The CHAIRMAN, taking the last subject first, said it did not occur to him that the observations made with respect to the requisition called for any remarks in reply at present. With respect to the situation of the terminus, if the Directors could have done more to provide accommodation for passengers, without too great a sacrifice on other considerations, they would gladly have done so; but it was out of their power to do both. As regarded Mr. Dixon's duties, he might observe that the correspondence of the Company must necessarily be divided between different parties; and it must not be supposed that the Directors had thrown upon that gentleman more work of this kind than actually belonged to the department which he filled. Again, on the subject of security, from a great many of their officers the Directors had taken what they deemed a sufficient amount; with respect to others, they were perhaps liable to blame. At all events, it would be satisfactory to the meeting to know that the Company had not suffered by the defalcation of the party at Tamworth, for which Mr. Birkinshaw held himself responsible. A great portion of the money had been paid, and for the remainder they had sufficient security. The clause referred to by Sir Oswald Mosley certainly did exist, but he believed it was copied from the Acts of Incorporation of the old Canal Companies, where one individual happened to fill the office of Treasurer.

Sir OSWALD MOSLEY—But it is not confined to the Treasurer: it has reference to collectors and others through whose hands money passes.

The CHAIRMAN was perfectly willing to bear the responsibility of the matter, but he was sorry the worthy proprietor (and he said it with the utmost good feeling) did not suggest the matter to the Directors during the five years he was himself connected with the Board as a Director.

Sir OSWALD MOSLEY replied that the suggestions he had thought it his duty to make, not publicly, he admitted, but to individual members of the Board, were not attended to, the consequence of which was, that he attended the meetings of the Directors very seldom, and ultimately withdrew from the direction altogether. He must, nevertheless, bear his share of the responsibility in the matter, for not taking measures for having the evil remedied during the period he had the honour of being connected with the Board.

The CHAIRMAN was completely taken by surprise at the observation just made, for, until this moment, he had not the slightest idea that during the time Sir Oswald Mosley was connected with the direction, he had any cause for complaining of a want of cordiality and perfect good feeling on the part of the Directors.

Mr. ENTWISLE, of Manchester, thought the subject introduced was not precisely the question before the meeting. With regard to the toll paid to the London and Birmingham Company, he was at a loss to understand why they were compelled to run goods and mails over that portion of the line between Birmingham and Hampton up to the 30th of June last; but he supposed they could not help it. He was unwilling to go at length into all the matters noticed in the Report, but with regard to the concentration of the locomotive and carriage departments, he wished to know whether the accommodation at the Derby station was not ample. He was also at a loss to understand how it was that they were paying rent for station accommodation to the North Midland Company, the establishment at Derby having been erected at the joint expense of the three Companies. With regard to the insufficiency of the notice given to the contractor, he was unwilling to believe that reasonable precautions had been neglected. The honourable proprietor said that the more serious matter which he had to complain of was, finding in the accounts the dividend on the third shares charged, with the cost of direction, to capital instead of to revenue; but the chief ground of objection which he entertained with regard to the management of the Directors was the mode they had adopted for issuing new shares. This, however, would, he believed, form a separate topic of discussion, and if it were the wish of the meeting, he would gladly reserve himself till other gentlemen explained their views on the subject, or until some amendment were proposed. He regretted that the Directors should have opposed the reasonable wish of the proprietors at the special meeting, for time to consider this matter, and he confessed he was quite astonished at finding the new shares issued at so low an amount as to put the old stock of the Company completely out of the market. So ruinous was the effect produced by the measure, that from the price of 50*l.*, at which the shares were quoted before the meeting, they went down to 41*l.* or 42*l.*, and he believed it was impossible to get a bid for them at any price. The dividend to be paid on the new shares was in perpetuity, and totally incapacitated proprietors from selling their old shares, except at a ruinous loss. If, for instance, they received 2 per cent. on their old shares for the year, the price at which the new shares had bee issued would ensure them a dividend at something like the rate of 6 per cent., and should their receipts increase so as to pay on the former 3 per cent., the new shares would be paying 9 per cent. Under these circumstances, he would have been glad to have seen the motion of the last special meeting adopted, for deferring the matter until other means had been suggested for raising the required capital. If they determined to call up no more than 1*l.* on the new shares, he thought they might adopt some temporary mode of raising money, even at a high rate of interest, if they pleased.

Mr. ROUTH said that great dissatisfaction was felt, by the London proprietors in particular, at the manner in which the plan for raising the money had been forced upon the special meeting held in June, and the sentiments of Mr. Entwisle were held in common by a large number of shareholders. Mr. Routh here entered into a history of the proceedings adopted by the requisitionsts, in the course of which reference was necessarily made to interviews and conversations held with individuals on the part of the Directors, the result of which was that the meeting called by the requisitionsts was abandoned, on the understanding, amongst other matters, that the wishes of the London proprietors would be acceded to by the admission, if desired, of some of the largest shareholders on the Board.

The CHAIRMAN, in reply to the observations of Mr. Entwisle, said the reason of the toll being paid to the London and Birmingham Company was because they were under the orders of the Post-

Digitized by Google

office authorities, who compelled them to run the mails along that line; and with respect to the goods traffic, it arose from the communication with the Grand Junction Company not having been completed. The moment they were able to effect that junction, the system was changed. As regarded the concentration of the engine establishment at Birmingham, the Chairman explained that they had only a very small establishment for repairing at Derby, and their present repairing station was at Hampton, but the whole would shortly be concentrated at this end of the line. With respect to the dividend on the new shares being charged to capital, and not to revenue, both his own feelings and those of the Directors were unfavourable to such a course; the dividend had been charged by them to revenue, but on the matter being brought before a general meeting of the proprietors, they ordered it to be charged to capital; consequently the Directors were justified in the matter, by the acts of the shareholders themselves. He might add, however, that it would not occur again.

Colonel BLANE said there was a clause in the Act which expressly forbade them to pay the dividend out of capital.

Mr. ENTWISLE expressed himself perfectly satisfied with the explanation given by the Chairman, and the only objection he now felt was with regard to the mode of issuing the new shares.

The CHAIRMAN thought they could not now enter into that question with any propriety. It was fully considered at a special meeting of proprietors, at which the mode of raising the shares formed the subject of a long discussion, and whatever might be the opinion of absent proprietors, he could only say that the result had been carried by a large majority. He would make no remarks at present in reference to the requisition for the special meeting of the proprietors, and the correspondence which took place upon that subject. What passed between himself and the gentlemen he had the pleasure of meeting, was merely matter of memory, but as it would form the subject of future remarks, he would reserve himself until the proper time arrived of making them.

A discussion here took place upon the cost for the maintenance of way, and other subjects connected with the management of the railway, when the Chairman called attention to the question before the meeting for the adoption of the Report.

Mr. CRAWSHAY said that the amendment he intended to propose would depend, to a certain extent, on the decision of the question with reference to the election of shareholders having a large stake in the concern to a seat at the Board. His impression was that the London shareholders were to have been elected by the Directors prior to the present meeting; he derived that expectation from what was communicated to him by other parties. Now, he believed that this intention was not carried into effect, and his amendment would therefore depend upon its being done. When he looked to the small number of shares held by the Board, he felt, as a large proprietor, that his interests were not fully represented, and he therefore wished to know whether it was the intention of the Directors to make any alteration in the constitution of the Board?

The CHAIRMAN said, although the subject was rather irregularly introduced, and although he might press for a vote on the question of the adoption of the Report, he should not take any advantage of that position, his object being to secure, if possible, that unanimity of feeling which would best tend to promote the interests of the shareholders. He would not, however, answer the question without going at some length into the matter introduced by Sir Oswald Mosley, and replied to by Mr. Routh, with reference to the conference which took place in London, and the requisition for a special meeting of proprietors. The Chairman here entered into a detail of the whole of the proceedings, and in reply to the question put by Mr. Crawshay, he could only repeat what he had before stated at the meeting in London, that he would be most happy to see any gentleman on the Board whom the proprietors in London or elsewhere might wish to recommend. The Directors only waited to know what was required of them in this respect, and it would be instantly carried into effect. Mr. Crawshay had prefaced his remarks by saying that there was an understanding that two London Directors should be admitted to the Direction before the present meeting. No doubt he had received that impression from observations which he had heard, or he would not have stated it; but the understanding was, that the arrangement should be carried into effect by the Directors, on their receiving an intimation of the names of gentlemen whom it was the wish of the proprietors to have elected. That intimation they had not yet received; those two vacancies were still to be filled up, and they would now be happy to receive the names of the gentlemen to make the appointment. He himself would willingly retire and make a sixth vacancy; but with respect to the feeling which the Directors had shown in admitting London or other proprietors to the Board, all he would say was that on the very first intimation of a wish of this kind that they received on a former occasion, Mr. Lewis was elected, and he was happy to say with satisfaction to the Board, and advantage to the interests of the shareholders. The Chairman afterwards noticed the election of Mr. Crawshay, who, however, owing to some misapprehension, had refused to act. He regretted the painful position in which he had been placed by the opposition of Mr. Crawshay, Sir Oswald Mosley, and Colonel Blane, from all of whom he had always experienced great courtesy; but he could only assure the meeting that as long as he continued their Chairman, in reference to this subject, he should always meet the proprietors with perfect good faith and cordiality. He again assured the meeting that there was no indisposition on the part of the Directors to accede to the wishes of the London proprietors. He would be most happy to see Mr. Crawshay with them, and any others that might be named; and whatever they decided, whether in the shape of a recommendation to the Directors, or by a substantive motion, they would cordially accede to.

Mr. CASH hoped, after the very fair and candid statement which they had heard from the Chairman, that no objection would be made to the passing of the resolution that the Report be received.

Mr. PREVOST also urged the adoption of this course, and expressed himself in favour of the election of local Directors, in preference to gentlemen who resided at a distance.

The Rev. Mr. BEDFORD thought the Board had hitherto consisted too much of one class of shareholders, residing within a certain district. They required some representatives of the large monied interest, who, on questions like the one which arose at the last meeting, might be consulted with advantage to the Company. Having done this, they could not do better than make up the rest of the Direction by electing gentlemen residing at Derby, Burton, Tamworth, Whitacre, and other places, whose local information would prove beneficial to the shareholders at large.

Mr. CRAWSHAY explained that the reason he had declined taking his seat at the Board was, that when he first expressed a wish to be elected, the Chairman had refused him in person, because he happened to be a large shareholder in a rival concern, the Midland Counties' Company. He therefore felt that his presence at the Board, standing alone in opposition to the other Directors, would be perfectly useless. Mr. Crawshay then alluded forcibly to what he considered to be the neglect of the Directors with reference to the question of the London trade, as connected with the Midland Counties' Railway.

The CHAIRMAN entered into an explanation, disavowing, in the observations he had made to Mr. Crawshay, any intention to give offence to that gentleman, and explaining that although he mentioned Mr. Crawshay's connection with the Midland Counties' Company as a difficulty, he did not refuse to concur in his election as a Director, but the contrary, as was proved by his election shortly afterwards. With respect to the charge against the Directors for want of judgment, or of energy, in the conduct of the London traffic, having reference to the competition for it with the Midland Counties' Company, he did not think it could with any fairness or correctness be made. That in the original contest for that trade, the Directors acted on the advice and with the full concurrence of the London proprietors, which was fully confirmed at subsequent general meetings. That since that time, with the knowledge of the same parties, and confirmed in the same manner, an arrangement had been made for working the trains, which had ever since been acted upon; but that the Directors, satisfied that various circumstances prevented the result being such as was originally calculated upon, and as this Company had a right, from its position, to expect had some time since given notice of the termination of the arrangement, and it had ceased, and that he (the Chairman) had subsequently had an interview with the Chairman and Deputy-Chairman of the Midland Counties' Company, and that he could not but hope that consequences would ensue which would be advantageous to this Company, and with which the proprietors ought to be satisfied. He could not, however, lead the proprietors to expect any alteration in the number or expense of the trains, whilst any of the north trade to London was conveyed by Hampton.

Mr. ENTWISLE was sorry to find Mr. Crawshay still disposed to press his amendment, for after the very handsome proposal of the Chairman he thought the grounds of his objections were entirely taken away; and although it had been his (Mr. E.'s) intention at first to have voted with Mr. Crawshay, he was so satisfied with the explanations which had been given, that he should certainly vote for the adoption of the Report.

Mr. Walker, Mr. Ledsam, and other Directors expressed their readiness to retire, and make way for any gentleman whom the shareholders might wish to elect in their stead.

Mr. ROUTH said, after what had been stated by the Chairman, he thought it would not be prudent to persist in any further opposition to the reception of the Report. The object of Mr. Crawshay was, he hoped, fully met by the declarations which had been made.

Mr. CRAWSHAY thought it should have been met before, and if he stood alone he should persist in his amendment.

Sir OSWALD MOSLEY having previously seconded the amendment, it was put to a show of hands and negatived, after which the original resolution for the adoption of the Report was carried by a large majority, the mover of the amendment having declined taking the votes.

The dividend recommended in the Report was afterwards adoped; and in the course of some inquiries relative to the state of the Company's locomotives, the CHAIRMAN said, with respect to the engines generally, he believed they were never in a better state of repair than at present.

The re-election of Messrs. Ledsam, Beale, and Peyton, the retiring Directors was then proposed and seconded, and carried unanimously.

A resolution in reference to certain shares which had been declared forfeited, was then passed, after which Mr. MICHAEL BASS, of Burton upon-Trent, moved a vote of thanks to the Chairman for his courtesy and kindness, and the ability with which he had conducted the business of the meeting, and to the Board of Directors generally for their attention to the interests of the Company.

A PROPRIETOR had great pleasure in seconding the motion. He had attended the meeting a dissatisfied shareholder, (and certainly he should have been better satisfied to have seen a larger dividend now,) but he must say that he should go away with very different impressions to those with which he came. He had seen such a willingness on the part of the Chairman to afford every information in his power, that he felt convinced the Directors were most anxious to do the best they could for the shareholders.

Colonel BLANE was sure that [gentlemen would

Digitized by Google

give him credit for candour at least when he stated that he could not conscientiously support the vote of thanks. He acknowlekged the talent of the Chairman in presiding at the meetings of the Company, but he could not look to profitable results to the railway from them.

Mr. PREVOST begged to express his full concurrence in the resolution for giving the thanks of the proprietors to the Chairman and Directors.

The CHAIRMAN, on behalf of himself and the other Directors, thanked the meeting for the vote, which, he observed, had been carried unanimously, with the exception of Colonel Blane. He regretted that the vote was not perfectly unanimous; but if the acknowledgments of a public body of proprietors to a Board of Directors, who did the best in their power, was to be measured by success, unfortunately very few indeed would have a claim to such thanks.

The meeting then separated, the proceedings having lasted nearly five hours.

[The accounts did not reach us in time for our present number. The following has been sent to us]:—

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY.

To the Editor of the Midland Counties' Herald.

SIR,—On reading the report in your paper of to-day of the proceedings of the meeting of the Birmingham and Derby Junction Railway Company on Tuesday last, I think it might be supposed (from the omission of certain parts of the conversation which took place) that the blame of a transaction alluded to with regard to the maintenance of the permanent way, was intended to be thrown on a particular individual. I feel it therefore necessary to say that it was not my intention, by anything that I said, to put that blame on the Company's Engineer, Mr. Birkinshaw. The matter was one of considerable complication, and whatever was the result to the Company (who gained considerably on the whole by the change of arrangements), I expressed at the meeting, or meant to do so, that I was not prepared to place the blame on any particular individual, but that the Directors took upon themselves the responsibility of the affair.

I am, Sir, your obedient servant,
HENRY SMITH,
Chairman of the Birmingham and Derby Junction Railway Company.

August 11, 1842.

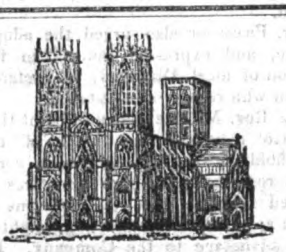
GLASGOW, PAISLEY, AND GREENOCK RAILWAY.

To the Editor of the Railway Times.

SIR,—The shareholders in this undertaking are probably by this time aware that, from the arrangements which the Directors of the railway have this year made with the steam-boats of a friendly Company, a communication with the watering-places on the Clyde has been established so regular, trustworthy, and economical in point of time and money to the public, as to make itself felt with a severity which has almost become intolerable to the numerous steamers which persist in plying to Glasgow.

To illustrate the uneasy feelings of the proprietors of these boats, I may perhaps be allowed to mention an anecdote I have from good authority. After the last general meeting a gentleman, who had been possessed for some days of a stake in the undertaking amounting to two 25*l.* shares, called at the office, and desired to see those entries in the books relating to the expenses of steam-boats. The individual himself was a writer or attorney, and he was accompanied by another gentleman, also a writer, but not a shareholder, and who consequently did not see the books. These two gentlemen, one of them known to be connected with the Clyde steam-boats, became so exceedingly restless as to the mode in which their property was managed, as to send another writer (a shareholder) to extract what he could from the Company's books on the same subject.

The chagrin of these gentlemen in not obtaining the information they required as to the affairs of the "Steam-Packet Company," whose boats ply in connection with the railway, and whose accounts, being those of a totally distinct Company, were of course not to be found in the "Railway Company's" books, showed itself in several letters to the provincial papers; and to the same source I conceive may be traced the letter from "A Shareholder" in your own paper of the 23rd instant.



Now the distant shareholders are perhaps aware that the Directors endeavoured last year to work with the boats running on the Clyde, but finding that they were treated with bad faith, they connected themselves this year with a new Company whose boats stopped at Greenock, and this connection, as I stated before, has worked well as regards the public, the Railway Company, and the Steam-Packet Company.

To show the importance of a proper connection with the watering-places, it is only necessary to state that the numbers by railway during the last four weeks, to and from the watering-places, have amounted to 19,000 per week, about four times as many as to Greenock alone.

The shareholders will also remember that the Directors in their Report of 5th January, 1842, state that a certain proportion of the receipts is excluded in the weekly and half-yearly published accounts of traffic, to meet the expenses of the steam-boats plying in connection with the railway, and as I am a shareholder in these steam-boats, I am able to state that the sum *set apart is sufficient to meet the expense.* I have no doubt the river steam-packet owners would be very glad to see how the affairs of the rival Steam-Packet Company stand. *We* are satisfied of the state of our own affairs, but we do not consider it necessary to satisfy them on the same subject.

I am, Sir, your obedient servant,
AN OWNER OF THE STEAM-BOATS PLYING IN CONNECTION WITH THE RAILWAY.

Greenock, July 27, 1842.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PATRONS.

The Archbishop of York	Sir G. Strickland, Bart., M.P.

Lord Worsley, M.P.	Robert Denison, Esq.
Hon. E. R. Petre	P. Saltmarshe, Esq.
	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.
London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.—The Public are respectfully informed that the TRAINS now RUN for the conveyance of passengers, parcels, horses, and carriages from the London Bridge Station as under:—

To Tunbridge, stopping at New Cross, Croydon, Reigate, Godstone, Edenbridge, and Penshurst—9 30, a.m.; 11 30 a.m.; 2 30 p.m; and 5 30 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

From Tunbridge, stopping at Penshurst, Edenbridge, Godstone, Reigate, Croydon, and New Cross—7 45 a.m.; 10 30 a.m.; 3 p.m.; and 6 p.m. SUNDAYS—8 30 a.m.; 6 30 p.m.

Horses and carriages can be embarked and disembarked at the New Cross as well as at the London Bridge station, at each of which post-horses may be had to convey carriages to or from any part of London, at a charge of 10s. 6d., including post-boy. They will be in readiness also at the Tunbridge station on the arrival of every train to convey carriages to Tunbridge Wells, at 10s. 6d. each, including the driver, and to all other places at 1s. 6d. per mile.

Omnibuses ply for every train between the London Bridge station and the following coach offices, viz.:—Griffin's Green Man, Oxford-street; the Universal office, Piccadilly; the Cross Keys, Wood-street; the Swan with Two Necks, Lad-lane; and at any of Messrs. Horne and Chaplin's offices, at which, and at the London Bridge station, parcels may be booked for all places in connexion with the railway.

Full particulars and time-tables may be obtained at the London Bridge Station, and at the Offices of the Company, 10, Coleman-street.

By order,
JOHN WHITEHEAD, Secretary.

10, Coleman-street, June 1, 1842.

LONDON AND BLACKWALL RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, on Tuesday, the 30th August instant, at the London Tavern, Bishopsgate-street, at Eleven for Twelve o'Clock precisely.

WILLIAM ROUTH, Chairman.
JOHN F. KENNELL, Sec. Pro. Tem.

Offices, 60, Fenchurch-street, Aug. 10, 1842.

PLEASURE EXCURSIONS ON THE CROYDON RAILWAY—ANERLY GARDENS, PENGE WOOD.—These Gardens will be open to the Public on Mondays and Thursdays. By an arrangement with the Croydon and Greenwich Railway Companies, the Fares on those days will be, First Class 1s.; Second Class 9d.; including admission to the Gardens.

HULL AND SELBY RAILWAY COMPANY.—NOTICE is hereby given, That a General Meeting of the Shareholders in this Company will be held on Saturday, the 27th day of August instant, at Twelve o'Clock at noon, in the Court of Requests Room, at the Town Hall, in the Borough of Kingston-upon-Hull, for the purpose of receiving the Directors' Report, and transacting the general business of the said Railway.

By Order,
CHAS. H. PHILLIPS, Law Clerk, } of the said
GEORGE LOCKING, Secretary, } Company.

Hull, 10th August, 1842.

DRY-ROT AND DECAY — MARGARY'S PATENT.—The cheapest and most simple preparation for the Preservation of Timber, Canvass, &c., from Decay, the material being only 4d. per lb.

This Patent is used by her Majesty's Board of Ordnance; by Brunel, Locke, and other celebrated Engineers; and by Noblemen and Gentlemen on their Estates. It has been extensively used for Railroads in England, and is now on the Bristol and Exeter and Manchester and Sheffield lines. In France, on the Paris and Havre line. It repels the attack of Insects—as neither the White Ants, nor the *Tiredo Navalis*, so destructive in the Liverpool Docks, will touch any substance so prepared.

Licences granted, and Specimens of all sorts of Wood may be seen, at the Patentee's Office, Quality-court, Chancery-lane, where every information will be given on the subject.

Rick Cloths, Cement Bags, &c., may be had of the Sole Agent, Mr. LEE, 97, Leadenhall-street.

ALTONA AND KIEL RAILWAY—CONTRACT FOR RAILS.—NOTICE is hereby given, That one of the Directors of the Altona and Kiel Railway Company will attend at the Caledonian Hotel, Adelphi, London, on Tuesday, the 30th of August instant, at Twelve o'Clock, to enter into a Contract for the supply of about 6,600 tons of Iron Railway Bars, to be delivered as early as possible after the opening of the river Elbe, in the spring of the ensuing year. For further particulars reference is to be made to the Engineer-in-Chief of the Railway, Mr. Buck, of Manchester.

The Tenders to be endorsed, "Tenders for Rails," with the name of the firm, and to be sent by Post under cover to Mr. T. H. Elmenhorst, London, on or before the 24th instant.

The parties Tendering, or an Agent on their behalf, are requested to attend at the Caledonian Hotel, at the time above mentioned.

By order of the Board,
STOPPEL, Secretary.

Altona, August 5th, 1842.

EDINBURGH AND GLASGOW RAILWAY.

—Notice is hereby given, That the Ninth Half-yearly General Meeting of the Shareholders in the Edinburgh and Glasgow Railway Company will be held, pursuant to the Act of Incoporation, in the Company's Office in Glasgow, on Tuesday, the 23rd instant, at One o'Clock p.m.

The Transfer Books will be Closed on and after the 16th instant, till after the Meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the Meeting (section 134,) otherwise they will not give a right to vote at the meeting. Blank Forms of Proxy may be had on application at this Office.

In terms of section 137, the Proprietor of any Share on which any Call shall be due, will not be entitled to vote in respect of such Share.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
Glasgow, 8th August, 1842.

KING'S COLLEGE, LONDON.—DEPARTMENT OF ENGINEERING, ARCHITECTURE, ARTS, AND MANUFACTURES.—The Classes will be RE-OPENED on Tuesday, the 4th of October next.

Mathematics—Professor the Rev. T. G. Hall, M.A
Mechanics—Professor the Rev. H. Moseley, M.A., F.R.S.
Chemistry—Professor Daniell, F.R.S.E.
Chemical Manipulations—Mr. W. A. Miller, M.B.
Experimental Philosophy—Professor Wheatstone, F.R.S.
Geology—Professor Ansted, F.G.S.
Principles and Practice of Architecture—Professor Hosking, F.S.A., and Mr. A. Moseley.
Arts of Design and Architectural Enrichment—Professor Dyce, M.A., F.R.S.E., Director of the Government School of Design.
Machinery—Mr. E. Cowper.
Geometrical Drawing—Mr. T. Bradley.
Architectural Landscape Drawing and Colouring—Mr. Cotman.
Mineralogy—Mr. J. Tennant, F.G.S.
Land Surveying and Levelling—Mr. H. J. Castle.
Workshop—Mr. W. H. Hatcher.

Persons may enter as occasional Students for any special Lectures which they may desire to attend, upon payment of the Fees for the same.

Further information may be obtained at the Secretary's Office.

J. LONSDALE, Principal.

July, 1842.

HAYLE RAILWAY COMPANY.—Notice is hereby given, That a Special General Meeting of the Proprietors of the Hayle Railway Company will be held at their Offices, on Thursday, the 1st day of September next, at One o'Clock precisely, to receive the Report of the Directors with reference to the proposed extension of the main line to Penzance, and the required alterations in the present line as connected therewith. Immediately afterwards the usual Half-yearly General Meeting will be held, pursuant to the Company's Act.

By order of the Board,
R. H. PIKE.

Rectory House, London Wall, London,
August 10th, 1842.

GREAT WESTERN RAILWAY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, in Bristol, at the Bristol Station, on Thursday, the 18th of August next, at Twelve o'Clock, for the general purposes of business. The Chair will be taken at One o'Clock, precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy-Chairman.

Clause 123 provides, that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least 5 days before the meeting.

By order,
CHARLES A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Dated 7th July, 1842.

Railway Offices—2, Princes street, Bank, London;
Railway Station, Bristol.

THE THAMES TUNNEL IS OPEN DAILY (Sunday excepted) from Nine in the morning until dark, and lighted with gas.

The present entrance is on the Surrey side of the river, close to Rotherhithe Church. Admittance, 1s. each.

On Monday, the 1st of August, the entrance will be on the Middlesex side, close to the Tunnel Pier at Wapping, when the entrance at Rotherhithe will be closed, in order to finish a new staircase; on the completion of which the Tunnel will be opened as a thoroughfare for foot passengers.

By order of the Board of Directors,
J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City,
13th July, 1842.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street; and by Steam-boats to the tunnel pier at Wapping, from Chelsea, Vauxhall, Lambeth, Hungerford, Adelphi, Old Shades Pier, and London Bridge. Books, with Plates descriptive of the works, are sold at the Tunnel, Price One Shilling.

YARMOUTH AND NORWICH RAILWAY COMPANY—FIRST GENERAL MEETING OF THE PROPRIETORS.—At a General Meeting of the Yarmouth and Norwich Railway Company, held in pursuance of the Act of Incorporation, at the Victoria Hotel, Great Yarmouth, on the 5th August, 1842,

GEORGE STEPHENSON, Esq., in the Chair,

It was resolved,

That the Common Seal of the Company be affixed to the Register of the Proprietors now produced. (The Common Seal of the Company was accordingly affixed in the presence of the meeting.)

That the Report of the Directors, as now read, be received and adopted, and printed for circulation among the Proprietors.

It was then moved by J. E. Lacon, Esq., seconded by John Norgate, Esq., and carried unanimously,

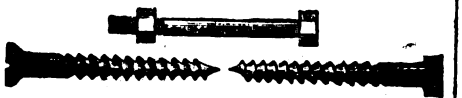
That the best thanks of this Meeting be given to the Directors for their zealous services and exertions in promoting the interests of the Company; and that a sum not exceeding £625 per annum be appropriated to the Directors for their services, to commence from the period of their undertaking the duties of their office.

It was then moved by John Longe, Esq., seconded by W. H. Palmer, Esq., and carried unanimously,

That John Edward Lacon, Esq., be appointed to act as Treasurer to this Company.

It was then moved by Sir E. H. K. Lacon, Bart., seconded by Captain Lawrence, and carried unanimously,

That Mr. Patteson be appointed Secretary to the Company until the completion and opening of the line, at a remuneration of £1,000.



(Signed) G. STEPHENSON, Chairman.

It was then moved by J. C. Smith, Esq., seconded by C. Cory Esq., and carried unanimously,

That the cordial thanks of this Meeting be given to the Chairman, for his conduct in the Chair on this occasion.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

T. H. RYLAND AND CO., Ozell's Street, Broad Street, Birmingham, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom.—*Liverpool Mercury*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—At the Half-yearly General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company, held at the Waterloo Rooms, Waterloo-street, on the 9th of August, 1842, pursuant to public advertisement duly inserted,

HENRY SMITH, Esq., Chairman of the Board of Directors, in the Chair,

The proceedings of the last Half-yearly Meeting, and of the Special General Meeting of the Proprietors, held on the 2nd day of June, 1842, were read.

The Common Seal of the Company was affixed to the Register of Proprietors.

The Report and Statements of Accounts presented by the Directors were read, and the subjoined Resolutions were agreed to.

Resolved—"That the Common Seal of the Company be now affixed to the Register of Proprietors."

Resolved—"That the Report and Statements of Accounts now read be received and adopted."

Resolved—"That a dividend of twelve shillings on each of the Original Shares, and of four shillings on each of the Third Shares in this undertaking, be now declared payable on the 1st of September next."

Resolved—"That the Directors, having according to the provisions of the Act of Incoporation, and of the Act of 3rd Victoria, ch. 51, declared the following Third Shares, issued under the provisions of the last mentioned Act, viz.:—Nos. 10,808, 10,809, 10,810, 10,811, 10,812 10,813, 10,814, 10,815, 10,816, 10,817, 7,691, 7,692, 7,693, 7,694, 7,695, 7,696, 7,697, 7,698, 7,699, 7,700, 7,701, 7,702, 7,703, 7,704, 7,705, 7,706, 7,707, 7,708, 7,709, 7,710, 7,711, 7,712, 7,713, 7,714 7,715, 7,716, 7,717, 7,718, 7,719, 7,720, 12,790, 12,791, 12,792, 12,793, 12,794, 12,795 12,796, 12,797, 12,798, 12,799, 12,800 12,801, 12,802, 12,803, 12,804, 12,805, 12,806, 12,807, 12,808, 12,809, 12,810, 12,811, 12,812, 12,813, 12,114, 12,815, 12,816, 12,817, 12,818, 12,819, 12,820, 12,821, 12,822, 12,823, 12,824, 12,825, 12,826, 12,827, 12,828, 12,829, 12,830, 12,831, 12,832, 12,833, 12,834, 12,835, 12,836, 12,837, 12,838, 12,839, 12,840, 12,841, 12,842, 12,843; 12,844, 12,845, 12,846, 12,847, 12,848, 12,849, 12,850, 12,851, 12,852, 12,853, 12,854, 12,855, 12,856, 12,857, 12,858, 12,859, 12,860, 12,861, 12,862, 12,863, 12,864, 12,865, 12,866, 12,867, 12,868, 12,869, 11,922, 11,923, 11,924, 11,925, 11,926, 11,927, 11,928, 11,929, 11,930, 11,931 9,447, 9,448, 9,449, 9,450, 9,451, &c., to be forfeited for non-payment of the Calls due thereon; such declaration of forfeiture be not confirmed by this meeting, but that the same be declared void, and of no effect."

Resolved—"That Mr. Samuel Beale, Mr. Daniel Ledsam, and Mr. Abel Peyton, the Directors retiring by rotation, be re-elected Directors of this Company."

Resolved—"That the thanks of the Proprietors are due to the Board of Directors for their attention to the interests of the Company, and to Mr. Smith, the Chairman of the Board, for his ability and courtesy in the conduct of the proceedings of the day."

(Signed) HENRY SMITH, Chairman.

EASTERN COUNTIES' RAILWAY COMPANY.—TWELFTH GENERAL MEETING.—Notice is hereby given, That in pursuance of the provisions of the Company's Act of Incorporation, the Half-yearly General Meeting of the Shareholders of this Company will be held in London, at the Shoreditch Station, on Wednesday, the 31st day of August instant, at One o'Clock, precisely, and that between Monday the 22nd, and Wednesday the 31st of August (both days included), the Transfer Books of the Company will be Closed.

By section 137 of the Act, it is provided that "No Proprietor of any Share on which any call shall have been made, shall after the day appointed for the payment of the same be allowed to vote at any meeting of the proprietors of the said Company, until the money called for in respect of such share shall have been fully paid."

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE,
Deputy Chairman.

Offices, Shoreditch Station.
10th August, 1842.

DUBLIN AND DROGHEDA RAILWAY COMPANY.—Notice is hereby given, That the General Half-yearly Meeting of the Proprietors of this Company, will be held at the Company's Offices, 22, Marlborough-street, Dublin, on Thursday, the 1st day of September next, at One o'Clock in the Afternoon—the Chair to be taken at that hour—for the purpose of receiving from the Directors a Report and Statement of the Accounts for the Half-year ended the 30th June last, and of confirming the forfeiture of certain Shares in the Capital Stock of this Company; the said Shares having been previously declared forfeited by the Directors, in conformity with the provisions of the Act of Parliament in that case made and provided.

The Books of Transfer of Shares in this Company will be Closed on and from the 23rd day of August instant, to the 2nd September next.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

22, Marlborough-street, Dublin,
5th August, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Books of this Company, which are kept at this Office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Saturday, the 13th August next, to Thursday, 25th of August, 1842, both days inclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Twelfth Half-yearly General Meeting of the Proprietors of the North Midland Railway will be held at Derby, in pursuance of the Act of Incorporation, at the Railway Station at that place, on Thursday, the 25th day of August, 1842.

The Chair to be taken at One o'Clock precisely.

WILLIAM LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

DUBLIN AND DROGHEDA RAILWAY.—TO RAILWAY CONTRACTORS.—NOTICE is hereby given, That on and after MONDAY, the 15th day of August, Plans, Sections, and Specifications of the following Works will be ready for inspection, at the Company's Office, No. 22, Marlborough-street, Dublin, or at Mr. Macneill's, No. 9, Whitehall-place, London, viz.—

Contract No. 5, commencing in a field in the Townland of Skerries, and extending to a point in the Townland of Tankardstown, about 500 yards north of Balbriggan Harbour, a distance of 4½ miles.

Contract No. 6, commencing at the end of Contract No. 5 aforesaid, and extending to the south side of the river Nanny, a distance of about 4¾ miles.

Contract No. 7, commencing at the end of Contract No 6 aforesaid, and extending to the intended terminus at Drogheda a distance of about 4¼ miles.

The Contractor will be required to make and maintain all excavations, embankments, viaducts, bridges, culverts, drains, and fences, to complete the ballasting of the permanent way of the said railway over the whole of the said respective distances, and to keep the whole of the said works (except the permanent way) in repair for 12 months after their completion. The Contractor is to provide all implements and materials necessary for the said works, according to the plans, sections, and specifications.

The Directors of the said Railway will meet at their office, 22, Marlborough-street, Dublin, on Thursday, 25th August, to receive Tenders for the above-mentioned Contracts.

Printed forms of Tenders may be had at the Company's Office, where all Tenders must be lodged *before* the hour of meeting, endorsed, "Tender for Works," and addressed to the Chairman of the Board of Directors.

No Tender will be received which is not made according to the printed form.

The party whose Tender is accepted will be required to enter into a bond to the amount of 10 per cent. upon the Contract, and to give Sureties for the due performance of the Works; the names of such Sureties must be set forth in the Tender.

The Directors will not consider themselves bound to accept the lowest offer.

Parties tendering, or persons fully authorised by them, must attend at the Company's Office on the day appointed by the Directors for receiving Tenders, when the Tenders will be opened in the presence of the parties so attending.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

TO RAILWAY AND BRIDGE CONTRACTORS, &c.—STOCKTON AND DARLINGTON RAILWAY.—The Drawings and Specifications describing the necessary Works in Piling and Erecting the Stone Piers for a New Bridge across the River Tees, near Stockton, may be inspected at the Office of the Company's Engineer, in Darlington, on and after Monday, the 8th day of August instant.

Tenders, written out on the printed forms only, to be lodged on or before Ten o'Clock on the morning of Friday, the 26th of August instant.

The Directors do not bind themselves to accept the lowest Tender.

Stockton and Darlington Railway Office,
Darlington, August 3, 1842.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Hunt's Bank, in Manchester, on Thursday, the 1st day of September next, at Twelve o'Clock at noon precisely.—Dated this 1st day of August, 1842.

HENRY HOULDSWORTH, Chairman.

Hunt's Bank, Manchester.

BIRMINGHAM AND GLOUCESTER RAILWAY.—The Half-yearly General Meeting of this Company will be held in Birmingham, at the Waterloo Rooms, Waterloo street, on Friday, the 19th day of August next,

The Chair to be taken at Twelve o'Clock precisely.

C. R. MOORSOM, Chairman.

The Books in which the Transfers of Shares are registered will be Closed on Thursday, the 11th day of August, until after the Meeting.

By order,
GEORGE KING, Secretary.

Office, Waterloo-street, Birmingham,
26th July, 1842.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	St. Ives
Cambridge	Huntingdon
Wells	St. Neots

Dereham	Bury St. Edmunds
Fakenham	Bishop Stortford
Newmarket	Hockerill
Thetford	Harlow
Holbeach	Hertford
Wisbeach	Hoddesdon
Chatteris	Waltham Cross
March	Ware

Also to

St. Leonards	Maidstone
Hastings	Godstone
Rye	Reigate
Battle	Worthing
Cranbrook	Lewes
Tenterden	Eastbourne
Tunbridge Wells	Horsebridge
Tunbridge	Hailsham
Penshurst	Uckfield

From the
Spread Eagle, Gracechurch-street.
Swan-Two-Necks, Lad-lane.
Cross Keys, Wood-street, Cheapside.
Golden Cross, Charing Cross.
George and Blue Boar, Holborn.
Spread Eagle, Regent Circus, and
Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3 0 0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0 4 6
Paving pathways, granaries, warehouses, &c., 1¼ inch thick, per square yard	0 4 6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0 5 6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

THE MANCHESTER AND LIVERPOOL PLATE GLASS COMPANY have just now on SALE a large quantity of Ground Plate Glass, suitable for Sky-lights, which they can sell in lots at 2s. 6d. per foot; also Stout Polished Plate for Conservatories at 3s. per foot; and a quantity of ditto for general glazing purposes, AT HALF THE "TARIFF PRICES." Also, several extremely Large Plates for Looking Glasses.

An extensive assortment of Dressing Glasses, with or without Mahogany Frames, to be sold considerably under the Tariff prices.

Every information may be obtained at their Manufactory, Sutton, St. Helens, Lancashire; or at their London Warehouse, 2½, Soho-square.

By order of the Board,
J. L. GRUNDY, Company's Agent.

London, August, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the Interest upon the Loan Notes of this Company will be payable on Monday, the 15th instant, at the offices of the Company. The Notes must be left one clear day for examination, for the purpose of the deduction of the Income Tax.

By Order,
C. R. MACKENZIE, Secretary.

10, Angel-court, Throgmorton-street,
12th August, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun*, evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, August 13, 1842.

The Railway Times.

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 242. Vol. V.—No. 34.] SATURDAY, AUGUST 20, 1842. [Price 6d.

GREAT NORTH OF ENGLAND RAILWAY.—TO CONTRACTORS for PUBLIC WORKS.—The Directors of the Great North of England Railway are desirous of receiving Tenders for Excavating the Approaches and constructing a Bridge to carry the Yarm and Neasham highways under their Railway, also two Bridges and other works connected therewith, over the above highways at the Bank-top near Darlington.

Plans and Specifications for the Works may be seen at the Company's Office, in Northgate, Darlington, on and after Tuesday, the 16th, and Tenders will be received until Ten o'Clock on Friday, the 26th (only on printed forms supplied by the Company), and the Directors will meet on Saturday, the 27th inst., at Twelve o'Clock, to Let the Contract, when parties tendering, or persons fully authorised by them, are expected to be in attendance.

The party whose Tender may be approved will be required to give security to the amount of 10 per cent. on his Tender for the due performance of the Contract.

The Directors do not bind themselves to accept the lowest Tender.

W. O'BRIEN, Secretary.

Darlington, August 3, 1842

GREAT NORTH OF ENGLAND RAILWAY.—Notice is hereby given, That the Thirteenth Half-yearly General Meeting of the Proprietors of the Great North of England Railway Company, will be held at the Railway Office, Darlington, in the county of Durham, on Tuesday, the 30th day of August, 1842, at Twelve o'Clock at noon, at which time and place the Proprietors of the said Company or their proxies, lawfully constituted, are requested to attend.

The Books in which Transfers of Shares in the said Company are registered will be Closed, in pursuance of the Act of Incorporation of the said Company, from Tuesday the 23rd day of August, 1842, to Wednesday the 31st day of August, 1842, both days inclusive.

Dated this 12th day of July, 1842,

FRA. MEWBURN, Clerk to the Company.

Great North of England Railway Office,
Darlington.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,

ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PLEASURE EXCURSIONS ON THE CROYDON RAILWAY—ANERLY GARDENS, PENGE WOOD.—These Gardens will be open to the public on Mondays and Thursdays. By an arrangement with the Croydon and Greenwich Railway Companies, the fares on those occasions will be, First-class, 1s.; Second-class, 9d.; including admission to the Gardens. Times of starting of Trains from the London Station—Morning, 5 minutes after 9 and 11; Afternoon, 20 minutes after 2, 4, 5, 6, and 8.

TO CONTRACTORS.—DUBLIN & DROGHEDA RAILWAY.—Notice is hereby given, That the letting of Contracts for Works is Postponed from Thursday, the 25th, to Tuesday, the 30th of this month; on which day Tenders for Contracts, 5, 6, and 7, will be received, according to the conditions of the former advertisements.

Dublin, 17th August, 1842.

EXTENSIVE SALE OF GRANITE.—FRANCIS FULLER, & Co., have the honour to announce, that they have been instructed to sell by AUCTION, on the Premises, Grosvenor Wharf, Millbank-row, Westminster, on Wednesday, August 24th, at One O'Clock precisely, a fine Stock of useful Granite in Blocks, Landings, Steps, Tramways, Passings, Sewers, Kerbs, Rollers, Copings, Pitchings, Stones, Crossings, Posts, Spurs, &c. Two Blocks of Brittanny Granite, 14 feet by 17 feet long. Several Blocks of the finest Red Jersey Granite, 13 feet to 17 feet 6 inches long. Aberdeen Blocks of the best quality, and a large quantity of Foggestic Blocks of rare dimensions.

Francis Fuller, & Co, beg to call the attention of the Trade to this Sale of Granite, and earnestly request an inspection of its quality. May be viewed three days prior to Sale, and Catalogues obtained on the Premises, and at the Offices of Francis Fuller & Co., Auctioneers, &c., 32, Poultry, and Croydon, Surrey.

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.—At the General Annual Meeting of the Proprietors, convened by the Directors in pursuance of the provisions of the Company's Act of Incorporation, held at the Railway Station in Derby, on Saturday, the 13th day of August, 1842,

THOMAS EDWARD DICEY, Esq., Chairman of the Board of Directors, in the Chair,

The following resolutions were agreed to:—

Resolved—That the common Seal of this Company be affixed to the Register of Proprietors. The seal was affixed accordingly in the presence of the meeting.

Resolved—That the Report of the Board of Directors now read, with the Statement of Accounts annexed, be received and adopted.

Resolved—That a dividend be made out of the clear profits of the undertaking, for the half-year ending on the 30th of June last, apportioned after the rate of £1 10s. for every whole share, and 7s. 6d. for every quarter share. The dividend will be payable on the 1st of September next.

In pursuance of the provisions of the Act relating to this Company, passed in the session of Parliament of the present year, it was Ordered—That this Company do now raise the further sum of £250,000, in addition to the sums of money which they have already raised, by creating 12,500 new shares of £20 each.

Ordered—That such shares be offered to the present Shareholders of this Company in the same proportion as the existing shares are held by them respectively, that is to say, in the proportion of one for each £100 share, and one for every four £25 shares

Ordered—That if any Shareholder shall fail to accept the shares offered to him on or before the 1st day of October next, the same may be disposed of to other persons for the benefit of the Company, in such manner as the Directors shall deem advisable.

Ordered—That after the said sum of £250,000 shall have been subscribed for (one-half of the capital of the Company having been paid up), this Company may and shall borrow on mortgage or bond the sum of £83,000, and secure the repayment thereof, with interest, by mortgage or bond, as authorised by the several Acts of Parliament relating to this Company.

It was also Resolved—That the new shares shall bear a dividend of not less than £6 per cent. per annum on the amount paid up, until the dividends on the former shares exceed that rate, and that then the new shares shall participate equally with the former shares.

Resolved—That the further sum of £50,000 be borrowed on Loan Notes for three years, in anticipation of the future calls on the new shares.

Resolved—That Mr. Cropper, Mr. Rathbone, Mr. Horsfall, and Mr. Fox, be re-elected Directors of this Company; and that Mr. John Ellis and Mr. Samuel Waters be elected in the room of Mr. Garnett and Mr. John Evans, who have gone out by rotation.

(Signed) T. E. DICEY, Chairman.

Mr. Dicey having left the chair,

Resolved—That the thanks of this meeting be given to the Chairman and the Board of Directors for their valuable services during the half-year.

MIDLAND COUNTIES' RAILWAY.—Mr. JOSIAH KEARSLEY, Engineer to the Midland Counties' Railway, having published a Report which he made on the 9th instant to the Committee of Management, respecting the consumption of coal without smoke, the Shareholders are respectfully informed, that they will in a few days be furnished with a refutation of that gentleman's statements, from which they will be able to judge how far they are garbled, exaggerated, and untrue.

Any party will be furnished with Mr. Kearsley's Report, and the refutation of it, on application to Mr. Samuel Hall, No. 8, King's Arms Yard, London.

LONDON AND BLACKWALL RAILWAY COMPANY.—Notice is hereby given, That the Transfer Books of this Company will be Closed on Wednesday next, the 24th of August instant, and will not be re-opened until after the Half-yearly General Meeting of Proprietors on the 30th instant.

JOHN F. KENNELL, Secretary, *pro. tem.*

Offices, 60, Fenchurch-street, August 19, 1842

YARMOUTH AND NORWICH RAILWAY COMPANY—GENERAL MEETING.

The first general meeting, under the Act, was held at the Victoria Hotel, Great Yarmouth, on Friday, Aug. 5; George Stephenson, Esq., in the chair. There were also present, among others, Sir E. H. R. Lacon, Bart., the Right Worshipful the Mayor, John Longe, Esq. (Spixworth), J. E. Lacon, Esq., W. H. Palmer, Esq., T. M. White, Esq. (London), H. Cooke, Esq. (Norwich), John Norgate, Esq., H. Bolingbroke, Esq., J. C. Smith, Esq., G. P. Bidder, Esq., Mr. Routh, Captain Laurence, Mr. Woodrow, F. R. Reynolds, Esq., C. J. Palmer, Esq., C. Cory, Esq., — Locke, Esq. (of Shipdam), W. F. Cooke, Esq., patentee of the Electric Telegraph.

H. Patteson, Esq., the Secretary, read the clause of the Act (s. 61) under which the meeting was convened, and also the advertisement announcing the meeting.

The Chairman said, this being the first meeting since the incorporation of the Company, at present a very young one, he had little more to say than to offer his opinion that the present would prove a safe and sound scheme for those who had capital to invest in such undertakings. (Hear.) He hoped in another year they would have considerably progressed in the execution of the work, and trusted he should then have an opportunity of congratulating them. He should conclude by calling on Mr. Patteson to read the Report. (Cheers.)

Mr. Patteson then read the following

REPORT.

The Directors avail themselves of the earliest opportunity afforded them under the provisions of the Act of Incorporation, which received the Royal Assent on the 18th of June last, to call together the proprietors, and to lay before them a statement of the proceedings and an account of the Company's affairs.

In the measures necessary to be taken previous to their application to Parliament, the Directors had to encounter much difficulty, both from the adverse interests of parties engaged in competing projects, and from the objections of many landowners, whose consent it was deemed of importance to obtain; nor did they find it an easy matter to induce a sufficient number of persons to take shares, in order to comply with the Standing Orders of the House of Commons, and to warrant the Directors in the further prosecution of the undertaking. These difficulties, however, ultimately gave way before the energy and activity of those parties with whom the establishment of this railway had long been a favourite object, and with the aid of whose exertions the Directors at length succeeded in bringing their project to a successful issue. As the merits of the undertaking became more public and consequently more canvassed, they also had the satisfaction to find the opinion generally gain ground, both among the landowners and the public, of the truth of which they themselves entertained a thorough conviction—that a railway communication between Yarmouth and Norwich would not only be a source of advantage to that immediate district, but would prove a profitable investment to the proprietors—it would likewise become the basis of promoting future enterprise in railway undertakings in this and the neighbouring populous and opulent counties, and would thus open to this part of the kingdom those modern facilities of communication, the comforts and conveniences of which are now so generally felt and appreciated in those districts where local enterprise and energy have succeeded in introducing them.

Having established this feeling, it was not difficult to show that the Valley Line, which had been selected by the present Company under the advice of Mr. Robert Stephenson, afforded the greatest facilities for the construction of the railway; and your Directors cannot but congratulate the proprietary upon having succeeded in securing, not only the professional assistance of that eminent Engineer, but likewise his active and energetic co-operation in the formation and progress of the Company. The Company will also have the advantage of being aided in their councils by the advice and assistance of Mr. Stephenson, sen., who, in the course of his researches and examinations into the merits of this line, the capabilities it affords with regard to traffic and accommodation, and the facility of its subsequent extension, became so convinced of its advantages as a public measure, and as holding out a prospect of ample remuneration to the proprietors, that he consented to accept the office of Chairman of the Board of Directors, and has, with his friends, embarked a large sum in the undertaking.

In proof of the sufficiency of the estimates for constructing the works, the Directors have also the satisfaction of stating that, upon the introduction of the Bill, contracts for the whole of the works were taken at Mr. R. Stephenson's prices; and notwithstanding a very determined opposition to the Bill in Parliament, no attempt was made on the part of the opponents to impugn the sufficiency of the estimates, or the engineering merits of the line.

In making the application to Parliament, the Directors were fully aware of the difficulties they would have to encounter from many conflicting interests; but they congratulate the proprietors upon having been enabled to establish the public merits of the project before both Houses of Parliament, without in any manner compromising the principles upon which it was in the first instance advocated.

The Directors have to express much obligation to the several members of both Houses of Parliament who attended the Committees during the investigation; more particularly to those members who took charge of the Bill in the House of Commons.

By the Act of Incorporation, the Directors are empowered to pay interest after the rate of 5*l.* per centum per annum upon all calls made prior to the completion of the work, by which means they hope to insure punctuality of payment, which will best enable them to prosecute the works with vigour, and thus advance the period when the undertaking will return a profit to the proprietary.

The Directors are now actively employed in making arrangements for commencing the works, under the inspection of their Chief Engineer, Mr. Robert Stephenson, and the Assistant-Engineer, Mr. James Routh, who will be constantly on the spot; and it is confidently expected that, in the early part of the spring of 1844, the line will be completed and opened to the public.

The Directors have prepared a statement of the receipts and disbursements, which they now lay before the proprietors, by which it appears that the balance at the disposal of the Company amounts to 6,393*l.* 13*s.* All the accounts connected with the expenses incidental upon obtaining the Act have been delivered, and are in course of examination, and do not exceed the sum which, in the general estimate of expense, was appropriated to that branch of outlay.

By the accounts now laid before them, the proprietors will see that 1,521 shares still remain undisposed of. Of these, however, upwards of 500 are since appropriated, although the deposit is not included in the cash statement; and the remaining number is so trifling that the Directors do not doubt they will all shortly be taken up.

The Directors have now only to express the continued and warm interest they feel in this undertaking, and their confident expectations of its success. They are prepared to exercise their best energies in carrying out its objects, to conduct the various operations with vigour, and to enforce economy and order in all the departments.

Statement of the Receipts and Payments to the 5th of August, 1842.

RECEIPTS.

Capital on 7,500 shares, at 2*l.* per share deposit	£15,000 0 0	
Deduct deposit unpaid on 1,521 shares	3,042 0 0	
		£11,958 0 0

PAYMENTS.

Henry Patteson, on account	250 0 0	
Petty cash	50 0 0	
		5,564 7 0
Cash at the disposal of the Company		£6,393 13 0

The Report was unanimously adopted. The other resolutions will be found in our advertising columns of last week.

The only part of the proceedings which was of much importance, was towards the close of the business. It is thus noticed in the *Cambridge Advertiser*:—

The Chairman called on Mr. Bidder to make some statement as to the progress of the works.

Mr. Bidder begged to express on behalf of Mr. Robert Stephenson his regret in being prevented attending this their first general meeting; this feeling of regret was increased by the circumstance of the great personal interest he had always entertained for the prosperity of this measure. With respect to the railway, every step which could be requisite for ensuring an early progress had been taken with the least possible delay, and in fact the levels and field plans were completed for several miles of the line; but Mr. Routh, the Resident Engineer, would more particularly explain what had been effected in this department. The circumstances to which he would more particularly allude would be, first with reference to the estimate; secondly, the time of completion; and, lastly, the ultimate prospects of remuneration. He need not inform the meeting that Railway Companies and their Engineers had attained no enviable reputation from the additions which it had been found necessary to make to their estimates, but as a very humble member of the profession to which he belonged, he must protest against the whole responsibility of railway estimates and expenditure being thrown in upon the Engineers, and when he informed them that in some cases very little more than one-third the total cost of a railway was either estimated by or expended under the control of the Engineer, they would no doubt perceive the justice of his remarks. In the present case, with the view of defining the responsibility of each department, the estimate was divided as follows, viz.:—Engineering and contingencies, 150,000*l.*; land and compensation, 35,000*l.*; Management and salaries, 15,000*l.*; making an aggregate of 200,000*l.* He believed, sincerely, that with care and economy none of the above heads of cost need be exceeded, though the Engineers had nothing to do with the latter portion. With regard, however, to the engineering estimates, he could speak with confidence. From the experience he had had in other railways, he was convinced that the estimates comprehended all the works which would be required to complete the railway, and the prices were ample, and in short were agreed to by the contractor, so that some fault must rest somewhere if it should be exceeded; but from the knowledge he had of the experience and zeal of the gentleman to whom was entrusted the execution of the works—he alluded to their Resident Engineer, Mr. Routh—he felt assured that his whole attention would be directed to perfect them substantially and economically. The time of completion would mainly depend on their having so far effected their arrangements and agreements with landowners as to enable the works generally to be proceeded with with vigour in the ensuing spring, in which case, without incurring any additional expense, he thought the railway might be opened to the public in March, 1844. The other matter related to the ultimate prospects of remuneration. On this head he could speak with confidence, for on himself had devolved the duty of proving the traffic case in Committee; and in discharging this duty he had to adopt rather an unusual course—for instead of having to collect materials from every available source in order to make a sufficient case, he had, on the contrary, to strike out every item of traffic to which a possible exception could be taken, and he had so far succeeded that not the slightest objection was taken by the opponents of the Bill to his estimates, and they showed a return of 10 per cent. to the shareholders. In short, so satisfied was he of the traffic which the railway would command, and of the economy with which it is capable of being worked, that he would undertake to find parties of undoubted responsibility who would gladly contract to rent this railway, guaranteeing them 5 per cent. clear of all expenses. He felt it necessary to tell them that an addition of some 10,000*l.* or 20,000*l.* might have ultimately to be made to their capital, for, as he had only taken credit in his estimates of traffic for 16,000 tons of goods, whereas in all probability they may have to provide for 150,000 tons, an augmentation would consequently require to be made to their carrying establishment. But they might comfort themselves in the remembrance that any increase of expenditure of such a nature must bring with it a corresponding profit. He thanked them for the kind attention with which his statements had been received.

The Chairman wished to call upon another gentleman to give his opinion as to the working of the line, which was about to be worked on almost, but not altogether, a new principle. Mr. Cooke was the patentee of the Electric Telegraph, and would be able to tell them how beautifully it could be worked. They could hear the minute the train started from Norwich, and when it was at the stations. (Hear, hear.)

Mr. Cooke wished he had received some previous

Digitized by Google

intimation that he would be called on for explanation. The practicability of the plan he believed to be very strongly established, from the daily experience of the Blackwall Railway, millions of communications had been made by it. The trains travelled across the line every quarter of an hour, and intimation was given to all the stations. If an engine stopped before the carriages were ready disastrous consequences would occur; and it had recently occurred to him, that this plan being worked out a little further might render a single line, he would not say as safe as a double line for a crowded traffic, but absolutely safer for a single with, than double line without, the telegraph. With this a collision was impossible. He conceived their object was to divide even the 20 miles into four stations. Call them A, B, C, and D. At A there are four representative telegraphs, each representing the movements on the line between A B, B C, and C D. While the train was between C D all the other stations would have intimation, and no train would leave A B till they had ascertained if the course was clear, or would probably be so. It was the work of a moment. A boy touched the telegraph. "Is the station clear?" The reply was "Yes," and they proceeded. If at the other end the same inquiry came, an answer was returned, and at the intermediate station the first arriving train turned into the sideway and waited till the other was past. Thus it was impossible for the trains either to overtake each other, or to come into collision, so that this single line would be perfectly safe. In addition to its general convenience, in case of an accident occurring, such as the breaking down a rail, an accident to which they would be by no means liable, the trains would be allowed to work up to the point where the accident occurred, they would land their passengers and work back again. Their line, which was a single one, could never be said to be incapable of being worked to advantage. Such was the confidence he felt in the economy of the system, that he had become a very large shareholder, under the full conviction that a single line between Yarmouth and Norwich would become the most profitable to the shareholders. The ordinary means of working a single line was by keeping a pilot engine, which alone incurred an expense of 500*l.* a year. So that the telegraph, instead of being an additional expense, would, in fact, be a saving to the Company.

Mr. ROUTH said they had, during the last fortnight, proceeded eight miles, and he hoped the whole would be completed in another month—when they would be prepared to make their arrangements with the landowners.

Mr. J. C. SMITH had the pleasing duty to perform of proposing the thanks of the meeting to Mr. G. Stephenson, for having taken the chair on the present occasion. They all felt greatly indebted to Mr. S. for the interest he had taken in the Yarmouth and Norwich Railway, and for the very valuable assistance he had rendered.

Mr. C. CORY wished to call their attention to one circumstance connected with this line. He believed this was the first line which had been carried through the House under the 10 per cent. clause. He thought this fully worthy of notice, and they ought to notice those gentlemen who had enabled them to do so. He thought they were much indebted to the Chairman for this, and believed they should become one of the most flourishing proprietaries in the kingdom. (Hear, hear.)

The CHAIRMAN, in returning thanks, hoped he should continue to enjoy their confidence, and that all would unite to promote the interests of the undertaking.

The meeting then broke up, all parties appearing highly delighted with the unanimity which had pervaded the whole of the proceedings.

LANCASTER AND PRESTON RAILWAY COMPANY—GENERAL MEETING.

ON Wednesday last, the half-yearly general meeting of the above Company was held in the Directors' room, at the railway station. The number of shareholders present was nothing like so numerous as, from the importance of the subjects to be discussed, was expected. Nevertheless, we understand that, from several gentlemen holding proxies to a very great extent, had the question of leasing the railway to the Lancaster Canal Company, the grand feature of the meeting, been pushed to a vote, nine-tenths of the railway capital would have been represented.

The Directors present were—G. Burrow, Esq., Chairman; R. Garnett, W. Jackson, J. Dunn, S. Preston, T. H. Higgin, J. Fearenside, and G. Coulston, Esqrs.

The SECRETARY having read the advertisement convening the meeting, and the seal of the Company having been affixed to the list of shareholders,

The SECRETARY read the following

REPORT.

The Directors of this Company, in their last half-yearly Report, called the attention of their shareholders to the falling off of their passenger traffic, and now regret to have occasion to announce to them a continuation of decreased receipts of this railway. The circumstance has no doubt been caused partly by that universal depression of trade which has effected every railway in the manufacturing districts, and partly by those impediments which have from the opening of the railway, and still more recently, contributed to prevent that full development of traffic which your Directors had expected. The competition of the Canal Company by their swift boats at very low fares has materially prejudiced this Company's interests, and the want of a proper understanding with the North Union Railway Company has rendered the interchange of passengers at the Preston station very inconvenient to the public; and the additional charge of 6d. per passenger, levied by the North Union Railway Company for passing the archway at Fishergate, has also operated injuriously to the interests of the Lancaster Railway Company.

Your Directors are not desirous to revive a discussion on the questions which have been so long pending between them and the North Union Railway Company, but they cannot, in justice to themselves and the interests which they represent, allow it to be supposed that they have ever refused to submit their differences fairly to an impartial tribunal. By the original agreement between the two Companies, Mr. Booth of Liverpool, was appointed sole arbitrator in all cases of dispute, and it must be borne in mind that it was the North Union Company who, after a trial of 18 months, first repudiated Mr. Booth's award. Your Directors have never refused to be bound by any decision of that gentleman, and were up to the last moment of the discussion ready, and offered, to continue the same terms and conditions with the North Union Company as were awarded by Mr. Booth, when he was sole referee 18 months ago, and subsequently confirmed by him when called upon by the North Union Company to review his award. And, as the proprietors may be assured, they would not have objected to the proposed appointment of Mr. Locke, as arbitrator on the same questions, had not the offer of the North Union Company to appoint him the referee been coupled with a condition which your Directors could not consent to, viz., to submit to the consideration of the referee, the continuance of the novel and objectionable charge of 6d. per passenger for passing the archway at Fishergate.

Under these circumstances, and in order to put an end to those differences, your Directors endeavoured to make an arrangement by which the North Union Company would have had the entire control of the working of the Lancaster line, on their guaranteeing a certain rate of interest to the proprietors of the Lancaster Railway. This proposition being declined by the North Union Company, your Directors entered into negociation with the Lancaster Canal Company, which has resulted in an agreement with that Company to lease the railway for a term of 21 years, paying to the railway proprietors a clear rent equal to 4*l.* per cent. per annum, on the amount of the called-up capital, and subject to conditions which are fully detailed in the agreement itself, which will be laid before the meeting. Your Directors have carefully considered the terms of this agreement, which they believe are equitable, and will prove beneficial to both parties, and they therefore recommend the agreement for the adoption and confirmation of the railway proprietors.

By the statement of the accounts now laid before the proprietors, it will be seen there is a net sum of 1,908*l.* 10s. 3d. to the credit of the half-year's traffic, which, added to the reserved fund of 2,183*l.* 12s. 10½d., leaves a balance of 4,042*l.* 3s. 1½d. It will be the object of your Directors to discharge all the outstanding debts of the Company as soon as they can satisfactorily realise the disposable property and other assets of the Company, and in the meantime they recommend that no dividend be made till March next. Your Directors have the satisfaction to state, on the authority of Mr. Locke, that the railway, the stations, and the works, are all in excellent order.

According to your Act of Parliament, three of the Directors, viz., Mr. Garnett, Mr. Thomas H. Higgin, and Mr. Jackson, went out of office at the general meeting held in June last, the same gentlemen at that time were re-elected, subject to the approbation of the adjourned general meeting.

GEORGE BURROW, Chairman.

August 6, 1842.

The CHAIRMAN then desired the Secretary to read over the memorandum of agreement between the Lancaster Canal Company and themselves, which was to the following effect:—

The Canal Company are to pay a clear 4 per cent., making a rental of 13,300*l.* on the paid-up capital. The Canal Company are also to pay the interest on the mortgage debt, and all the expenses of working and maintaining the line. But as there is certain property not absolutely required for the traffic, it will be retained by the Railway Company; which, when sold, is expected to meet all outstanding liabilities. There is also a provision in the lease that the Canal Company should pay an increase on the rent of 13,300*l.* in case the line should be carried forward from Lancaster to Carlisle.

In answer to a question by Mr. W. Garnett, it was stated that the Canal Company were to pay the same rate of interest as the Railway Company did on the money borrowed.

Mr. R. GARNETT then moved that the agreement be adopted.

Mr. DEANS CAMPBELL, from London, seconded the motion.

After some little discussion,

Mr. BATES said, that, if he stood alone, he begged to move that the agreement as proposed with the Lancaster Canal Company be not carried into effect.

Mr. CATTERAL, of Preston, rose to second the motion.

Mr. HIGGIN then said that he rose with some degree of reluctance in the matter; but he conceived it of the greatest importance whether they should adopt the agreement or not. He hoped that the gentleman who had made the motion in opposition to the Directors, whose previous conduct he must have under his eye, would withdraw it; for the knowledge that some of them had no less than 600 shares ought to be a guarantee in their favour for anything which they might do on the behalf of the shareholders. Therefore, unless the gentleman could show some figures for his opinion, he hoped that he would withdraw his motion, and that the original proposition would be carried unanimously. If there was any shadow of a possibility of the matter coming to a poll, he would not say one word more, but from all that he could learn from those with whom he had conversed upon the subject, he could not hear that any one complained of the Directors having made a bad bargain for the shareholders. If the gentleman had no *data* to show that that which he had moved was necessary, he (Mr. H.) deplored the course which he had adopted. He thought that there had been but one opinion, that the bargain was a most advantageous one for the Railway Company, at the same time he did not wish that the Canal Company should be losers by it.

Mr. R. GARNETT said that, as he was the largest proprietor in the railway, he entirely concurred in and sanctioned the agreement. The agreement bore interest for 21 years, and he did not see how the same rate could have been produced any other way. He should therefore wish the gentleman to withdraw his opposition, unless it was likely to meet with support, which, on looking at the meeting, he did not think at all probable. Unless he could show some strong grounds for persevering in his opposition—which he (Mr. G.) did not see, and he would do the same for the interests of the shareholders as for his own—no good could arise in agitating the question, for upon so important a matter there ought to be but one undivided opinion amongst them.

Mr. W. JACKSON concurred in all that Mr. Garnett had stated.

Mr. DEANS CAMPBELL, said, that he had travelled a good deal, and he was quite certain that the agreement would be for the benefit of the small shareholders. There had been some hint of the interest of the railway being sacrificed in the agreement, as the times would get better; but might they not also get worse before they were better? He fully entered into the opinion of the

Digitized by Google

Directors in not stating to the public the terms of agreement, which would have greatly prejudiced the concern by producing nothing but jobbing. The Directors had fully held up that confidence reposed in them by preserving a secrecy, of which, if it had not been observed, others would have quickly taken the advantage.

Mr. W. GARNETT then said that he had great pleasure in supporting the original motion.

Mr. BATES said that, seeing what was the sense of the meeting, and the opinion particularly amongst the largest proprietors, he was open to conviction, as he did not wish to offer any factious opposition. Still he was of opinion that they had had a rather expensive Directorship; however, not to throw any inconvenience in the way of the Directors, he would withdraw his motion, with the consent of Mr. Catterall, who had seconded it.

Mr. W. GARNETT said that it was most desirable that they should go to Parliament without a dissentient voice.

A resolution was then put, and carried unanimously, that Parliament be applied to for an Act authorising the two Companies to carry the agreement into effect.

Mr. WAITHMAN, of Yealand, was glad to see the deference which Mr. Bates had paid to the opinion of the Company. He for one would have been glad if the interest had been more than 4 per per cent., but under existing circumstances he thought it a very good bargain. The last half-year they could not pay 2 per cent., and he did not see how it could have been doubled in the year. It was a poor concern, and the Directors had made a good bargain.

Mr. T. HIGGIN then moved the second resolution, which he termed a professional one, which was to the effect that a clause should be inserted in the Act that the Lancaster and Preston Railway Company should be invested with full powers to lease the said railway from time to time to any party, as they might deem conducive to their interests. Carried unanimously.

Mr. J. DUNN moved the third resolution, that the Directors of the Company should form a Committee, three of whom to be a quorum, to carry out and do all acts necessary for the interests of the Company. Carried ananimously.

After this the Report was adopted and confirmed.

Mr. Higgin and Mr. Jackson then gave in their resignation as Directors entirely on private grounds.

Mr. D. CAMPBELL moved a cordial vote of thanks to Mr. Jackson and Mr. Higgin for past services.

Mr. W. SATTERTHWAITE had great pleasure in seconding Mr. Campbell's motion, still he regretted the resignation of those whom he termed "the seniors of the Directorship."

Both gentlemen returned thanks. Mr. Garnett's re-election was confirmed; and Mr. Waithman, of Yealand, and Mr. Robinson Kay, of Bury, were chosen unanimously in the place of those who had resigned.

Mr. HIGGIN then recommended that Mr. Bolden be continued as the Secretary to the Company, for no gentleman would attend more to their interests than he would. As the duties would be much abridged the Directors had come to a resolution that the salary should be after the rate of 250*l.* a year, to commence from the 1st September next, without any fees or perquisites whatsoever; but that he was to have the liberty of devoting any part of his time to other business not interfering with his duty to the Company.

Mr. W. ROBINSON had great pleasure in seconding the motion, only he thought the remuneration was scarcely sufficient for the labour which would have to be bestowed.

The CHAIRMAN, in putting the motion, said that Mr. Bolden's salary had previously been 500*l.* a year: it being reduced to 250*l.* did not bind it for 21 years; it could be discontinued at any time, if ever a Secretary's services could be dispensed with.

The motion was then put and carried unanimously.

Thanks being voted to the Chairman and the Directors, the meeting broke up.—Abridged from the *Lancaster Guardian*, Aug. 13.

SHEFFIELD AND ROTHERHAM RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the proprietors of this railway was held at the Station, in the Wicker, Sheffield, on Thursday noon, when WM. VICKERS, Esq. Chairman of the Directors, took the chair.

Mr. H. VICKERS having read the notice convening the meeting, proceeded next to read the bye-laws, which have been confirmed by the railway department of the Board of Trade, and to which the seal of the Company was affixed.

The CHAIRMAN then said, on all former occasions he had been able to congratulate them on the steady increase of their revenue; but he was sorry now to say that the depression of trade had caused a considerable decrease. He called on

Mr. BADGER, who read the Report. The income of the majority of railways for the last half-year, especially where they depended on manufacturing districts, had considerably decreased; and this line, depending on the trade of the neighbourhood, had also felt the depression. The Directors, however, had endeavoured to enforce economy, and hoped to effect a considerable saving in the cost of coke, by reducing the rate of interest on the loans from 5 to 4½ per cent.; and by the new mode of levying the passenger tax. The former mode pressed very unequally on this railway. The new tax would be 5 per cent. on the receipts, whereas on some of the fares the former tax was 10 per cent. The income tax of the Company would be paid out of the general income. The Directors recommended a reduction of 1 per cent. in the dividend, which however they believed would be but temporary, since the savings adverted to, and the revival of trade, would, they hoped, restore the Company to its former position. The number of passengers was, by the local trains, 140,930; and by the North Midland trains 58,120; making a total of 199,050, being a falling off of 39,034. Mr. Thomas Linley, Mr. James Wilkinson, and Mr. Briggs retired from the Direction, and, if not re-elected, must be supplied by other gentlemen. Mr. Badger also read the accounts. The receipts were 9,314*l.*, the principal items being—passengers, parcels, and mails, 3,944*l.* 14s. 1d.; goods and miscellaneous, 610*l.* 2s. 10d.; coals, 337*l.* 6s.; North Midland Railway Company, our portion of passengers, goods, parcels, and mails, 1,680*l.* 11s. 1½d.; interest on outlay at the Sheffield station, 857*l.* 7s. 3¾d.; North Midland for engine power, &c., 1,720*l.* 17s. 10d. The expenditure was 5,717*l.*, of which the principal items were—cost of working the railway, including repairs of engines and carriages, cost of police, &c., 2,917*l.* 16s. 9½d.; maintaining the way, 520*l.* 5s. 11d.; interest on loans, 1,239*l.* 3s. 8d.; office expenses, &c., 360*l.* 13s. 5d. There remained a balance of 3,597*l.* 1s. 4½d. which, added to the surplus fund of 3,269*l.*, made 6,866*l.* Deducting the proposed dividend, 4,900*l.*, the surplus would be 1,966*l.*

The CHAIRMAN said, the Directors had closely investigated the question of the propriety of maintaining a dividend of 8 per cent., but were of opinion that it should be reduced to 7. In all the railways there had been an immense falling off, but on this railway the falling off had been less than the average. In last week, as compared with the corresponding week of last year, the Birmingham and Gloucester line had fallen off 315*l.*; the Glasgow and Greenock, 79*l.*; the Grand Junction, 176*l.*; the Liverpool and Manchester, 1,068*l.*; the Great North of England (a high-price line, and therefore paying the smallest proportion of duty), 152*l.*; and the Leeds and Manchester (a cheap line from Sheffield, but a dear one from Leeds) had fallen off 258*l.* Looking at the times, and the fate of other railways, they had reason to congratulate themselves that they had not suffered a greater reduction. It would however serve as an incentive, to urge the Directors to maintain strict economy, and he had no doubt that within seven years the line would pay 10 per cent. In the next half-year they should suffer a reduction from the loss of the mails, for the Company had not had the contract a quarter before the Post-office gave notice to take the mails off the line. They had got a contract to bring the bags for one-third of the price paid to the Company, but they did not consider the insecurity of a gig-mail travelling in the night without guard. The reserve fund, when the proposed dividend and income tax were paid, would amount to 1,803*l.* He congratulated the Company on the advantage they had gained by the new mode of paying the passenger duty, though the interest of all the great lines was on the other side. It would save this line 600*l.* a year, while it would cost the London and Birmingham 6,000*l.* a year more, and other long lines in like proportion.

The adoption of the Report was moved by Mr. Roberts and seconded by Mr. Hand.

Mr. BOOTH then commenced questioning the Chairman upon almost every item in the accounts, comparing them with those of previous years. It appeared that the Company had not been able to get their accounts from the North Midland Company until Tuesday, and then some considerable errors were discovered. With regard to the delivery of the goods the Chairman said, it was for the consideration of the Board whether they could not do it more satisfactorily than at present, or whether they should give it up. He admitted that the Rotherham station as at first erected was a disgrace to the Company, but it was now made exceedingly perfect, more so than it could have been but for the first blunder. He thought it was well worth all that it had cost.

Mr. WALES said, the 7 per cent. dividend would require 4,900*l.*; but as the profit of the half-year was only 3,600*l.*, it would be necessary to take 1,300*l.* from the reserve fund, which was but about 3,000*l.*, an operation which could not often be repeated. He moved, therefore, that the dividend should be only 6 per cent., which would take a smaller sum from the reserve fund.

It was arranged that the vote should be taken on the Report—not pledging gentlemen as to the dividend, which should be the subject of another resolution.

The Report was carried.

Mr. W. JACKSON then moved that a dividend of 17s. 6d. on the original shares, and 7s. on the new shares, being after the rate of 7 per cent., should be paid. He thought that considering the saving by the new passenger duty, by the reduction of interest, and the expectation of a reduced expenditure, there was no reason for paying less than 7 per cent.

Mr. LINLEY seconded the motion.

Mr. WALES then moved his amendment, to pay only 6 per cent. It would be foolish to divide the money which should be reserved for extraordinary outlay.

Mr. BOOTH seconded the amendment, and said, the reserve fund would be reduced 163*l.* by the income tax. The engines and carriages had been four years in work, and must be greatly deteriorated.

The amendment was put, and lost by a large majority.

Mr. BOOTH moved that the Directors of the North Midland should be applied to, to order their officers to furnish a weekly return of the traffic on this line.

The motion was seconded by Mr. W. Smith, and carried.

Mr. H. VICKERS then read a minute of the proceedings of the Directors of the 9th June, forming the basis of an agreement with the party who was erecting a place for public exhibitions at Brightside. The terms were, that the Company should let him a piece of land, at a rental of 6 per cent. upon its cost, for the purpose of public exhibitions; and that when the weekly income of the Company, by passengers from Sheffield to Brightside, which had only averaged about 6*l.*, should exceed 10*l.* a week, then the Company should pay the speculator half the fares above 10*l.* for 14 years; that the Company should also pay the speculator 2d. each on all passengers to Brightside by special North Midland trains. It was further provided, that if the building should cease to be used for the purpose of public entertainments, it should not be applied to any other purposes, without the sanc-

Digitized by Google

tion of the Company; and the proprietor should conduct his establishment subject to such conditions in the contract as the Company might choose to require.

Mr. Booth was sorry that the building had been begun, as he thought such a connection would, in the long run, be detrimental to the Company. He objected also to the reduction of the Brightside fares to 3d.

The Chairman said, the reduction had been tried for six months, and had produced 50 per cent. more than the higher fares.

Mr. Booth thought they had turned many shilling into threepenny passengers. Many walked from Kimberworth to Brightside to save 3d., rather than go to the Holmes. He thought that, by making Brightside attractive for pleasure passengers, they would injure the Company by inducing such passengers to stop there, rather than go further. He had always been opposed to the reduction of the fares to the intermediate stations.

After some further discussion,

Mr. Wilkinson and Mr. Briggs said, that having maturely weighed the matter, they were of opinion that the arrangement would be to the advantage of the Company.

On its being put to the vote, the agreement was confirmed by a majority of 21 to 16.

It was then proposed that the retiring Directors, Messrs. Linley, Wilkinson, and Briggs, be re-elected.

Mr. Booth proposed, and Mr. M'Turk seconded, the nomination of Mr. Spencer.

Another proprietor nominated Mr. Ingleson.

A show of hands was called for, when there appeared for Mr. Linley, 15; Mr. Wilkinson, 12; Mr. Briggs, 15; Mr. Spencer, 27; and Mr. Ingleson, 17. This rendered it necessary to take a scrutiny, the result of which was—Mr. Briggs, 722; Mr. Linley, 719; Mr. Wilkinson, 668; Mr. Spencer, 178; and Mr. Ingleson, 139.—Abridged from the *Sheffield Independent*, Aug. 13.

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

[From the *Leicester Journal*.]

The half-yearly meeting of the proprietors of the Midland Counties' Railway took place at Derby on Saturday, August 13. The attendance was by no means large.

The Secretary (Mr. J. Fox Bell) having read the notice convening the meeting,

The Chairman (T. E. Dicey, Esq.) affixed the seal of the Company to the list of shareholders, and called upon Mr. C. C. Macaulay to read the following Report:—

REPORT.

The general meeting of the proprietors which was held in February last having answered the purpose of a half-yearly meeting (though not then required by the Act of Incorporation), the Directors have now for the first time, in meeting the proprietors at this season of the year, to limit their Report to the proceedings of the half-year ending on the 30th of June last.

The Directors in the first place have to refer to the statement of accounts for the past half-year which has been printed and circulated amongst the proprietors, and a copy of which is annexed to this Report. It will be seen, that the gross receipts for traffic are 64,007*l.* 7s. 3d., exceeding those of the corresponding half-year of 1841 by 7,105*l.* 13s. 1½d.

The balance in favour of the Company on the revenue account is 18,767*l.* 18s. 2d., which, according to a clause in the Act of Parliament recently obtained, is at the disposal of this meeting for the purposes of a dividend, and it will enable the meeting, if they so decide, to declare a dividend of 1*l.* 10s. on every whole share, and 7s. 6d. on every quarter share for the half-year.

The amount of the working expenses in proportion to the gross receipts of the railway is a subject on which the Directors must make a few observations.

The tenor of some remarks that have been made, in the public prints and elsewhere, would seem to imply at least suspicion that this is a question which has either been viewed with indifference by the Directors, or at all events has not received the attention which its great importance merits. The Directors, however, assure the proprietors that the reverse of this is the fact, and that there is no one of their duties which has had in their minds so paramount an interest, and which has at all times been the subject of such anxious and unremitting attention, as that of keeping the working expenses within the smallest possible limits, and devising every means for their diminution, both with reference to the time present and the future.

In the first place, as regards the heaviest and most important item of railway expenditure, locomotive power, the Directors have been ably and assiduously seconded by the Superintendent of this department, Mr. Kearsley, and they cannot but feel gratification in calling the attention of the proprietors to the result, in the diminution of expenditure compared with any previous half-year, and in the low rate of actual cost compared with that of any other line. Whilst the engine stock has been not only brought into a state of the highest efficiency, as shown by the punctuality and speed regularly maintained, but has also had a further increase in value from the substitution of no less than seven copper fire-boxes for iron ones, as well as new tubing and complete general repair of several of the engines which were still deficient in this respect, the whole expenditure amounts to 14¾d. per mile run, and the Board feel confident of being able to effect still further reductions. Of the advantages and ultimate economy of copper fire-boxes no doubt is now entertained, notwithstanding their greater cost in the first instance. A reduction of 16 per cent. in the consumption of coke has already been made, and by adopting the system which is producing such remarkable results elsewhere, it cannot be doubted that a further reduction may ere long be effected; and at the expiration of the present contract for coke it appears probable, from the unexpected fall in the price of this article, that the superior quality absolutely requisite for locomotive purposes will be offered at a still lower rate. The proprietors are probably aware that Mr. Hall's patented invention for the consumption of coal has been tested by means of a series of very carefully and accurately conducted experiments on this railway, more fully and completely than on any other, in the hope of thus realising an important saving; but the Directors regret to say that the result proves altogether unsatisfactory, and that the adoption of this plan would, in the opinion of their Superintendent, be attended with an increase instead of a diminution of expense, as well as great injury and risk of serious accident to the engines. Mr. Kearsley's Report on this subject, just made to the Committee of Management, will be read to the meeting, and the Directors regret to find that an attempt has been made, by sending round to the proprietors partial extracts of a former Report from Mr. Kearsley tending to convey a totally erroneous impression of his views, and by other equally unwarrantable expedients, to force upon the Company the adoption of a scheme which they had shown such willingness and anxiety to examine, and to bring into operation if it had proved deserving.

Similar exertions are making in all the other departments to reduce every item of expenditure within the narrowest limits consistent with real and ultimate economy, and with the true and permanent interests of the undertaking, but the Directors must guard the proprietors against the error which is often committed, by taking the per-centage of expenditure on the gross receipts of a railway as a criterion of what should be the comparative expense of working. A comparison thus made between a railway of small and one of large receipts, must inevitably lead to produce a result not only unfavourable but most unfair towards those of the former class. No test can obviously be more fallacious, as there are so many sources of expense which will be the same or nearly so in amount, whether the traffic is large or small, and in scarcely any of which the per-centage of expense will not be greater in proportion as the receipts are smaller. Taking, for example, on the Midland Counties' Railway one head of expenditure—that of wages to servants—for the four weeks ending 29th January, 1842, when the weekly traffic averaged only 2,150*l.*, the average expense was 388*l.* 8s. 4d. per week, while for the four weeks ending 6th August, 1842, when the traffic averaged 3,057*l.* weekly, the expense was 394*l.* 12s., being an increase in the expense of only 6*l.* 3s. 8d. per week, whilst the increase of traffic has been 907*l.* per week. The fair mode of judging between one railway and another is the expense per mile, making due allowance for the difference of traffic according to relative circumstances; and upon this only accurate mode of arriving at a sound conclusion, the Midland Counties' Railway will bear an advantageous comparison with any of the principal lines in the kingdom.*

The Directors have to report, that the Act authorising an increase of the capital of the Company, and for which the petition had only been presented at the last meeting, received the Royal Assent on the 22nd of April. The power of creating new capital, by shares and by loans, has been granted to the full extent applied for by the Company; but it is accompanied by a condition, insisted upon for the first time this year by the Parliamentary authorities, namely, that the whole amount authorised to be raised by shares shall be *subscribed for* before the power to borrow can take effect. It has therefore become necessary that new shares should be issued to the full amount authorised by the Act, but the calls may be regulated by the wants of the Company, and it will be seen, by the explanatory statement which the Directors have lately sent to every proprietor, that if the measure they now intend to propose to this meeting be adopted, a call of 2*l.* per share, payable on the 1st of October, will be all that will be required to be paid on the new shares within the next two years. The following is the plan by which the Directors beg to propose that the proprietors should avail themselves of the powers of the new Act, and by which they consider that the present holders of shares will be placed on a more advantageous footing than by issuing the shares at a large discount, or by any of the other alternatives to which they might have resorted:—

That the additional capital of 250,000*l.*, authorised to be raised by the Act of the present year, be raised by creating 12,500 new shares of 20*l.* each, and that the same be offered to the present shareholders in the same proportion as the existing shares are held by them respectively, that is to say, in the proportion of one for each 100*l.* share, and one for every four 25*l.* shares, and that the Directors have power to dispose, according to their own discretion, of such of the new shares as may not be accepted by the present shareholders. That a call of 2*l.* per share on new shares be made payable on the 1st of October next. That the sum of 83,000*l.*, authorised by the above-mentioned Act to be borrowed after the new capital shall have been subscribed for, and which has been already engaged by the Directors, be borrowed on debentures; and that the further sum of 50,000*l.* be borrowed on loan notes for three years, in anticipation of calls. The new shares to be guaranteed a dividend of not less than 6*l.* per cent. per annum on the amount called up, but to participate equally with the other shares when the dividend shall exceed that rate.

The money to be now raised will therefore consist of the following sums, viz.:—

Call of 2*l.* per share on 12,500 new shares of 20*l.* each	£25,000
To be borrowed on debentures	83,000
To be borrowed on loan notes for 3 years	50,000
Total	£158,000

Although the legislature has unexpectedly imposed the necessity of issuing in the first instance shares for the whole amount, the Directors are desirous that the original views of the proprietors in sanctioning the application for power to add so large a sum to the capital, should be thoroughly and rigidly carried into effect, and they propose that the Board of Directors should be pledged not to increase the capital account beyond the above-mentioned sum of 158,000*l.* without the sanction of a general or special general meeting of proprietors, to which the grounds for any further increase of capital, and the full detail of any proposed expenditure, should be previously submitted.

The Act for making a junction railway between the Great North of England Railway at Darlington, and the Durham Junction Railway, which was adverted to at the last meeting, has passed through Parliament, and received the Royal Assent, and the Directors understand that active measures are in progress for the immediate formation of the line. It will be remembered that in accordance with the resolution of the special general meeting, held on the 5th of November last, this Company agreed to unite with several other Railway Companies in taking a lease of the intended new railway, for 10 years from the opening of the line, and a clause has been inserted in the Act for facilitating that arrangement.

Mr. Cropper, Mr. Rathbone, Mr. Garnett, Mr. Evans, Mr. Horsfall, and Mr. Fox, go out of office at this meeting by rotation, in conformity with the provisions of the Company's Acts, but are all re eligible.

[The publication of Mr. Kearsley's report on Hall's apparatus, above referred to, we must for the present defer].

* The following statements will show the relative cost of locomotive power under each head of traffic:—

Receipts from merchandise	£15,110	1	3
Deduct locomotive expenditure	2,691	2	6
Leaving a balance for all other expenses and profit of	12,418	18	9
Or	82·19 per cent.		
Receipts from coal, coke, and lime, from 3rd April to 30th June	1,245	18	7
Deduct—Locomotive expenditure	277	2	9
Leaving a balance for all other expenses and profit, of	968	15	10
Or	77·75 per cent.		
Receipts from passengers, horses, carriages, dogs, parcels, and mails	47,966	0	4
Deduct—Locomotive expenditure	10,238	0	0
Leaving a balance, for all other expenses and profit, of	37,728	0	4
Or	78·65 per cent.

Detail of the Charges referred to in the foregoing Statement.

(Abstract 1.)—Maintenance of Way and Stations.

	£ s. d.	£ s. d.
Six months' repairs of the railway, including the locomotive power employed in ballasting		£7,106 0 8
Extra works, viz., repairing bridges, side lines, turntables, points, and crossings		411 18 2
Repairs of stations and buildings		127 2 3
Engineers' salaries		550 0 0
Total		£8,194 15 0

(Abstract 2.)—Locomotive Power.

	£ s. d.	£ s. d.
Coke, coal, and fire-wood		4,092 7 9
Repairs of Engines and Tenders—		
Materials	£2,633 10 1	
Wages	3,003 2 9	
		5,636 12 10
Engine-drivers and firemen		1,405 7 5
Coke fillers and cleaners		1,073 9 6
Oil, cotton waste, &c.		640 8 4
Superintendence, clerks, and foremen		520 0 0
Gas		98 13 6
Sundry stores		76 10 6
Total		£13,543 9 10

(Abstract 3.)—Coaching Charges.

	£ s. d.	£ s. d.
Salaries to booking clerks		£423 17 5
Wages to guards and porters	1,006 4 4	
Clothing of ditto	183 13 2	
		1,189 17 6
Gas, oil, tallow, and waste		422 16 2
Sundry stores		181 6 3
		2,217 17 4
Repairs of carriages		1,886 0 5
		4,103 17 9
Stationery and tickets		162 6 1

Locomotive account	305 12 9	
		405 3 0
		4,671 6 10
Interest on the Midland Counties' proportion of North Midland outlay, and of cost of working the Derby station from 1st January to 30th June, 1842, and cost of working the Rugby station from the opening to 30th June, 1842 (two years) about		3,300 0 0
Total		£7,971 6 10

Audited 1st of August, 1842,
JOSEPH CRIPPS, Auditor.

Mr. JAMES HEYWORTH requested to be allowed to make a few observations with regard to the position of the Company's affairs, as he thought that some matters must necessarily arise before the Report could be adopted or discussed.

It being thought necessary as a matter of form that the Report should be before the meeting,

Mr. ORMEROD moved, and Mr. MATHER seconded, that it be received, adopted, and printed for circulation among the proprietors.

Mr. HEYWORTH then proceeded to say that he was not actuated by a spirit of opposition to the Directors in what he did; he had too deep an interest in the concern to wish to injure or obstruct its progress, for he was connected in his own family with members who held about a twentieth part of the whole shares. (Hear, hear.) He hoped his observations would not be considered irregular, and believed them to contain the sentiments of the shareholders generally. Many were disappointed, nay, irritated with the position of the Company. The excessive cost of the line above the estimate, an amount of traffic very far below what was put forward as an inducement to subscribe, and the heavy expense of working a line which should have been less than any other, were severely felt by the shareholders. Disappointment in those particulars, and looking forward for the last half-year to a dividend of 30s., had compelled them to think upon the means of improving their position. To effect that they looked to a reduction of the expenditure, and they recommended the Directors to make a searching inquiry, and, wherever curtailment could be made, consistent with the safe working of the line, hoped they would carry it out. It was impossible for them to point out item by item where reductions could be effected, not having access to all the financial details, but they would suggest that a considerable saving might be effected by reducing the number of Directors to 12, with an allowance of 600*l.* a year instead of 1,200*l.* On the Grand Junction they had 15 Directors, and 800*l.* a year only. Reducing the number of police to 40 would be a saving of 1,100*l.* per annum. Another point in which they might reduce their expenditure was the sum given for the maintenance of way; the Birmingham and Derby Company contracted for the maintenance of their

Digitized by Google

way at 117*l.* per mile, while theirs was 280*l.*: he was perfectly aware of the difference between the lines, and would give 170*l.* as a fair price—(applause)—in which case there would be a saving of something like 3,000*l.* a year. He would also allude to another point; if there were any salaries too high for the duties performed they should be reduced; if there were any supernumeraries, persons retained without any business to do, they should be discharged. The whole saving under such circumstances would be about 3,600*l.* a year, and that he thought might be effected. There might be a great number of items upon which economy might take place, and persons who had access to the books could minutely and nicely ascertain how retrenchments could be effected. As regarded increasing the receipts, another important branch of the question, the shareholders saw the way clearly in which that might be effected, that was, by a trifling advance in the fares, which they thought lower than those of other lines. The advance he had to propose was exceedingly trifling, and such as he felt persuaded would not be objected to by the public. If a farthing per mile advance were made the increase of revenue would be about 10,000*l.* a year. All statements put forward then must partake of the nature of theoretical assertions—they could not arrive at accuracy; but he could not conceive that any considerable falling off in the number of passengers would follow; but even if a few of the poorest class did, it would not materially affect the calculated increase, and, as to the convenience of the public, their own interests as shareholders were of primary consideration. An individual opposed to the interests of the shareholders might say, that coaches would again compete with the railway; what coach proprietor could live on such a fare, and even if he could, who would lay out capital in coaches and horses, with the knowledge that by the return of the Company to their old fares, he would again be deprived of his business? He had given those general views on the position in which they stood, and begged it to be understood that he did not mean to cast any reflection on the Directors, nor to put himself in the semblance in a hostile attitude towards them. (Hear, hear.) He should like some information on some points, as he had not been in the habit of attending meetings of the sort. There was nothing worse than hostility between shareholders and Directors, but it must be admitted that they were only stewards, and there were duties to perform with which no feelings of their own should interfere, he would just ask what were the regular periods of the Board meetings?

The CHAIRMAN replied, that the Committee of Management met once a fortnight, and the regular meetings of the Board were held once a quarter.

Mr. HEYWORTH—You have special meetings when anything particular occurs?

The CHAIRMAN—Very often; special meetings of smaller numbers. During the last year my brother Chairman attended 51 meetings of different kinds.

Mr. HEYWORTH—As 1,200*l.* a year is the amount paid for Direction, do the Directors receive whether attending or not?

The CHAIRMAN—The Chairman and Deputy-Chairman receive a fixed sum, the others an amount in proportion to their attendance.

Mr. HEYWORTH inquired the amount paid to the Chairman, and received for answer, last year 150*l.* He then continued, there was also a patronage to bestow, and he hoped it was carefully used. There were 15 Directors on the Grand Junction Railway; when they attended meetings 15 guineas were laid on the table, if only seven attended, 7 sovereigns and 7*s.* were taken up, and the rest returned into the cash box, and not divided. Was that the case in the Midland Counties', or did the members attending divide the whole sum among them whatever might be their number?

Mr. RATHBONE said that probably the Grand Junction Directors were altogether, those of the Midland Counties' were scattered.

The CHAIRMAN said, himself and Mr. Oakes, during the six years, had received about 100*l.* a year each.

Mr. RATHBONE could not say what was the amount paid to different members.

Mr. J. ELLIS said, if he were one he would tell whether they got 60*l.*, 80*l.*, or 100*l.* a year each.

The SECRETARY read a statement that the Chairman and Deputy-Chairman were to be allowed 150*l.* a year each, the Auditor 100*l.*, 26 meetings of the Committee of Management, seven members 2*l.* 2*s.* each, 26 of the Store Committee, two members 1*l.* 1*s.* each, 26 of the Finance Committee, five members 1*l.* 1*s.* each, and six meetings of the Board, 12 members 3*l.* 3*s.* each, except the Chairman, Deputy-Chairman, and Auditor, whose sums were fixed.

Mr. HEYWORTH—Supposing there is not that number of meetings in the year?

The SECRETARY—It is divided.

Mr. HEYWORTH—How many generally attend the meetings?

The CHAIRMAN—Six or seven.

Mr. HEYWORTH asked what was the quorum, and was answered three. He then inquired whether there were not occasions on which less than that number were present, and received a reply in the negative. A further inquiry was made by him as to whether they had any agreement with the Birmingham and Derby Company, and if so, when it expired.

The CHAIRMAN replied, it did not legally exist.

Mr. HEYWORTH—Did not the Chairman of the Derby Company, Mr. Smith, allude to some new arrangement to be made with the Midland Counties' Company?

The CHAIRMAN said, he was not in a situation to say what the proposed agreement was; the old one still existed. Notice had been given, a meeting was proposed, they had met, but nothing had occurred.

Mr. HEYWORTH said, some gentlemen, after seeing what Mr. Smith had said, had come to the conclusion that if the agreement were favourable to the Birmingham and Derby Company it must be unfavourable to the Midland Counties'. He hoped the Directors would see that they got a fair proportion of advantages.

The CHAIRMAN said, the proposed agreement, he believed, would be beneficial to both.

Mr. HEYWORTH—Is the maintenance of the road done by contract?

The CHAIRMAN—The whole.

Mr. HEYWORTH—Of course the price varies considerably?

The CHAIRMAN—North of Leicester it is 210*l.* per mile, south 230*l.* per mile; the average being 217*l.*

Mr. HEYWORTH inquired respecting the contract for coke.

The CHAIRMAN said, when they begun the railway coke was monstrously expensive, 50*s.* per ton, after some time it came down, and then good Morley Park coke was 28*s.* a ton, and they saw no prospect of its being cheaper. It was suggested that by baking themselves they could effect a considerable reduction, and in consequence they built some ovens, and contracted for three years with Mr. Silverwood, that he should furnish coke at 16*s.* per ton, delivered to the boats, or 19*s.* 6*d.* at Long Eaton, he paying 150*l.* a year for the ovens. It was his (the Chairman's) opinion that they would not get coke of an equal quality cheaper.

Mr. HEYWORTH asked whether the price paid for the conveyance of coal, 1*d.* per ton per mile, could be any profit to the Company?

The CHAIRMAN read a reply on the subject sent by the Secretary to Mr. Lawrence Heyworth, the most important part of which was, that the rate was fixed in relation to the canal, and therefore could not be raised. The receipts were stated at 1,245*l.* 18*s.* 7*d.*, the cost of locomotive power, including repairs, at 227*l.* 2*s.* 9*d.*, and other expenses at 48*l.*, leaving a considerable balance in favour of the Company.

Mr. HEYWORTH apoligised for the time consumed in the observations he had made, and said, that whatever inaccuracy there might be in the statements put forward, he must maintain that the principle must be kept in view both by Directors and shareholders, that retrenchment of expenditure and increase of revenue were the only two means by which they could hope to redeem that which he would call a good line, and which he used to think better. He hoped the principles would not be lost sight of.

Mr. JESSOP said, the means of judging of the railway was by a comparison with other railways. He had a statement of the expenses of the North York and North Union Railways, which were both considerably below theirs. The expenses of repairs on the Midland Counties' Railway for the half-year ending December, 1841, were 8*l.* 17*s.* 8*d.* per cent. on the receipts. They were told that those expenses were excessive, and increased on account of the slips at the Rugby end, but instead of a reduction they had increased during the last half-year to 12*l.* 6*s.* 1*d.* per cent. The maintenance of way on the North Union was 1*l.* 4*s.* 5*d.* per cent.—(hear, hear,)—that of the North Midland was 4*l.* 10*s.* 11*d.* per cent. Their repairs of locomotives amounted to 21*l.* 3*s.* 2½*d.* per cent., that of the North Midland was only 15*l.* 9*s.* 10*d.* The previous half year the expenses were 51*l.* 5*s.* per cent., for the last they were 60*l.* per cent. Mr. Jessop then went into a few other details, all tending to show the high rate of expenditure on the Midland Counties' Railway.

Mr. MOXON asked whether Mr. Cripps, the Auditor, was a Director.

The CHAIRMAN replied that he was, at that moment.

Mr. ORMEROD stated, that he had taken a comparison of the fares on different lines, from which it appeared that the Midland Counties' rates were exceedingly low. The Brighton line 52½ miles, and the fares were 4*s.* 6*d.*, 6*s.*, and 9*s.*; the London and Birmingham was 112 miles, the fares 30*s.*, 25*s.*, 20*s.*, and third-class 14*s.*; the Grand Junction was 97½ miles, the fares 26*s.*, 18*s.*, and 13*s.*; the Leeds and Manchester was similar in the rate per mile to the Midland Counties'.

Mr. HEYWORTH presumed that an advance of a farthing per mile would be readily acceded to by the public; the result would be 10,000*l.* a year increase. He was sure if it was his own business he should do so, and every gentleman sitting at the Board was bound to look at the interest of the Company as his own. He trusted that, after what had been said, something would be done.

Mr. J. ELLIS agreed with Mr. Heyworth that the shareholders were disappointed, and was sure the Directors were not surprised at it. He did not suppose the Directors could bring traffic on a line where it might be wanted; all they could do was to employ the best servants they could get, and pay them no more than they ought to be paid; to offer every facility for the traffic, and to conduct it economically. He did not agree with Mr. Heyworth about the maintenance of way. Knowing the circumstances of a portion of the line better than any one else, he thought the contract for the distance between Rugby and Leicester would not pay. With respect to raising the fares, he doubted the feasibility of it; such was the depressed state of trade between the three towns, and the competition with the Derby and Birmingham line, that he doubted whether any good could arise from raising the fares. He represented some persons who had their all in the railway—they were dissatisfied, and he was too—dissatisfied with the continued increase of capital. When a railway was begun they did not know what it would cost; but when a railway had been at work a year and a half, 24 men, with common sense, could come near it. He would not trust the best set of men he knew with power to spend a quarter of a million in any way they pleased. At the meeting the previous year did not they come out in that room and tell them that 90,000*l.* were wanted to complete the line, but that to make quite certain they would take 110,000*l.* and that went for gospel. Then their worthy Chairman told them that 120,000*l.* were wanted, but that 133,000*l.* should be taken to complete the

Digitized by Google

works. Now they had gone on another half-year, and 158,000*l.* were wanted; they knew very well that they would not complete it for 158,000*l.* If they were just to suppose their capital increased to 200,000*l.* then there would be 10,000*l.* a year interest to pay. They had heard a great deal about cheapening locomotive power. When their receipts were 30,000*l.* their expenses were 11,000*l.*; when they were 56,000*l.* they were 22,000*l.*; now when they earned 64,900*l.* they spent 38,000*l.*, or 60 per cent. on the receipts. He wanted to get things into such a trim that no more money should be spent than was necessary. He would rather see a calculation made of the existing liabilities, and if they were 200,000*l.* let them have it, and put them in such a nick that they could get no more. From that time it ought to take care of itself, and the expenses come out of the traffic.

Mr. RATHBONE was sorry to say that the only ray of hope was in raising the charge, and thus trying to get from the public what they ought to have for the accommodation given them. The only question was whether they would not lose a greater quantity of passengers than would make up for the advance. With regard to economy he hoped the Board would continue what they had practised. The North Union line cost nearly 200*l.* a mile, and they had no works like those between Leicester and Rugby. They were better off than lines that let their contracts some time before. In power, he should be glad to see a reduction; still they were nearly on a par with the North Midland. He must deprecate very strongly any comparison of the comparative per-centage upon the traffic. He believed that their expenses were lower than those of the London and Birmingham Company. He did not think that sudden and violent changes would be attended with success, hoped they should have an increase the next half-year, and thought the proprietors must exercise a little patience.

Mr. HEYWORTH said, Mr. Rathbone had adjusted his argument to such a nice balance of opinion, that it was impossible to ascertain to what side it turned. (Applause.) He had alluded to the matured experience of the London and Birmingham line; but as his had been acquired on that line, why need they be crawling at that slow pace when the experience of Mr. Rathbone might be grafted upon their line, and thus start it at once from infancy to manhood. Mr. Rathbone expressed a favourable opinion to the increase of fares, but thought himself scarcely capable of forming a judgment, because not acquainted with the neighbourhood. Supposing they found the advance in the fares did not produce the desired effect, were they bound to remain in that position? Had they not locomotive power, and intellectual understanding to return to that they had departed from? Could any mischief arise from making the change? He knew the difficulty of arriving at a certain conclusion, but some steps should be taken; this was an obvious one, and the trial should certainly be made; if it succeeded they would gain a considerable advantage, and if it were a failure they would neither sustain defeat nor loss if they went back again to the peaceable, sleek, lovely, humble condition in which they then were. (Applause and laughter.)

Mr. WATERS was not surprised at the dissatisfaction expressed, while their shares were at from 34 to 36 per cent. discount in the market; and it was his firm belief that there had been too much money expended. Their first works had been badly constructed; they were done at the expense of the Company instead of the contractors. The maintenance of way, in the December half-year, was 6,512*l.*, or 8*l.* 7*s.* 3*d.* per cent., and they hoped it would be less in the June accounts; instead of which, it was increased to 8,194*l.* 15*s.*, or 12*l.* 16*s.* per cent. He was aware that the expense was great between Leicester and Rugby, and would like to know out of what it was paid—the capital or the revenue?

The CHAIRMAN said, it was quite correct that the maintenance of way had increased; the reason they were probably not aware of. The contractor or a part of the line had taken it so low that he was unable to fulfil his engagement; the Company, in consequence, called in an experienced Engineer, who recommended them to take it into their own hands, and spend a considerable sum of money upon it, and get it into a good condition. They acted upon that advice, and a certain portion of the expense had been placed to the capital account, and the rest to the revenue.

Mr. WATERS said the Directors ought to have been fully aware that the contractor could not perform his contract, and ought to have made him enter into security.

The CHAIRMAN said they did not enter into it hastily. [Much surprise was expressed at their neglecting to obtain security for the performance of the contract.] He continued to remark on the previous speakers, saying, Mr. Ellis was very anxious that their capital should be limited. They had endeavoured to limit the capital, but they could not so tie up the hands of the Directors as that they should not be empowed to call up the whole amount of those shares; still they had pledged themselves that they would not call beyond the amount stated in the prospectus. [The Chairman read the clause in the Report referring to this business.

Mr. C. MACAULAY explained that, previous to this year, the general meeting had the power of allotting the shares; but in the late Act, the Lord Chancellor had introduced a clause, by which it was necessary that it should be all subscribed for before the power to borrow arose. The Act of Parliament stood in that way; and when it was once subscribed for the Directors could call for the money at any time, and in any way they thought proper. All he could say was, that when the Directors had pledged themselves in the way they had done in the Report, a Court of Equity would restrain them from exercising the legal power they had.

The CHAIRMAN asked if they could tie up their hands more completely?

Mr. R. SEDDON said, they should not place themselves in a situation to need the money; they should call a public meeting if they wanted more. He wished to know whether that would pay all the liabilities?

The SECRETARY replied that it would cover all, and 4,000*l.* beyond, except some works that were necessary to be erected. (Cries of "Ah!") There were sheds wanted at Rugby, Syston, and Loughborough; it was also calculated that the three Companies might save 500*l.* a-year in gas at the Derby station, by manufacting their own—if they had but gas works, the cost of which would be 3,000*l.*, or 1,000*l.* a-piece. (The gas now costs 1,400*l.* a-year.) They were badly off for water at Leicester; it had been so impregnated with lime as to be very injurious to the engines.

Mr. J. ELLIS said, any expense they might go to in procuring water, would not be badly laid out.

Mr. WATERS inquired if the land was included in the liabilities, and received an affirmative answer.

Mr. E. S. ELLIS asked if the interest was paid of that. It ought to go to the revenue account.

Mr. WATERS made some inquiries about the buildings at Rugby, &c., and was informed they would not be expensive.

Mr. BURGESS said, Mr. Betts had brought an action against the Company for 7,500*l.* If he gained his action, they should have to pay it; if not, they should not. He was to have had a certain sum if the line was opened by a certain time, and if not, the Company were to have certain deductions. The line was not opened at the time specified, the Company had refused to pay the money, and for it Mr. Betts had brought his action. This was an additional contingent liability.

Mr. MOXON inquired if the account contained the whole of the debenture charges, and was told it did.

Mr. SEDDON asked, how much the proposed buildings would cost?

The SECRETARY replied, that Mr. Barlow's estimate was about 14,000*l.*

Mr. SEDDON, after an inquiry respecting the engineering expenses, noticed an item for the stations at Rugby and Derby, which was said to be about 3,300*l.*, and asked what were the expenses of the two stations?

The CHAIRMAN said the amount was not settled.

Mr. SEDDON remarked, that they took nothing off for depreciation of stock; the London and Birmingham Company debited themselves with 10*l.* per cent. per annum on this account, and he wished to know what amonnt they should set aside for the purpose.

Mr. HEYWORTH asked whether it was for the proprietors to determine the depreciation of stock.

The CHAIRMAN repaid in the negative. Their business was only with regard to the amount of the dividend. Provided a contemplated arrangement with the London and Birmingham Railway Company, by which they would rent their carriages, was entered into, a depreciation fund would not be needed. Circumstances had made things so very low, that they had thought it better not to take such a fund at present.

Mr. HEYWORTH did not see the value of that argument. No man would consider it wise to close his eyes to anything depreciating or defective in his property. They ought to look it fairly in the face. As far as the engines were concerned, he thought there was no such fund required, as they were constantly kept in a state of repair.

Mr. J. ELLIS thought the depreciation would be at the least 5 per cent.

Mr. HEYWORTH only wished to know what the depreciation was. He was rather inclined to think it would be best to pay out of the earnings of the current half-year the expenses of depreciation.

Mr. ELLIS said, they knew the rails would not last for ever, and therefore they ought to provide annually for renewing them.

Mr. HEYWORTH had the authority of Mr. Locke for stating that the wear and tear of a railway, the necessary repairs, and new stock required, might be so nicely adjusted as to vary very little indeed from year to year; so that no shareholder need complain of being saddled with unnecessary expense in any half-year.

Mr. RATHBONE was glad to have Mr. Heyworth on his side, in a question on which he had been opposed by Mr. Ormerod and Mr. Lawrence Heywood. No Company was inclined to go through an investigation of the kind more than once a year, as it was not only inconvenient, but attended with very much expense. The engines had been very completely attended to, and that expense had been put to the revenue account, as was the case with other Companies.

Mr. HEYWORTH was afraid that the reason they had not laid aside something was, the extreme poverty of their circumstances, but they ought to "take the bull by the horns." He must press the necessity of economy. When he looked at that splendid building, whose magnificence and greatness were almost national, his mind was filled with admiration and respect; but when he saw the profligate waste of expenditure—saw money extravagantly expended, which had been torn from the pockets of the poor shareholders, his blood almost curdled in his veins. (Hear, hear.) He must enforce the necessity of their being led to retrace their own steps, and to economise to the utmost extent. He hoped the Chairman would assure the shareholders present of the determination of the Board to examine into every item of expenditure, and to reduce wherever practicable. They could not return to their constituents, unless they had an assurance of that description. He must say that unless something tangible was stated, unless they could convey an assurance that the process of economy would be carried on, and raising the revenue also, a collision would take place between the Directors and the shareholders, a special meeting would be called, and probably unpleasant circumstances would occur.

The CHAIRMAN said, they required an assurance of their disposition to practise economy; he did not see the necessity of it, as they had always been as economical as possible. He did not say that they had not made mistakes, but that they had not spent

Digitized by Google

one penny without endeavouring to benefit the Company. He wished Mr. Heyworth had given more hints that would have been useful for them. If they could reduce the expenditure—if they could raise the revenue—if the sky fell, they should catch larks—(cries of "No, no; we shall all be caught")—if they could point out any particular item on which they could reduce 100*l.*, it would be of some use. (Some one mentioned the police.) Was it desirable that they should expose themselves to the risk of life.

Mr. JESSOP said, it was done on the North Midland, the men wrought on the works, and acted as police in addition.

Mr. ORMEROD said, he would be happy to point out one or two points on which a saving might be effected. If the Board of Directors was reduced to 12, then there would be a very visible saving, with a reduced allowance of 600*l.* a year. (Applause.) He could point out many other things, and he did not think the Directors would be doing their duty to the Company if they did not make the reduction.

The CHAIRMAN did not think they would do wisely in reducing the sum paid to the Directors. With respect to the officers of the Company, he did not hesitate to say, he did not think any of them overpaid. With respect to the saying, that because the Company did not make a large dividend, they could not pay their servants well, it was a complete fallacy; they must pay according to the price of labour among the surrounding Companies. (No, no.) If they received 12 per cent. they would not pay more. One word with respect to Mr. Ellis, who was the most formidable of their opponents, though, when he knew more of their expenditure, he would, perhaps, judge more charitably of them. He did not think that he had even stated what he thought the liabilities of the Company would be; in fact, it was quite impossible for the Company to state that for themselves. It was nothing uncommon, he believed, for railways to exceed the estimate; and he wished to ask Mr. Ellis what was the cost, and what the estimate of the Swannington Railway?

Mr. ELLIS said, the whole cost of the Swannington Railway was 142,000*l.*, and the estimate 70,000*l.* or 80,000*l.* He gave his services in attending to the business of that railway for two years without any pay. (Applause.) No 24 men men could tell what a line would cost when it was begun, but after a year and a half they should be able to tell. He did not agree with the Chairman, when he told them that nothing could be done in the way of retrenchment. (Hear, hear.) He thought that something could be done, and that something must be done.

The CHAIRMAN said, something visible. (Many voices, "It can be done.")

Mr. HEYWORTH said, the Chairman had stated that he had not shown in what way a reduction could be effected. He (Mr. H.) had told him of the way in which he thought it ought to be done, and the Chairman spoke of danger to the public, and tremendous catastrophes that might take place. He only wished for such reduction as was consistent with safety; beyond that he did not go. He had another remark to make with regard to the reduction of expenditure; the Chairman stated that it could not be expected the Directors should give their services without remuneration; he (Mr. H.) would reduce their number to twelve; and then if they got 600*l.* instead of 1,200*l.*, they would be as well paid as at present. With regard to the servants, he would not deprive any man of the remuneration he should have, but he had an opinion that if an investigation were made into the manner in which the clerks of the Company were paid, it would be found that some reduction might be made without detriment to the concern, or injustice to the servants.

Mr. R. COOKE (of Leicester) said, allusion had been made to expenditure taking place in buildings at Rugby, and also still further to take place; he wished to know whether those works were contracted for?

The CHAIRMAN replied, it was not yet decided whether they should erect themselves, or contract for them.

Mr. COOKE had another question to ask; he had perceived in passing to the Leicester station a house building for the superintendent of police, when it was notorious they had already too many empty houses.

The SECRETARY replied, that that house, at least the materials, had been bought to make the opening from Northampton-street.

Mr. COOKE inquired the amount of the contract, and was told 150*l.*, which he did not think too much. He was also informed that the superintendent would pay rent for it. Mr. C. went on to say that he thought the Chairman had assumed the tone of special pleading, instead of that belonging to his office, particularly when he said he could not lay his finger on any item which might be reduced. He should like to be informed what was the salary of the Secretary.

The CHAIRMAN said he was obliged for his mentioning that, as he considered himself particularly responsible for that appointment. He had pressed his friend Bell to offer himself for the situation when it was vacant; and himself and another Director had fixed the salary. Mr. Bell received 800*l.* a-year for being Secretary and Superintendent. When the railway was originally planned, Mr. Bell undertook the Secretaryship at a very inadequate salary. For about three years he gave his services to the Company, with the understanding that if the thing were carried out, he should receive a salary of 500*l.* a-year. He had worked through a great deal of difficulty, and by his means their share-list was better than that of almost any other Company. They had not so many men of straw among them. (Voices, "It was owing to Mr. Burgess.") The Company was formed, and Mr. Bell became the Secretary at 500*l.* a-year; he (the Chairman) became acquainted with him, and after some time had an opportunity of seeing what the duties of Superintendent were, previous to which he had thought they could make any man a Superintendent; but of that he had been disabused, and saw that it required peculiar talents. These he thought he had found in his friend Bell, and when the superintendency became vacant, he suggested that he should take it, and also recommended that he should have 800*l.* a-year. He would say they had never made a better bargain in their lives. (Derisive laughter.) Mr. Bell's salary was not equal to two salaries united altogether. They were in a peculiar situation between three railways, and if the Superintendent had not tact, they were injured in various particulars. Mr. Bell united two qualities in a greater degree than he ever expected to find them together, good temper and firmness. In all probability a saving in salary would have been a direct loss to them. His view of economy in laying out money was to make it produce the best results.

Mr. D. GOSSETT asked whether any subordinate appointment took place at the time Mr. Bell was appointed Superintendent, and received a negative reply. He then asked how it was Mr. Woodhouse had 500*l.* a-year for superintending, if Mr. Bell had time for both?

Mr. COOKE inquired Mr. Kearsley's salary, and was told 500*l.* a-year.

The CHAIRMAN said the salary was at first 300*l.* a-year, but when Mr. Kearsley was invited to accept an engagement under the Grand Junction Company, they proposed to give him something like what he would have had there if he would engage with them for five years.

Mr. COOKE said, whatever his office of 800*l.* a-year might be, he presumed Mr. Bell's time was supposed to be wholly occupied at his old salary, and he thought the last a very needless addition for the extra work. They could only have his time, and he pronounced that he was overpaid.

The CHAIRMAN said, if they had two officers, they must pay more.

Mr. COOKE said, if no other gentleman proposed it, he should, that Mr. Bell's salary be reduced one-half.

The CHAIRMAN hoped then that they would propose another Board of Directors.

Mr. J. EDWARDS, Baptist minister of Nottingham, said he thought no loss could accrue to the public from such a circumstance. Much had been said about the claims of the public, and much of the claims of the agents, but nothing respecting those of the shareholders. If the Directors could not accede to the wishes and necessities of the Company, he hoped they would retire, and leave some better men to take their places. He thought, if nothing else could be done, they had better let the railway to some person who would manage it, as had been done with the Leeds and Selby line; a proceeding which had at once raised their shares from an enormous discount to par. It was quite time some arrangements should be entered into for their improvement, and if the Directors could not reduce the expenditure, he thought a Committee of gentlemen should be appointed to consider the matter.

The CHAIRMAN said, if the shareholders thought they should retire, he for one had no objection.

Mr. MATHER seconded the reception of the Report.

Mr. EDWARDS moved as an amendment, that the Directors retire; and as another, if that were rejected, that a Committee of gentlemen be appointed to inquire into their affairs.

Mr. RATHBONE, among some other remarks said, with reference to Mr. Bell's and other salaries, that it was not the business of that meeting to consider the value of individuals; that business belonged wholly to the Directors.

Mr. J. ELLIS thought that the retirment at once of the whole body of the Directors of any concern would be attended with great inconvenience.

Mr. EDWARDS said, some time ago the Government of the country had misbehaved themselves, they were all turned out, and another set took their places, yet no inconvenience had resulted.

Mr. J. ELLIS said that the Under-Secretary of State was a gentleman residing in a neighbouring county, and he retained his situation under different Administrations. The working men remained the same, though the ostensible actors were changed.

Mr. EDWARDS replied, that if Mr. Bell, whose valuable services they had heard so highly commended, and the other acting officers remained, they need not care about the Directors.

Mr. SEDDON hoped they would follow the example of the Grand Junction Company. The expenses should be less in proportion to the receipts.

Mr. GLYNN moved as a further amendment, that a Committee of five gentlemen be appointed to inqure in the accuracy of the accounts. He thought it would be more satisfactory to the shareholders.

Mr. EDWARDS seconded the motion.

The CHAIRMAN said, the only object would be to supersede the powers of the Directors. He thought no persons could be better fitted to examine the accounts than them. It was for their interest to have a large dividend.

Mr. ORMEROD thought they should not separate without an understanding on the part of the Board that modes of retrenchment would be sought and prosecuted. Moreover, that an understanding should be given that an addition should be made to the fares; if not, the shareholders with whom he was connected would call a special general meeting in six weeks.

Mr. J. ELLIS said, with that understanding it might go off.

Mr. GOSSETT could not see any great difficulty in the way of the appointment of a Committee; nor even to the retirement of the Directors, as a whole: it had been done on the London and Birmingham line.

After some further discussion it appeared, that the clause in the Act, upon which Mr. Glynn's motion was funded, was so framed as to render null the intentions of that gentleman; it only allowing a retrospective examination of the accounts, and that merely with reference to their correctness. He consequently withdrew his motion.

Digitized by Google

The adoption of the Report was then put and carried.

The CHAIRMAN proposed that a dividend of 30s. per cent. be paid, which was carried *nem. con.* He then moved the resolutions relating to raising new capital. (*See Advertisement.*)

Mr. JESSOP moved that the dividend be 5 instead of 6 per cent.

Mr. E. S. ELLIS wished to ask if the Directors would pledge themselves not to spend more than 200,000*l.* The resolutions were then passed, scarcely an effort being made to prevent them.

The CHAIRMAN said, there were four Directors to retire by rotation, Messrs. Cropper, Rathbone, Horsfall, and Fox, who were all re-eligible.

A long discussion followed; the majority present not wishing to fill up those vacancies, but gradually to reduce the number of Directors, and expecting they had the power to do this, as it was one express purpose for which they had applied in their last Act. This Mr. Ormerod, Mr. Rathbone, and others, stated to have been the wish of the previous meeting, and also their impression, on hearing the draft of the Act read.

Mr. C. C. MACAULAY stated, that if a Director went out from any other cause than rotation, as resignation or death, then the vacancy might be left unfilled up.

Mr. MOXON moved, 'that Mr. J. Ellis and Mr. S. Waters be chosen Directors, in the room of Messrs. Garnett and Evans; which was seconded and carried, after an interruption from some informal proceedings.

The whole of the remaining business was transacted in a very confused informal manner. Some one moved that the gentlemen going out of office should be re-elected, which was seconded.

Mr. Seddon moved, and Mr. Ormerod seconded, that the two last-mentioned gentlemen, Messrs. Horsfall and Fox, be left out.

Some altercation followed, and the opposing party persisting, the non-election of these parties being carried by a considerable majority; on a show of hands, a gentleman with 20,000*l.* proxies, demanded the ballot. Several shareholders exclaimed, that while the Directors had things their own way, they were satisfied with a show of hands, but when their wishes were opposed, they demanded the ballot, because they knew that they had the power.

Mr. HEYRICK said, he was a most unworthy member of the Board, and very seldom attended; he therefore wished to step in as a peace-maker between the parties, and offered his resignation that there might be no disputes, and no ballot.

This was not accepted; and the so-called ballot was taken, when a very large majority appeared for the re-election of the two Directors; principally owing, however, to the large number of proxies, 1,016, possessed by one individual, Mr. Rathbone.

Some discussion, respecting the appointment of an Auditor, took place, but the matter was left undecided.

A vote of thanks to the Chairman and Directors was then moved by Mr. Mather, and passed, without notice of any kind; in fact, it could scarcely be heard by any one.

MARYPORT AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the proprietors of the Maryport and Carlisle Railway was held at Aspatria, on Wednesday, the 10th instant; F. L. B. DYKES, Esq., in the chair.

The advertisement announcing the meeting having been read, and the requisite shareholders in number and value being present, the common seal of the Company was affixed to the share list.

The following Report of the Directors was then read by the Chairman:—

DIRECTORS' REPORT.

The Directors, in submitting to the proprietors the result of their operations, have great pleasure in reporting the progress of the works to be in a most satisfactory condition, as will be found set forth in a more detailed manner in the Engineer's Report annexed.* That portion of the line from Maryport to Aspatria, which has been in active operation for some time, continues to afford an increasing revenue, and yields a very fair return for the outlay upon it. In a short time another part from Carlisle to Dalston will be open; and in the course of the ensuing spring, the line will be through to Wigton, when a very considerable traffic may be expected. In fact, the weather during the last six months has been so favourable for the operations of the contractors, that the work done during that period is such as to satisfy every person concerned.

The passenger traffic exceeds by much what could have been expected. Coaches from Carlisle to Whitehaven run in connection with the railway, the arrangements of which are both judicious and cheap, and this mode of travelling is found a great accommodation to the public.

It is now ascertained that coals may be sent to Carlisle and all the intermediate places from the coal fields in the west when the whole line is open, so that the proprietors are particularly interested in a speedy completion of the railway.

In all the proceedings of the Directors the most rigid economy has been and is still observed; so much so, that when the railway is completed, they have no hesitation in declaring it will be found one of the cheapest lines in the kingdom, and with confidence do they regard it as a work of great utility to the public and advantage to the proprietors.

After the present contracts are completed there will remain about eight miles of road to make between Aspatria and Wigton to connect the two extremities of the railway; for a deviation of the line on this part of the railway, in consequence of a considerable saving which will be effected thereby, it has been thought advisable to apply to Parliament for a new Act, for which the notices have been given and the plans lodged according to the line approved of at the last general meeting. And as the Act is likely to be obtained early next session, the Directors look with confidence to a completion of the whole line at a very early period afterwards.

The contractors have so far completed their work between Carlisle and Wigton with great credit to themselves and satisfaction to the Directors.

Such, then, being the state of their proceedings, the Directors look with confidence to the proprietors and the public in general to further the object in view as much as in their power, fully expecting the result will be what they have always anticipated, namely, an advantageous speculation to those who have embarked their property in the Railway Company.

REVENUE ACCOUNT.†

	Dec. 30, 1841.			Half-year June 30, 1842.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.
Received on coal carriage	6174	0	0	2653	17	9	8827	17	9
Passenger traffic	496	17	9	244	10	3	741	8	0
Parcels and goods	194	1	0	103	15	4	297	16	4
Total	6864	18	9	3002	3	4	9867	2	1
Paid on account of repairs of way, engines, waggons, and traffic	3382	1	4	1651	16	6	5033	17	10
Interest on mortgage deeds	1458	13	8	1328	4	5	2796	18	1
Balance, being net	2024	3	9	22	2	5	2046	6	2
Profit on traffic after paying all expenses of maintenance, and interest of borrowed money	6864	18	9	3002	3	4	9867	2	1

These documents having been read, it was proposed by Jas. Harris, Esq., seconded by Thos. Parkin, Esq., and unanimously resolved, that the Report of the Directors be approved and adopted, and their acts and proceedings confirmed.

It was then proposed by J. W. Fletcher, Esq., seconded by Geo. Dalton, Esq., and unanimously resolved—that the balance-sheet and accounts now exhibited be approved and passed.

H. Senhouse, Esq., whose health has for some time been on the decline, having communicated to the meeting his wish to resign the office of Chairman and Director of the Company, it was unanimously resolved, that Mr. Dykes be requested to convey to Mr. Senhouse the expression of regret they feel at such resignation, and the cause thereof; and at the same time to express to him the high sense they entertain of the strict impartiality, urbanity, and good feeling invariably manifested by him during the whole time he held those offices.

The cordial thanks of the meeting were then voted to Sir Wilfrid Lawson, Bart., for his invaluable services in furthering the objects of the Company in every possible way, and more particularly for supplying the Directors with the means of purchasing iron to complete the remaining part of the railway from Aspatria to Wigton, at a time when the article can be procured on such advantageous terms.

The three Directors retiring by rotation, namely, Thomas Hartley, George Cowen, and R. Ritson, Esqrs., were unanimously re-elected.

It was then resolved, That John Steel, Esq., be appointed Auditor and Managing Director, at a salary of 100*l.* a year.

The forfeiture of shares resolved on by the Directors was confirmed.

F. L. B. Dykes, Esq., having been appointed Chairman in the place of Humphrey Senhouse, Esq., it was resolved, on the motion of Sir Wilfrid Lawson, Bart., seconded by Joseph Harris, Esq., that George Harrison, Esq., be appointed Deputy-Chairman of the Railway Company, in the place of F. L. B. Dykes, Esq., elected to the chair.

The thanks of the meeting were then voted to F. L. B. Dykes, Esq., the Chairman, not only for his services on this, but on all occasions.—*Whitehaven Herald.*

* This document enters at some length into the details of the various contracts, but our space will not admit of its publication.

† The sum already expended on the railway, and in the purchase of engines, carriages, and waggons, amounts to 154,218*l.* 13*s.* 6*d.*

LONDON GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London Grand Junction Railway Company was held on Monday, at the offices of Messrs. Sweet and Sutton, No. 6, Basinghall-street, City; WILLIAM CASH, Esq., in the chair. There were only three or four shareholders present.

The advertisement convening the meeting having been read,

The CHAIRMAN said, the next step in the proceedings would have been to affix the seal of the Company to the register of shares, but as in point of fact no transfer had taken place since the last meeting, that formality was not necessary on the present occasion.

The SECRETARY (E. Ayres, Esq.), then read the Report of the Directors as follows:—

REPORT.

In assembling the proprietors together upon the present occasion, the Directors beg to remark, that were they not compelled by the Act of Incorporation, they would not have caused the present meeting to be held, as nothing has occurred since the last general meeting to render such a step necessary. Annexed is an account of the receipts and expenditure for the half-year ending on the 30th of June last.

Mr. DOUBLE inquired whether they were compelled to meet thus from time to time to have their feelings tantalised. There was now no chance of proceeding with the undertaking. He had examined the Act of Parliament, and thought they might at any time wind up the concern.

Mr. FISH (a Director) said, nothing but an Act of Parliament could abrogate an Act of Parliament; and as the Company's powers would die a natural death in July next, the Directors thought it would be imprudent to spend any portion of the balance in hand in hastening on that process.

Mr. DOUBLE made an inquiry respecting the

Digitized by Google

arches (the first commencement of the line) near Messrs. Cubitt's premises in Gray's-Inn road.

Mr. SUTTON (the Solicitor) said, under an agreement entered into by the original Directors, the land on which these arches stood and the materials themselves had reverted to Messrs. Cubitt, failing the payment of a certain sum agreed upon. The arches had accordingly been taken down. Even if no such agreement had existed, this land, and all other land, would revert to the original owners in July next.

Mr. DOUBLE again pressed for an immediate dissolution of the Company. After the Act expired the shareholders would have no power over the Directors.

Mr. SUTTON said, a special meeting would undoubtedly be called previous to the expiration of the Act, and then the balance in hand would be divided.

Mr. DOUBLE saw in the accounts an item of 200*l.* as paid to Mr. Rastrick. What was it for?

The CHAIRMAN said, it would be recollected that at a meeting held last year the Directors had been taxed with negligence in not attempting to devise means for carrying out the project, and it had been pressed upon them that an Engineer should be called in to make certain surveys. This had been done by Mr. Rastrick, whose charge was 358*l.*, but which in the most handsome and liberal manner he had subsequently, in consideration of the state of the concern, and at the urgent solicitation of the Board, reduced to 200*l.*, although the Directors were satisfied that the original charge was only a fair remuneration for the work performed.

A PROPRIETOR said, he remembered that Mr. Rastrick's plan was the most absurd one imaginable, and that on being brought forward it was laughed at by the whole meeting. It was nothing short of a tunnel for the whole length of the line.

Mr. DOUBLE said, he was as much convinced as ever of the intrinsic merits of the line, and that if the Directors had had funds vigorously to carry out the original scheme of Sir George Rennie, the railway would by this time have been in successful operation, in spite of the opposition of the London and Birmingham Company.

After some further conversation the Report was received and adopted, and a vote of thanks passed to the Chairman and the Board of Directors. The compliment was acknowledged by the Chairman, and the meeting separated.

CANTERBURY AND WHITSTABLE RAILWAY COMPANY—GENERAL MEETING.

THURSDAY afternoon the annual meeting of the shareholders of this railway met at the office in North-lane, Canterbury. There were present—W. Hyder, Esq., Wyane Ellis, Esq. (from London), Mr. Ald. Cooper, Mr. Ald. Neame, R. Sankey, Esq., and a dozen other shareholders. Mr. Alderman COOPER, having been called to the chair, requested the Clerk (Mr. Curteis) to read the minutes of the last meeting, which having been done, the position of the Company, as near as could be, was placed before the meeting; but the accounts were of so complicated a nature that it was next to impossible to understand them. The only satisfactory statement that could be gathered was, that the expenditure for the past year, up to the end of June, amounted to 8,330*l.* and a few shillings; the receipts 7,626*l.*; leaving a balance of about 704*l.* The mortgages upon the whole were stated to amount to about 42,000*l.*

Several remarks were made upon the very unsatisfactory manner in which the affairs of the Company had been managed as regarded the funds; and among these was a complaint by Mr. Ald. Neame, that the accounts with some tradesmen were allowed to run on so long. He suggested the appointment of a Committee to investigate the affairs, and lay a correct statement before the whole body of shareholders.

After a lengthened conversation, Mr. Alderman Neame brought forward a proposition for the appointment of a new Board of Directors for the ensuing year, which was seconded by R. Sankey, Esq. The following are the names of the parties who were proposed to fill this office:—D. Denne, Esq., Mr. Alderman Cooper, Mr. Alderman Neame, R. Kingsford, Esq., J. Cates, Esq., G. Buckley, Esq., R. Sankey, Esq., J. Neame, Esq., Messrs. J. Saunders, W. Cannon, W. H. Cullen, J. Cooper, J. Pearson, T. Fairbrass, and B. Harnett.

Wynne Ellis, Esq., was included in the original list, but at his particular request his name was withdrawn.

W. HYDER, Esq., expressed a hope that no one would take upon himself the office of Director without a determination to use his best efforts towards promoting the prosperity of the concern; and he also hoped it would be understood that no one should exercise any individual power in giving directions.

The motion was then agreed to.

Mr. Ald. NEAME then proposed that the firm of the Canterbury Bank should be appointed to the office of Treasurer, which was agreed to, though Mr. Curteis (the Clerk) pointed out the propriety of naming some one only of the firm, for purposes in which, as he stated, an individual signature might be required.

Mr. Ald. NEAME said, the next motion he had to bring before the meeting related to the management of the railway. In the present deplorable state of their finances he thought it desirable they should reduce, as much as possible, every expense attending their concern. Were the Company in a more prosperous condition none he was sure would feel more happy than he should to pay their officers most liberally. At present they had, as it were, two Managers on the railway, one of whom he thought might be dispensed with. [Here Mr. Saunders, one of the Managers, rose to make some observations, but was prevented by Mr. Ald. Neame, who stated that he was in possession of the meeting.] The worthy Alderman continued, that each of these Managers had a salary of 120*l.* a year, that one was stationed at Whitstable and the other at the Canterbury terminus; and as he believed that one of these, Mr. T. L. Burch, would fill the office as satisfactorily as he had hitherto, he proposed that he alone should be appointed to it.

Mr. SAUNDERS said, he had risen for the purpose of making some observations, which he had been prevented doing. It was his wish to tender his resignation of the office he held as one of the Managers, and he concluded with seconding the proposition.

Mr. Ald. NEAME then proposed that the Clerk to the Company should, in future, be paid a guinea for every attendance at the meetings of the Directors, instead of an annual salary of 25*l.*

Mr. CURTEIS expressed his approval of this proposition, and it was accordingly carried.

Mr. Ald. NEAME, after pointing out the propriety of the accounts of the Company being audited quarterly, proposed the appointment of Mr. J. C. Abbott, with a yearly salary of 10*l.*, to undertake that part; which was seconded by G. Buckley, Esq.

W. HYDER, Esq. thought the auditing might be accomplished by some two or three of the Committee, by which expense in this department would be saved.

After a few observations upon the propriety of allowing some one to do this who was not connected with the Company, the proposition was agreed to.

Mr. PEARSON proposed that persons holding five shares and more should be allowed to ride on the railway free of any charge.

Mr. Ald. NEAME supported this as a means which he believed would be conducive to the interests of the Company, as the more frequent inspection of the shareholders would, thereby, be drawn to the concern.

Mr. SAUNDERS moved an amendment, that none but Directors be allowed this privilege.

W. HYDER, Esq. seconded it, and said, that such a privilege as that proposed might be detrimental to the interests of some parties, and those who had it might take advantage of it to visit Whitstable who otherwise would pay. In fact, it gave the appearance of poverty to their concern.

Mr. DRURY could not see why either Directors or those holding five shares more than others who had a smaller number, should be allowed this privilege.

The CHAIRMAN spoke in favour of the orginal motion, which was carried, after the amendment had been put and lost.

Some remarks were made as to the necessity of having a Harbour-Master, at Whitstable, now that the Manager for that place had been superseded; and the Clerk stated his belief that the Act of Parliament required such an appointment. It was agreed, however, that this, with other matters, should stand over for future consideration; and after the disposal of some minor business the meeting adjourned.—*Canterbury Journal*, Aug. 6.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—This Company, with a capital of about 900,000*l.*, half shares and half loans, have literally the assurance to appropriate the profits entirely to the shares, and to charge the interest to capital! The published accounts show that, had interest been duly charged, not one half-farthing piece would have remained to the shareholders.

Such conduct, in such a country as England, is positively demoralising, and it is to be hoped that you, the guardian of the railway public, will, with your strong arm, at once and for ever put down a practice so un-English, so "American."

AN ENGLISHMAN.

August 17, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—You will oblige me by inserting the following replies to the letter of "Œconomicus" in your last paper.

1st, That the times for holding the half-yearly meetings of this Company are fixed by the Act of Parliament, and the Directors have appointed the *earliest day* for the ensuing meeting on which it can be legally held.

2nd, That the last meeting was held on the 17th March, 1842, and the dividend-warrants (nearly 1,000), were prepared and sent off alongwith the Reports *in the course of the next four days*. I will trouble "Œconomicus" to point out any other Company that has used *even similar despatch* in transmitting the dividends to their proprietors so soon after the meeting. It is quite clear that your correspondent is no shareholder *in this Company*, or he would have known when he received his last dividend, and also that the subject of his letter has been adverted to at our former meetings, and satisfactory replies given by the Directors.

I am, Sir, yours, &c.

JOHN JELLICORSE.

Manchester, August 16, 1842.

BRIGHTON RAILWAY.—The receipts of the London and Brighton Railway for the week ending the 6th instant justified the anticipations expressed by the Chairman at the half-yearly meeting. They amounted to no less than 5,087*l.* 13s. 7d., being by far the largest sum yet received since the opening of the line. What may not be expected when the traffic with France—still in its infancy as to the important port of Havre—shall be fully developed.—*Brighton Gazette* of Thursday.

GREAT WESTERN RAILWAY.—We understand that the Chancery proceedings in the case of Ranger *v.* the Great Western Railway Company, will be argued before, and finally adjudicated by the Lord Chancellor, in the second or third week of October. This case, as some of our readers have good reason to know, involves a claim of many thousand pounds, which, if recovered, will be divided among the plaintiff's creditors in this town (Reading) and neighbourhood. It is believed that the trial will occupy at least a week, the pleadings, accounts, &c., being very voluminous.—*Berks Chronicle.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles and 20 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+31+20.) The Company do not now carry goods to Manchester. The returns are exclusive of the proportion of the Manchester and Leeds traffic, the returns for which have not yet been received.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 36*l.* 0s. 5d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,106*l.* 4s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 34*l.* 3s. 6d.; carriages, 77*l.* 4s. 0d.; dogs, 6*l.* 0s. 0d.; parcels, 237*l.* 10s. 6d.; cattle, 16*l.* 2s. 0d.; corn, 5*l.* 6s. 3½d; heavy goods, 522*l.* 12s. 6d.; coal and lime, 115*l.* 6s. 1d. —Total, 1,014*l.* 4s. 10½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 3,132*l.* 13s. 6d.; carriages and horses, 297*l.* 13s. 11d.; parcels, 157*l.* 0s. 3d.; malls, 50*l.* 5s. 9d.; merchandise, 1,205*l.* 0s. 8d.; minerals, 303*l.* 1s. 11d.; cattle, 27*l.* 17s. 4d.—Total, 5,233*l.* 12s. 11d.; including North Midland proportion of Manchester and Leeds traffic, and amount received from Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Newcastle and Carlisle Railway.—*Week ending August 6. —Receipt from passengers and parcels, 721l. 7s. 10d.; goods, 977l. 17s. 11d.; total, 1,699l. 5s. 9d.*

Newcastle and North Shields.—*Week ending August 4. Receipt from passengers (number of passengers, 17,284), 410l. 18s. 7d.; goods, 29l. 8s. 10d.; gross receipts, 440l. 7s. 5d.*

TO CORRESPONDENTS.

We cannot undertake to return rejected communications. This answer to five or six correspondents.

Inquisitor, *on the proposed leasing of the Northern and Eastern Railway, should adduce facts in justification of such phrases, as "artful scheme," "shamefully hoodwinked," and so on.*

Argus *should send his note on the non-eligibility of bankrupts as Managers of railway undertakings, to the journal to which he refers. We certainly agree with him, that the same measure should be meeted out to all—whether Secretaries or Chairmen.*

Mr. R. Craven.—*We can have nothing further to do with Mr. William Robinson, of the Manchester and Leeds Railway, and his abusive language.* Similis simili gaudet; *Mr. Robinson is welcome to seek other channels of communication.*

Railway Traffic Returns.—*The Managers of the Arbroath and Forfar Railway Company set an example which we should be glad to see followed in other Companies. They forward us, week by week, a printed form precisely similar to that of our traffic tables, stating the total amount authorised to be raised—total expended—receipts per mile per day, &c., and nearest corresponding week of 1841; thus saving us considerable labour, and at all times ensuring accuracy in the returns. We wish this plan were general.*

A Reader of the "Railway Times," *who writes with reference to a previous letter, is informed that we have no recollection of having received it. We are sure he would pardon us for any seeming inattention, if he knew how closely we are at present pressed for room. By-and bye we shall get over the bustle of the meetings, and then we shall be glad to hear again from our correspondent on the subject to which he refers.*

Genie.—*We are much obliged to our correspondent. He will see that we have elsewhere noticed the rumour to which he alludes. Should our space permit, we will hereafter give his more ample details.*

M.—1, 5, 6. *We would recommend you to wait in all cases for about two months; but you must use your own discretion. We give the best counsel we can, but will not be held responsible for the results. As to P., we should not sell just now.*

A Plain Man (*Glasgow*), *on Sunday travelling, writes very much to the purpose. We wish we could give publicity to his letter previous to the meeting, but it is totally out of our power. We shall be glad to hear from him after the Agnewite scheme has been again defeated—which it is sure to be.*

The letter to the Secretary of the so-called Anti-Sabbath Desecration Association in Edinburgh, is an excellent one, and we are very sorry that we cannot possibly make room for it.

E. T. *is referred to the notice of the meeting in another column.*

A Constant Subscriber—*See our leading columns.*

Brighton Railway.—H. *calls attention to a disbursement in the Brighton accounts of 6,228l. 9s. 2d., as "toll to the London and* Croydon *Company to 6th June, 1842," and seems to think that no toll to the* Greenwich *Company has been charged. In this, however, we believe he is mistaken. Of the sum above named, we understand the amount received by the Croydon Company was 4,780l. 9s., and by the Greenwich 1,448l. 2d., thus showing that the Greenwich toll is about 23 per cent. of the whole amount paid to the Croydon Company. Of course, the Brighton Directors should have been more explicit in their accounts, but what can our correspondent expect from such a quarter?*

The Post-office and the Brighton Railway.—Amicus *asks if the following, which is part of a paragraph that has been going the round of the daily papers, can be true? "The line of road between London and Brighton is the only one in the kingdom with a railway in full working which does not carry the mail bags; but there is very little prospect of their coming to an agreement with the Post-office authorities. The Brighton Post office is kept open at present until* 11 *o'clock at night, and the Railway Company will only agree to convey the bags upon reasonable terms, upon condition that they are dispatched at nine, and the Postmaster-General refuses to make this alteration." Of course there must be a mistake here. The Postmaster-General has absolute power to fix the hour of departure, and any dispute as to terms is to be referred to arbitration.*

Manchester and Birmingham Railway.—*The traffic return for last week is deferred in consequence of new arrangements connected with the opening of the line throughout.*

One or two Editorial articles are unavoidably postponed.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, AUGUST 20, 1842.

We have of late published several letters having reference to the serious depression which has within the last two months befallen South-Eastern Railway stock, and as our space will not allow us to insert a vast number of other communications on the same subject, we take this opportunity of offering a few general remarks upon the position and prospects of the Company.

The depression which has given rise to so much comment we have heard attributed to a variety of causes. Amongst others—

1st. That the Directors purpose abandoning the line from Folkestone to Dover.

2nd. That further capital will be required to complete the railway even to Folkestone, this supposition being based upon the fact that the whole of the last capital being under notice of call due in January next (months before the line can possibly be finished), could only be called for either because it would be absorbed immediately, or months at least before otherwise it ought to be required.

3rd. That the traffic has not equalled expectation.

4th. That the fares are too high.

5th. That the fares are too low.

All these rumours we will briefly touch upon; and in order to do so with accuracy, we have applied for every information we could obtain from the most undoubted sources.

To the first of the imputed causes of the depression, the supposed abandonment of the line from Folkestone to Dover, we need only reply by publishing the following return of the numbers of men and horses employed one day each for the last week between Headcorn and Dover, viz.—

Men	21,267
Horses	2,804

Of these 1,851 were employed in the Shakespeare tunnel, and 1,163 in the construction of the sea wall, of the progress of both of which and the other heavy works there, we shall be enabled to give a most satisfactory report in a few weeks from a gentleman connected with this journal, who will then be sojourning in that district.

To the second point, as to further capital being required, we make this reply, that at the time the last capital was subscribed, the assets of the Company consisted of—

Then subscribed	£700,000
The remaining amount under the amended Act, but not then raised	100,000
First mortgage	450,000

Digitized by Google

Second ditto	206,600
Joint Station Act	120,000
	£1,636,600
Deduct, then raised of the 450,000*l.* of the first mortgage	52,000
Total	£1,584,600

so that the whole sum the Directors had to depend upon to pay the Brighton Company and carry on the works was actually the 700,000*l.* then subscribed; for, seeing how slowly money up to that period had been tendered on loan, who could say with certainty that one shilling more would be offered? and as the joint station powers, and those for raising the remaining 100,000*l.* had and have not been called into operation, who can say that it was other than extreme wisdom to make the calls as they were settled by the knowledge and consent of the proprietors when they voted the new capital, and not by after arrangements of the Directors? Happily money became easy and confidence great; the consequence, we have reason to believe, has been that the borrowing powers of the Company have, since the last half-yearly statement, been in most active operation, and hence not only has the large sum of 326,000*l.* (more by nearly 50,000*l.* than the whole amount of the two instalments paid on the scrip) been invested in the Brighton account, but the works have from Tunbridge to Dover been in a state of the greatest possible activity. Whether the Directors will be able to relieve the proprietors by postponing either of the remaining instalments must depend upon a variety of circumstances, of which they are the best judges; and with them we leave the question, satisfied that they will not on the one hand suffer the works to be delayed from any Stock-Exchange trick, nor press needlessly upon the proprietors if they can avoid it. This we think, whilst it explains why the calls were settled as they were, will also be a complete reply to rumour No. 2.

Nos. 3, 4, and 5, resolve themselves into the important question of traffic. In respect of *that*, we have taken some considerable trouble to make ourselves acquainted with the real facts.

The amount of receipts may in round numbers be set down at 900*l.* per week. Let us examine how this has been produced, and under what circumstances.

The position of the South-Eastern line is peculiar. To go to Tunbridge you travel 40 miles by rail, the coach road being but 30; the first place it approaches where anything like business is to be expected (for we throw Croydon entirely overboard) is Reigate, where the Brighton Company is a competitor; you then pass on to the other stations, crossing great public thoroughfares, and until Tunbridge is reached, touch no place of consequence, but leave many of consideration, as we shall by-and-bye show, to the right and left of the line, where also, the distance by road to London being less by coach than rail, coaches have been able to compete, not only without lowering their own fares, but in time also. The result has been, that independent of the weekly earnings by rail, there travelled in the week ending 21st July, by road coaches, no less a number than 4,380 persons, as the following return, taken on the spot by an experienced and trustworthy party will prove; and the chief portion of these travellers, we will undertake to show, would, and will at low fares, take to the rail. What will seem extraordinary, and but for the high fare by rail hardly credible, in this return, is the number travelling through and to Tunbridge by coach.

Statement showing the Number of Passengers travelling from various Places by Coaches, in the week ending July 21, 1842.

Name of the town.	No. of conveyances, including mails.	No. of passengers weekly.	Station to which they will run.	Fare.	Amount.
				s. d.	£ s. d.
Tunbridge....	10	800	Tunbridge....	5 0	200 0 0
Maidstone....	19	2,200	Maidstone Rd.	5 0	550 0 0
Sevenoaks....	3	250	Penshurst....	4 6	56 15 0
Westerham ..	2	180	Edenbridge ..	4 0	36 0 0
East Grimsted	2	300	Godstone	3 6	52 10 0
Dorking.....	5	650	Reigate	3 4	108 6 8
Total	41	4,380			£1003 11 8

With respect to the estimated rate of fare which we have taken as the average that would be received, it cannot be said that is a high figure; on the contrary, by reference to the Company's advertisement in our paper of this day it will appear, as respects Reigate, we are below the proposed scale.

We know that in regard to the Maidstone traffic, this Company has to contend with steam-boat competition by the river, and that as respects that by Sevenoaks, the turnpike-road to London is the nearest route, and, at the high fares, the cheapest; but the same observation applies with equal truth to Sevenoaks as Maidstone—that with reduced fares and increased speed by railway, the coaches in a country of the hilly character of Kent between London and those points, cannot continue to carry the full loads they now do. The current once broken, let the prepossessions of a portion of the public be what they may in favour of a particular route, coach-masters will not long play a losing game by running with partial loads at the very low fares they now charge, but follow the new current, and one by one gradually run to the railway, which from its very nature must work with greater regularity, and carry greater numbers, and afford greater comfort and accommodation, than steam-boats ever can. There is another ingredient in this Maidstone traffic, which it is essential should not be forgotten. It is this, that the present low fares between Maidstone and Gravesend are maintained only by the invariably full loads each conveyance carries. The inevitable consequence of diverting any portion of the traffic, which it is acknowledged on all hands *does* flow by that channel, must clearly be that the coach proprietors, ceasing to carry the many, must, in order to exist, raise the fares of the few, thereby making the railway the more likely to be favoured by the whole body.

Those who are not conversant with Kent have no conception what a moving mass the population consists of. They are ever astir, each sturdy yeoman making it his business, even with present facilities, to attend the London markets. There is no district in the kingdom equal to it in this particular—for, generally speaking, the agricultural class seldom extend their journies beyond the neighbouring towns on market days; but here, where the land is divided into small farms, in a county from its fertility and high cultivation proudly and justly denominated the garden of England, the ease of reaching the metropolis *via* Gravesend has taught the farmer the importance of attending himself to his own concerns, an advantage which the railway will place within his grasp, more certainly, more cheaply, and more speedly, than the river ever has done or can do. We know that many farmers who now frequent the hop and other markets, and make their way to London by the river, are compelled to be on the road by 3 o'clock in the morning!

The following will show the present cost by coach, and time occupied in the journey, between the several places before noted and London, and the proposed fare and time by railway:—

	Coach.		Railway.	
	Present Fare.	Time.	Proposed Fare.	Time.
	s. d.	h.	s. d.	h. m.
Maidstone, by coach direct ..	6 6	3½	6 0	3 22
Do. by Gravesend	4 0	4		
Dorking to London	5 0	2½	4 6	2 15
Sevenoaks to London	5 0	2½	5 0	2 30
Westerham to London	5 0	2½	4 6	2 15

In the estimated cost by each mode of conveyance, all collateral charges are included between the points named and London.

Having shown that there is at this moment a large existing traffic which low fares alone can tempt to the railway (besides which there is a business in posting of an amount that would scarcely be credited, which high fares have not only kept from the railway, but fostered and cherished by road), and that Hastings, Rye, Cranbrook, and other places in the very route of the line, have from the same circumstances given but partial support to the railway, we have a fair right to assume that with the wise, the politic, and liberal course the Directors have pursued in giving publicity to a tariff of fares without example for cheapness on a metropolitan line, and establishing no fewer than six third-class trains a day (three each way), by which the poorer classes can travel, most important benefits must result from this bold and highly judicious experiment.

Our pleasure meets but with one alloy. The third-class passengers are to be stopped at New Cross, owing to the short-sighted policy of the Greenwich Company in refusing to assent to any commutation of toll. "All or none," is their motto. *None* will be the consequence.

Hereafter we shall draw attention to the extraordinary parallel this line presents to the South-Western in its early career in point of success; and when it shall have been in full work as long as that line has been, we shall indeed be much disappointed if it does not bear an equally favourable comparison with the present traffic of that important route.

Since writing the above we have heard that the Croydon and Dover Companies have agreed to an arrangement by which the latter Company has been enabled to reduce the fares to the extent advertised. We are not in possession of more than this general outline of the arrangement, but the principle so long contended for by the Croydon Company with the Greenwich Company, of a toll proportionate to the fare, is the basis of the agreement—thus proving, on the one hand, the honesty of the Croydon Board, that they ask no more than they are willing to concede; and on the other, that the Directors of the Dover Company have availed themselves of an arrangement which must eventually prove of extreme benefit to their constituents, to the Croydon Company, and to the public.

The agreement is, we understand, of a temporary character only, but such that, if found to answer in practice, the Dover Company have the power to make it permanent. Each Company is as free and independent in its management as if no agreement existed, the

Digitized by Google

Croydon Company having no right to interfere with the fares of the Dover Company; so that whether very high or very low, the latter, after making an allowance (to what extent we are not informed) to cover the working expenses over their line, can claim only their proportion. The only restricted point is Croydon; and *there*, we understand, the Dover Company are prohibited, most properly and equitably, from carrying at lower fares than the Croydon Company themselves charge.

We have now arrived at that point at which our readers are entitled to our opinion as to the real cause of the depression in the value of this Company's stock. It is readily given, and is comprised in one word—SPECULATION.

We shall watch the traffic with much earnestness, but no anxiety, satisfied that a great and glorious result will be the consequence of the alteration in fares we have so long advocated, and which we hail with increased pleasure, coming as it does from so important a line.

We may just add, that the line from Tunbridge to Headcorn will be inspected early in the week by the Directors and General Pasley, and partially opened on Wednesday, the 31st, thereby strictly keeping faith with the proprietors—Mr. Cubitt having promised the opening early in September.

Although we studiously avoid political disquisitions, still the insurrectionary movements in the north of England are so likely to affect railways, that with reference to the interest which we feel in these undertakings it is our duty to say a few words.

The spirit which has arisen it may probably be difficult to quell. It partakes of a movement of mind apparently from reflections or notions deeply ingrained in the unfortunate workmen, and is most likely to be vanquished only by hunger and thirst, and the miseries of home upbraiding a man for not earning the wages of industry, low as they may be, to support those with whom he is connected, and who are starving while he walks the streets, flag in hand, and makes of himself a fool or a felon. Could mischief and robbery be prevented without bloodshed, there can be no doubt that a signal and speedy defeat must await the insanity of men who rise in rebellion without arms, without plans, without a guiding mind capable of wielding the vast destinies which the working men profess to desire to accomplish, and of directing the deliberate action which is to produce the wished-for results—without funds or provisions in store to resist the attacks of an army, a police, and wealthy inhabitants combining for self-protection—and without credit to raise a public loan, were it but for ten pounds. But with these and several other points, which readily suggest themselves, we, as railway journalists, have no concern. We can only earnestly hope that the stronger-minded men amongst the working classes will let their reason guide them to a resumption of a proper course, and that they will exhort those who are misleading themselves by quarrelling with hard toil and badly recompensed labour (evils not to be avoided in an artificial state of society, with redundant population), to return to their duty and replace the country in quiet.

Our business is with the position of railways amid these commotions. It has been said in favour of this mode of transit, that under the threat of foreign invasion a few hours might convey an army from the metropolis to the invaded coast. Undoubtedly it would be so, and this boon is not to be despised, since the time may come to require such application of railways; but where troops are moving to destroy the foreign invader, the home population would be assisting and encouraging these movements. It is different, however, with railways when civil war rages, or insurrectionary commotions arise; *then* those who are disaffected, can, by breaking a single rail, stop the journey of ten thousand men, ammunition, despatches, stores or provisions. It is evident, moreover, that by lying in ambush, evil disposed parties might start up and break a rail at the moment of the approach of a train at its full speed, and then the destruction of life and limb would probably be great from the accident and the confusion, especially at night—increased probably by the fact, that the authors of the mischief would add the horrors of slaughter to the awful carnage produced by steam turned from a travelling, into a destroying power. These horrid scenes are not glanced at as likely to occur, (Heaven forbid they should!) but no person can dispute the possibility of their happening, and this very possibility ought to act as a warning to Directors, that every practicable measure should be adopted (temporarily at any rate) at the present crisis, to guard their establishments from danger. The police, if necessary, should be greatly increased, especially at parts of the railways most vulnerable to attack—all the officers and servants, without exception, should be sworn in as special constables—the advice of a military man might properly be taken as to removing points or places for ambush, and for stationing watchmen to command views of the line and adjoining country; and all chances of lurking in long grass or in sheltered ditches should be cut off. If, as it is to be hoped, good sense shall at no distant day again govern the disturbed population, subdue their turbulence, and induce their return to industrious habits, these measures of precaution may be speedily abated, but nothing can be worse than the policy which avoids resorting to remedies until the mischief actually takes place, which care and forethought, and the measures they dictate, might have effectually prevented.

The following illustration of the mode in which matters are not unfrequently managed on the Grand Junction Railway comes to us from a quarter upon which we can place the fullest reliance, otherwise we confess we should have deemed it altogether incredible.

The Directors, within the last week or two (as our readers have doubtless observed), put forth an advertisement announcing an enormous increase of fare, to commence on a day then named. The day came, and at every station and place from London to Liverpool the increased fares for passengers, and rates of carriage for goods, were as respects the early trains demanded and paid. About the middle of the day, however, the Directors discovered that they had made an increase not authorised by their Act, and expresses were immediately dispatched in every direction to request that the old fares and rates should be instantly resumed! Nevertheless, for one half-day every passenger, and every consigner of goods, was unjustly and illegally mulcted of a certain amount of the money which he had paid.

It would be superfluous to comment upon such a case as this. It speaks for itself. We had hoped that the hasty legislation which heretofore has led the Grand Junction Company into no small trouble and expense, was at an end; but it would seem to be otherwise. Upon the policy of attempting to raise the fares at all we need not now dwell; it is to the mode of carrying the intention of the Directors into effect that we desire to call attention. *With whom does the blame rest?*

Of course the parties thus overcharged may recover back the excess of fare, and we are not quite sure that the Company would escape a penalty besides; but be this as it may, what a discreditable specimen of railway management does not the case present—of management upon one of the leading lines in the kingdom, and by Liverpool men too, who constantly assume for themselves (and have usually had awarded to them by others) the merit of knowing so much more than their neighbours of all that pertains to the practical working of the modern system of locomotion!

Our report of the Great Western Railway meeting reached us at so late an hour, that we cannot to-day do more than thus generally allude to it. It will be seen that a good deal of discussion took place with reference to a "depreciation" fund, but ultimately the plan sanctioned at a previous meeting was triumphant. We can readily conceive how anxious some parties are to divide as much as they can *now* (leaving futurity to shift for itself), and then to withdraw quietly from the concern; but it would have been much more conducive to the benefit of *bona fide* permanent investors, had the time wasted in attempting to carry this point been devoted to a searching examination of some of the items of account. It is ever thus. The time and patience of meetings are exhausted in re-discussing matters already settled, or in agitating questions of comparatively little moment, while subjects of vast, nay vital importance, are almost or altogether overlooked.

Preparations for the approaching meeting of the North Midland Railway Company are going forward with much spirit. The Directors on the one side, and the dissatisfied shareholders on the other, are organising their forces; and circular after circular is sent out by both parties, soliciting proxies or personal attendance on Thursday next.

We trust the important inquiry to which all these preliminary efforts professedly refer, will not be suffered to degenerate into a personal or partisan squabble. It is to urge as strongly as we can, upon all parties, the propriety of avoiding such a result that we now revert to the subject. That there is abundant reason for investigation, and ample scope for improvement, as regards the management of the North Midland Railway, we are fully convinced—and equally satisfied that it was a most illiberal, and as regards themselves a most impolitic, act on the part of the Directors, to refuse the facilities for inquiry originally requested. It is with the *grounds* of complaint, however, that the proprietors at large ought to concern themselves, and not with the *mode* in which these complaints have been brought forward or set aside. Is the railway managed as efficiently and economically as, judging from other lines (for we will take *that* low standard), it ought to be, and might be? Are there any means yet untried whereby the lavish expenditure incurred in making the road may in any degree be counteracted by encouraging or calling into existence new sources of revenue? These are the main questions which ought to be fully agitated; and surely this may be done without the application of harsh terms to those who *may* have done their best—or the imputa-

Digitized by Google

tion of improper motives. That a public meeting is not the best place for entering into such matters we admit—for without the most minute examination into details, such as cannot possibly take place in a mixed assemblance, and amid the excitement of popular oratory, no conclusion entirely satisfactory can be arrived at—but if they *are* to be discussed on such an occasion, it should be the aim of every one to treat the questions temperately, and with candour, caring less to support or defeat a particular policy than to discover *which* line of policy is the best. What matters it to the shareholders of a Railway Company whether Mr. THIS or Mr. THAT is Chairman, or who are his colleagues, provided their property is managed as it ought to be? *They* have nothing to do—or should have nothing to do—with Board-room tactics, whether the object be to keep one set of Directors *in*, or another set of would-be Directors *out*. What the shareholders ought to look to, is the largest possible dividend that can be secured from their several investments, and if they have reason to believe that this desirable consummation has not been attained, not all the customary clap-trap of confidence, nor all the pie-crust promises for the future, in which Directors so largely deal, should make them hesitate one moment in sending a Board of Management adrift. On a similar principle to that on which the elder BOSWELL thought the decapitation of CHARLES THE FIRST might not have been without a good effect on future monarchs, the cashiering of an entire Direction might possibly promote the cause of Board-room reform; it would show some few gentlemen whose honour, nay, whose talent and judgment must not, as matters now stand, be for one instant called in question—it would show those parties who mistake the office of Director for that of Dictator—that they are not *wholly* irresponsible.

With respect to the North Midland meeting, from which we have thus digressed, we can only again express an anxious hope that the discussion will be conducted in a manner suitable to the importance of the subject. The proprietors have an immense interest at stake, and should at once put down any and every attempt, from whatever quarter proceeding, to introduce matters not strictly bearing upon the business of the day.

A REPORT of the proceedings at the Midland Counties' Railway meeting held this day week will be found in another part of our present number. We have deemed it right to defer some observations which we had intended to make upon this meeting rather than abridge the ample report supplied by a local contemporary, as there were many facts incidentally elicited which must *tell* with far more force upon absent shareholders than could any remarks of ours. We shall not, however, lose sight of the subject. In the meantime we cannot help saying that the conduct of the Directors is, in several respects, most unsatisfactory. They appear to have displayed an impatience of criticism into their official acts, which augurs but ill for their fair-dealing. If the proprietors are foolish enough to tolerate such arrogant bearing as this, they ought at least not to murmur at its inevitable consequences. So long as Directors are to be at liberty to do as they please (overpowering by their proxies all opposition), shareholders may hope and pray for a satisfactory dividend, but they will never secure it.

We gather from what transpired at the meeting that unless certain reforms are forthwith effected by the Directors, a special meeting *may* speedily be called. We trust there will be no necessity, but if there should, we hope the proprietors at large will do their duty, and show the Directors that they are no longer to be trifled with.

We shall take a future opportunity of calling attention to some of the questions mooted at the meeting—such as the salaries of the officers, and the constitution of the Board of Direction—and to the extraordinary construction of the Company's Acts of Parliament, which it would seem completely nullify all attempts to arrive at the truth by means of a Committee of Investigation.

AT the commencement of the disturbances which now unfortunately prevail in the manufacturing districts, several of the railways in the vicinity of Manchester—more especially the Manchester and Leeds—were threatened with serious damage. Fortunately, however, no serious injury has been sustained. Never were the facilities offered by railways more sensibly felt than during the last week. The concentration of troops at particular points has thus been effected with a rapidity and certainty hitherto unequalled. The following is a return of the number of troops and quantity of ammunition conveyed by the London and Birmingham Railway within the last eight days; and it gives us much pleasure to state, that the arrangements of the Company have called forth the unqualified approbation and admiration of the military authorities. Eight or nine hours sufficed for the journey from London to Manchester and Leeds—formerly a 14 days' march.

Saturday Night. Half a Battalion of Grenadier Guards, viz., 20 officers, 500 men, and 6 horses; Troop of Royal Horse Artillery, viz., 3 officers, 62 men, 50 horses, 2 cannon, and 3 ammunition waggons.

Sunday Morning. Half a Battery of the Royal Artillery, viz., 3 officers, 41 men, 23 horses, 2 guns, and 2 ammunition waggons.

Sunday Evening. Part of the 34th Foot, viz., 24 officers, 577 men, and 7 horses.

Tuesday Morning. Remainder of the 34th Foot, viz., 4 officers, 215 men, 63 women, and 44 children, about 12 or 14 tons of ammunition.

Thursday Morning. The 73rd Foot, viz., 24 officers, 633 men, 4 horses.

Thursday Night. 2 tons more ammunition.

Friday Morning. The 32nd regiment, viz., 24 officers, 650 men, 6 horses.

In addition to the foregoing, a large number have been conveyed on from Weedon, and replaced by the 12th Foot, brought up from the north. Large quantities of baggage, &c., have also been transmitted.

—o—

THE *Berkshire Chronicle* states, that at a vestry meeting of the parish of Tilehurst, held on Thursday week, it was resolved to raise the assessment of the Great Western Railway from 300*l.* to about 1,000*l.* per mile. There are two miles of the line in that parish.

—o—

A VALUED correspondent at Cheltenham, says, "Having just returned from the Isle of Wight, and the regatta at Ryde being fixed for the 25th instant, it may be useful to some of your numerous readers in this neighbourhood to know that they can easily reach Portsmouth, Ryde, or Cowes, in one day, by going by the first train from Cirencester to Reading, proceeding by the *Rocket* coach to Basingstoke (only 16 miles), and thence by the South-Western Railway to Gosport or Southampton. To return, leaving Ryde at 11 o'clock in the forenoon for Gosport, you will reach Cirencester by three-quarters past 8 in the evening."

—o—

SIR FREDERICK TRENCH has given notice that next session he will move "to revive the Select Committee on the Thames Embankment and Quay of Communication, in the hope of being able to prove that this useful and beautiful work may be accomplished without any demand for public money, and in such manner as will improve the navigation of the Thames, and contribute to the embellishment of its banks, and to the health and recreation of the inhabitants of this crowded metropolis." If Sir Frederick would drop the railway part of the scheme, he would stand a much better chance of success.

RAILWAY OFFENCES AND OFFENDERS.

AT the Croydon Police-court on Saturday, William Neal, a person in the service of the Brighton Railway Company, and James Baker and James Evans, two dealers in marine stores, were charged with stealing a large quantity of iron rails, to the extent of several tons, the property of the above Company. It appeared from the evidence of Mr. Coombe, the Resident Engineer for the Croydon and Merstham district, that the prisoner Neal had been employed by the Company, and occupied a house upon their property, being engaged to look after the iron and other stores. A very large quantity of iron plates, that had formerly been used for the tram-road from Croydon to Godstone and Merstham, but which had since become the property of the Brighton Railway Company, was piled up in stacks at Merstham, and it appeared that a few days ago it was discovered that from five to six tons of these metals had been stolen. An immediate inquiry was in consequence instituted, and it was discovered that the prisoners, all of whom keep horses and carts, had been seen conveying iron to London. Ultimately a search was made on the premises of Mr. Benbow, an iron founder at Bankside, and there a large quantity of the iron was discovered. Mr. Benbow was examined, and he proved that on the 4th of August he purchased 20 cwt. of this iron of the prisoner Evans, and paid him 3*s.* a cwt. for it. On the 13th of April he purchased of the prisoner Neal, 33 cwt. of the same description of iron; and, on the same day, he purchased a second lot of another person, and paid 10*l.* 8d. for the whole quantity. In addition to these facts, it was also proved that the prisoner Neal had sold several cart loads of railway blocks, the property of the Company, and that he told the party who purchased them that they were perquisites allowed him by the Company. The prisoners, who merely denied that they had been concerned in plundering the Company, were committed for trial.

The Sheriff-Substitute for the eastern district of Stirlingshire last week found a passenger by one of the Edinburgh and Glasgow trains, on the previous Tuesday, liable in a penalty of 10*l.* for having committed a trespass, by running up the bank and leaping over the fence at the Polmont station. His lordship, however, on certain mitigating circumstances being stated on behalf of the offender, by the agent for the Railway Company, modified the penalty to 1*l.*, with 10*s.* 6d. costs.

GREAT WESTERN RAILWAY COMPANY —GENERAL MEETING.

THE fourteenth half-yearly meeting of the proprietors of the Great Western Railway was held, pursuant to advertisement, at 1 o'clock on Thursday, at the terminus at Bristol, and was most fully attended. CHAS. RUSSELL, Esq. M.P., (Chairman of the Company), presided, and commenced the proceedings by calling upon the Secretary to read the notice calling the meeting, and the register of proprietors.

The notice, &c., having been read,

The CHAIRMAN said, the Report which the Directors had had the pleasure of laying before the proprietors that morning, and which had been distributed among them, was so full in every particular, that it would be unnecessary for him to detain them with many observations of his. (Hear, hear.) The Directors hoped that that Report would prove fully satisfactory. (Hear.) The receipts for traffic during the last six months had not been so large as in the previous six months; that circumstance was, however, to be fully accounted for by its being the winter half-year, when the receipts never were so large, and by the depressed state of trade during that period, which prevailed throughout the kingdom. The receipts would, however, he was happy to say, bear a comparison with those of any other railway in the kingdom; and, notwithstanding those circumstances, the Directors were enabled to declare as before a dividend of 3 per cent. upon the half year, and when they considered that previous to doing so the whole of the interest upon the debt had been paid, together with the rents due to the Cheltenham and Great Western Union and the Bristol and Exeter Railways, he thought that such a dividend could not fail to inspire them with much confidence in the progressive success of their undertaking. (Applause.) Now that their own line was nearly completed, the attention of the Directors had been naturally turned to those neighbouring railways to which they must look for an increase of their traffic. The contract which the Directors had entered into with the Bristol and Exeter Railway had proved satisfactory in every respect; that Company had also been benefitted by it, for it had enabled them to get over a period of great pressure and difficulty, and had also secured to them a responsible and solid proprietary. (Hear, hear.) Since their last meeting the line had been still further opened to Taunton. Connected with this subject was the selection by the Government of a port of departure for the West India mails; that subject remained nearly in the same state as it was in at their last meeting, with the opinion of the Commissioners in their favour; and as there had not been any adverse decision of the Government, notwithstanding the powerful influence which had been exerted in favour of various ports, he had no doubt that (the facilities of their railway being taken into consideration) a western port in connection with this railway would be selected—(hear, hear)—and from all that he had heard, he had little doubt but that Dartmouth would be the port selected. Another important topic which had been under consideration was respecting the selection of a port for the mails to the south of Ireland. On this subject a Committee of the House of Commons had sat, with Lord Ingestrie for its Chairman. He (the Chairman) had had the honour of attending a conference with Sir Robert Peel, with a deputation consisting of all the members for the west of England and the south of Ireland, and he had little doubt that, if the packets between Bristol and Ireland were only made more powerful and certain, and a species of passengers, who were not the most pleasant companions, were excluded from them—the Government would lend their aid to them for the conveyance of the mails, and an important commercial enterprise would be opened. (Applause.) The most important point of all which would come under the consideration of the shareholders was that with reference to the completion of the Cheltenham and Great Western Union Railway. In conformity with a wish expressed at the last meeting, the Directors had given to this subject their best and most anxious attention. They had been informed by the Directors of the Cheltenham and Great Western Union line that they were about to obtain powers to treat with them. The Directors of the Great Western had given it their serious consideration. A conference had been held between deputations of the two Companies; and although in the early stages of the discussion the Directors of the Great Western line had not seen their way very clear to a satisfactory conclusion, yet principles as stated in the Report had been pointed out, upon which he thought that measures might be taken to carry their wishes into effect. (Hear, hear.) This would be a most important point, as it would be the means of bringing to the Great Western line not only the trade of Cheltenham and Gloucester, but also the trade of the north. Travellers from Ireland would also select their line. Great, however, as these advantages unquestionably were, they might be bought much too dearly—(hear, hear)—and therefore, as was stated in the Report, the terms of such an arrangement would of course require the most vigilant and full examination—the most careful foresight must be used; every detail should be most fully gone into, and then the whole matter would be laid before a special meeting of the proprietors convened for that purpose. He was not aware of any other point which called for any remarks from him, and he would therefore request the Secretary to read the Directors' Report. (Hear, hear.)

Mr. OSLER, the Secretary to the Bristol division of the line, then read the Report.

DIRECTORS' REPORT.

The statements of traffic periodically furnished for publication, and which are also open for inspection by the proprietors individually, will have long since apprised them that the gross receipt during the six months to the 30th June, was 310,871*l.* 6d. 2d., being the amount collectively for the three lines worked by this Company.

The particulars of that revenue are supplied in the accounts annexed to this Report. It remains, however, to mention that of the sum so received, 273,877*l.* 12s. 4d. was earned separately and exclusively on the Great Western Railway between London and Bristol.

That line having been but partially opened in the corresponding period of the former year, no perfect comparison can be made of the receipts. There were, however, only 187,780*l.* 16s. 2d. for an average distance of about 100 miles of line, worked between January and June, 1841, as contrasted with 273,877*l.* 12s 4d., for 118¼ miles in 1842. The falling off in revenue during the first six months of 1842, as compared with the last six months of 1841, is 26,480*l.* 18s., which is less than might have been expected from the difference of season, invariably to the prejudice of the first six months of the year.

The number of passengers conveyed between 1st January and 30th June, 1842, and the Directors rejoice to say without casualty, has been 736,571, travelling 23,584,161 aggregate miles.

The merchandize has increased in the last half-year, notwithstanding the general depression in the trade of the country, presenting an augmentation of 7,612*l.* 5s. 7d. in the revenue over the former half-year. The Directors consider this item to be susceptible of still further increase, but they have still to contend against a vigorous competition in water carriage, both by canal and sea, which requires the most careful and vigilant attention to meet, without injuring the receipts from a local trade for which there is scarcely any competition, by a precipitate reduction of charges, under the hope of withdrawing more rapidly some traffic from other channels, which, on the other hand, would naturally be resisted by progressive and still greater reductions of charge or toll.

In stone and coal, two articles of considerable extent in trade, this has been more particularly felt, and although small quantities of each have been conveyed by railway, the Directors have hitherto been unable, from the circumstances referred to, to secure to the line any important revenue from them. Lately an arrangement has been made with the owners of two quarries adjacent to the railway, to carry stone for them, and those parties are now providing cranes for loading and unloading the stone from the waggons, and adopting other requisite means for carrying on and extending their trade. The Directors are also about to send coals to their principal country stations for sale, with a view to encourage that traffic on the line, for which purpose they mean to select the larger coal from the stock supplied to their coke ovens, being peculiarly adapted for domestic consumption, while the smaller coal is the best suited for the manufacture of coke.

The expenses for the past half-year have somewhat exceeded those of the preceding period. In many items there has been, as might reasonably be expected, a material reduction, but in others an increase has been unavoidable. In providing for the merchandise trade, an augmentation of establishment has been requisite. The misfortunes of the Sunning accident, which happened in December last, have also entailed an additional expense in this half-year, in regard to the sufferers by that lamentable occurrence. The deodands attempted to be inflicted on the Company have on the other hand been declared illegal, and set aside by the Court of Queen's Bench, as the superior authority, upon appeal made to them. The maintenance of way has been heavier during the last half-year, which is partly to be accounted for from the reparations necessary after the wet weather of last year, and partly from some relief of expense in the former period, when the cost of construction on a short portion of the line only just then opened, embraced some of the chief charges of keeping it in order. It will be satisfactory to the proprietors to know that 147½ miles of the lines worked by this Company have been now let under contract for the maintenance of way, at an average of less than 3*l.* per mile per week. The contracts for 97½ miles have been limited to a period of one year, under the firm anticipation of a further reduction of cost of maintenance at the expiration of that time, but they do not comprise any portion of the line between Paddington and Maidenhead, which, on account of the lightness of rails and timber laid down, the Directors regret to say, entails a higher charge upon the Company. The contract on 50 miles will expire within three months, but there is no doubt of reletting it upon equally favourable terms.

The expenses in ratio to receipt are 41, and the comparison with the corresponding period in 1841 is given in the accounts. To facilitate reference to the last half-year's proportion of expenses, a third column is also given with that information. Taking the distance worked by this Company, viz., 170 miles of railway, with 34 stations, the expense will be 75*l.* per mile for the half-year, which, compared with the general cost on other lines, must unquestionably be considered moderate.

The line from Bridgewater to Taunton was opened to the public on the 1st of July, which fulfilled the obligations contracted by the Bristol and Exeter Railway Company in February last to entitle them to receive the full rent at 80,000*l.* per annum for that half-year, deducting 500*l.* as compensation for the non-opening on the 1st of June, 1841.

They have also now become entitled to receive 7,500*l.* which had been forfeited in the first half-year, but as this is merely a contingent advance, liable to be repaid to this Company in three sums, with interest if the future openings do not take effect within stated periods, the Directors propose to charge such portions only against the traffic when the three respective openings in 1842, 1843, and 1844, for which the said payment is to be deemed the consideration, shall have determined the right of the Bristol and Exeter Railway Company to keep it, and this Company shall be in receipt of the advantages of the arrangement so made. The sum of 7,500*l.* referred to in the former Report as a contingency, and which has, in fact, only been payable since the 30th June, added to 10,937*l.* 5s. 1d. constitute the balance of 18,437*l.* 5s. 1d. brought to credit in the present half-year.

The balance of interest paid on loans during the last half-year, after deducting all interest received, has been 72,438*l.* 1s. 7d. This sum, together with the rents for the half-year, 8,500*l.* to the Cheltenham and Great Western Union Company, and 17,237*l.* 11d. to the Bristol and Exeter Railway Company, being defrayed out of the general revenue account, a balance remains of 93,355*l.* 6s. 9d.

The Directors recommend that a dividend of 3 per cent. for the half-year on the capital called up be now declared payable on the 1st of September, to the proprietors who were registered at the closing of the books.

This dividend, the same as that payable in March last, amounts to 90,750*l.*, and will leave an undivided balance of 2,605*l.* 6s. 9d. for the current half-year.

The property tax for one quarter of a year from the 5th of April, will be deducted from the present dividend.

It may be proper to remind the proprietors that 8*l.* per share on the fifth shares will be called up in

Digitized by Google

January next, in order to liquidate the debentures on loan notes then falling due, which will subsequently at this time next year entitle the proprietor of the fifth share to a *pro-rata* dividend upon the increased amount so called up.

A report having been studiously circulated, upon the supposed authority of an eminent geologist, that the Box tunnel presented cause of apprehension of insecurity from the nature of the oolite through which a portion of it had been cut, without lining in brickwork, the President of the Board of Trade felt it to be his duty to ascertain the correctness of such opinion or rumour, for which purpose General Pasley, the Inspector-General of Railways, was instructed minutely to inspect the whole tunnel, and to report thereon. The Directors have much gratification in learning that, after having taken the utmost pains to ascertain the solidity and security of the work, he has reported to the Board of Trade that it is perfectly safe.

The capital account of the Company is rendered in the usual form to the 30th June. Further payments have been made during the last half-year of 153,193*l.* 6s. 4d., principally for outstanding accounts of contractors, engine-makers, law charges, &c. It must be remembered that the total sum paid includes those disbursements for extra land, freehold premises, and a very large stock of plant, which when sold or otherwise employed, will have to be brought to the credit of the Company in reduction of the capital account.

The number of locomotive engines delivered on the 30th June was 125, since which 7 have been received, and 4 more remain still to be delivered to the Company.

The Bristol and Exeter Railway Company, having made overtures to the Directors for an alteration of two of the conditions of the lease of their line, as an inducement to them to accelerate the opening of the railway throughout to Exeter within the year 1844, the best consideration of the Board was given to the matter; but although they were well convinced that the proposition was made with the best and fairest intentions, it appeared to them inexpedient to recommend it to the proprietors for their adoption.

The Cheltenham and Great Western Union Railway Company, as was stated at the last meeting, made an application to Parliament for full powers to treat with other Companies, in order to facilicate or enable them to complete their line to Gloucester and Cheltenham, according to the original design of the Company, which has since received the sanction of the legislature.

As soon as the Bill passed, an application was made to the Directors of this Company to entertain a proposal for purchasing at once the finished portion of that railway and the powers to construct the remainder, in order to make it an integral part of the Great Western line, by the incorporation of the two Companies. However important to the interests of this undertaking the completion of that line might seem (and it is almost needless to say how very important it is), the Directors were extremely unwilling to enter upon any such negociation, having for its basis the amalgamation of the two Companies in their present position, with the prospect of a further expenditure, upon a mere estimate of costs of works beyond Kemble.

The Directors were of opinion that the most desirable mode of attaining the great object of carrying a continuous line of railway from the Great Western to Cheltenham, as forming a complete connection for the whole local trade, as well as for the traffic from South Wales, or from places brought by the Birmingham and Gloucester Railway to Cheltenham, would be by an undertaking on the part of this Company to lease the line, at a fixed rental, when completed, for a stated number of years.

Two grounds of objection and difficulty appeared to present themselves to the Cheltenham and Great Western Union Company, in attempting to carry out any such project for finishing their line. The one involving their proprietors, without adequate motives of future gain, in the contingencies of the expenditure exceeding the estimate, and the other in the doubt whether the public would advance the capital, upon the mere existence of a lease from the Great Western Company, without any direct guarantee of interest to the parties who might be expected to lend or contribute the capital.

The negociation chiefly on those grounds was interrupted, but recently a suggestion has been made which may probably overcome those material obstacles to an arrangement by lease; and the Directors have resolved to acquaint their proprietors fully with the circumstances of the case, in order that they may determine whether they would approve of the principles of an arrangement, provided the details of it can be adjusted, without, however, committing themselves now to the final confirmation of such an arrangement, which, if proceeded with under any expression of the opinion of this meeting, would of course be submitted to a special general meeting for ultimate decision.

The Cheltenham and Great Western Union Railway Directors having been apprised that some contractors of considerable capital and experience would enter into a comprehensive engagement for the entire making and finishing the railway, complete in every respect for traffic, without leaving any extra or uncertain sum for disbursement, by which means they may now arrive at a well-defined and certain cost with a sufficient guarantee for its correctness and accomplishment, will probably be willing to undertake the completion of it, provided the credit of this Company can be applied to aid them in raising the money, by means of a fixed annual rent guaranteed to the parties willing to subscribe or lend their capital for that purpose.

The basis of such an arrangement would be, first to ascertain and determine the entire cost of construction and the sufficiency of the security to ensure its being done; secondly, to arrange the amount of rent which it would be worth giving for the line when made; and thirdly, to obtain the money by a guarantee from this Company that the rent should be applied to pay the interest on all such loans until the principal sum be repaid, for which a time would be fixed by the Cheltenham and Great Western Union Company, to redeem the capital and terminate the lease and engagements of this Company, in default of which it should be optional with the Great Western Company either to continue the lease and payments thereon, or to redeem the capital and take permanent possession of the line.

There is every reason to believe that such security would be available to any required extent, and the obligation upon this Company would be reduced to a mere payment of annual rent, in consideration of the completion and for the benefit of the working of that line. The terms of it would of course require the most careful and vigilant attention and foresight; but the Directors have no hesitation in saying that they should consider this Company well justified in paying as rent the full sum which could be reasonably expected to be earned within an average of ten years upon that line, after allowing for all the working expenses; the recompense for the risk, labour, and responsibility being derived exclusively from that augmentation of traffic on the Great Western line, which they confidently believe must be thereby attracted to it.

Any interest upon loans payable before the line is finished for leasing, must of course be capitalised and provided for by the Cheltenham and Great Western Union Railway Company, so as not to burthen this Company with an advance of money for such purposes, before the line is in working order and yielding a revenue.

Upon this statement it must remain with the proprietors to decide the course which they may deem most conducive to their own interests.

The Engineer's Report on the general state of the works is appended.

C. RUSSELL, Chairman.

ENGINEER'S REPORT.

16, Duke-street, Westminster, August 16, 1842.

Gentlemen,—During the last six months nothing has occurred to disturb the regular working of the line and the maintenance of the works. The weather, particularly for the last few months, has been most favourable for the repairs of those injuries which had been sustained during the very wet season of the autumn and winter of 1841, while the works were yet new, and consequently not in a condition to resist the action of the continued rain to which they were exposed. These injuries were particularly referred to in my Report in February last; such as more immediately interfered with the proper maintenance of the permanent way were repaired early in the present year, but wherever the clay embankments had suffered materially from the quantity of water, which had not only destroyed the slopes but in many places had penetrated into the mass, I considered it wiser to profit by the very dry season, and to leave the embankments exposed as long as possible. The repairs of these various slips have now, however, been completed, or are in progress; and before the summer is over I believe the works will everywhere be in a very satisfactory condition.

A report having been generally circulated that parts of the Box tunnel were unsafe, and that such an opinion was entertained by an authority well competent to judge, I am happy to be able to assure you that such is not the case, and that there has been no foundation for any such report. A portion of this tunnel, it is well known, is carried through very solid beds of oolite, and at some parts a particularly sound and hard bed occurred immediately, or within a few feet, above the top of the tunnel. To have left the looser beds underneath, and have lined it with masonry, would indeed have been a waste of money, when by slightly varying the height of the excavation a perfectly solid and safe roof was afforded by nature. No precautions were spared in examining and ascertaining the quality of this bed; and the experience of the large quarries in the neighbourhood, joined to our own, in carrying on one of the largest excavations hitherto made in the oolite formation, enabled me to determine, beyond doubt, the security of the roof thus selected. My own opinion, and that of others well competent to judge, and who were engaged in the works, has, I am glad to say, received a strong and a very satisfactory confirmation.

The reports referred to were considered by the Board of Trade sufficiently important to induce Lord Ripon to direct that a survey of the work should be made by General Pasley; that examination, made with the utmost care, has led to his expressing to me his perfect satisfaction of its security, and his opinion that it would have been a useless expense to have arched those portions of the tunnel.

The Swindon engine-house and the Bristol goods' shed, although they have not proceeded as rapidly as could be desired, are now advanced nearly to completion. A portion of the former is already in use, and I trust before the winter approaches, that the whole will be completed, and in a few weeks the Bristol goods' shed will be in operation.

I have used my utmost endeavours to bring to a close the settlement of all the contract accounts for the construction of the line; but although several of these are much nearer a settlement than at the last half-yearly meeting, I am sorry to say but few have been actually closed. I am not in a condition, therefore, to make any positive or accurate statement of the amount of the balances which may still be payable, but I can assure you that I still see no reason to fear that my former statement will prove inaccurate.

I am Gentlemen, your obedient servant,
I. K. BRUNEL.

CAPITAL ACCOUNT.

Statement of Receipts and Payments to 30th June, 1842.

RECEIPTS.

Amount received on account of Capital, viz.:—

By Carriage of timber and materials for the line	333 6 9
By Warehouse rent	44 18 5
	£310,871 6 2

Detail of Charges referred to in the Revenue Account.

ABSTRACT No. 1.

Enginemen and Firemen's wages	£4,991 12 2
Waste oil, tallow, water, and firewood	2,771 4 0
Wages of labourers and cleaners	3,102 7 2
Cost of superintendence, including clerks' salaries, foremen, and office charges	1,566 12 11
Repairs of engines and tenders—comprising wages, materials, and every other expense	7,223 19 0
Coke consumed by locomotive and stationary engines, being 13,038 tons, including charge for coke, waggon repairs, &c.	19,293 10 10
Total	£38,949 6 1

ABSTRACT No. 2.

Carrying Accounts—	
Wages to conductors and guards	£2,810 0 6
Police and Inspectors	7,217 4 8
Messengers and porters	8,007 9 9
Clothing	1,163 17 8
Carriage and waggon repairs	4,571 1 8
Stores consumed	2,713 14 1
Carrying expenses	246 5 4
Horse account, including expenses of working the Weston-super Mare branch	382 2 4
Lighting and gas at stations	1,435 15 3
Total	£28,527 11 3

ABSTRACT No. 3.

General Charges—	
Superintendent's and clerks' salaries	£8,814 18 11
Advertising	508 1 5
Stationery account and ticket books, &c.	1,768 12 2
Sundry office expenses and postages	228 3 3
Parcels, carriage of	52 14 5
Travelling expenses, &c.	286 9 9
Water at stations	272 4 3
Total	£11,931 4 2

General Revenue Account.

DEBTOR.

To Cheltenham and Great Western Union Railway Company, for half year's rent, from 31st May to 29th November, 1841, at 17,000*l.* per annum		£8,500 0 0
To Bristol and Exeter Railway Company, for half-a-year's fixed rent, to 13th December, 1841, at 15,000*l.* per annum	£7,500 0 0	
For ascertained tollage on 143,894 passengers, 3,118,771 miles, 4,046 tons goods, at ¼d. per mile	3,377 12 6	
		10,877 12 6
To Balance of interest paid to 31st December, 1841		73,881 18 5
To Amount of dividend, payable 24th March, 1842		90,750 0 0
To Balance carried down		18,437 5 1
Total		£202,446 16 0
To Rent paid Cheltenham and Great Western Union Railway Company, to 30th May, 1842		£8,500 0 0
To Rent paid Bristol and Exeter Railway Company, for half-year, to 13th June, 1842:—		
Fixed rent, at 30,000*l.* per annum	£15,000 0 0	
Tollage	2,737 0 11	
	17,737 0 11	
Deduct—		
For sum allowed for non-opening on the 1st June, 1841	500 0 0	
		17,237 0 11
To Balance of interest paid to 30th June, 1842, after deducting all interest received		72,438 1 7
Total		£98,175 2 6

CREDITOR.

By Balance, as per former statement, to 31st Dec. 1841	£212,446 16 0	
Less depreciation fund, for half-year to 31st December, 1841, as ordered by the general meeting of proprietors of 24th February, 1842	10,000 0 0	
		202,446 16 0
Total		£202,446 16 0
By Balance brought down		£18,437 5 1
By Balance of revenue account, being net profit for the half-year ending 30th June, 1842		173,093 4 2
Total		£191,530 9 3

Mr. CROSTHWAITE said, before the Report which had been read was adopted, he wished to know whether it was intended that it should be followed up with a motion upon that part of it which related to the Cheltenham and Great Western Union line, or whether they would prefer first hearing the opinions of the proprietors on that point.

The CHAIRMAN said, the Directors would wish first to hear the opinions of the proprietors.

Mr. CROSTHWAITE wished to know whether it would be desirable that those proprietors who were adverse to the views of the Directors upon this subject should express their opinions. His own opinions, as was known, were decidedly adverse to this proposition, because he was convinced that there would not be a sufficient traffic on the line to pay its expenses. If there was to be a motion originating with the Directors, it could be done then, or he would propose one—and probably if they found that a large portion of the proprietors were adverse to it, it might perhaps as well be stopped then; but, on the other hand, if he found he was not supported, he should not think of pressing it.

The CHAIRMAN said, whether it were done by the adoption of the Report, or by the proposition of a resolution, he thought the proprietary would be bound to the extent of inquiry, but no further.

Mr. ENGLAND objected to one portion of the Report, and intended to move an amendment, as he never could sanction the application of the capital of the Company to the payment of dividends. It was proposed in the Report to take the 7,500*l.* which it had been arranged at the last meeting should be set apart for payment to the Bristol and Exeter Company, and with the addition of about 11,000*l.* of balance to make up the 18,000*l.* from which the dividend of 3 per cent. was to be paid. He objected to this because, becoming a proprietor with a view to the permanent investment of his capital, he never would consent to say he had taken 3 per cent. when in fact he was only receiving 2½ per cent. The Report now stated that the 7,500*l.* was only a contingent advance, liable to be repaid to the Company if the future openings did not take effect at the periods stated. (Hear, hear.) But he should wish to know why it was that the Directors did not think it now necessary to do so, after having set it aside for that purpose. He should move that the sum of 7,500*l.* be not appropriated for the purposes of dividend; for he did not wish it to go forth to the world that

Digitized by Google

their dividends were made up of appropriations.

Mr. HOVENDEN said, if the honourable proprietor who had just spoken had finished, he wished to rise for a purpose totally opposite to that advocated by him; for, in his opinion, they ought to divide 7 per cent. instead of 6, and he should propose a dividend of 3½ per cent. upon the half-year. (Hear, hear.) He had ever held the opinion that it was most hard upon the early proprietors of a railway to oblige them to lay aside a large reserve fund for the benefit of future proprietors—for the benefit of persons who might not even become connected with the railway until seven or ten years hence—(hear, hear,)—while the early proprietors had actually gone for years without any interest at all. (Applause.) He should, therefore, move that the Report of the Directors be received and adopted, with the exception of that part of it relating to the reserved fund for depreciation, and that such fund, being injurious to the proprietors, uncalled for by any circumstance, and unrequired by any principle of justice or sound policy, be hereby abolished. (Applause.) He might probably be told by the Directors, that he ought to have given notice of his intention to bring forward so important a motion, but to this he could only answer, that giving notice of important motions was not the practice of the Great Western Railway Company. (Hear, hear.) If the Directors had anything to bring forward, they did not give notice, and this very reserve fund had been brought forward by them at the last meeting, (from which, through illness, he was unfortunately absent,) without any notice having been given. (Hear.) It had not only been brought forward without notice, but had been carried almost *sub silentio*. (Hear, hear.) He mentioned this as an excuse for his present proceedings, for, if he had been present he should have then opposed it; and the subject was one of such importance, that he thought it was at least desirable it should undergo a full and fair discussion. (Hear, hear.) He could only say, that if he had not given notice of his intentions to the Directors, neither had he done so to any other individual; he had made no party, nor had he canvassed for votes for the purpose of upsetting the former decision, so that he had not acted unfairly. (Applause.) He would now enter on the merits of the question: he had come there relying on the justice of his cause; if he should fail in satisfying the proprietors, they would not vote for his motion, but if, on the contrary, he could make out his case, and show that the reserve fund was not required, he hoped that it would be forthwith abolished. (Hear, hear.) If he could show them that by doing so they would inflict no injustice on the future proprietors, he hoped they would declare a dividend of 3½ per cent. on the half year, instead of 3 per cent. (Applause.) What were the arguments upon which it was assumed that there was a necessity for a reserve fund? Why, as stated at the last meeting, it was taken for granted that by the lapse of years such a depreciation of the stock took place, as if provided for out of the half yearly receipts would prove most injurious to the dividend to be declared; and it was contended, that in order to equalize the burden, and make the depreciation gradual, it was necessary to provide a reserve fund. He would, however, dispute this point. He denied that any such grounds existed. He would not admit that there were any sufficient grounds on which to rest such assumption; nay, further, even admitting that such a depreciation did take place, he would deny the justice to the present proprietors of making such a reserve fund for future contingencies. He would first inquire whether there were any grounds for the assumption, that in a few years there would be such a reduction in the value of the stock as would require such a large expenditure. He knew that they, the Great Western Railway Company, could not boast of great experience, but the experience which they had was most decidedly not in favour of a reserve fund, and showed them that there would not be any such depreciation. There was a railway in the country which had been opened for several years, for upwards of ten years, which had paid good dividends, and which was as well managed as any railway in the kingom, he meant the Liverpool and Manchester, and yet that had no reserve fund. It was true that their expenditure had increased, but so also had their receipts, and their very last dividend had been one of 10 per cent., and they never had divided more. They heard of no expressions of dissatisfaction from the shareholders or Directors of that Company, and as it was fair to infer from their experience, that if any evil had been felt it would have been complained of, it was fair in him to say that experience was in his favour. (Hear, hear.) There was another railway, the South-Western, the Vice-Chairman of which Company, Mr. Chaplin, had favoured them with his opinion on the subject of a reserve fund. The question having been pointedly put to him, he had replied, that their railway had been in work for three or four years, that their stock then was more valuable than it was at the commencement of their undertaking, that they had gone on upon the principle of repairing, as soon as repairs were needed, without waiting until the articles were entirely worn out, and Mr. Chaplin had added, that not only was no reserve fund necessary, but that he beleived that his successor, if asked ten years after the same question, would be enabled to make a similar reply. (Hear, hear.) Therefore, as far as experience had gone, it was strongly against the principle of a reserved fund. He would, however, take it hypothetically, and say that it was probable that at the end of ten years a large expenditure would be necessary to replace worn-out stock, even supposing that 200,000*l.* were needed for that purpose, which would be the whole of the ten years' reserve fund, at 20,000*l.* a-year; then he would still contend that they were not the parties to repair that stock—(applause)—for they had already purchased a set of engines, and all the plant necessary for working the line, and were constantly paying large sums to keep it in repair; and instead of it being unjust to the future proprietary, it was most unjust to the present proprietors, after purchasing one plant, to oblige them to lay by the money to provide a new plant for their successors. (Hear, hear.) The fair way would be, if it was necessary at the end of ten years for them to purchase a new stock—the fair way would be for the future proprietors to take up the sum required on loan-notes, to be paid off within ten years, by which period most of their debts would be paid off; and then at the end of another cycle of years let a third set of proprietors act in a similar manner. (Hear, hear.) If he had shown that it was unjust, he was certain that it could not be denied that it was most impolitic, and was at the present time peculiarly harsh in its bearing, when the resources of their line were not yet developed—for their traffic would, he believed, be immensely increased. Their leases also were not productive at present, but when the line was opened to Exeter, would no doubt produce to the Company a large profit, while now they were a loss. Why then should they, he would ask—why should they have a reserve fund, when they were at the minimum of their receipts and at the maximum of their expenditure? (Hear, hear.) They now had upon them the incubus of unfinished lines; why should they add to the weight of that incubus by the establishment of this reserve fund? But it was said, if proprietors wanted to sell their shares, they would gain the advantage of this reserve fund; he, however, thought that the declaration of a dividend of 7 per cent. would be much more advantageous. Upon the grounds, therefore, that the reserve fund was unjust to themselves, unwise and impolitic, he should move that it be abolished.

Mr. DAY having seconded Mr. Hovenden's motion,

Mr. ROSKELL said, he rose to move as an amendment, the adoption of the Directors' Report, with the 3 per cent. dividend. He saw nothing in the Report to complain of, while there was much in it that was subject of congratulation. (Hear, hear.) With regard to the completion of the Cheltenham and Great Western Union line, he had his own opinions upon it, and was sorry to differ from those friends with whom he formerly acted, thinking as he did that the Great Western Railway would be greatly benefitted by that completion.

A PROPRIETOR having seconded Mr. Roskell's amendment,

Mr. CROSTHWAITE said, he wished to ask Mr. Brunel a question. He had read in the *Railway Magazine*, that although the locomotive power on the Great Western Railway amounted to 132 engines, they had only 40 or 50 engines which could be worked with effect—if this was not correct it should not go forth to the public, and therefore it was that he wished the question answered. The other question he wished to ask was, the cost of the engines, which was not set forth separately in the account, but which, with the carriages, &c., was stated at 531,570*l.* 3*s.* 7*d.*

Mr. BRUNEL in reply said, there were 132 engines the property of the Company, 7 of which were new, and not yet in working order; but of the remaining 125, there were 109 ready to do their work at any time. (Applause.) At least that was their state in the Report made on the 30th of June, and there was no difference now that he was aware of, but if there were any difference, it was that more than 109 engines were completely effective. (Applause.)

Mr. CROSTHWAITE was most happy to hear it.

Mr. BRUNEL—The fact is, they are not only ready to take their turn, but they actually do so.

Mr. CROSTHWAITE—I suppose Mr. Saunders is not prepared with the valuation?

Mr. SAUNDERS said he was not, as the honourable proprietor was aware that no valuation had been made.

Mr. CROSTHWAITE observed, that no notice had been taken of the mails in the Report, which it was promised at the last meeting there should be.

The CHAIRMAN—It was not noticed because, as the honourable proprietor was aware, they were the subject of arbitration, and in consequence of the opening to Taunton, it had been thought desirable that that arbitration should be deferred in order to comprise the whole and not subject them to two awards.

Mr. CROSTHWAITE — The next question he wished to put was respecting the workmen employed on the line, for whom accommodation was much wanted. He had been informed that in some instances they had to walk three or four miles to their work, which, as the winter approached, would be a most serious hardship. He asked the question therefore in the hope of calling the Directors' attention to the subject.

The CHAIRMAN said, the Directors were quite alive to the evil; the fact was that great fault was to be found with the contractors for not providing the necessary cottages, and they had been not only complained to by the Directors, but the Directors were resolved to take the necessary steps to remedy the evil. He wished also to observe that those cottages were not to be at the charge of the Company.

Mr. CROSTHWAITE had observed that at the meeting of the Northern and Eastern Company, Mr. Crawshay had stated that the Great Western Company had paid a considerable sum to coaches for going off or coming on the line of the Great Western Railway.

The CHAIRMAN—The gentleman who said so was much mistaken; the Great Western Company never have paid a single shilling for any coaches going off the line, nor for coming on.

Mr. CROSTHWAITE wished next to ask whether all the fifth shares had been disposed of.

The CHAIRMAN—Yes; with the exception of a small number in the hands of the Company which they are expecting to dispose of at a profit, after apportioning any claims for fractional allowance.

Mr. CROSTHWAITE—I suppose that in the answer respecting money paid to coaches the Chairman included omnibuses, and that nothing had been paid to them.

The CHAIRMAN—The first year three omnibuses from the Paddington station were paid 50*l.* each, to ensure their regularity, so that 150*l.* has been the whole sum paid, while the Company cleared 1,050*l.* by their contracts with coaches between Hay-lane and Bath.

Digitized by Google

Mr. CROSTHWAITE hoped there would not be any necessity to require further capital.

The CHAIRMAN answered that he had still every reason to believe that the powers given to the Directors to raise a further amount would prove adequate for their wants.

Mr. HEYWORTH thought that to have a reserve fund was most unjust in principle and impolitic, for if their plant was in good working order, they need not inquire into its value, its value being its use. If they had good working engines, they need not number them up, for as he had said their value was their use. He thought therefore if the Directors reserved an annual fund of 20,000*l.* the honourable proprietor was right in claiming it as their own—(hear, hear)—and at least he might say that a quota of it belonged to him (Mr. H.). He thought that everything should be repaired instantly that it required it, and that without a reserve fund it would be so; but that with a reserve fund for the purpose of finding a new plant, it was probable that instead of being repaired it might be allowed to get more and more out of repair; he therefore concurred in everything which had fallen from Mr. Hovenden, not that he wanted the additional half per cent., for if the Directors had got into debt 20,000*l.*, let them only come forward in a straightforward manner, and say so, and he would say, let them have it—he would say let them pay off their debts, but he would tell them to hereafter keep their accounts so as to get into debt no more. (Hear.) There was another part of the Report which he thought important—the completion of the Cheltenham and Great Western Union Railway. If the portion of the Report relating to that measure implied that the proprietors, by adopting the Report, gave their assent to it, he for one would object to it at once, believing as he did that the traffic to be obtained on that line would not pay for its working expenses. (Hear.) He believed, if he were not misinformed, that at present they received about 1,000*l.* per week from that line, and if they could show that by lengthening that line they could double or more the number of passengers and the amount of traffic on it, then they would be receiving an additional 1,000*l.* per week, which, although not all profit, would yield a certain portion of profit; but if this could not so increase the number of passengers, &c., they would only be carrying on a losing traffic over an additional number of miles. Now, he did think, that before the Directors asked them for their sanction, they should be prepared with such data, as would prove to a certainty, that the traffic would be so increased. He could not, however, shut his eyes to the fact that the property upon that line and the Gloucester line did not pay. If there were here proprietors of that line, or if there were any such among the Directors of the Great Western line, he had no doubt but they might be glad to close any bargain which would save their property from ruin, which he thought was its inevitable fate, as soon as their lease of it was at an end. For a few years this Company had to pay them 17,000*l.* a year, but that would cease, and then what became of the property? He had made inquiries as to the amount of the traffic, and the result of those inquiries had made him rather sceptical as to the largely increased amount to be expected from the extension of the line; he thought this line had already all the traffic which went that way to London, and that they could not have more than all. It was often a false idea, that an extraordinary quantity of traffic must ensue from having a terminus at a largely populated place, as was instanced in the case of the North Midland, one end of which, although in a populous place, was not among a travelling people.

Mr. BRUNEL, in answer to a question, said, the stock of plant was kept up half-yearly in the best possible order.

Mr. C. BOWLES FRIPP wished to ask whether the depreciation fund was applied solely to the machinery, or whether it was applicable to the repairs of road as well as of the machinery.

The CHAIRMAN then addressed himself to the motion before the meeting, and said in doing so he would first notice Mr. England, who had made some remarks respecting the 7,500*l.* The Bristol and Exeter Company had not opened the line to Bridgewater on the 1st of June, but as they opened in 14 days after, it had appeared to the Directors that it would be hard to impose so large a penalty for 14 days' delay; and as it was thought that it could be beneficially applied to the further openings of the line, the Directors thought that a penalty of 500*l.*, about the amount of the loss to the Great Western Company, would be sufficient, and that they should remit them the 7,500*l.* provided the line was further opened at the three specified periods; but as that arrangement was not completed until after the 1st of July, it could not properly be brought into the present account, which ended on the 30th June. It was therefore agreed that it should remain as a deposit in their hands, subject to the contingencies that all the openings should take place at the specified times, and if the line was not so opened, then they would not be entitled to retain it. He did not think that this ought to have been made a charge against the Directors. With respect to the depreciation fund he entirely differed from the honourable proprietor. The Directors had had many anxious consultations on the matter, and Mr. Brunel had put to them the depreciation which the stock would undergo in so plain and simple a manner, that taking also into consideration the very many improvements in engines which were constantly being made, the Directors had felt themselves bound to recommend the establishment of the reserve fund. (Hear, hear.) The honourable proprietor said it was unjust that the present proprietors should be called on for that which he thought ought to fall on the future proprietors, he (the Chairman) would, however, remind him that the depreciation was gradual from year to year, and that therefore it should be provided for from year to year. The Liverpool and Manchester Railway had been cited as an example; he thought, however, that the Grand Junction and London and Birmingham Railways were of equal authority, and they had both of them reserve funds. The honourable proprietor had said that the feelings of most of the proprietors were against the reserve fund; he (the Chairman) was surprised to hear this said, when at their very last meeting the motion for a reserve fund had been carried all but unanimously. (Hear, hear.) He should be sorry to see so much levity manifested by the proprietary that a measure should be carried almost unanimously at one meeting, and then rescinded at the next; besides, he thought it would be a great injustice to those proprietors who were absent, if it to should be rescinded without any notice being given to them—(hear)—and therefore he should oppose the motion. The other hon. proprietor had said with regard to the proposition respecting the Cheltenham and Great Western Union line, that they already had all the traffic which was to be obtained on that line; he (the Chairman) begged to differ with him; but all that the Directors asked upon that point was, that they might be permitted to inquire into the matter, that they might fully investigate it, and report to a meeting of proprietors to be held for that purpose, and at which meeting the proprietors would be as free as to the rejection or adoption of any proposition that might be made as they were at present.

The Rev. Mr. NICHOLSON expressed his surprise that they were now no nearer the knowledge of the cost of their railway than they were 12 months since, and that they were told this by the Report nearly in the same words as they were 12 months since; viz., that the contract accounts were many of them still unsettled. He thought the meeting ought to be informed of the reasons why these accounts had not been settled. Mr. Brunel could not complain of his inability to do so from want of time, for he had had plenty of time, and had, as he (Mr. N.) understood, been for some time at Milan this summer, where he was constructing a railway from that place to Genoa. Before, therefore, they entered into arrangements for new lines with the Cheltenham or any other Company, he thought they ought to know the cost of the present one, and why the contracts had not been settled.

Mr. BRUNEL in explanation said, as the question had been put in that shape, he would so give his answer, but out of consideration for the proprietors he must be cautious how he shaped it. They were probably all aware that when large works were finished and measured off, there were frequently differences in the accounts as made by the engineer and the contractor—the one fancying that 500*l.* or 1,000*l.* or more was due to him, while the engineer maintained, on the other hand, either that not so much or that nothing at all was due to him. (Hear.) If he (Mr. Brunel) had yielded what he considered the interests of the Company, probably he might ere this have settled with every contractor, and the difference might not have been more than 20,000*l.*; but he had thought it more proper to go on for six months, and this he would say, that such a course gradually brought them together. In some cases documents might be shown him proving that he was in error, or in others the parties feeling that he was right might accede to his award. He thought he ought not to say more, because at the last meeting the attorney of one of the contractors with whom there was a dispute, had attended and put a number of very strange questions, purely with the view of eliciting testimony from him (Mr. Brunel) in favour of his client; and they had a suit in Chancery now with that contractor, after he had tried the other courts. He could, however, say that, with some very small exceptions, the expectations which he had held out to the proprietors 12 months since would not be disappointed. (Applause.)

The Rev. Mr. NICHOLSON thought the answer so satisfactory, that the proprietors must be happy that he had asked it.

The CHAIRMAN explained as to Mr. Brunel's absence at Milan, he had only been absent six weeks, and he was sure had had but very little indulgence from the Company.

The Rev. Mr. NICHOLSON—At the last meeting they were promised a full and fair Report of the property to be sold; he asked if they could now have it?

Mr. BRUNEL hoped to be soon able to furnish it.

Mr. NICHOLSON—It is stated at 150,000*l.* I wish to ask if it is sold.

The CHAIRMAN—We are taking the best opportunity to sell it, but if we sold it in the manner in which the honourable proprietor wishes us to pay the contractors, I am afraid the proprietors would have but a Flemish account of their property.

Mr. NICHOLSON wished to ask, if the Directors were empowered to raise more money the next half-year on debentures?

The CHAIRMAN said, the Directors were still empowered to raise 120,000*l.* on loan notes.

Mr. HOVENDEN then replied to the arguments against his motion. If it were said to be levity on the part of the proprietors now to seek to abolish the reserve fund, then it was levity in those who, without notice, had established it. (Hear.) There could be no more reason in favour of the one case than of the other, for it was impossible that proprietors could be instantly prepared for a motion—in this case they had been taken by surprise, and he took the question of the last meeting as a notice for the present meeting, since then they had had six months to consider of it. One of the chief arguments of their Chairman was, that improvements in the engines were constantly being made, but those improvements did not take place so rapidly as to affect them; and under this head the case of the Liverpool and Manchester Railway was even more strongly in their favour. Having been established when the manufacture of locomotive engines was completely in its infancy, they must have many engines which were perfectly obsolete now, and yet they had no reserve fund. Besides, were the engines on the Great Western line all of one age? Had they not also some that were constructed at the very commencement of their undertaking? (Hear, hear.)

Digitized by Google

This clearly, therefore, was no argument in favour of a reserve fund. With regard to the other argument, he would admit its justice as regarded private tradesmen, who ought not only to lay by a reserve fund, but more than a reserve fund, out of his profits, that he might make provision for his children, but with great Companies the case was different. Ought they to do so? No; let the profits be quickly divided among the shareholders, in order that they might fructify in their pockets, that they might be able to provide for their children.

The CHAIRMAN was sorry that the honourable proprietor persisted in pressing his motion; he was in hopes that he would not attempt to reverse the deliberate decision of the proprietors, and especially without notice. He was still in hopes that the honourable proprietor would not press his motion even now.

Mr. HOVENDEN persisted in pressing his motion, and after some observations from Mr. Vousley, Mr. Roskell's amendment was put and carried, the numbers being declared as 42 for the amendment, and 32 against it.

A long discussion ensued, many proprietors thinking that the decision had been the other way, and the Chairman was called upon to put the motion again, but declined doing so, stating that if his decision were not satisfactory the proprietors had the alternative of the ballot, which was, however, ultimately declined.

In answer to a proprietor,

Mr. BRUNEL said that the quantity of coke consumed per mile was 44 lbs., but that was not merely the consumption while running, but comprised the whole quantity when divided by the number of miles travelled both by passengers and goods trains.

The Rev. Mr. NICHOLSON wished to inquire whether the interest for the current half-year would be as large as the last?

The SECRETARY said, it would be larger.

Mr. C. BOWLES FRIPP made some observations as to the accommodation for third-class passengers, and wished that there should be a morning and evening train for them. He wished a return of the number of passengers, specifying each class, and also of the quantity of merchandise conveyed, which was not set out in the Report. He also suggested that the Directors should give more statistical details than they did, which would be highly useful.

The CHAIRMAN explained that if notice had been given the details required should have been furnished. With regard to the statistics, the information was often used by overseers and others to the disadvantage of the Company.

The resolution respecting the Cheltenham Union being now about to be put,

Mr. HEYWORTH thought it would bind them to the principle of the proposition, and objected to the word "treat" with the proprietors of the Cheltenham and Great Western Union Railway.

The CHAIRMAN could assure the meeting that it would not at all bind them; all that the Directors asked was to be allowed to inquire.

Mr. HEYWORTH wished to know if that portion of the line now paid for its working?

The SECRETARY replied that it more than paid the actual working expenses, but he would with equal candour admit, that if the rent were added it did not pay.

After some further observations, the resolution was put and carried, the numbers being 48 to 13.

The other resolutions (see our advertising columns) were then carried unanimously.

Mr. HEYWORTH then gave notice that at the next general meeting he would move "that the reserve fund should no longer exist, but that all repairs should be paid for out of the weekly receipts and general revenue, and no depreciation fund allowed."

Thanks were given to the Directors and the Chairman, and the meeting separated.

DUBLIN AND DROGHEDA RAILWAY COMPANY.—NOTICE is hereby given, That the General Half-yearly Meeting of the Proprietors of this Company, will be held at the Company's Offices, 22, Marlborough-street, Dublin, on Thursday, the 1st day of September next, at One o'Clock in the Afternoon—the Chair to be taken at that hour—for the purpose of receiving from the Directors a Report and Statement of the Accounts for the Half-year ended the 30th June last, and of confirming the forfeiture of certain Shares in the Capital Stock of this Company; the said Shares having been previously declared forfeited by the Directors, in conformity with the provisions of the Act of Parliament in that case made and provided.

The Books of Transfer of Shares in this Company will be Closed on and from the 23rd day of August instant, to the 2nd September next.

GEORGE ALEXANDER HAMILTON,
Chairman of the Company.

22, Marlborough-street, Dublin,
5th August, 1842.

EASTERN COUNTIES' RAILWAY COMPANY.—TWELFTH GENERAL MEETING.—NOTICE is hereby given, That in pursuance of the provisions of the Company's Act of Incorporation, the Half-yearly General Meeting of the Shareholders of this Company will be held in London, at the Shoreditch Station, on Wednesday, the 31st day of August instant, at One o'Clock, precisely, and that between Monday the 22nd, and Wednesday the 31st of August (both days included), the Transfer Books of the Company will be Closed.

By section 137 of the Act, it is provided that "No Proprietor of any Share on which any call shall have been made, shall after the day appointed for the payment of the same be allowed to vote at any meeting of the proprietors of the said Company, until the money called for in respect of such shares shall have been fully paid."

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE,
Deputy Chairman.

Offices, Shoreditch Station, 10th August, 1842.

EDINBURGH AND GLASGOW RAILWAY.—NOTICE is hereby given, That the Ninth Half-yearly General Meeting of the Shareholders in the Edinburgh and Glasgow Railway Company will be held, pursuant to the Act of Incoporation, in the Company's Office in Glasgow, on Tuesday, the 23rd instant, at One o'Clock p.m.

The Transfer Books will be Closed on and after the 16th instant, till after the Meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the Meeting (section 134,) otherwise they will not give a right to vote at the meeting. Blank Forms of Proxy may be had on application at this Office.

In terms of section 137, the Proprietor of any Share on which any Call shall be due, will not be entitled to vote in respect of such Share.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
Glasgow, 8th August, 1842.

THE MANCHESTER AND LIVERPOOL PLATE GLASS COMPANY have just now on SALE a large quantity of Ground Plate Glass, suitable for Skylights, which they can sell in lots at 2s. 6d. per foot; also Stout Polished Plate for Conservatories at 3s. per foot; and a quantity of ditto for general glazing purposes, AT HALF THE "TARIFF PRICES." Also, several extremely Large Plates for Looking Glasses.

An extensive assortment of Dressing Glasses, with or without Mahogany Frames, to be sold considerably under the Tariff prices.

Every information may be obtained at their Manufactory, Sutton, St. Helens, Lancashire; or at their London Warehouse, 2, Soho-square.

By order of the Board,
J. L. GRUNDY, Company's Agent.

London, August, 1842.

TO IRON MASTERS.—The Liverpool and Manchester Railway Company are desirous to contract for the purchase of 250 Tons of best Railway Bars, of the parallel double T form—weight about 75lb. per yard.

Each Rail to be made exactly 15 feet in length, and in strict conformity with a template of the cross section, which may be seen at the Company's office, and which will be delivered to the contractor for his pattern—each end of every rail to be cut square and smooth to the precise sectional form.

The Rails to be made in a workmanlike manner, of the best No. 2 Mine Iron, free from cinder, constituting the Rails when made No. 3 best bar iron.

To be delivered at the Company's yard in Salford straight, and free from warp or twist; and the Railway Company to be at liberty to put every Rail to such test in proof of its strength and quality, by bending or breaking, as they shall think expedient, with power to reject all defective rails; the cost and charges on the Rails not accepted to be borne by the manufacturer.

The Rails to be delivered in 3 months from the date when the tender shall be accepted; and payment to be made by a banker's bill at 3 months' date, when the Rails shall have been delivered and approved. Tenders to be addressed to the Treasurer, and transmitted to the Lime-street Office, on or before Wednesday the 31st instant.

By Order of the Directors,
HENRY BOOTH, Treasurer.

Railway Office, Liverpool, Aug. 17, 1842.

GREAT WESTERN RAILWAY—FOURTEENTH HALF-YEARLY GENERAL MEETING.—At the Fourteenth Half-yearly General Meeting of the Great Western Railway Company, held in pursuance of the provisions of the Act, at the Company's station, in the City of Bristol, on the 18th day of August, 1842,

CHARLES RUSSELL, Esq., M.P., in the chair,

The following Resolutions were severally agreed to:—

1. That the Report now read be received and adopted, and printed for circulation.

2. That a dividend of £3 per cent. be declared for the half-year, ending on the 30th June last, payable to the Proprietors of all the shares in this Company registered at the closing of the books, in proportion to the sum called up on each share respectively. That the said dividend be paid at the bankers of the Company on and after the 1st of September next

3. That in order to effect a further reduction in the number of Directors from Eighteen to Twelve, it be hereby ordered, that no vacancy in the Board arising from the death, resignation, or disqualification of the present Directors be filled up, until the number shall have been so reduced.

4. That the Directors be requested to treat with the Directors of the Cheltenham and Great Western Union Railway Company, for the purpose referred to in their Report, with the understanding that the details of any arrangement which they may consider beneficial to the interests of this Company, shall be submitted for the consideration of a Special General Meeting of Proprietors before they are adopted.

5. That the best thanks of the Company be expressed to the Directors for their very efficient services.

CHARLES RUSSELL, Chairman.

The Chairman having quitted the chair, it was resolved unanimously:—

That the cordial thanks of the Meeting be given to the Chairman for his able and judicious conduct in the chair.

Mr. Lawrence Heyworth gave notice, that it is his intention to submit at the next Half-yearly Meeting, a Resolution for the consideration of the Proprietors, that the principle of a Depreciation Fund should not exist in the affairs of this Company.

HUNGERFORD and LAMBETH SUSPENSION FOOT BRIDGE.—NOTICE is hereby given, That a Half-yearly General Meeting of Proprietors will be holden at the Company's Offices, No. 9, Villiers-street, Strand, on Wednesday the 31st instant, at Twelve o'Clock precisely, to receive the Directors' Report, and upon other business, when three of the present Directors and one of the present Auditors (who are by the provisions of the Company's Act of Parliament eligible for re-election) will go out of office.

(Signed) W. HAWES, Deputy-Chairman.

Office, 9, Villiers-street, Strand, Aug. 16, 1842.

BANKS'S RAILWAY WHEELS.—MR. EDITOR,—Your paper of June 25th contained a notice of my improved mode of Steeling the working parts of the Tyre of Railway Wheels, and stated, that an experiment of 6,000 miles had proved most satisfactory, as in that distance there appeared no visible wear of the surface of the Tyres. The experiments have been continued—the brake carriage under which my first set of wheels were placed having now run about 14,000 miles. When nearly 9,000 were completed, one pair of the steeled wheels was taken out, and a new pair of wheels with iron tyre put into their place.

The superiority of the steeled wheels soon became very evident, as they are scarce worn 1-16th of an inch with running the whole 14,000 miles, while the iron tyres are worn 3 16ths of an inch with runningonly 5,000 miles.

It appears that the longer the Steeled Tyres run, the harder the surface of the steel becomes.

As the *Economy* of my improvement proves to be even greater than I at first calculated, I send the above facts to your valuable paper, to call the attention of Railway Directors to the subject. I have pleasure in publicly acknowledging my obligation to the Manchester and Leeds Railway Company, for the liberality and kindness with which they consented that my improvement might be tested on their line, and for permission to state that any Railway Director or Engineer wishing to inspect the wheels now running may do so, by applying to Mr. Burgess, at the Station, Manchester.

About 12 pairs have been running on the above line for some time past.

Any Company having wheels, the tyres of which want turning up, can have a few sets of them steeled, to assure themselves of the value of the improvement, by application to

THOMAS BANKS, Engineer.

Bengal street, Manchester.

TO CONTRACTORS.—The Wishaw and Coltness Railway Company propose to erect a Timber Bridge over the Garrion Burn, in the parish of Cambusnethan, near Wishawton, by contract; and intimate that plans and specifications thereof will be ready for inspection at 36, Miller-street, Glasgow, on and after Wednesday, the 17th inst.; and any information that may be required will be given by Mr. MacNeill, or Mr. Thomson, Civil Engineers, Ingram-street; or by Mr. Dodds, the Resident Engineer, at Woodend, by Bellshill, where a model of the proposed bridge may be inspected; and that Tenders for executing the work will be received by their Clerk, at 36, Miller-street, on or before Wednesday the 24th inst. The Company will not be pledged to accept the lowest tender.

36, Miller-street, Glasgow, Aug. 11, 1842.

The time given in these Tables is London time, and is that appointed for the departure of the Trains. Passengers to avoid disappointment, are requested to be at the Station five minutes at least before the time named. Omnibuses will run from the George and Gate, Gracechurch-street, to meet the Down Trains No. 1, 3, and 6, and from the Ship, Charing Cross, to meet every Down Train.

Every Train will convey First and Second-Class Passengers, but Third-Class Passengers will be conveyed from New Cross only, by the Trains Nos. 1, 3, and 6, and by each of the Sunday Trains. The Trains will stop at those Stations only where the time of departure is inserted.

Carriages and Horses will be conveyed by every Train from the London Bridge, New Cross, Tunbridge, and Headcorn Stations. One day's notice will be required at any intermediate Station from which it is intended to embark a Carriage or Horses; in either cases the Carriage and Horses must be at the Station twenty minutes before the time fixed for the departure of a Train.

Post Horses are in readiness at the Tunbridge Station on the arrival of every Train; they may also be had at the other Stations, on notice being forwarded to the Station Clerks. Carriages with one or two horses may always be obtained at Tunbridge.

Coaches for Rye and Cranbrook will meet the Down Train No. 4, at Staplehurst.

Third Class Passengers will be conveyed to New Cross only, by Trains Nos. 1, 2, and 6, and by each of the Sunday Trains. Omnibuses will be ready to convey Passengers to Charing Cross and Gracechurch-street on the arrival of these Trains.

Post Horses are in readiness at the New Cross and London Bridge Stations on the arrival of every Train, to convey Carriages to and from all parts of London at 10s. 6d. each, including the Driver. Carriages with one or two horses may also be obtained at New Cross to any place, or for the day.

Omnibuses ply to and from New Cross and Charing Cross, meeting all the Up Trains, performing the journey in 40 minutes.

No charge will be made for infants in arms, but children above one year and under ten years will be charged half-price.

Passengers riding in their own Carriages, will be charged Second Class Fares only.

First Class Passengers will be allowed each 84 lbs. of Luggage.
Second ditto..... 56 lbs. ditto
Third ditto..... 28 lbs. ditto

} Overweight will be charged One Farthing per lb. for any distance under 20 miles, and One Half-penny per lb. for any distance above 20 miles.

Parcels may be booked at the London Bridge and New Cross Stations; also at the George and Blue Boar, Holborn; the Greenman and Still, Oxford-street; Universal Office and Hatchett's Piccadilly; 41, Regent Circus; the Spread Eagle, Regent Circus; the Golden Cross, Charing Cross; the Bolt-in-Tun, Fleet-street; the Belle Sauvage, Ludgate Hill; the Cross Keys, Wood-street; the Swan with Two Necks, Lad Lane; and the Spread Eagle, Gracechurch-street; and they will be conveyed to and from the following places and delivered free from every other charge, except that of booking, at the undermentioned rates, viz.:—

	Weight not exceeding 14 lbs.	28 lbs.	56 lbs.
To or from London and Reigate, Dorking, Godstone, East Grinstead, Edenbridge, Westerham, and Penshurst	0 8	0 10	1 4
,, Tunbridge	0 10	1 0	1 6
,, Tunbridge Wells	1 0	1 4	1 10
,, Rye, or any intermediate place	1 2	1 8	2 10
,, Cranbrook ditto	1 0	1 2	2 2
,, Ashford ditto	1 0	1 2	2 2

Arrangements are in progress for forwarding Parcels to Canterbury and Dover, and all intermediate parts, and will, when completed, be announced in future bills.

Dogs will be charged 2s. 6d. each for the whole or any part of the journey, but they will not be permitted to accompany the passengers in the Carriages.

The Company's Servants are prohibited from receiving Gratuities; it is requested therefore that Passengers will assist in enforcing this regulation, by not offering any.

Smoking is strictly forbidden in or upon any of the Carriages, or at the Stations.

By Order,

10, Coleman street, August 16, 1842. JOHN WHITEHEAD, Secretary.

MANCHESTER AND LEEDS RAILWAY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Hunt's Bank, in Manchester, on Thursday, the 1st day of September next, at Twelve o'Clock at noon precisely.—Dated this 1st day of August, 1842.

HENRY HOULDSWORTH, Chairman.

Hunt's Bank, Manchester.

AYLESBURY RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of the said Company will be held at the Euston Hotel, Euston Grove, London, on Monday, the 29th day of August instant, at One o'Clock in the afternoon. The chair to be taken at half-past One precisely.

G. CARRINGTON, Chairman.
THOS. TINDAL, Deputy-Chairman.

Dated this 6th day of August, 1842.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY—TENDERS FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders for Loans of Money on Debentures, to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200, for terms of four, six, or ten years, on Interest at the rate of £5 per cent. per annum, payable half-yearly.

The Tender must express the sums and terms of years, and be addressed to Mr. Saunders, at the Great Western Railway Office, Princes Street, Bank, or to Mr. Merrick, at the Company's Office in Cirencester.

By order of the Board of Directors,

A. MERRICK, Secretary.

Cirencester, 13th August, 1842.

The Company has a net Income of £17,000 per annum, payable half-yearly by the Great Western Railway Company.

Digitized by Google

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Books of this Company, which are kept at this Office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Saturday, the 13th August next, to Thursday, 25th of August, 1842, both days inclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Twelfth Half-yearly General Meeting of the Proprietors of the North Midland Railway will be held at Derby, in pursuance of the Act of Incorporation, at the Railway Station at that place, on Thursday, the 25th day of August, 1842.

The Chair to be taken at One o'Clock precisely.

WILLIAM LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Railway Station, Derby, July 26, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater and Heelis, Princes street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb 1842.

SOUTHAMPTON DOCK COMPANY.—The Directors hereby give notice, that they are receiving Loans of Money on Debenture, secured upon Mortgage of the undertaking, and of the Rates and Tolls arising therefrom, under the provisions of the Company's Act, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, paid half-yearly at the banking-house of Messrs. Williams, Deacon, and Co., of London.

Tenders to be addressed to the Secretary.

By Order,
GEORGE SAINSBURY, Secretary.

Southampton Dock Office, 19, Bishopsgate within, London, 15th August, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company, will be held, in pursuance of the Act of Parliament, at the White Lion Hotel in the City of Bristol, on Thursday, the 25th of August, at Twelve o'Clock. The Chair will be taken at One o'Clock precisely.

FREDERICK RICKETTS, Chairman.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 15th of August, and not be re opened until after the said General Meeting on the 25th of August.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol Office, 30, Broad-street, 5th of August, 1842.

TO RAILWAY AND BRIDGE CONTRACTORS, &c.—STOCKTON AND DARLINGTON RAILWAY.—The Drawings and Specifications describing the necessary Works in Piling and Erecting the Stone Piers for a New Bridge across the River Tees, near Stockton, may be inspected at the Office of the Company's Engineer, in Darlington, on and after Monday, the 8th day of August instant.

Tenders, written out on the printed forms only, to be lodged on or before Ten o'Clock on the morning of Friday, the 26th of August instant.

The Directors do not bind themselves to accept the lowest Tender.

Stockton and Darlington Railway Office,
Darlington, August 3, 1842.

CEMENT.—MOST IMPORTANT AND VALUABLE INVENTION.—To Architects, Engineers, Contractors, Builders, Masons, Plasterers, and the Trade, and also to Shippers.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co. of Plymouth, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—Remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp: the more it is exposed to the atmosphere, the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may, therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour; nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other Cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents; at whose Warehouses any quantity may be had, specimens may be seen, and every information afforded.

CEMENT.—To Architects, Builders, and Others.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co., Plymouth. Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface; no wet, or damp, or frost can have any effect on it; time hardens and improves it; a house covered with it becomes encased in stone. The cost is trifling. The invention is a fortune to builders; and to all who are interested in house property, old or new.

The sole Agents for the Patentees, are Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris. A sufficient number of Shareholders not being present in order to constitute a General Meeting on the 30th ult., the Annual General Meeting of the Shareholders will therefore be held in conformity with Article 40 of the Statutes, at 32, Rue de la Victorie, on Tuesday, the 30th instant, at half-past Two o'Clock in the afternoon.

By order of the Board of Directors,
ADOLPHE THIBAUDEAU, Secretary.

Paris, 1st August, 1842.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Proprietors of this Company will be held on Wednesday, the 7th day of September next, at Two o'Clock precisely, at the London Tavern, Bishopsgate-street, for the purpose of taking into consideration the two following subjects:—

1st. A scheme for the sale of 3,186 forfeited shares.

2nd. A Letter from Mr. Charles Parker, offering terms for Leasing the Railway.

JOHN ROSKELL, Deputy-Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 17th Aug., 1842.

WARKWORTH COQUET HABROUR.—TO ENGINEERS, CONTRACTORS, AND BUILDERS.—Persons willing to contract for the finishing the North and South Breakwaters Piers, or either of them, now in course of erection at the mouth of the River Coquet, near Warkworth, in the County of Northumberland, are requested to apply by letter, or in person, at the Office of the Commissioners of Warkworth Harbour, at Amble, in Warkworth aforesaid, or to Messrs. Western and Son, No. 7, Great James Street, Bedford Row, London, where Plans and Specifications of the works remaining to be done may be seen, and particulars obtained, and where tenders will be received.

Amble, 20th August, 1842.

ALTONA AND KIEL RAILWAY—CONTRACT FOR RAILS.—NOTICE is hereby given, That one of the Directors of the Altona and Kiel Railway Company will attend at the Caledonian Hotel, Adelphi, London, on Tuesday, the 30th of August instant, at Twelve o'Clock, to enter into a Contract for the supply of about 6,600 tons of Iron Railway Bars, to be delivered as early as possible after the opening of the river Elbe, in the spring of the ensuing year. For further particulars reference is to be made to the Engineer-in-Chief of the Railway, Mr. Buck, of Manchester.

The Tenders to be endorsed, "Tenders for Rails," with the name of the firm, and to be sent by Post under cover to Mr. T. H. Elmenhorst, London, on or before the 24th instant.

The parties Tendering, or an Agent on their behalf, are requested to attend at the Caledonian Hotel, at the time above mentioned.

By order of the Board,
H. STOPPEL, Secretary.

Altona, August 5th, 1842.

TO RAILWAY COMPANIES, CONTRACTORS, &c. &c.—To be Sold by Private Contract, a decided bargain, in good working order (having lately undergone thorough repair), Two Six-wheeled Locomotive Engines and Tenders, 13 inch Cylinders, Copper Fireboxes, 18-inch Stroke, wrought-iron Wheels, 4 feet 8½ inch Gauge; built by Jones, Turner, and Evans, of Warrington. May be viewed on application to Edward Lovell, Swindon, Wilts, and further particulars known on application to W. T. Paris, Solicitor, Stroud.

HULL AND SELBY RAILWAY COMPANY.—NOTICE is hereby given, That a General Meeting of the Shareholders in this Company will be held on Saturday, the 27th day of August instant, at Twelve o'Clock at noon, in the Court of Requests Room, at the Town Hall, in the Borough of Kingston-upon-Hull, for the purpose of receiving the Directors' Report, and transacting the general business of the said Railway.

By Order,
CHAS. H PHILLIPS, Law Clerk, } of the said
GEORGE LOCKING, Secretary, } Company.

Hull, 10th August, 1842.

DRY-ROT AND DECAY — MARGARY'S PATENT.—The cheapest and most simple preparation for the Preservation of Timber, Canvass, &c., from Decay, the material being only 4d. per lb.

This Patent is used by her Majesty's Board of Ordnance; by Brunel, Locke, and other celebrated Engineers; and by Noblemen and Gentlemen on their Estates. It has been extensively used for Railroads in England, and is now on the Bristol and Exeter and Manchester and Sheffield lines. In France, on the Paris and Havre line. It repels the attack of Insects—as neither the White Ants, nor the *Tiredo Navalis*, so destructive in the Liverpool Docks, will touch any substance so prepared.

Licences granted, and Specimens of all sorts of Wood may be seen, at the Patentee's Office, Quality court, Chancery lane, where every information will be given on the subject.

Rick Cloths, Cement Bags, &c., may be had of the Sole Agent, Mr. LEE, 97, Leadenhall-street.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. F. Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, H. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3 0 0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0 4 6
Paving pathways, granaries, warehouses, &c., 1¼ inch thick, per square yard	0 4 6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0 5 6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, August 20, 1842.

By order,
JOHN WHITEHEAD, Secretary.

London, 10, Coleman-street, August 16, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY COMPANY.—TENDERS for LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive TENDERS for the LOAN of MONEY for a term of three, five, seven, or ten years, at the option of the lender, and to grant mortgages on the undertaking, and all and singular the rates, tolls, and sums of money arising by virtue of the Acts relating thereto, and all the estate, right, title, and interest of the said Company in and to the same, bearing interest at the rate of 5 per cent. per annum, payable half-yearly, at the bank of Messrs. Glyn and Co., London.

The Tenders are to express the sums and term of years for which the loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

MANCHESTER AND LEEDS RAILWAY.—Notice is hereby given, That the next Half-Yearly Meeting of the Manchester and Leeds Railway Company will be held at the Company's Offices, Hunt's Bank, in Manchester, on Thursday, the 1st day of September next, at Twelve o'Clock at noon precisely.—Dated this 1st day of August, 1842.

HENRY HOULDSWORTH, Chairman.

Hunt's Bank, Manchester.

TO THE EDITOR OF THE RAILWAY TIMES.—Sir,—Mr. Josiah Kearsley, Engineer of the Midland Counties' Railway has stated in his Report to the Committee of Management, respecting Mr. Hall's Apparatus for Consuming Coal without Smoke in Locomotive Engines, as follows:—"The Manchester and Leeds Company have made a similar trial, but with *such unsatisfactory result as to cause them to abandon it also.*" I have no hesitation in assuring you that this is totally without foundation. I have been to the Manchester Railway Station, and find that the engine in question (the *Sheffield*) has required a few days' work to be done to it, which has been interrupted by the rioters here, and that this delay is the only cause of that engine not being at this moment in regular work. I recommend Mr. Josiah Kearsley to apply to Mr. Fenton, the Engineer of the Locomotive Department of the Manchester and Leeds Railway, to ascertain whether he will confirm or repudiate his statements respecting the merits of Mr. Hall's apparatus.

I am, Sir, your obedient servant,
WILLIAM SMITH.

Manchester, August 16, 1842.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For farther Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PARIS AND ROUEN RAILWAY.—Offices of the Company, 52, Rue Basse du Rempart, Paris. A sufficient number of Shareholders not being present in order to constitute a General Meeting on the 30th ult., the Annual General Meeting of the Shareholders will therefore be held in conformity with Article 40 of the Statutes, at 38, Rue de la Victoire, on Tuesday, the 30th instant, at half-past Two o'Clock in the afternoon.

By order of the Board of Directors,
ADOLPHE THIBAUDEAU, Secretary.

Paris, 1st August, 1842.

GREAT NORTH OF ENGLAND RAILWAY.—TO CONTRACTORS for PUBLIC WORKS.—The Directors of the Great North of England Railway are desirous of receiving Tenders for Excavating the Approaches and constructing a Bridge to carry the Yarm and Neasham highways under their Railway, also two Bridges and other works connected therewith, over the above highways at the Bank-top near Darlington.

Plans and Specifications for the Works may be seen at the Company's Office, in Northgate, Darlington, on and after Tuesday, the 16th, and Tenders will be received until Ten o'Clock on Friday, the 26th (only on printed forms supplied by the Company), and the Directors will meet on Saturday, the 27th inst., at Twelve o'Clock, to Let the Contract, when parties tendering, or persons fully authorised by them, are expected to be in attendance.

The party whose Tender may be approved will be required to give security to the amount of 10 per cent. on his Tender for the due performance of the Contract.

The Directors do not bind themselves to accept the lowest Tender.

W. O'BRIEN, Secretary.

Darlington, August 3, 1842

CEMENT.—MOST IMPORTANT AND VALUABLE INVENTION.—To Architects, Engineers, Contractors, Builders, Masons, Plasterers, and the Trade, and also to Shippers.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co. of Plymouth, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—Remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp: the more it is exposed to the atmosphere, the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may, therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour; nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other Cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Malden-lane, Queen-street, Cheapside, their sole Agents; at whose Warehouses any quantity may be had, specimens may be seen, and every information afforded.

CEMENT.—To Architects, Builders, and Others.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co., Plymouth. Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface; no wet, or damp, or frost can have any effect on it; time hardens and improves it; a house covered with it becomes encased in stone. The cost is trifling. The invention is a fortune to builders; and to all who are interested in house property, old or new.

The sole Agents for the Patentees, are Messrs. Mann and Co., 5, Malden-lane, Queen-street, Cheapside.

TWENTY-FIVE Superior CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, September 2, 1842, at One o'Clock, Twenty-five valuable, powerful, fine-shaped, young, seasoned CART HORSES, with the Thill and Chain Harness, the genuine property of Mr George Orbell, sold in consequence of having completed the Company's Contract.

On View and Catalogues had two days before the sale.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

CLARENCE RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors of the Clarence Railway Company was held on Tuesday last at the George and Vulture Tavern, Cornhill. There were only a very few persons present.

The chair was taken by Henry Blanshard, Esq., who opened the business by stating, that hitherto they had always been anxious to give every publicity to their proceedings, *but* on the present occasion, when a mere question of finance was to be brought under the notice of the meeting, he thought it desirable that what transpired should not be reported.

The honourable gentleman was proceeding to give reasons for the exclusion of the press, when, seeing that his words were being taken down, he suddenly came to a stop, and requested the reporters to withdraw until the meeting should decide upon the question. This was accordingly done, and after a few minutes deliberation with closed doors, the Chairman (with much courtesy on his part) informed the representatives of the press that it was the unanimous opinion of the meeting that the proceedings ought not to be made public. The reporters therefore withdrew.

For our own parts we by no means regret the decision of the Directors, as we doubt very much whether our readers would thank us for occupying our columns at this busy time with the *notabilia* of this unfortunate concern, but we must protest against Railway Companies opening their doors to the press when any species of puffery is to be promoted, and closing them when matters which it would seem will not bear public criticism are to be brought forward.

We have before us a copy of the Directors' Report laid before the meeting, but under the circumstances must decline publishing it.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

[From the *Midland Counties' Herald.*]

THE half-yearly general meeting of the proprietors of this Company was held at the Waterloo Rooms, Waterloo-street, Birmingham, on Friday, the 19th August instant, and was very numerously attended, there being present upwards of 120 shareholders.

At 12 o'clock precisely Captain C. R. MOORSOM, R. N., Chairman of the Board of Directors, took the chair, when the notice convening the meeting, as well as the minutes of the last half-yearly meeting, having been read, the Chairman laid before the proprietors the following Report, a copy of which, as well as the statement of accounts, &c., had been placed in the hands of each shareholder on entering the room:—

REPORT.

The receipts during the half-year ended 30th June were 41,967*l.* 4s. 7d.; the expenses, excluding interest on scrip and on loans, but including depreciation of carrying stock, were 28,298*l.* 5s. 8d.; the interest amounts to 12,053*l.* 11s. 10d.; the balance is 1,615*l.* 7s. 1d.

Comparing the traffic receipts with those of the corresponding period of 1841, it appears that there is a deficiency from passengers, but an increase from parcels and goods—the increase on the whole being 2,885*l.* 9s. 5d. By comparing the particulars of expenditure of the half-year ended 30th June, 1842, with those of the half year ended 30th June, 1841, the proprietors will find that there has been a diminution of expense in the working of the line, principally in the locomotive department.

The charges against the last half-year's receipts, additional to those on the former period, (i. e. to 30th June, 1841) arise, —from the maintenance of way 5,097*l.* 6s. 4d., not then charged against revenue—and the interest on scrip, &c. 3,982*l.* 3s. 11d., making together 9,079*l.* 10s. 3d. The balance on the receipts for the half-year ended 30th June, 1841, was 6,896*l.* 15s 6d.

Comparing the expenditure of the last half year with that ended 31st December, there is also a reduction on the whole of 2,922*l.* 19s. 10d.

Notwithstanding the state of stagnation in which the trading interests have remained during the past half year (and which must have materially affected the receipts from passengers), it is gratifying to find that an increase of goods has taken place to the extent of about 50 per cent. on the quantity, and about 60 per cent. on the money receipts, compared with the half year ended 30th June, 1841—an increase which would no doubt have been considerably greater, but for the cause above alluded to.

The Committee are well aware of the obstacles which still oppose the full development of the traffic in goods—obstacles which are partly natural and unavoidable—partly artificial, and to be removed as time and opportunity may serve. The principal difficulties lie in the defective communication with the basin at Gloucester, and in the uncertainty and irregularity which attend the transmission of goods between Gloucester and Bristol. For the first there is no remedy but a railway communication, as originally designed; but till the intentions of the Bristol and Gloucester Company, and the Cheltenham and Great Western Company, are known, and their plans of junction understood, it would be highly imprudent in this Company to incur any more expense in furtherance of such communication. For the second the Committee are engaged in arrangements by which they hope to remove the grounds of complaint, and to accomplish the conveyance of goods to and from Bristol with greater regularity, and in less time.

The experience of the last six months has given the Committee no reason to doubt the soundness of their decision to admit carriers on the railway on fair terms, while, at the same time, the Company should be carriers of such goods as the public may prefer to consign to them—an arrangement which the Committee consider preferable to the adoption of either of the more restricted systems which were explained in the last Report.

The number of goods' waggons has been increased by the addition of 39—besides which, 10 new carriage trucks having been purchased, a corresponding number of goods' waggons has been set free—and the whole number is now 133—which are barely sufficient for the demands of the traffic.

A coal station has been opened at Alstone-lane, near Cheltenham, and arrangements made by which the Derbyshire coal is now conveyed along the line, and at a rate which is expected to prove remunerative.

During the last half-year four new locomotive engines have been added to the Company's stock, and the whole of the train engines are now in good working order.

The substitution of 5 feet for 4 feet driving wheels has in every respect answered.

The bank engines now work the Lickey without tenders, their supply of water and coke being carried on the engines themselves, by which a considerable increase of effective power is obtained, and a saving of expense accomplished.

The statistical returns, which are annexed to this Report, show that a considerable saving has again been effected in the cost of locomotive power—viz., from 1s. 6d. per mile run to less than 1s. 3¼d.

Before many railways had come into operation, there was a prevalent notion that the cost of working the line must necessarily bear some certain proportion to the receipts—and about one moiety was assumed as that proportion. A little consideration might have shown what experience has now proved, that the ratio of the expenses to the receipts would be as various as are the circumstances under which the different railways are worked.

It is obvious that a certain establishment must be maintained, and that its increase or diminution can only in a comparatively small degree depend on the greater or less amount of work to be performed. As an instance—the actual working expenses of the half-year ended 30th June, are less by 2,040*l.* 15s. 8d. than those of the half-year ended 31st December, yet the expenses of the former period bear to the receipts a larger ratio than those of the latter by about 6 per cent. This furnishes a striking illustration of the fallacy of estimating the management by the proportion which the expenses may happen to bear to the receipts.

The Committee of Directors have endeavoured to place the Company's establishment of officers and servants on such a footing, that the expenses shall be as low as is compatible with the efficient working of the traffic; and they believe that no railway, under similar circumstances, is worked at a lower rate, compared with the number of miles run. In any comparison that may be instituted, the cost of the Lickey, and of the omnibuses, should be separated from the general expenses.

The number of level crossings of parish roads having entailed a considerable expense in gatekeepers, most of the places have been made stations for passengers by the goods' trains, in order that this unavoidable expenditure might also be turned to an additional source of revenue.

The accommodation of passengers to and from the London and Birmingham, Grand Junction, and Birmingham and Derby Railways, has been a matter of considerable difficulty under the limited number of trains which the amount of the present traffic requires; and the Directors can only hope that it may so increase as to justify such an addition to their number, as may give full accommodation to the public.

The payments received on scrip amount to 144,172*l.* 10s., and on loan notes to 16,100*l.*, making together 160,272*l.* 10s., which is less by 11,727*l.* 10s. than the sum which in April, 1841, was estimated as necessary to cover the liabilities, and to execute or complete certain works, and provide additional stock. The Committee have not thought it expedient to exercise the powers by which they were authorised to dispose of the surplus scrip, and the scrip not taken up; they consider it more advantageous for the Company to continue to borrow on loan notes, to be hereafter exchanged for debentures under a new Act of Parliament.

A deputation from a Provisional Committee for the formation of a branch line between Evesham and the Birmingham and Gloucester line, having waited on the Directors with their plans, the following resolution was passed:—

"That the Directors of the Birmingham and Gloucester Railway are of opinion that the formation of the proposed line would be conducive to the interests of this Company; and, in the event of its being made, would recommend to their proprietors to undertake the working of it in common with their own line, under lease, and on such fair terms as may hereafter be agreed upon."

The Committee, impressed with the inconveniences to which the passengers are exposed, and the loss which the Company suffer for want of a branch line to the City of Worcester, have bestowed much time and attention on the means by which the hitherto opposing interests might be reconciled; and they are not without hopes of ultimate success.

The Committee consider it desirable that the attention of the proprietors should be directed to the great importance to this Company of the completion of the railway between Gloucester and Bristol. It appears probable that the line between Bristol and Stonehouse may be finished in less than two years; and it is hoped that the further distance of about eight miles, viz., from Stonehouse to the junction with the Birmingham and Gloucester line, may, by the joint efforts of the Bristol and Gloucester Company and the Cheltenham and Great Western Union Railway Company, be completed within the same period. The Directors feel, that all they can do at present, after calling attention to the circumstance, is to express their readiness to unite, if necessary, in any plan by which a continuous line between Birmingham and Bristol may be secured, and its opening effected at the same time with that between Stonehouse and Bristol.

While on this subject, the Directors desire to record their conviction that the traffic, both in passengers and goods, on the Birmingham and Gloucester line, will be materially increased by the opening of the line to Bristol. Under its present circumstances, the Birmingham and Gloucester Railway must be considered as a line only partially opened, and it is labouring under all the disadvantages incident to a broken communication.

On the 21st of July the Committee of Directors received a requisition signed by 61 proprietors holding together 1,256 shares calling for a special meeting "to consider whether the present system of management and appointments has been, or is likely to be, conducive to the interests of the shareholders; and to determine whether it is desirable that it should be continued, or otherwise."

A General Board of Directors having met on the 26th of *July*, to take the requisition into consideration, the following resolution was passed unanimously; viz.:—

"That the Board, having given the requisition their best consideration, are of opinion, as the general meeting is so near at hand, when it will be competent to the proprietors to inquire into the present system of management, and as the system will come under the review of the Board of Directors previous to that meeting taking place, when the accounts and other particulars will be before them, that it is not expedient to call a meeting of the proprietors prior to the general meeting; and they therefore decline to comply with the requisition."

In order to give the requisitionists the opportunity of taking such course as they may now deem expedient, uninfluenced by any opinion, and unfettered by any act of the Directors, they decline introducing into this Report the views they entertain of the system of management.

It should, however, be clearly understood that the arrangements connected with the system are only in course of completion. Every department of the Company's business has been more or less affected; either wholly remodelled, or partially altered, so as to be blended into one uniform system, with separate executive officers under one General Superintendent.

The difficulties attending such changes can only be appreciated by those who have been engaged in them; and the time they have consumed is sufficient to show that they have not been undertaken unadvisedly, or executed hastily.

Mr. Joseph Gibbins has resigned his seat at the Board.

In their Report of February, 1841, the Directors informed the proprietors that Mr. Garnett, having resigned his seat at the Board, they did not think it necessary then to fill up the vacancy.

Having obtained a legal opinion upon the point, the Board found, that as those vacancies could not legally be filled up by the proprietors, it was necessary for the Board to do so. They have therefore elected Mr. J. F. Ledsam and Mr. Moore in the place of Mr. Garnett and Mr. Gibbins respectively.

The Directors who now retire by rotation are, Mr. Beilby, Mr. J. F. Ledsam, Mr. Moore, and Mr. Sturge.

C. R. MOORSOM, Chairman.
THOMAS BEILBY,
A. W. DANIEL,
CHARLES STURGE,
H. B. TYMMS.

GEORGE KING, Secretary.

Pursuant to the instructions given at the half-yearly general meeting in August, 1841, we have examined and audited the accounts for the half-year ended 30th June last,—have verified the Statement of the General Capital Account, and amount of Current Receipts and Disbursements, and find them to be correct.

A. K. BAKER,
JOHN FRANCIS.
DANIEL LADSAM.

Detail of some of the above Charges.

I. Maintenance of Way.

Amount of contract for maintaining railway, station yards, and approach roads, between Camp Hill and Gloucester (9,050*l.* per annum)	4,52 0	
Extra works of all descriptions (the chief portion arising from works incomplete when the line was taken to by contractors)	449 7 9	4,974 7 9
Salary of Engineer, inspectors, and clerks, and office charges		567 4 2
		5,541 11 11
Repair of station buildings		80 14 0
Total		£5,622 5 11

14. Interest.

On debentures and loan notes	8,238 17 0
On scrip	3,280 19 11
Bankers' balances, and sundries	538 14 11
Total	£12,058 11 10

4. Coaching Department.

		£ s. d.	£ s. d.
Salaries of booking clerks and others connected with the coaching department	24		1,068 10 5
Wages, viz.—			
Inspectors of stations, ticket collectors, & porters	56	1,296 12 0	
Guards	10	527 0 0

The Chairman said, as each of the shareholders had been furnished with a copy of the accounts, it might not be necessary to read them in detail; but they would, he hoped, indulge him on the present as on former occasions, by allowing him to make a few observations connected with the Report of the Directors. (Applause.) He would, then, draw their attention to that part of the paper containing the accounts which came under the head of statistics, and which was headed "passengers and goods traffic." They would there see that the number of first-class passengers was 41,756, that the number of second-class passengers was 81,906, and that the number of third-class passengers was 25,398. Comparing these returns with those of the corresponding period of last year, they would find that the first-class passengers had increased, that the second-class passengers had diminished, and that the third-class passengers had also diminished in number. The average mileage of the passengers did not appear to be materially different. Of course these numbers differed considerably from the numbers carried in the previous six months, for there could be no fair comparison between the autumn and spring portions of the year; and it was now clearly ascertained that, both as to passengers and goods, the difference between those periods was such as to render inconclusive any comparison which might be made between them. The system which had, therefore, been established now, was to compare spring with spring, and autumn with autumn. They had, however, been too short a time open to afford correct conclusions as to the effects produced on their own line by these two periods, but he would make a few remarks on the first and second-class passengers, and they would see how exceedingly various those proportions were on different railways. In some instances the second-class passengers amounted to about one-half of the first-class, and in other cases they exceeded by three times the number of the first-class. What this difference arose from was of course a subject of speculation which did not relate to the immediate business before them. He, however, wished to draw their attention to those points just now, for the purpose of asking them what would have been the effect, supposing the second and first-class passengers had in their relative numbers changed places, the returns giving, instead of the numbers as they at present stood, 81,906 first-class, and only 41,756 second-class passengers. They would perceive that such a change would have added 6,000*l.* to their receipts, and yet there would have been no increase of expense attending it; the trifling difference between the second and first-class carriage in its original cost, when the interest was debited against the working account, would be quite inappreciable. This was another instance in proof that the working cost and the receipts compared with each other were no criteria of management. He would draw their attention again to the price per mile of each of the classes of passengers, and to the general average which they presented, something more than 2d., and taking off the Government duty, something less than 2d. Now, he held in his hand a paper which contained the names of ten railways, the fares of the different classes of passengers, and the general averages. The general average is 2d. 4·10ths, or nearly 2¼d.; the general average of the Gloucester line being, as he said before, with the Government duty something more, and without the duty something less than 2d. What circumstances, then, were they which prevented the Birmingham and Gloucester Railway from obtaining an average as large as the general average of those ten railways. They were, he apprehended, to be found in some of these elements: that their line was considerably distant from one large town which fed it, and that it was not very conveniently placed with respect to another large town, and that the class of passengers moving along it, being second-class passengers, would not bear such high fares as some other railways. This was a subject which had been frequently under the consideration of the Board of Directors. His own wish, he confessed, had been to raise the fares; but guided by the opinions of those who had more local knowledge than himself, he had yielded to the general wish to defer it until they could get better information to determine the question as to the expediency of raising the fares altogether, or whether the second-class fares only should be raised. He hoped, however, that there would be some means of determining this question before long; but he felt persuaded that not only ought they to have higher fares, but he hoped they would be able to get them without diminishing the number of passengers so as to take off from the net profit; for this, after all, was the way to look at it. Now, they would permit him to direct their attention to that portion of the paper which related to the goods traffic. They would see that the total weight carried was 10,810 tons; that it was carried on an average a distance of 39 3-5 miles. Comparing that with the autumn, the weight carried was 9,924½ tons, with 34½ miles average. The figures last quoted were not in the papers with which the proprietors had been furnished that day, but they would be found in a similar paper with which they had been supplied at the last general meeting. There had been, therefore, a small increase in the

Digitized by Google

quantity, and what he would call a considerable increase in the average mileage. Now, comparing the six months ending the 30th of June, 1842, with the corresponding period of 1841, they would find those proportions to obtain—viz., 50 and 60 per cent. respectively—which were stated in the Report. But the difference of mileage was more considerable, for in 1841 the mileage was very little more than 30. He had also returns of the last six weeks, which showed 3,815 tons carried 43 miles, and they would find that that was at the rate of above 600 tons a week, which was very nearly one-half of that estimated quantity which had been made so much the subject of discussion—namely 70,000*l.* per annum. The last six weeks, they would therefore perceive, did approach to something like that estimate. They would also find that the rate per mile averaged a little more than 3d., but during the last six weeks it was reduced to a little below 3d., and this sum he considered to be a fair average on the whole. Perhaps, however, some might suppose that they were taking nothing but a low class of goods, and that they had not the best trade for paying; but the average he had already referred to proved the contrary. They could not have an average above 3d. with low class goods; but he could give them the proportion of classes for the last six weeks, which would enable them to judge for themselves. Those proportions were—of fourth-class goods, 800 tons; of third-class, 1,000 tons; of second-class, only 345; of first-class, 800; of cotton, 170; of coal, 500; and of short road goods, 200; making the total of 3,815, of which he had already spoken. These two things showed clearly that they were not taking altogether low-priced goods which did not pay. The average amount upon 43 miles was about 10s. 7d. for the goods conveyed by carriers, and about 10s. for the weight carried by the Company. He had not adverted, but would now do so, to the proportion which they would perceive in the tables, of goods carried by the Company and the goods carried by carriers. The whole question about goods lay, in fact, in this. The carriers, they would observe, carried a much smaller proportion than the Company. He did not congratulate himself upon that; he wished it were the other way: and now in saying so, it at once opens this great question, whether the Company should adopt the plan of the London and Birmingham Directors, and leave the carriers alone to work the line, or whether they should adopt the course of the Grand Junction Company, and allow no carriers to come on their line, or whether they should go on feeling their way till the Bristol and Gloucester Railway was opened, when the question would settle itself? Now, there had been numerous complaints respecting the management of the goods traffic. He fully expected them. For a year and a half he was a party to the arrangements of the London and Birmingham Company, at its opening. Precisely the same complaints obtained there, and they grew very much out of the same circumstances. The carriers had not full and free scope, and it was the complaints and representations that were made to Parliament, and the way in which the thing was worked in the public press, that led the Company to throw open their line to carriers without working it themselves. Now, if they could command such a member of carriers, and such circumstances as existed between London and Birmingham, he was not quite clear whether it would not be their best policy to give up carrying at all. There were, on the London line, about twenty-four carriers, of whom several had nothing to do with water communication; but on the Birmingham and Gloucester line there were only six or seven. He was not aware what number there were on that line of communication; probably the whole number might amount to ten. If of that ten a sufficient number had nothing to do with water conveyance, they might be in a condition to abandon the traffic entirely to them, for no one could doubt that the net profit which the Company obtained by the carriers was greater than that which the Company could obtain by working it themselves. (Hear.) They had endeavoured to avoid entering on any cost which they could possibly help, and this feeling had led the Directors to adopt expedients which it would perhaps be better if they had not got into. He alluded on the one hand to the making of a special contract with a party to take goods to and from Bristol; and on the other, to a special agreement with the Grand Junction Company. Notwithstanding his experience of the difficulties which had attended the carrying out of such arrangements on other lines, he felt driven to consent to do the very same thing on the Birmingham and Gloucester Railway. Circumstances overruled his opinion, and he yielded. They would bear in mind that the traffic, as between Birmingham and Gloucester, was but a small proportion of the whole traffic which went in the line of direction of their railway. They had the Leicester, the Nottingham, the Derby, the Liverpool, all the north-eastern and north-western coasts, together with Bristol and the parts of Wales in communication with each other, of which their railway formed but one inconsiderable link. There were three separate routes for the conveyance of merchandise; the sea route by the Bristol Channel, the Stourport route, and by the Worcester Canal—all of which they had to contend with; and these facts satisfied him that (as he had observed before on another occasion) they had as fair a proportion of the estimated traffic as could, under the circumstances, be expected. (Hear.) He would now draw their attention to the locomotive part of the accounts. They would remember that when his friend (Mr. Sturge) expressed his opinion at the last meeting, that the locomotive department would still present a diminution of expense this half-year he (the Chairman) hesitated to assent to it; but he was happy to find that Mr. Sturge was more correct than himself. The diminution under this head amounted to more than 2d. per mile run; but what he was more particularly anxious to draw attention to was the diminution in the consumption of coke, and more especially on the Lickey incline. The consumption of coke on the Lickey for the half-year ending the 31st December last was 430¼ lbs., whilst the consumption during the half-year ending the 30th of June last was only 266¾ lbs.; the expense of the former half-year was 17s. 6d. per trip; the expense of the last half-year was only 10s. 6d. per trip. (Hear.) No doubt a great deal of that arose from doing away with tenders, and the substitution of tanks on the engines, turning the waste steam into the boiler and keeping the water always boiling, by all which he believed a still further reduction would be effected. He believed, too, that they had solved the problem whether the inclined plane should be worked by locomotive engines, as at present, or whether it would be better to have fixed engines, or the pneumatic railway. It had been ascertained that a fixed engine could not be worked at less than 1,200*l.* a-year, and they all knew the inconvenience which attended the use of ropes. Indeed, he believed there was no question as to the superiority of locomotives; the only question was as to the expense. That expense had now been brought to somewhat about 1,200*l* a-year; and, if so, all the other circumstances decide in favour of the use of locomotive engines. But the locomotive engines which they now employed were only probably of half the power of those that might be employed in working the Lickey. By-and-by the engines must be entirely different, but it would be arrant folly to throw away what had cost 40,000*l.*, and lay out now another 60,000*l.* in replacing them. By degrees these engines must be replaced, and probably the opening of the Gloucester and Bristol Railway might afford them an opportunity of doing this. He would here allude to a question which had been mooted, as to the more economical working of the railway, if the whole line from Birmingham to Bristol were placed under one management and one uniform set of arrangements, than if worked by two distinct establishments. Which should undertake it was another question; the Birmingham and Gloucester Company happened to be first in the field. Having adverted to the engines, without meaning in the slightest degree to cast any sort of reflection on those who chose those engines, believing, as he did, that they exercised, under all the circumstances of those years, as good a judgment as men could be expected to exercise, he nevertheless thought, if they had now to do it over again, that, with increased experience, they would by no means choose the same size of engines, but that probably, adopting the same principle of construction, they would very much increase their size. This, however, was of course only a speculative opinion of his own; but it was a principle in railway management that the engines should be as nearly alike as possible, having two different descriptions, for passengers and for goods; and that they should be suited to the gradients, the probable weight of the trains, &c.; in short, adapted to those peculiar conditions of the line to which he had already adverted in the printed communication which he had taken the liberty of addressing to them. They had four engines of 13-inch diameter of cylinder, 18-inch stroke, 5 feet 6 inches diameter of driving-wheel, and six wheels; there were two of 13-inch cylinder, 18-inch stroke, 5 feet driving wheels, and with four wheels; there were two more with 12½-inch cylinder, 20-inch stroke, 4 feet driving wheels, and six wheels; there was one with 12-inch cylinder, 18-inch stroke, 5 feet driving wheels, and six wheels; three of 11½-inch cylinder, 20-inch stroke, 4 feet 9-inch driving wheels, and six wheels; five of 11½-inch cylinder, 20-inch stroke, 5 feet driving wheels, and six wheels; four of 11½-inch cylinder, 20 inch stroke, 4-feet driving wheels, and six wheels; one of 10½-inch cylinder, 18-inch stroke, 4 feet 3-inch driving wheels, and six wheels; two of 10½-inch cylinder, 18-inch stroke, 4 feet 3-inch driving wheels, and six wheels; and five 10½-inch cylinder, 18-inch stroke, 4-feet driving wheels, and six wheels. In addition to these, there were three bank engines of 12½-inch cylinder, 20-inch stroke, 4-feet driving wheels, and six wheels. This was the team they had to manage for conveying every description of passengers and goods, and he need not say how much more convenient it would be were they all of two classes, instead of this variety. He would now request their attention to the cost of working the line, and he would ask what ought fairly to be taken in any comparison as the elements of cost. If an individual was about to make an investment of money, he would look to everything, of course, that effected the net profit, but if he was going to make a comparison of the manner of working the railway, so as to test the capabilities of the parties working it, there were many elements which he would necessarily exclude. First, he would exclude the interest of borrowed money; next the Government duty, and also the parish rates; for this plain reason, as shown in the Liverpool and Manchester Report, that while the traffic diminished from the distress of the times, the parish rates increased. He would, therefore, test those qualities of management by excluding all such elements, and moreover, he would take into account the number of stations, level crossings, and the greater or less number of trains in proportion to the number of persons and goods to be conveyed by them, for these were things which were not altogether at the discretion of the Managers. There must always be a certain number of trains, be the passengers greater or fewer. He should also exclude, in any comparison of the Birmingham and Gloucester with other railways, those things peculiar to it, and to it alone. He should exclude the cost of working the Lickey, and the cost of omnibuses conveying passengers between Worcester and Spetchley. He was not aware that other railways had to provide those conveyances and that they were paid out of the average receipts of the line. There might be railways so circumstanced, of which he was not aware. With respect to level crossings he would merely give them an illustration. He held in his hand a list of twelve railways, of the average distance of 61 miles. The number of miles between the level crossings was 6½, but the number of miles between the level crossings on the Birmingham and Gloucester line was only 3½. They would see, therefore, the additional expense which they were put to in order to guard these level crossings, compared with the general average of the twelve railways to which he had referred. There was no subject upon which it was more difficult to ob-

Digitized by Google

tain information than that which was necessary in order to enable them to compare the working of one railway with another. He had access to as much authentic information in such matters as most people; but of the various railways in the kingdom he could only get authentic information with respect to five. He knew not whether gentlemen present had seen in the *Railway Times* the attempt there made to get at the comparative cost of working railways, taking the number of miles run by the trains and the cost per mile. The idea was a good one. He (the Chairman) had obtained the number of miles run by the trains of the five railways to which he had referred. He must not, however, give their names, but he would put them down alphabetically as A, B, C, for the information was confidential. They must, therefore, take from him the statements he made as from a gentleman who would not knowingly deceive them. (Applause.) The railway A, on an average of three years, cost 5s. 8½d. per mile; the railway B, on an average of two years, cost 6s. 0½d.; the railway C, on an average of the half-year ending the 31st of December, 1841, cost 5s. 5½d.; the railway D cost 3s. 11d., and the railway E 8s. 10½d., both the latter averages being also for the half-year already stated. The average of those five was 5s. per mile for each mile run by the trains. Now, the two latter railways obtained their coke remarkably cheap, at very little more than half the cost of the Birmingham and Gloucester. The Birmingham and Gloucester Railway cost per mile run, for the whole year ending the 30th of June, 1842, 4s. 0½d., including the Lickey and omnibuses, as compared with 5s., the general average of the five railways—(applause)—but excluding the Lickey and omnibuses, the cost per mile run was 8s. 10½d.—(applause)—precisely the same as that of railway E, whose cost of coke was very little more than half what they paid. (Renewed applause.) If these were not fair comparisons, he should exceedingly regret it, for so far as his knowledge went, he had endeavoured to make them fair, and he presented them to the meeting as facts which he believed himself. He now came to a subject which was exceedingly unpleasant, but a sense of duty which he owed to the Directors no less than to himself, and in fact, a sense of duty which he owed to the shareholders at large, obliged him to bring it before them in a shape which he assured them was to himself a subject of regret. He held in his hand a printed table, a copy of which they had all had, and which he believed emanated from a gentleman then in the room, who signed himself Chairman of a Committee of shareholders, and who in that table impugned the management of their Directors. Coming as it did from a gentleman whom he believed to be respectable, he could only think that he must have been deceived. This table contained the cost of working the Grand Junction, the London and Birmingham, the Lancaster and Preston, the Manchester and Bolton, the Manchester and Leeds, the York and North Midland, the Liverpool and Manchester, and the Great Western Railways, on none of which could he find that the same elements were included as must be included in order to make 81 per cent. on the receipts, the cost of working the Birmingham and Gloucester line. (Hear, hear, and applause.) If he had indulged, in the observations which he felt called upon to make, in any expression which could hurt Mr. Tate, he was sorry for it. He had, however, merely stated facts. (Applause) The Directors adverted in their Report to the carriage of coal. He must explain to them a little upon that subject. He was afraid, however, that he had detained them. ("No, no," "go on.") Well, they recollected what had occurred at the last meeting on this subject. A proposition had been made by certain parties to take coal along the line at a rate which was specified, and these parties, after certain negociations, appeared unwilling or unable to go on with the arrangement. However, a gentleman subsequently came forward under very respectable auspices, and with him the Directors had effected an arrangement. He confessed that he (Captain Moorsom) would have much rather put off the matter, but seeing the feeling of the last meeting, that coal should travel along the line, and having to choose between the whole length from Birmingham to Cheltenham, and the seven miles between Gloucester and Cheltenham, and the nine miles between Tewkesbury and Cheltenham, he thought that he should certainly do best in first getting the coal along the longer distance. The reason why he was anxious to defer it was this. The question of profit upon the coal would depend on the return traffic. If a return traffic could be obtained there would be a fair profit; if there was no return traffic, then they would about clear themselves of the cost. If they had waited awhile, and seen a certainty of a return traffic, he should have been perfectly satisfied. He had simply explained his reasons for wishing to delay entering into this traffic, and if they had done wrong in getting the coal trade under these circumstances, the shareholders had themselves to thank for it, for it was the exceeding eagerness they showed upon this subject which had driven him on against his opinion. (Hear, hear.) As to the tramway, it had occurred to him whether they would not do better to encourage the coal trade there than from Birmingham, for it was just possible that they would have been able to get a better net profit from that tramway than from the railway, as far as coal is concerned. He mentioned these things just to show that they were not blindly going on, but that they were endeavouring to make arrangements on the best data that they could get; but, as he had already stated, that data was uncertain. The Directors must be considered the best judges of what was the cost of conveying things under the peculiar circumstances of their railway. He now came to the requisition of the sixty-one proprietors; but first let him hope that the explanation given in the Directors' circular had been satisfactory to them for not calling a special meeting before the present one. It might have been stated in that circular, that the earliest period at which a meeting could be held, was Monday, the 15th instant, if the Directors had complied with the requisition. They would therefore have had two journeys to Birmingham in one week. (Hear, hear.) Moreover, they had told the proprietors that they had received, while yet sitting, and before deciding on the question, a letter from Mr. Ellins, which seemed of itself to decide the question that the Directors need not call a special meeting before the general meeting. That letter they all had had a copy of. Now, gentlemen, it had been asked why we did not make this general meeting a special one, for the consideration of that subject? Where was the use of that? They were there that day to do as they pleased about it. He never knew of a general meeting which was competent to take up every subject, made a special meeting for a particular subject. But then it was asked, why not assign a particular day subsequent to this meeting, when the subject might be taken up? Such a course would be forestalling the decision of this meeting. He must again allude to the circular bearing the signature of Mr. Tate. It says—"The Committee of shareholders," he hoped they should know the gentlemen of whom the Committee was composed. He did not think it was an impertinent question to ask, seeing that the Committee had assailed the Directors, whether justly or unjustly he would not say; but it could not be thought unfair to ask the names of this Committee, seeing that the names of the Directors were known to all. "The Committee," says the circular, "having pointed out to the Directors, as respectfully as possible, the weak arrangements on the line, and disappointment of the trade expected to support it, and by which the welfare of the line has hitherto been compromised, and finding there was no disposition to alter a system which was too apparent a failure, induced them, in conjunction with a large body of shareholders, to ask for a special meeting." He quoted this passage to say that he was not aware of anything having been pointed out to the Directors, either individually or collectively, either verbally or in writing, until the day when Mr. Shaw and Mr. Ellins called at the office, and saw Mr. Sturge, Mr. Beilby, and himself, and with the requisition in their hands, stated that they wished a modification of the system of management, and that they hoped what they had to propose would be acceded to; but they did not, he thought, say what was to be done with the requisition, which (and he might as well at once admit it) came, to his mind, in the shape of a threat. In saying thus much, they were not to imagine that he meant to say, or imply, that there was any discourtesy whatever in the manner of its presentation. Quite the contrary, the conduct of both those gentlemen was just such as gentlemen should yield to each other. (Hear, hear.) He simply adverted to the mere fact of the paper being placed before them, which seemed in his mind to say, "if you do not yield, see what will be the consequence." He might have been wrong, but he told them honestly the impression produced on his mind at the time. With that impression then on his mind, he alluded to the conditions he had made when he became Chairman of the Board of Directors, and pointed out that any such change, so threatened, must inevitable lead to his resignation. He did not know whether it was necessary for him to say more of what took place. Mr. Shaw and Mr. Ellins were both present, and if he had made any omission, or if he had in any way incorrectly put what had occurred, they were capable of correcting it. In two days the requisition was sent in, and was dealt with in the manner that he had explained to them. There were two other printed publications connected with the circulars signed by Mr. Tate, which he held in his hand. They were signed "A Shareholder." He did not know that he had any positive proof of their being connected with Mr. Tate; he hoped they were not. He thought that no gentleman present would expect him to take any notice of the contents of these papers. (Hear, hear,) They attacked him personally. Perhaps it was a necessary consequence of a man being in a public situation that he should be attacked, and he was sure that it was always a prudent thing to be quite quiet under such attacks. If it could be necessary for him to rebut any of the insinuations which these letters contained, he must have lived twelve years amongst his fellow-townsmen to very little purpose, or he should rather say to a very bad purpose. He might, therefore, safely leave the answer to those insinuations in the hands of those who knew him. (Hear, hear, and applause.) Might he claim their indulgence for a short time longer. He hoped what he had said, and what he was saying, would shorten the business of the meeting. At all events, they would, he was sure, feel as Englishmen, that when a man was attacked, they would patiently hear what he had to say for himself. (Hear.) He now came to the system of management. There existed great misapprehension respecting it. How it should have arisen he could not explain. If misapprehensions did arise, he could not prevent them; but they might be explained away. He thought, however, that considerable industry had been shown in the present case to misrepresent. What had been the objects of those concerned in the system of management? They were that the Directors should obtain as much knowledge of the particular thing they were managing as would make them competent to be superiors and Directors, as much as it was necessary that any member of the Cabinet, or any Lord of the Admiralty, should be thoroughly acquainted with all the details of the department over which he presided; and they ought to expect of their Directors that they should know as much. By a division of labour amongst the Directors, he thought to obtain in the particular departments of management that amount of knowledge which would bring to the common stock of the Board an aggregate of information on every subject of importance connected with the working of the railway, the want of which had caused so much injury to other Directions with which he had been connected. There was not the slightest intention that any individual Director should in any way assume the position of an acting officer. (Hear, hear.) How the notion could have got into people's heads that the Directors became officers he could not imagine; for if there was any point more than another which he took pains to put clear, that was the one. At

Digitized by Google

the general meeting, in February, 1841, he stated, "I have no idea of Directors becoming executive officers, and no one is more decidedly opposed than I am to their giving orders in their individual capacity, which is a practice that destroys the responsibility of the proper executives, and is entirely opposed to the division of duties which I wish to see carried into effect." My plan would, therefore, always comprehend a general executive officer. He would state again his idea of the duties of Directors, which were these:—"That they should know what was wanted, consider what was to be done, give the proper orders, let the executive carry them into effect, and then ascertain the results." He had no knowledge of any individual composing the Committee of Directors having ever given orders on his own individual responsibility in any important matter whatever, and he had no knowledge of any directions being given, on being applied to by any officer for advice, without the same being also reported to the Committee at the next meeting, and receiving the approbation of the collective body. (Hear, hear.) If his colleagues thought fit to speak, they would say that in this respect he was particularly strict, and he believed that they would also agree with him as to the confusion that would be created if any of them, in their individual capacity, gave orders on his own responsibility. Another point of misapprehension arose out of the use of the term "responsibility," which was employed in the communication he made to the general meeting in February, 1841. At the meeting, in February last, a Director was called to account in a way that no gentlemen would submit to. If he could for a moment have supposed that his personal acts as a Director were to be brought before a general meeting made the subject of canvass, and a matter of censorious comment, why he should have been mad to have become a Director; he would not submit to even as a paid servant to such a condition, and he did not think that any man would who had a due sense of self-respect. It was one thing to be under the control of a body of gentlemen acting in a room as Directors, whose proceedings, though recorded, were not published to the world; but it was a very different thing indeed to be called to account in a public meeting, in the presence of the reporters of the public press, who circulated from one extremity of the empire to another the hasty opinions which occurred in debate, and which might leave a stigma utterly uncalled for. The "responsibility" which he meant might be easily collected from a document which, he believed, they all had had—the responsibility of a particular Director to his colleagues, receiving and giving mutual advice and assistance. That he did mean this, and this alone, he would show them by reference to the papers which he held in his hand. "Thus we should get each Director identified with a specified branch of the Company's affairs. It would interest him even as a mental occupation, and he would not confine his services to the Board-room. He would not be satisfied without seeing and understanding somewhat of the thing about which he has to read in the Reports and returns, and on which his colleagues look to him for clear and precise ideas, and matured opinions." He believed that this would be satisfactory to every fair and candid mind as to what he meant—namely, responsibility to each other, and collective responsibility to the shareholders at large. He felt an individual responsibility also as their Chairman in that room; but the responsibility of a Director could only be as a Director. Now, this system then which he had endeavoured to explain, was pronounced to be a failure. In what respect had it failed? That it had not failed in reducing the expenditure he had proved. It had not failed in bringing engines that were in a very inefficient state into a very efficient one! It had not failed in any one of the points which he had had in his mind, and which he had stated in the document now in his hand, when read at the general meeting in February, 1841. He conceived it to have succeeded as amply as he had expected, and he was entirely at issue with those gentlemen who had pronounced it to be in any degree a failure. He never promised that it should gain confidence; he knew how ticklish a thing confidence was; he knew upon what an uncertain foundation it rested; he knew that much must on that score depend on success, and that that success must be entirely, as to the receipts, beyond the control of the Directors. (Hear, hear.) If the receipts of the Birmingham and Gloucester Railway had increased as some other lines had increased—if the passengers had been commensurate with what they had been led to expect, but to which expectations he had been no party, (for he for one had never indulged in them)—but if their expectations had been realised in these respects, they would never have heard of the system being a failure. Of one thing he was quite sure, that whatever their decision on that question might be, the railway world at large, and the Directors of these numerous railways of which the country may boast, will not call it a failure—they know better. But he would admit that on one point there had been a failure. There had been a failure in producing that restoration of prosperity and rise in the value of property in a certain town on the line, which, in the estimate given to Parliament, this railway was to effect. He took the trouble to go down there; he satisfied himself, by as rapid a sketch as time permitted, that at present at least it would be a mere waste of their money to lay out two or three thousand pounds in doing what had been originally planned. He might have expressed himself with characteristic promptitude, for he generally said what he meant, and possibly he might have offended. If he had, he regretted it, for he never would knowingly or intentionally offend any man. He might do so frequently by manner, without having the slightest conception that he was offending. (Applause.) His impression was, that if the depot was made, and that coal-yard set up, they would have heard very little of failure in this department of the railway. Perhaps they would permit him to say a few words about himself. (Applause.) He had been asked—and therefore being asked by letter and in person, he had a right to assume it was a matter of interest to some persons at least—he had been asked, what his opinions were, under the existing circumstances of the meeting, as to the course likely to be taken, and his own conduct in consequence of any given course. Last February, after the general meeting, he intimated to his colleagues, that seeing that the system which he had suggested had placed gentlemen in the very invidious position in which one of their number had been placed, he could never think of asking a gentleman again to subject himself to such treatment—that therefore, so far as his own opinions were concerned, (and waiving them all,) he would leave it to the Board to decide what system of management should be adopted, if it were thought proper to make a change; and that maintaining the principle of the system, he was ready to abide by the decision to which the majority might come. (Hear, hear.) The Board did not, under the circumstances, think it advisable to make any change then. He was requested to see a gentleman, with a view to his strengthening the Board. That might come before them in another shape; but he would only say that his object was to remove what was objectionable, to retain the principle. but to make it as efficient as it could be made. They would find that he was not wedded to the number of five; he expressly said, "the most material point is not, however, the specified number of five Directors, but that the Directors should take upon themselves and establish upon all below them, a distinct, defined, individual responsibility, and arrange the business of the Company on a system which shall give that responsibility full play." Now he repeated, that leaving to the Board, full, fair, and free discussion—for he would never consent to be a delegate with his hands tied up—but leaving to the Board full, fair, and free discussion, he would abide by what a majority might decide as to the system. ("Hear, hear," and applause.) Again, he might say he had not the egregious vanity to suppose that his services could be of the slightest importance to the shareholders. He held this doctrine, that there breathed not the man to whom any body of gentlemen should concede what they thought right to his peculiar views. (Hear, hear.) If his opinions should commend themselves to their reason and jndgment, and if their opinions should then be similar to his own, he was ready to serve them; but if they differed from his opinions they would say so. He would then have the means of ascertaining whether he could reconcile his views to theirs, and that would determine the matter at issue between them. That was the footing upon which he put it. (Hear, hear.) He felt that it was right. ("Very fair," and general applause.) He had a little more to say, and only a little, on the question of the requisition which had been brought before them; but he would tell them that upon this subject his impression was that the differences were scarcely susceptible of reconciliation. He did not see how the points in dispute between them were to be united; for, so far as he could understand, it was a question of principle. The two points at issue between them appeared to him as far apart in principle as (to use an illustration which recent events had made familiar) the sliding scale and the fixed duty. He might be wrong in supposing that it was so stern a matter of principle; but, under the impression that it was so, he thought that this meeting was called on to pronounce, by a substantive specific vote between the Directors and the requisitionists. If they had full confidence in the Directors, that, as men of integrity and men of business, they would take such a course in this respect as would be conducive to the interests of the Company, and bearing in mind the experience they had obtained, if in using that experience they would apply it to carrying out the principle he had laid down, they would allow him to say, (supposing their confidence was so placed in the Directors,) the proper course for the shareholders would be to leave it to them. (Hear, hear.) He did not say that it might not be right for the proprietors to give directions to them as to any particular course, for he did not impugn their right to turn out the whole of them by a vote of want of confidence—he did not mean to trench on those rights which they possessed—but he would venture, as one in whom they had heretofore placed some confidence, to intimate that his opinion might possibly be found to be the most expedient course in this case. (Loud applause.) The question now before the meeting is the resolution for the adoption of the Directors' Report.

Mr. Charles Shaw—And to which I have the honour to move a rider.

Mr. Winterbotham (who had first caught the eye of the Chairman) said, he had no intention of being present at the meeting or taking part in the proceedings. He thought it probable, after the lengthened address from the Chairman, that it would call for personal explanation, and, as two hours had been already occupied, it appeared to him that time might be saved in setting Capt. Moorsom right in one or two particulars in which he appeared to be mistaken, and which might be easily removed. He wished, however, in the first place, to state that he was not one of the requisitionists, that he had never met them, nor taken part, directly or indirectly, in their proceedings, nor was he cognisant of them. Still, he did not mean to say that he disapproved of their views; on the contrary, so far as he understood, he concurred in them. He thought, in the remarks made by the Chairman in reference to the comparative expense of working other lines, that too much stress was laid on it, and that it was not fairly dealt with. He (Mr. Winterbotham) said at once when the paper came out there was a mistake, and he regretted still more when he saw the second paper that it was not corrected. He felt, however, that it could only have arisen in mistake, knowing Mr. Tate as he did to be incapable of saying or doing anything which a gentleman ought to be ashamed to do; but after the mistake of 100,000*l.* made by gentlemen in office, it could not be wondered at that gentlemen out of office should, from the complexity of the accounts, be found falling into error. As Mr. Tate's character put him above the suspicion of stating a falsehood, it was possible that he might have fallen into the inaccuracy without the remotest intention of misleading any one. It might be very easy to make remarks on a

Digitized by Google

little town which was not of great importance when compared with Birmingham, but if that were fully gone into, it would be found that money was to be earned at the small town of Tewkesbury. With respect to the other personal matter referred to by the Chairman, he would observe that at the last meeting Mr. Tymbs's character was only attacked in his public capacity. If gentlemen assumed this responsibility they were open to remarks, and fairly open, from the body of proprietors; and he thought that the extent to which those remarks were carried as regarded Mr. Tymbs, were not carried too far. Indeed, he was glad to see them levelled at a man whose character was above reproach. They touched him only as a public man; they charged him as incapable of performing duties which he undertook, and of assuming a situation which he could not fill with advantage to the proprietors.

The CHAIRMAN begged to correct the observation which had fallen from Mr. Winterbotham as to the state of the accounts. Admitting their confusion, of which he knew nothing, but supposing them to be confused, the state of the accounts he referred to was anterior to anything which he had to do with them as a Director. He believed the accounts were now as clear, and had been so for the last year and a half, as it was possible to make them.

Mr. TATE here rose, and with some warmth entered into a vindication of his conduct in reply to the observations of the Chairman. He was so little in the habit of speaking at public meetings that he should have gladly left his defence in the hands of the gentleman who had lately addressed them but it might be expected after the strong language which had been used relative to himself that he should say a few words in his own defence. The Chairman must have known perfectly well, that although his name was placed at the foot of the paper it was placed there as Chairman of the Committee of shareholders, and it was therefore unfair to make it a subject of personal attack. If the Chairman had calmly and quietly told him that the statements in the circular were not borne out by facts, but that he supposed they had originated in some mistake, that mistake would have been immediately explained. The truth was, that in their ignorance they took 81 per cent as the gross estimate of the working expenses; but in mentioning the 81 per cent. as consumed in working the line, they ought to have said that 81 per cent. was the total disbursement of the line.

The resolution for the adoption of the Report having been moved and seconded,

Mr. SHAW said, he should first read the motion, or rider, which he intended to propose, and then give his reasons for submitting it as shortly as he could. The resolution he was about to propose was—"That this meeting is disappointed that the system on which the concern has lately been managed has failed to realise the expectations held out when it was adopted, and that it is now desirable to increase the number of acting Directors to nine." He was glad to find that their Chairman had in some measure accommodated his views to those of the requisitionists, and he returned thanks to him for the very able manner in which he had declared his principles and intentions with reference to the Company. (Hear, hear.) He thought the Report did credit and honour to all connected with the Board, and he was glad that the matter of the requisition had been treated with the courtesy it had received. They were assembled together as partners, and he hoped and trusted, notwithstanding what had taken place, that they would not separate without agreeing upon some system of management that would be agreeable to all. The difficulty, however, was very great, if not altogether insurmountable, to find four gentlemen having sufficient time and suitable qualifications to undertake the management of the executive department of a railway, and he thought the Chairman must have found it so. He would therefore suggest, as he had done before, that in each department, except that filled by Mr. Daniel—that of the traffic department—there should be two Directors instead of one, in order to provide for sickness or absence. From the conciliatory manner of the Chairman, he trusted they would be able to come to some arrangent of this kind, for he did not disagree with Captain Moorsom's principle of action. With respect to the requisition, he would merely observe, that in the interview which Mr. Ellins and himself had had with the Board, if Captain Moorsom had stated then what he had stated that day, he should have expressed himself perfectly satisfied; and should the Board agree to his resolution, his impression was, that the meeting would separate much obliged to their Directors, and that, too, as satisfied as men could be who separated without a dividend. He was not disposed to attribute the want of a dividend to the acts of commission or non-commission of the Directors, but he thought that Captain Moorsom's principle would be more effectually carried out if he agreed to increase the number of acting Directors to nine. Captain Moorsom had said that he was not wedded to the number of five, nor was he (Mr. Shaw) wedded to the number of nine. (Hear, hear.) He was perfectly willing to listen to any recommendation that would not compromise the interests of the Company, or the efficiency of the Board. (Hear, hear.) It was of the utmost importance to every one of them that they should come to a unanimous resolution upon this subject, for if they quarelled to-day, their shares would go down in the market to-morrow; but if they could unanimously agree on the question of future management, or even have a large majority, he was satisfied that the public would have confidence in the undertaking. He could not believe that the present was a reasonable price for the shares; he was satisfied that his shares would be worth a hundred pounds each in three years, and he thought it very possible that they would increase 10 or 15 per cent. within the next six months. He was not inclined to promise much. He knew that the public mind was disturbed, but he also knew that trade was improving. He knew that trade was improving in the West Indies, in South America, that it would improve in North America after Christmas he was certain: and when men got money, they would have no objection to speculate in Birmingham and Gloucester shares. If the Board were disposed to accord with the resolution he had submitted, he thought the business of the meeting would be much shortened.

A SHAREHOLDER thought that the Board were already committed to it.

The CHAIRMAN, in reply to the observations of Mr. Shaw, thought it might have the effect of making them understand each other better if he read to the meeting a resolution which the Board had passed at their meeting yesterday, "Resolved, that the Board, after full consideration of the manner in which the system of management which commenced in March, 1841, has been carried into effect, and of the results attained, are confirmed in the opinion expressed in their minute No. 462, of the 18th of February last viz.—'That the Board, after the expiration of nearly twelve months since the new system of management came into operation, have again considered the subject; and although the experiment cannot yet be said to have had either a full or a fair trial, they are unanimously of opinion that the system has answered the expectations the Board were led to entertain, and that it ought to be continued.'" That was last February. The system had been continued to the present meeting, and the Board, on re-considering the subject, had adopted the following resolution:—"The division of the business of the railway into separate departments with a responsible executive officer at the head of each, united under a general Superintendent, and presided over by Directors acquainted with the business of their respective departments, has been attended with beneficial effects to the Company's affairs. The personal labour and responsibility which have devolved upon the Directors in the peculiar circumstances under which they took office have, however, been very great, and the Board would have been prepared to make a certain modification of the system by the increase of the number of the Committee, if circumstances had not led them to consider it more convenient to suspend such modification until after the general meeting."

Mr. SHAW—If the Directors had promised them that resolution when they had the honour of waiting on the Board, it would have spared the printers a great deal of trouble.

Mr. FRY (of Bristol) said, he should be very happy to second the resolution. There were many of the shareholders in Bristol who were very anxious to see the feeling which existed between the Directors and a portion of the proprietors done away with, and had desired him to do all he could to bring them together. From all he had heard, it would be greatly to the interest of all the proprietors to forget what had passed, and endeavour to work together with good feeling. If they did not do so, he was satisfied they would have their shares very much further depreciated.

Mr. W. R. LLOYD, as one of the requisitionists, disclaimed the intention of conveying a threat, or in any way dissolving or altering materially the constitution of the Board. A requisition had been handed to him, stating that it was desirable to increase the number of Directors, in which he fully concurred. He therefore signed the requisition calling the meeting, and there were a number of others holding the same opinions who were completely unconnected with the Tewkesbury Committee, and had nothing whatever to do with the circulars fulminated by them. Their sole object was to increase the number of Directors, with no intention of holding out a threat, as the Chairman seemed disposed to think.

Mr. TATE—Mr. Lloyd had called it a Committee of Tewkesbury shareholders, but there were many more out of Tewkesbury who had signed it.

Mr. SAMUEL BOWLY said, that with very little alteration he would be cordially prepared to join in the resolution, not that he apprehended an increase in the number of Directors would increase their dividends, but, that he thought union amongst themselves would benefit the concern. He thought, however, they might omit in the resolution that part of it which condemned the system, leaving it to the Directors to carry out their views. They must all see that it would be impossible to get the railway worked properly if they forced on the Directors men who were uncongenial to them. Only imagine two men in the same department taking different views. Instead of getting strength by such an alteration as this, they would have weakness itself. With the slight alteration he had suggested, he would be prepared to support the resolution.

Mr. CHANCE said, they had a motion before them for the adoption of the Report. Mr. Shaw proposed to add a rider. He could not do that. They must accept the Report or not. They could not add to or detract from it.

Mr. SHAW acknowledged that he had felt the difficulty pointed out by Mr. Chance.

The CHAIRMAN asked whether Mr. Shaw had any objection to make his motion a substantive resolution? Probably he wished to attach it to the acceptance of the Report for some reason. If he had no such reason, why not accept the Report, and make the other a substantive resolution?

Mr. SHAW having signified his assent to the course proposed,

The CHAIRMAN said he apprehended the meeting had no objection. ("No, no.")

Before the resolution was put, Mr. Sturge and other gentlemen put questions to the Chairman, in relation to a variety of items in the accounts under the head of "law expenses," and "engineering," in respect to which full explanations were given; after which, the resolution for the adoption of the Report was put to the meeting and carried, there being only one hand held up against it.

The CHAIRMAN said that the question now before the meeting was Mr. Shaw's rider as a substantive resolution. He believed that the subject had been sufficiently spoken to, but if there was any proprietor who might wish to speak to the resolution, he would be happy to hear him.

Mr. BAKER (of Gloucester) had an amendment to move on the resolution, not that he disapproved

Digitized by Google

the latter, but there was other matter which he shed to embody in it. And before he read it to e meeting, he would merely observe that if ere was any gentleman present who could have tertained any doubt as to the Chairman's qualifitions for the important situation he filled, that ubt must now be entirely removed; for he had ver heard so able, so elaborate, so clear, and so fective a statement as that which had been placed fore the meeting by the Chairman. Having acitted himself of that duty, he would not presume offer advice to one who was so much more able advise himself; but he would offer a suggestion hich he believed to be a general feeling amongst ie shareholders, and which he trusted would not e considered as having been made through any ictious motives, but for the benefit of the shareolders at large. He conceived the feeling abroad be justly founded in many respects; at any rate, o this extent, that as all human affairs must be ubject to some irregularities, so the shareholders of he Birmingham and Gloucester Railway must have elt that some little irregularities have crept into their ffairs. That might be right, or it might be wrong, ut at all events, it was the general opinion; and, fter what had occurred that day, he should retire with the conviction that any suggestion made to the Board would be received with courtesy and attention. Having said thus much, he would refer to other matters which appeared to be questions of doubt amongst the Directors, and being matters of doubt, he trusted they would resolve them as speedily as possible. Mr. Baker here briefly referred to the question of raising the fares, of giving up the carrying traffic, and the use of the tramway for the conveyance of coals between Gloucester and Cheltenham. In noticing the system of management, and the comparative statement which had been made by the Chairman as to the cost of working the traffic, Mr. Baker said that there was one thing of which he was perfectly satisfied, that the Birmingham and Gloucester Company was worked at a lower rate than any other Company, and yet it appeared that they had no dividend. This was the difficulty. (Hear, hear.) Of one thing, however, he was perfectly satisfied, from having filled the Chair which was now so much better occupied, that there were the same ingredients for profit to the Company existing now as when the undertaking was first brought before the public, and that they would, when brought into action, ultimately make the Birmingham and Gloucester Railway a profitable concern. He, therefore, begged to move, "That this meeting perceives with great regret that the Report of the Directors does not warrant the expectation of a dividend; and whilst the shareholders cheerfully express their confidence in the Chairman and Directors, and hope they will continue their exertions for the interests of the Company, they also hope that they will take into consideration the propriety of adding to the number of the acting members of the Board, so as to ensure the most efficient administration of the affairs of the Company."

Mr. HALL, of Bristol, seconded the resolution.

The original resolution having, with the consent of the mover and seconder, been withdrawn,

The CHAIRMAN said, he believed he was expressing the opinion of the Board, as well as his own, when he said that they could have no possible objection to the resolution proposed by Mr. Baker, and that they would most faithfully endeavour to carry out the spirit of it. (Applause.)

The resolution was then put to the meeting, and carried unanimously.

The next business being the election of Directors, Mr. Joseph Sturge proposed Mr. John Homer in the room of Mr. Moore, one of the Directors who retired by rotation from the Board; and Mr. Tate proposed Mr. G. Ellins, of Bromsgrove, in lieu of Mr. Beilby, who also retired. Mr. Moore having intimated his intention to retire from the Direction altogether, Mr. Homer was elected in his stead. Mr. Charles Sturge and Mr. J. F. Ledsam were afterwards elected. Mr. Beilby was then put in nomination by Mr. J. F. Ledsam, seconded by the Rev. R. Bedford, and on the question being put to a show of hands, there appeared to be a considerable majority in favour of Mr. Ellins. Mr. Daniel of Gloucester demanded a scrutiny, which, after much discussion as to the legal mode of proceeding, was ultimately gone into. Mr. Rodway being appointed scrutineer on the part of Mr. Beilby, and Mr. Tate acting in the same capacity for Mr. Ellins.

The meeting was then adjourned for an hour, in order to afford time for examining the votes. On the re-assembling of the shareholders, the numbers were declared to be—for Mr. Beilby, 2,775; for Mr. Ellins, 1,499. The Chairman then declared Mr. Beilby to be elected, after considerable dispute with respect to the manner in which the scrutiny had been conducted, in the course of which much personality and recrimination were indulged in by some of the gentlemen who took part in the discussion.

J. F. LEDSAM, Esq., was then called to the chair, when Mr. Shaw, in very complimentary terms, proposed a vote of thanks to Captain Moorsom, for his able and zealous devotion to the interests of the Company.

The motion having been seconded, was carried by acclamation.

Captain MOORSOM, in acknowledging the resolution, said, that in the midst of the arduous duties of the day, he confessed that he did look to something like the mark of approbation which he had now received. There was, indeed, no other motive which influenced him in exerting his energies in their behalf, than the hope that those exertions might merit their approval. He did not want their money, but he did court the approbation of those who were capable of appreciating his services; and if they were made in any way conducive to the benefit of the shareholders, he should be amply repaid.

A vote of thanks was also passed to the Directors, for their services during the last six months, and the sum of 600*l.* was placed at their disposal.

The proceedings lasted upwards of six hours, and it was near eight o'clock in the evening before the meeting finally broke up.

TAFF VALE RAILWAY COMPANY—GENERAL MEETING.

THE general half-yearly meeting of this Company was held at the Angel Inn, Cardiff, on Tuesday last; Sir J. GUEST, Bart., in the chair. We observed a great number of gentlemen from Bristol in the room.

The business of the day commenced by the reading of the following—

REPORT.

"By a reference to the statement of accounts appended to this Report, it will be seen that the receipts from the working the line for the six months ending June 30 have been 14,964*l.* 1*s.* 0½*d.*, that the disposable balance, after paying the whole of the interest on the loans and new shares for the half-year, is 4,376*l.* 14*s.* 2*d.*, out of which the Directors recommend that a dividend of 28*s.* per share be declared on the original shares in the undertaking, payable on the 10th of September; and that the further sum of 22*s.* per share be carried to the credit of the old shareholders, as capitalised interest, making the nominal amount of each share 116*l.* 4*s.* 6*d.*

"The amount received from passengers during the last six months rather exceeds that of the corresponding half year. A correct comparison can scarcely be made with respect to the general merchandise traffic, as the line was not fully open during the corresponding half-year, the amount of revenue from this source is not quite equal to that of the last half-year.

"The tonnage from the Dowlais Works has averaged 1,184 tons per week, and the amount is 4,066*l.* 10*s.* 2*d.* With respect to the iron this may be considered the result of 3½ months' working, as it was not on the line until about the middle of March. The average tonnage from the Dinas branch has been 1,626 tons per week, and the amount is 3,426*l.* 11*s.* 8*d.* That the Llancaiach branch has only reached 543 tons per week, or the sum of 1,391*l.* 11*s.* for the half year.

"These results are not so favourable as the Directors had anticipated, but that it arises from no want of trade, or facilities for conducting it, is proved by the fact, that during the last week, in addition to the passengers and general merchandise, the minerals passed over the line were—

To and from the Dowlais Works.....	1,460 tons.
Dinas Works.....	1,968
Llancaiach Works ..	2,212
Tons	5,640, being an

average of 930 tons per day.

"The negociations refered to in the last Report as having been entered into with the Marquis of Bute, were not brought to a successful issue; but since that time arrangements have been made for the rental of a portion of wharf ground on the Bute Docks, for the purpose of erecting machinery for the shipment of coal. This work is now in progress, and the Directors hope it will prove of considerable advantage to the Company.

"The Directors retiring at this time are Messrs. Coffin, Carlisle, and Rudhall, all of whom are eligible for re-election."

The revenue account was then read, of which the following is a copy:—

Revenue Account for the Half-year ending June 30, 1842.

DEBTOR.

Direction ..			£250 0 0
Secretary's Office Expenses, viz.—			
Salaries.....	£372 18 4		
Rent, stationery, and incidental expenses	115 16 8		
			488 15 0
Maintenance of Way and Works, viz.—			
Salaries.....	132 5 0		
Amount paid for maintenance.....	1,167 7 5		
			1,299 12 5
Locomotive Department, viz.—			
Salaries.....	140 5 0		
Wages of engine drivers, stokers, cleaners, &c.....	847 4 6		
Coke	747 15 3		
Stores, viz., oil, tallow, &c. for consumption.....	392 10 2		
Wages and materials for repairs of engines and tenders	734 8 11		
			2,862 3 10
Stationary Engine and Inclined Plane, viz.—			
Wages of enginemen, bank riders, coal, and stores			395 11 8
Traffic Department, viz.—			
Salaries of station clerks..	543 14 1		
Printing, advertising, and stationery	210 1 4		
Coal, candles and other stores for stations	117 14 4		
Wages of guards, brakesmen, police, and porters.....	1,403 14 11

On the Chairman inquiring whether any gentleman wished to offer remarks to the meeting,

Mr. EVANS (of Dowlais) rose, and said that Mr. Powell brought down but 543 tons of coal per

Digitized by Google

week on the line, whilst Mr. Coffin, another Director, brought 1,260 tons per week. Probably Mr. Powell would satisfy the meeting how it was that the traffic on his part was so small, because he had declared that he would bring the whole of his traffic down the line. Mr. Powell had said that he could get his coal cheaper down the railway, even if the canal gave him tonnage for nothing. Now, how Mr. Powell could reconcile such conduct with his former statements he could not conceive. He (Mr. Evans) was sure such a man was not fit to be on the Directory; and it was of no use for Mr. Powell to attempt to badger and frighten the proprietors: for his part he would rather sink his interest than such an advantage should be taken by him. Mr. Evans then made some personal remarks, for which he was checked by

The CHAIRMAN, who said that personal expressions must not be used; one hard word produced another; he was glad to hear public discussion, but personalities should be avoided.

Mr. EVANS said, he came there not to represent the Dowlais Company, but to represent himself. If Mr. Powell had any spark of manly feeling he would resign at once.

Mr. GREEN, on the part of Mr. Powell (who is deaf), replied at length to Mr. Evans's observations. He said that to his own knowledge Mr. Powell was as anxiously alive to the interest of the Company as any proprietor, and would do as much as any one to promote the trade on the line; he (Mr. Green) had been engaged by Mr. Powell to decide upon the best mode of shipping coal. Mr. Powell had gone to a large expense in the building of waggons, which he would not have done if he had intended to have left the railway; he had caused drawings and models to be made, and had expended from 4,000*l.* to 5,000*l.* in erecting machinery, which would have been completed and in operation ere this, had he not been checked; he had been kept in abeyance. Mr. Powell was prepared to erect stages, &c., and was present when arrangements were made with Mr. Stevens on the part of the Marquis of Bute. His (Mr. Green's) opinion was, that six months before that time Mr. Powell would have brought down five or six times the quantity of coal more than he had carried, but Mr. Powell had been thrown on his back. Subsequently an arrangement had been made between the Railway Company and the Marquis of Bute, by which the Company rented a piece of ground of his Lordship, with the stipulation that no other persons than the Railway Company should use it for the purpose of shipping their coal. Mr. Powell was therefore compelled to ship at their wharf, or not at all. Mr. Powell rented of the Marquis of Bute four wharfs, of 120 feet each, at 10s. per foot, so that one may well suppose it was his intention to ship a large quantity of coal, otherwise he would not have gone to so large an annual expense; of course he expected a certain return, he could not conceive it to be the interest of the Marquis of Bute and other persons so to monopolise. Mr. Powell had also purchased a locomotive for the purpose of conveying his own coal, but he was not allowed to use it on the line now. All these things accounted for Mr. Powell's sending so little coal down the railway. Could any one suppose that Mr. Powell, having 20,000*l.* embarked in the line, would not look after his own interest? Mr. Green concluded by again declaring that no man had the interests of the railway more at heart than Mr. Powell.

Mr. BURGESS (the Secretary) said that it had been deemed advisable to make such wharfs as would be convenient to all persons using the railway—(hear,)—and to afford convenience to small freighters as well as to large ones. Again, the description of machinery which had been erected by Mr. Powell was not, according to his judgment and that of others on whom he could rely, calculated for a large trade. Mr. Powell had been asked before the arrangement was made, whether he would make the shipping-place one for public accommodation. The answer was, no. The Company's intention was to put up machinery at a small cost to accommodate all on the railway. (Hear.) So far from Mr. Powell having been hindered, every thing had been done to encourage him. Last week, knowing the canal was out, he (Mr. Burgess) being aware that Mr. Powell would want a large quantity of coal down, used extra exertions, and got up several mornings as early as 4 o'clock, to see that proper arrangements were made. 300 tons were brought down, but Mr. Powell was not satisfied; he said they should have brought down 400 tons. With respect to the locomotive question, it amounted to this—Mr. Powell referred to the Act of Parliament, and that regulated the movements on the line. The Directors could not enter into any such arrangement as was proposed by Mr. Powell, as they considered such a course would be both dangerous and inexpedient. Gentlemen might be assured that the management of their line was a matter of great and intense anxiety; on a single line they were compelled to await the arrival of intelligence at the station-houses, and there was no proceeding to the different points whilst trains were running; how much more would the difficulties and dangers be increased if other locomotives than those of the Company were used. (Hear.)

Mr. JAMES (of Bristol)—I do not understand what grievance Mr. Powell complains of in shipping at our wharf.

Mr. BURGESS—I have told Mr. Powell before that he may have a machine, if he wishes, to raise coal on his own wharf.

Mr. POWELL—Yes; and charge 3d. per ton.

Mr. BURGESS—The machine would be on the hydraulic principle; and I told Mr. Powell that we would supply him with water at a low rate.

Mr. POWELL—I hear but little of what passes, and this was only told me last week. I deny all ill-feeling, and candidly tell you, that with me the matter is purely one of pounds, shillings, and pence. If you cannot draw my coal to my own advantage, I will do it myself. Of course I would do all I could to support the railway, for I have 20,000*l.* entailed in it. I am also a freighter, and as such would surely take care of my own interests—self predominates in us all. Mr. Green was employed by me to prepare drawings and models of machinery, and just as I had brought them to perfection, Mr. Burgess steps in with, "The Marquis prevents you." The Marquis of Bute takes my 700*l.* or 800*l.* a-year, and yet I am not allowed to ship my own coal. Is not this preposterous? Mr. Evans is quite wrong in what he has said; but if you throw obstacles in my way, and if you do anything to drive my trade from the railway, it will be your own faults. I will give 1d. per ton in preference to the railway, and no more. You take your course, and I will take mine.

Mr. GREEN made some observations with respect to the models of machinery he had projected, and vindicated the views he had taken, which he said had been sanctioned by Mr. Stevenson.

The CHAIRMAN said, when the negociations with Lord Bute took place, it was his Lordship's intention to make a road on the eastern side of the dock, so that every person might ship in his own way, but some obstacle occurred. During the first three years the Company were to ship on the western side of the dock.

In reply to a question by Mr. James,

Mr. GREEN said, Mr. Powell was injured, not only in the shipping, but in the drawing, of the coal; the speed, also, at which the engines travelled injured the coal.

Mr. POWELL said, Sir John Guest got his iron drawn down for nothing.

This was denied by Mr. COFFIN, who ably defended the course taken by the Company. As soon as the branch now making to the Dowlais Works was completed, Sir John would pay the Parliamentary tariff. (Hear.)

JOSEPH PRICE, Esq., of Neath, in an able speech, highly complimented the conduct of the Directors, and recommended that when disagreements of this kind occurred, some rational man should be called in to mediate. (Hear.) He was pleased to hear that they had had Sir John Guest's trade for three months, and they should have it for all the next six months. Mr. Price then adverted to the subject of Mr. Powell's locomotive, and contended that it would not be safe on a single line. Many persons would not like to travel where the locomotives did not act harmoniously. (Hear.)

Mr. POWELL intimated that he only wished it to travel on the line at night.

To this it was replied, that it would be incompatible with the arrangements which the Directors had made for working the line, and the safety of the public.

The resolution, that the Report and the Treasurer's account be received and adopted, was then put by Joseph Price, Esq., of Neath, seconded by — Margham, Esq., and carried *nem. con.*

THOMAS CARLISLE, Esq. (of Bristol), said, he supposed he might say after the storm had blown over came a calm. He had hoped for a larger dividend, but taking into consideration that 22*s.* per share had been carried to the capital account, 28*s.* per share was as much as could be properly recommended. This was independent of what was carried to the credit of the original shares, now worth 116*l.* 4*s.* 6*d.* He had little doubt but that the dividend would be materially enhanced next meeting, for the traffic had much increased, and last week it was still augmented.

Mr. Carlisle then moved, and Mr. Rudhall seconded, a resolution to the effect that a dividend of 28*s.* per share be declared payable on the 10th Sept. next. Having been put from the chair, it was carried *nem. con.*

Mr. Evans moved, and Mr. James seconded, that the retiring Directors, Messrs. Coffin, Carlisle, and Rudhall, be re-elected.—Carried.

Mr. Coffin, in an eloquent speech, on behalf of himself and brother Directors, acknowledged the compliment.

The seal of the Company was then affixed by the Chairman to the register of the proprietors.

Mr. THOS. WM. HILL (one of the Directors) called the attention of the meeting to the improved state of the finances of the Company, by showing that out of 6,600 quarter-shares originally issued, only 252 more remained for disposal; and since his arrival in the room, he had received communications from individuals requesting him to have their names registered for upwards of 100 quarter-shares, leaving about 150 for disposal.

Mr. Chilcott (of Bristol), in a few observations, moved, and Mr. Margham seconded, a vote of thanks to the Directors, which was carried *nem. con.*

Thanks were then voted the Secretary and Superintendent, who acknowledged the compliment in a short speech.

The Chairman then vacated the chair, which was taken by W. Coffin, Esq., and a vote of thanks, by acclamation, for his able conduct there, was given to the Chairman, Sir J. Guest.

Sir J. GUEST briefly acknowledged the compliment, and the meeting broke up.—*Bristol Gazette*, Aug. 24.

EXTENSION OF THE GREAT WESTERN RAILWAY TO OXFORD.—The *Oxford Chronicle* says—"It is now confidently stated that application will be made to Parliament, next session, for a Bill to enable the Directors of the Great Western line to make a railway from Wallingford to Oxford. It is not probable that the project will experience any opposition from either the University or City."

—o—

At the Witham Petty Sessions, on Tuesday week, the bench were engaged a considerable time in investigating a complaint made on the part of Lord Western against the Eastern Counties' Railway Company, for not making a temporary road while the works were carrying on over Rolls-lane, a private road on his lordship's estate. The information was for the penalty of 500*l.*; and it appears it would have cost the Company about 50*l.* to make the temporary road. The bench, after a long argument on each side, adjudged the Company to pay 20*l.*—*Chelmsford Chronicle.*

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY.

The intended opening of the line as far as Headcorn at an early day, and afterwards, before the end of this year, its continuation to Ashford, has already produced its effect upon the value of the tolls arising on the turnpike road for the intermediate distance between the latter place and Dover, and even on the branch road from Folkestone to Barham. On Wednesday the 17th, the Trustees of the Dover and Sandgate Road, and of the Folkestone and Barham Road, met at the Guildhall in Folkestone, pursuant to advertisement, to offer the tolls on those roads to public competition, which were then let at the following rates, viz., Folkestone Hill Gate, which was let last year for 30*l.*, is now let for 42*l.*; Sandgate Gate, which last year produced 22*l.*, is now let for 42*l.*; Uphill Gate (Barham Road), let last year for 12*l.*, now for 17*l.*; Denton Gate (Barham Road), let last year for 12*l.*, this year for 15*l.* There were very many bidders, and the competition was exceedingly brisk. The increase on the two gates between Dover and Hythe, viz., Folkestone Hill and Sandgate Gates, was in each case exactly the same (12*l.*); but we have a strong impression that the lessee will, even at that increase, have a more profitable speculation than his predecessor. We should not have been surprised if double the last year's rents had been given for these two gates; for there can be no doubt that on the opening of the railway to Ashford the great majority of the traffic between the Continent, Dover, and London, will pass *via* Dover and Ashford by the railway between the latter place and the metropolis.—*Dover Chronicle.*

Coach *v.* Railway.—There are now no fewer than eight coaches running each way between Manchester, Ashton, and Staley Bridge. This fact must be deemed as extraordinary when it is considered that, on the opening of the Manchester and Sheffield Railway, all the coaches between these towns ceased to run. An attempt to raise the fares by the railway from what was at first charged by the Company has given rise to this unexpected competition. Nor is this opposition likely to be put down, as the nearest point to the railway from Ashton is nearly two miles, and more than that from Staley Bridge, so that passengers have either to walk those distances, or to pay 6*d.* extra for omnibus fare.—*Leeds Mercury.*

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles and 20 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+31+20.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 27*l.* 4s. 9d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. The dividend is from the opening, and on the old shares alone.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,222*l.* 6s. 6d. are the receipts after deducting omnibus charges, and payments to other Companies. The decrease this week in the receipts is owing to the riots.

28. The receipts for goods, &c., include, horses, 45*l.* 18s. 0d.; carriages, 41*l.* 7s. 0d.; dogs, 6*l.* 2s. 0d.; parcels, 210*l.* 10s. 6d.; cattle, 21*l.* 17s. 6d.; corn, 5*l.* 3s. 10½d.; heavy goods, 417*l.* 8s. 9d.; coal and lime, 145*l.* 12s. 5d. —Total, 894*l.* 0s. 0½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 3,204*l.* 8s. 5d.; carriages and horses, 198*l.* 11s. 2d.; parcels, 257*l.* 16s. 1d.; mails, 50*l.* 5s. 9d.; merchandise, 1,155*l.* 1s. 11d.; minerals, 310*l.* 7s. 7d.; cattle, 32*l.* 1s. 6d. — Total, 5,208*l.* 12s. 5d.; including North Midland proportion of Manchester and Leeds traffic, and amount received from Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll, and are for five days only.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Midland Counties' Railway.—*In our last number we made some remarks on the (apparent) dictatorial bearing of the Directors of this Company at their late meeting. We have since received several letters on the subject, from which it would appear that the Report in the provincial journal, from which we quoted, and upon which our observations were based, is extremely unfair and partial. We shall make further inquiries, as our sole object is to do justice to all parties, not censuring on the one hand without good cause, nor withholding censure where it appears to be deserved.*

The letter from Tipton, *respecting a railway break, is an advertisement.*

Swindon Station, Great Western Railway.—*A correspondent, who gives his name, says, "I wish briefly to mention a piece of shabby extortion practised at the* Swindon station. *It has been attempted on myself more than once, and, to my knowledge, also on others, and cannot, therefore, be mere accident. The charge for a plate of sandwiches is 6d., and a pint of bottled ale 8d.; this last is 2d. more than is charged on the Birmingham line and elsewhere. When* 1s. 6d. *is tendered in payment, there is no such thing as change—change is impossible. But just as the train is going to depart a remedy is discovered—'Will you take some buns instead of the change.' This pitiful practice, I think, deserves exposure, that it may be at once put a stop to."*

Manchester and Leeds Railway.—Œconomicus *writes thus:*—"*I observe in your last the answer of Mr. Jellicorse to my letter inserted in your journal of the* 13*th instant. I beg to say in reply, that no one can more admire the general management of the Manchester and Leeds Railway Directors than I do, nor have I been backward in endeavouring, in your columns, to defend the line from the assaults of its numerous enemies. Mr. Jellicorse, however, has not arrived at a right conclusion, when he says I cannot be a shareholder in the Leeds line, or I should have known when the last dividend was paid to me. I remember the time very well; the warrant reached me on the* 24*th of March,* 1842, 88 days after the end of the half-year! *Delay enough in all conscience! Indeed, such a waste of time as must sooner or later create general complaint. If the Act of Parliament be the cause of so much delay, I beg to recommend, when next the Company trouble the legislature (and Railway Companies seem no way loath to do this), that a clause be inserted in the Act, enabling the Directors to fix an earlier day for holding the half-yearly meetings; for there is, perhaps, nothing that tends so much to make a Company esteemed and prosperous as promptitude—promptitude of payment, particularly. What, indeed, would not be the fall in the public funds, were Government to intimate, that in future the dividends would not be payable* till three months after the end of the half-year!"

D. W. *(Edinburgh).—There can be no doubt the line to which he refers will be constructed. Matters are going on very favourably, and we hope in a short time to be able to supply full particulars. It is quite impossible that the other project to which our correspondent alludes can permanently damage the scheme in which he is interested.*

M. H. W. *will find, to his cost, that we are right. We should be very glad, for his sake, and the sake of his co-proprietors, that it were otherwise.*

We shall take care to forward the hint of our Newbury *correspondent to the proper quarter.*

Blackwall Railway.—*A correspondent wishes us to urge upon the proprietors the necessity of mustering in large numbers at the meeting on Tuesday next. He says, the Directors have been eagerly canvassing for proxies, and that there is to be no dividend.*

The Patent Stucco Cement.—*We feel obliged to* Verus, *for calling our attention to this important discovery. We have in type a notice of its properties, which shall be given next week.*

Mr. Samuel Hall's Smoke-Consuming Apparatus.—*Mr. Kearsley's Report to the Midland Counties' Railway Directors (with some Editorial comments) is unavoidably postponed.*

A number of correspondents must excuse us for another week. They will see from a notice below, that next week we shall be able to do them justice.

In consequence of the numerous meetings which take place in the ensuing week, and the heavy arrears of correspondence and general matter now pressing upon us, we propose, next Saturday, to issue two sheets—each the size of this. The price will be one shilling. We hope to be able to get through the busy season without the issue of another extra sheet.

*** Early on Monday morning we shall publish a Second Edition, containing a full Report of the South-Western meeting, which takes place this afternoon.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES.....	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, AUGUST 27, 1842.

THE Report of the Directors of the Eastern Counties' Railway has already made its appearance, together with the Report of the Engineer, although the general meeting of proprietors is not to be held, according to advertisement, until the 31st instant. The former of these documents, and extracts from the latter, will be found printed in our columns, and are deeply interesting. The reason for this early publication appears to be, to put the shareholders fully in possession of everything known to the Directors, and that the meeting advertised for Wednesday next may be merely *pro forma*, and may adjourn until the proprietors have the pleasure to assemble at the opening of the line for traffic, expected confidently to take place on the 1st of October next.

This plan appears to be judicious, and is evidently intended to save the distant proprietors the trouble of coming to London until they can witness the completion of that great work, in the construction of which they have been so long engaged. It must indeed be a deep satisfaction to the Directors, Engineer, and officers of the Company, to see so near a termination to their labours and anxieties; and looking back at all the difficulties to which they have been subjected, and which have been surmounted, the greatest credit is due to their exertions.

Originally the line was brought forward in great haste, was wretchedly supported by the counties through which it passed, and, although forced through Parliament, could only be so by unexampled sacrifices to rapacious landowners, whose opposition, had it been maintained, must inevitably have lost the Bill in 1836; and as in the following year the Standing Orders were altered, and became onerous in a high degree by the 10 per cent. subscription, and otherwise, upon persons investing in new railway schemes, there can be little doubt, especially considering the commercial distress of late years, that had the Act of Incorporation not been obtained in 1836, it would not at the present day have been in existence, nor would a spadeful of Essex earth have been moved to make that railway which now is a proud and imperishable monument of utility to the county.

Scarcely had the Bill passed, however, before a general fall in property took place, and a scarcity of money arose, and this kept back the undertaking until it was on the point of death. From this depression it was gradually rising, when it received a temporary check from the enforcement by a noble Lord, and others, of certain obligations against the Company which, under the circumstances, they should blush to have treated as contracts of sale for honest prices, and regarding which

Digitized by Google

the public will yet speak out in a voice which will cover these parties with shame and confusion. To think that a Peer should by a *peculiar* exercise of Parliamentary influence get 2,500*l.* per acre for land, while the honest English farmers right and left of him, for similar land in every respect, did probably neither ask nor get 200*l.* per acre, is an abomination, to say the least of it, which, while there is a sense of justice and honour existing in the country, must be condemned with words of the most bitter and unmitigated reproach, scorn, and disgust.

These impediments had scarcely been removed when parties in Norfolk and Suffolk, ignorant of their own best interests, endeavoured to force by legal proceedings the Company to waste their money in buying land up to Norwich and Yarmouth, upon which it would have been impossible ever to have put a railway, and thus so to cripple their resources as that a continuous line to Colchester could never have been constructed. This paper at the time erroneously advocated the soundness of the views taken and objects sought for by these parties. They were defeated, and then, and not until then, did the undertaking really begin to force its way forward to completion. All these obstacles could not but disorganise financial arrangements and knock down credit, and the consequence has been that the whole burden of making the Eastern Counties' line has fallen upon the shareholders. Every other existing railway concern of any magnitude is in debt for money lent, some to the extent of millions, and others to the extent of many hundred thousands. But the Eastern Counties' Railway has, from circumstances, been formed actually with the capital of the proprietors, and therefore the security the Company can give to lenders for any money now to be borrowed must be equal, if not preferable, to any existing security, the London and Birmingham Railway Company's bonds or loan notes not excepted. Heavy and sad has been the burden on the proprietors, and most patiently have they borne with their many disappointments. Now, however, it is to be hoped that they are to reap a rich harvest, and that their sorrowing is to be turned into joy.

The great traffic of the Eastern Counties is little known and quite undeveloped, and when we look back at the estimates of traffic published by the Company some years ago, and at the extent of revenue now possessed from the opening of 17½ miles only of the line, they satisfactorily prove that the expectations put forth in this document, and probably much more, will ultimately be realised. Except to those who have journeyed between London and Colchester, it is not conceivable that so many daily travellers between the east and the metropolis exist. But the best test of correctness of the judgments of the skilful and experienced parties who drew up this traffic statement, is the fact, that the travellers estimated by it to pass between London and Brentwood, have already been greatly exceeded in number. At the first opening of the line we do not look for any very considerable increase on the present weekly returns. The revenue of this undertaking will be of slow growth, just as the surrounding traffic shall slowly congregate to the line, and shape itself to this mode of transit. Should the stock of the Company rise in value and in public favour, as it indubitably must, this will, under the present administration of the Company's affairs, have been effected without puffing, or vaunting, or resorting to anything but *bona fide* statements and ungarbled facts. The accounts also, upon which necessarily so much depends to maintain the concern in a healthy condition, are, we are informed, kept with an accuracy which may well serve as a model to other Companies. This is strong praise, but it is just; and after a concern has undeservedly been under a cloud for years, and its shareholders suffering bitterly, it is our duty, when we justly can, to speak the words of cheerfulness to their rising hopes.

We now turn to another subject not so gratifying, namely, the excess of cost of 200,000*l.* over the last estimates, and regret that this fact exists to mar the pleasure which would have been afforded by the completion of the undertaking under Mr. BRAITHWAITE'S skilful direction, had it been effected within the estimate of 2,300,000*l.* This feeling will prevail generally amongst the proprietors; but, a sense of justice and impartiality guiding them, they will view the excesses *seriatim* which make the aggregate of 200,000*l.* (or as it appears to us about 180,000*l.* only), and will find it difficult to place condemnation anywhere. Mr. LOCKE was called in, and estimated the cost of the line at 2,300,000*l.*, and Mr. BRAITHWAITE'S corresponding estimate is somewhat under that figure. The expenditure, however, reaches about 15,000*l.* above that sum, and all of it is accounted for, and located upon the various portions of the line. How different from the sad exhibition of the Brighton accounts and the Brighton meetings! *There* an estimate of Mr. LOCKE'S is not exceeded by about 7½ per cent. only, but by 100 per cent.!! and the excess has not, to this day, been divided into portions and appropriated to particular parts of the line, and *proved* to have been at those points expended. Would the Directors of the Eastern Counties' Railway Company have ever dared to come before their shareholders with an announcement that they had accepted their Engineer's statement for an excess of one million of expenditure, without requiring him to divide that excess into its minute portions? If they had, they would have been disgraced, and hurled from their seats. But they have been more careful of their character, and so has Mr. BRAITHWAITE of his, even where the excess is 150,000*l.* only. The whole of it is minutely accounted for, and when the shareholders find 30,000*l.* for interest on debentures, 45,000*l.* for the slips near Brentwood—which are almost predicted in Mr. LOCKE'S Report, although not to so great an extent as has unfortunately happened—upwards of 40,000*l.* from having hidden cesspool foundations, &c., for the London viaduct, and about 70,000*l.* for additional masonry, side cuttings, and spoil banks, all absolutely necessary, or the line could not possibly have been completed this year—the result will be that, although they may regret, they cannot condemn; and those who best know the vast undertaking which has been accomplished within a period extraordinarily short, the consequent necessary sacrifices of money to gain speed, and the standard excellence of the works, will say in their hearts that few men could possibly have done within the cost what the Engineer of the Company has effected. We shall look forward with anxiety to the opening, and to the subsequent general meeting of the proprietors, whom we heartily congratulate on the near approach to the realization of their hopes. When once the line to Colchester is completed they have not done their work; but alive to retain for it supremacy, and to increase their own dividends, they must assist with all their might all reasonable projects for ensuring feeding branches into the main railway.

THE South-Eastern Railway will certainly be further opened to Headcorn on Wednesday next. On Monday, General PASLEY made an official inspection of the new works, with which he expressed himself in the highest degree satisfied. A large concourse of the inhabitants of Marden were at the station, about 200 of whom accompanied the Directors on their return to Tunbridge, and were sent back by a special train, on the arrival of which it seemed as if the whole country were concentrated at the spot. To diffuse as generally as possible the gratification connected with the proceedings of the day, Mr. BETTS, the contractor for the works in that district, made up a train of waggons, and took on to Headcorn, and brought back, upwards of 1,000 persons. We hope by-and-by to see many such trains in the ordinary traffic of the line.

With a view to render more complete the details which we published last week relative to this Company, we had prepared a statement of the distances from the line of the most prominent places from which traffic is expected, but want of space compels us to defer its publication till our next number.

IT is a pity, for their own sakes, that the concoctors and managers of some of the ricketty affairs which go by the name of railway schemes do not preserve a discreet silence as to their sayings and doings. Gladly, if we could, would we suffer them to blush unseen; but when their pretensions are so pertinaciously brought before the world, and when public approbation is so impudently asked in their behalf, it is beyond all patient endurance, and we *must* speak out. One of the most barefaced exhibitions of the kind, within the last week, has reference to a project with the intrinsic merits of which no reader of last year's *Railway Times* can be unacquainted—we mean the so-called Edinburgh, Leith, and Newhaven Railway. In the *Liverpool Standard* of yesterday week we find the following paragraph:—

"A highly respectable meeting of the shareholders in the Edinburgh, Leith, and Newhaven Railway Company, took place on Tuesday, the 16th instant, at the Royal Hotel, Dale-street, Liverpool Sir Thomas Brancker in the chair, to meet Erskine Douglas Sandford, Esq., the Chairman of the Board of Directors, and Mr. J. Macgregor, one of the Directors. The whole of the affairs of the Company were very ably laid before the proprietors by their talented Chairman, and which were highly satisfactory. Resolutions were passed to enable the Board to proceed with their works, and the lower part of the line will be opened in three weeks. The drifts, as recommended by Mr. Evans, will be immediately commenced, and this very judicious mode of proceeding *may* save 8,000*l.* or 10,000*l.* in the construction of the tunnel under the new town of Edinburgh. *When* this is completed, and the lines to Granton and Leith (which *will be* undertaken forthwith), there is no line in the United Kingdom that will be constructed for so small a sum, and none that will pay a better dividend. It is a positive fact, as stated by the Chairman of the Board, that the tunnel from the North Bridge to Trinity will be completed for 15,000*l.* short of the Parliamentary estimate, a case unparalleled in railway undertakings."

Again, in the same journal of Tuesday last, there appears a second paragraph, as follows:—

"EDINBURGH, LEITH, AND NEWHAVEN.—This railway will open the lower part of the line on

Digitized by Google

the 29th instant, previous to the arrival of her Majesty the Queen in Scotland, it being arranged that the landing will take place at the Granton Pier. The Secretary has been ordered to write to the Lords of the Privy Council (Railway Department) for permission so to do, may act, to the contrary notwithstanding. [*Sic* in *L. S.*] The drift under the New Town is advertised to be contracted for, and thus the operations of this highly useful and important line of railway *is* [*Sic* again] in a fair way of being completely finished. The completion of this railway ought to call forth *an active* demonstration on the part of the shareholders of the Edinburgh and Glasgow Railway, to form their line of communication through the Princes-street Gardens, and thus carry out the original plan of this useful and profitable undertaking."

The first thing in the former of these paragraphs which will strike one unacquainted with the history of this concern, is the circumstance that a resolution of Liverpool proprietors should be necessary to "enable the Board [in Edinburgh] to proceed with their works." If matters be in so satisfactory a state as the officials and paid "Agents" of the Company would represent, where is the need of special resolutions to enable the Directors to do that which they were expressly appointed to do? Is it usual when affairs are so "highly satisfactory," that Boards of Management should require permission to bring to completion a project than which "*there is no line in the United Kingdom that will be constructed for so small a sum, and none that will pay a better dividend?*" Were not upwards of six years a sufficient period in which to construct a railway of less than two miles in length, without imposing upon the "talented Chairman" the necessity of a trip from Edinburgh to Liverpool to secure the passing of a permissive resolution to proceed? The fact is, that the whole paragraph is a rank imposition on the public, and as such we must expose it. We are certainly not a little surprised that so respectable a journal as the *Liverpool Standard* should lend itself to the promulgation of these gross delusions. Every one knows from what quarter they proceed. The Edinburgh, Leith, and Newhaven Directors do not have an "Agent" in Liverpool for nothing. What with his circulars and his newspaper puffs (we know he is indefatigable in the latter, for he has repeatedly made an attempt upon *us*), he must earn all he gets. By the way, we do not think we ever heard it explained how this same Agent, who now talks so crowingly of the scheme, got out of the payment of a large amount of arrears upon calls, in respect of which he was at one time sued by his friend the "talented Chairman" and his colleagues. Of course, every farthing was paid, and the eyes of Mr. RICHARD DAWSON have *since* then been opened to the merits of this best (that-is-to-be) of all paying lines in the United Kingdom!

We should write in a different strain if we thought there was the smallest reason to fear that any man of sane mind could *now* be led away by the impudent assertions in which the Directors of this pitiful scheme and their friends are in the habit of indulging. Of *that*, however, there is not any chance, and it is mainly to disavow on the part of Railway Companies generally any participation in the practices of the "Edinburgh, Leith, and Newhaven Railway Company" and their Liverpool advocate, that we now advert to the subject. The scheme itself is beneath contempt. It is fallacious in name, and hollow and baseless throughout. Instead of being completed within the Parliamentary estimates, as insinuated in one of the paragraphs above quoted, the mutilated scheme (very different from that which was at first brought forward) will cost much more than the estimate for the entire original line, if indeed it ever be completed at all.

The attempt to gain a passing notoriety by connecting the opening of "the lower part of the line"—something less than a mile in length—with her Majesty's visit to the metropolis of the north, is excellent in its way. Equally good is the allusion to the extension of the Edinburgh and Glasgow Railway, the Directors and proprietors of which, we have reason to know, look upon this abortive project as it deserves. But it is useless to waste words on such a subject. The "Edinburgh, Leith, and Newhaven Railway" is (or rather has been) a capital scheme for putting money into the purses of Secretaries, Directors, and "Agents;" as respects the shareholders, it has from the first been, *and now is*, of a character which, for obvious reasons, we cannot venture to describe. Any man who hereafter embarks in it deserves whatever he may meet with.

VERY full details of the Birmingham and Gloucester Railway meeting, held in Birmingham yesterday week, will be found in another part of our present number. The proceedings seem to have been upon the whole conducted in a much more amicable spirit than from previous appearances one could have anticipated. To this desirable state of affairs there can be no doubt the admirable exposition of the condition of the Company's affairs, given by the Chairman, greatly contributed. We call especial attention to this address of the gallant Captain, as embodying a vast deal of information which cannot fail to be interesting to a much wider circle than the Birmingham and Gloucester proprietary.

As respects the constitution of the Board of Management, it will be seen that the plan introduced by Captain MOORSOM has, with the consent of the Directors, been somewhat modified, by an addition of active members. Whether the new system will answer expectation remains to be seen. We confess we have our doubts.

Unfortunately *there is no dividend;* and under such circumstances it can scarcely be expected that any scheme of management can content the shareholders. We would fain hope that better days are in store for them. The concern is now suffering from the consequences that invariably follow exaggerated and delusive promises of success—exaggerations and delusions which, it is but fair to say, are in no way chargeable upon the present Board of Directors.

FROM the brief sketch which we give elsewhere of the Edinburgh and Glasgow Railway meeting, it will be seen that the Agnewites did not venture to press to a division the question of stopping the Sunday trains! We were sure that the good sense of the people of Scotland would speedily disgust them with the puritanical schemes of the agitators.

The prospects of the railway are most promising, and now that a better, because more concentrated, system of management has been introduced, the proprietors may look forward to the speedy realisation of their most sanguine hopes.

THE proceedings at the Bristol and Exeter meeting, on Thursday last, were brief, but satisfactory. They will be found fully recorded in another part of our journal. The Directors and officers of the Company appear to enjoy (and most deservedly) the confidence of the proprietors, as was abundantly proved by the votes of thanks which are specified in our advertising columns.

THE meeting of the North Midland Company has ended in the appointment of a Committee of Investigation, which we trust will not be one of mere form. We have been disappointed of the full details which we had expected of the proceedings, and for the present, therefore, must defer comment. A brief outline of the result will be found in another page. Next week we shall give further particulars.

THE Report (to which we briefly alluded in a late number) of the "Select Committee appointed to inquire into the Post-office communication between Great Britain and Ireland," supplies another example of the indecisive, see-saw sort of style in which Parliamentary Committees have of late indulged in promulgating the results of their labours. It is, in point of fact, no Report at all, and the House of Commons and the Government must be wise indeed, if they can gather from the Committee's statements any clear notion as to which port of arrival and departure, or which projected line of railway to the English or Irish coast, ought from its superior merits to receive the preference. We must protest against this mode of Reporting. It is very well to affect an air of impartiality, and nicely to balance the real or fancied advantages and disadvantages of particular spots, and conflicting schemes; but what Parliament wants, and what the public want, is a decided opinion, from the Committee expressly appointed to investigate the whole subject, *which* project is *upon the whole* the best. And we have no hesitation in saying, that the delay occasioned by the issue of such Reports as this, which serve only to distract attention from one scheme to many, must, even if the very best plan should ultimately be recommended, inflict more injury on the public than could possibly result from the immediate adoption and execution of an inferior project—when it would seem that *all* the projects are so nearly equal in merit, that the Committee cannot come to a positive decision. In cases like this, we would have especial care taken that the Committee should consist entirely of individuals amply competent to give a judgment, and undeniably impartial; and *that* having been done, it should be expected that they come to some definite conclusion, and that *their decision be final*. The parties interested would thus be spared the tantalizing spectacle of seeing the Report of one Committee made the ground for the appointment of a second, neither Committee being, according to their own showing, capable of setting at rest the matters in dispute.

The Post-office Committee divide their Report into two branches:—First, as regards intercourse between London and Dublin; and next, and principally, with respect to a line of Post-office communication between the southern parts of this country and Ireland. As regards the former, they very properly concur in the doctrine put forth by previous Committees, and recognised by the Imperial Legislature, that "any expenditure which may be necessary for affording the utmost facility of intercourse between Great Britain and Ireland is to be regarded rather as an outlay of money for national purposes, than for the advantage of any particular department of the public ser-

Digitized by Google

vice," and this more especially as bearing upon London and Dublin, which will eventually be the two great centres of railway communication for each country respectively. They then proceed to urge the propriety of adopting such line as will ensure the shortest sea, and the most direct land, route which the localities admit of; but, singularly enough, they pronounce no opinion upon the relative merits of Holyhead and Port Dynllaen, although everybody knows that the one or the other of these must be selected in order to secure the desideratum which they themselves point out! May we ask for what purpose the Committee suppose they were appointed? It surely was not simply to enunciate general propositions, in which all parties agree, nor yet that they might throw upon a future Committee the labour which they themselves ought to have undertaken! Yet such is the sum total of this part of their Report:—"Your Committee would earnestly impress upon the House and the Government the importance of procuring, without delay, such *further* information as may be deemed necessary in order to a satisfactory decision between the two ports of Holyhead and Port Dynllaen; and your Committee submit, *when* such decision shall have been made, that no time should be lost, or reasonable expense spared, for the purpose of establishing, upon the foregoing principles, the most direct, certain, and rapid line of communication between this metropolis and the seat of Government in Ireland." Just as if sufficient information had not already been obtained to enable every unprejudiced person to give a decision! *Another* Committee, and another such Report! At this rate of progress our grandchildren may be gratified with the facilities offered by "the most direct, certain, and rapid line of communication between this metropolis and the seat of Government in Ireland;" *we* shall not live to see it. We say again, that the immediate adoption of *either* route is far preferable to these everlasting postponements. If the matter cannot be otherwise decided, it were desirable that Government should follow the example of the Lancashire jury, of whom the newspapers of the week make mention, and "toss up" for a verdict as between the two ports.

Upon the subject of a southern communication the Committee are equally undecided. We shall not follow them through their various paragraphs, but the following is the concluding one, and is quite in keeping with the whole Report:—

"Your Committee recommend the adoption of SUCH *port as may appear to hold the prospect of the least future outlay;* and that measures be taken to ensure the arrival of the Scotch and Irish mails, and a more powerful class of packets, at WHATEVER *station* the Government may select for the departure of the steamers."

Oh, most lame and impotent conclusion! And such is the *practical* result of the appointment of a Parliamentary Committee in a matter which they cannot possibly understand!

It is very evident that the Committee were (to use a vulgar phrase) "bothered" by the opinions and statements of rival engineers flatly contradicting each other. They do not seem to have suspected for a moment that it was their business to extract from personal and party representations data for determining a question of vast public importance.

THE meeting of the Hull and Selby Railway Company is to be held to-day. We have been favoured with a copy of the Report to be submitted, and are happy to find that, although the railway has suffered in common with all similar undertakings from the existing commercial distress, the receipts for the half-year have been such as to enable the Directors to recommend a dividend of 10s. per share. The goods' traffic, it is satisfactory to know, has very considerably increased.

—o—

THE *Sheffield Independent* of Saturday, says:—"On Wednesday, Messrs. G. Peace and Green, guardians of the poor, and Mr. Crosland, clerk of the union, had interviews with Sir James Graham and Mr. Goulburn, in support of the application of the Sheffield and Manchester Railway Company for a loan of Exchequer Bills, to enable them to commence operations at this end of the line, and thus afford employment to our able-bodied poor. We are happy to learn that they succeeded, and that the loan would be formally authorised at a meeting of Exchequer Loan Commissioners yesterday."

—o—

WE learn from the local journals that the Directors of the Newcastle and North Shields Railway have adopted a plan which has been found to answer well on other lines, namely, that of using yearly and half-yearly tickets, which entitle the holders to travel on the railway as frequently as they please.

RAILWAY OFFENCES AND OFFENDERS.

AT the Central Criminal Court on Tuesday, Thomas Leather, a labourer, aged 21, was charged with stealing at Hayes 113¼ lbs. of spelter, value 2*l.*, the property of the Great Western Railway Company. It appeared that the metal in question had been carried along the line of the railway to Hayes, where it was placed in the yard of the Company for security. Shortly afterwards the metal was found in the canal, and the prisoner, who had been working in the neighbourhood, being near the spot where the metal was discovered, was taken into custody. The prisoner was convicted principally on admissions made by himself, and sentenced to seven years' transportation.

GRAND JUNCTION RAILWAY.

WE have received the following note from Captain Huish, Secretary of the Grand Junction Railway Company, with reference to some remarks which appeared in our paper last week. We have not had an opportunity of making inquiries into the matter; but, Captain Huish's denial notwithstanding, we have strong reasons for believing that the information originally given to us was in the main correct, although we have since ascertained that our informant erred in stating that the charge on *goods'* traffic had been illegally raised. Will Captain Huish tell us whether expresses were or were not sent off with orders to alter the passengers fares, and if so, *why?* We fear there is still a strong spice of Jesuitry in the proceedings of the Grand Junction Directors and their officers; but of this hereafter. We hardly know what the gallant Secretary means by stating that "in every *other* respect" the information given to us was incorrect. He had already insinuated a denial as to the illegal raising of the fares and charges, and we do not know that *any* other information was tendered to or published by us, unless it were that the Grand Junction Directors had repeatedly got into awkward scrapes from ill-advised and hasty legislation, and that Liverpool gentlemen do not seem to be much better Railway Managers than their neighbours. *One* at least of these positions we do not think Captain Huish or his superiors will venture to controvert. The following is Captain Huish's note. We shall probably notice the subject at a future opportunity:—

"*To the Editor of the Railway Times.*

"SIR,—In making so direct an attack upon the conduct of the Grand Junction Railway as that contained in your last number, it is to be regretted that you did not take the trouble to ascertain its correctness. No passenger has been charged an illegal fare upon this railway, and the rates for goods are far below those which are authorised by the Act.

"Had you looked at the advertisement which you quote, you would have seen that the revised table for goods was only to come into operation on the *very day* upon which your charge against the Company appeared in print.

"So far indeed from the new rates being illegal, they are below the maximum, and you will find them in full operation at the present moment.

"I have only to add that in every other respect the information given to you is incorrect.

"Your obedient servant,

"MARK HUISH, Secretary.

"Liverpool, Aug. 24, 1842."

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Will you oblige me by correcting an error into which you have fallen in reporting a few remarks I made at the Midland Counties' Railway meeting recently held at Derby. I am stated therein to have referred to the London and Birmingham Railway. Now, Sir, I have no interest, nor ever had, in that concern, and I only know of it by observation and report, and believe it to be at least one of the best managed in the kingdom. The local paper from which I apprehend you took your report, misreports what I did say, though it correctly states the railway I referred to. The question was simply this:—A motion had been made for the appointment of a Committee to inquire into the affairs of the Company, which appeared generally to be approved. Our Chairman thought such an appointment tantamount to an expression of want of confidence in the Directors. After various persons had offered their opinions, I ventured to make the following observation:—"I should be very unwilling to make any remark which might be seriously offensive to the Directors, but I could not understand how the appointment of such a Committee could be viewed in that light. In a similar concern, viz., the London and Brighton Railway, this course had been adopted, and, as I believed, with the full concurrence of the Directors; and the upshot was, that many circumstances were brought to light, and many suggestions offered which greatly benefitted the interest of the shareholders." This was the substance, and (as nearly as I can recollect) the words I used. I said not a word about all the Directors going out; I made no reference to the London and Birmingham line. I think it necessary to explain thus much, as it would otherwise appear I had made an assertion concerning the latter, as far as I know, entirely devoid of truth.

Yours, obediently,

DANIEL GOSSET.

Leicester, August 23, 1842.

FIRE ON THE GREAT WESTERN RAILWAY.—On Wednesday afternoon the luggage in a van, which was placed next to the tender of the engine affixed to the five o'clock train, from Paddington, caught fire, in consequence of a lighted cinder flying from the furnace when about two miles on the London side of West Drayton. Several of the packages were immediately ignited. The necessary assistance being near, the packages were promptly removed, and a good supply of water prevented further destruction.—*Globe*, August 20.

NORTH MIDLAND RAILWAY COMPANY —GENERAL MEETING.

A VERY numerous meeting of the proprietors of this Company was held in the spacious station at Derby, at 1 o'clock on Thursday last. The Chairman of the Board of Directors, WILLIAM LEAPER NEWTON, Esq., presided.

From the great dissatisfaction which has for some time existed in reference to the vast expenditure in the construction and carrying on of this undertaking, a more than usual interest was excited amongst the proprietary. Many parties attended—some of them having come from a considerable distance—with a determination to minutely investigate the causes why the concern had so long been unprofitable, and to consider the expediency of electing an additional number of Directors.

The CHAIRMAN called upon the Secretary, Mr. Frost, to read the Report and financial statement for the six months ending the 30th June, 1842.

The Report stated that the Directors regret being called upon to share with the proprietors in the disappointment necessarily resulting from the continued failure of traffic compared with the anticipations of success which were originally formed of the undertaking, much of which was attributable to that commercial depression which had in a greater or less degree affected the traffic of every Railway Company throughout the kingdom. Still, after making due allowance for that cause of deficiency, it was not to be concealed that the expectations of the public had been disappointed. Retrenchment in the expenditure since October, 1841, had been made, amounting to 10,106*l.* 1s. 4d.; and there was an increase of 15,815*l.* 12s. 9d. on the surplus balance of the last half-year, compared with the corresponding half-year ending the 30th June, 1841. The net profit amounted to 31,854*l.* 3s. 1d., out of which a dividend of 20s. upon every whole share, 10s. upon every half share, and 6s. 8d. upon every third share, free of income tax, was declared payable on the 15th of September next, leaving a balance of 2,784*l.* 3s. 1d.

After the Report had been read,

The CHAIRMAN rose, and, in allusion to the dissatisfaction which he understood existed respecting the management by the existing Board, said, that objection had been taken to the method in which the accounts had been kept, and to the closeness which, as was alleged, marked the proceedings of the Directors. He went at considerable length into a detail of the management of the different departments of the establishment, and concluded by requesting any proprietor who was desirous to have information, to put whatever questions he may deem proper.

Upon which, Mr. John Rand, of Bradford, Mr. Carr, of Sheffield, and several other gentlemen, put questions as to the expenditure, and other matters connected with the business of the meeting. The expressions of fault being attributable to the way in which sums of money had been appropriated, particularly in the erection of unnecessary premises, and in furnishing refreshment and waiting-rooms at the different stations, which latter one of the proprietors designated "more like drawing-rooms in palaces than places of comfortable accommodation," were very general.

After a long and desultory discussion, the following resolution was moved, seconded, and carried unanimously:—

"Resolved,—That a Committee, consisting of seven proprietors, each of whom shall hold not less than ten shares in the North Midland Railway, be now appointed, for the purpose of examining the position and future management of this Company, and report to a special general meeting, or to an adjourned meeting, for that purpose."

The following gentlemen are the seven named in the foregoing resolution:—J. T. Alston, P. W. Brancker (the present Auditors); Mr. Mustgatroyd, Bradford; Mr. Starkey, Huddersfield; Mr. Wilson, Sheffield; Mr. Waddingham, Leeds; and Mr. Hudson, Chairman of the York and North Midland Board of Directors.

A long conversation took place respecting the imputation which the appointment of these seven gentlemen cast upon the management of the present Directors. Several of the proprietors expressed themselves satisfied that no improper motives could be imputed to the Board; and that the desire of those of the proprietors who wished for the new arrangement arose entirely out of the manner in which they had for a length of time been disappointed.

The meeting ended about six o'clock.

EDINBURGH AND GLASGOW RAILWAY COMPANY—GENERAL MEETING.

[From the *Glasgow Constitutional*, Aug. 24.]

THE half-yearly general meeting of the shareholders of the Edinburgh and Glasgow Railway Company was held yesterday, at one o'clock, in the Board-room of the Glasgow Station; JOHN LEADBETTER, Esq., in the chair.

After some remarks by the Chairman, Mr. WRIGHT, the Secretary, read the following

REPORT.

In meeting the proprietors on the present occasion, the Directors feel much pleasure in laying before them a Report of the state and prospects of the undertaking.

The railway was opened to the public on the 21st February, the day before the last half-yearly general meeting, and has thus been in operation for six months. Up to 30th June, 205,268 passengers have been conveyed along the line. Considering the unexampled depression in trade since it has been opened, a circumstance which the Directors need hardly say must have materially affected the extent of its traffic; and keeping in view the fact that the full development of the resources of a railway has proved on other lines to be a work of time, the Directors think that the traffic to the present time justifies them in saying that the undertaking will fully realise the expectations entertained of it by its original promoters.

The goods' traffic, which did not commence till a month after the opening of the line, has not yet attained the importance to which it is destined. Time is necessary to break up existing connections and channels of conveyance; but a large field, both in goods and minerals, exists; and a considerable portion of these will inevitably be drawn to the railway.

After the full trial which the embankments, viaducts, bridges, cuttings, and other works along the line, have now undergone, the Directors feel the highest gratification in reporting that the whole prove to have been completed in the most substantial and perfect manner, and that they afford the most satisfactory evidence of the ability and skill displayed in their design and construction. As the maintenance of way is usually a very heavy item of expenditure, the Directors, judging from the experience and information they have already obtained, have much satisfaction in anticipating that they will be enabled to contract for this important branch on very moderate terms. They have also much reason to be satisfied with the whole plant of the line. The locomotive engines, and the different classes of carriages, waggons, and other machinery, are of excellent workmanship, and in high order.

The total receipts on account of traffic, up to the 30th June, as shown in the accompanying balance sheet, are		£33,716	16 3
The charges for the same period amount to	£11,034 14 7		
The interest on debentures, warrants, and loans	6,232 17 6		
		17,267	12 1
Leaving a net profit of.....		£16,449	4 2

The largest portion of the item of maintenance of way is included in the above charges, and has been ascertained by a fair estimate of the proportion incident to a new line, and of the proportion arising from the ordinary tear and wear of the traffic, the Directors thinking it a more correct principle to debit the revenue at the very outset with such an amount of the cost of maintenance as may be supposed to arise from the trade on the line, rather than to follow the general practice of postponing the commencement of the charge till some time after the opening of the line.

After carrying the sum of 1,449*l.* 4s. 2d. to the reserve fund, your Directors think themselves warranted in recommending that a dividend of 16s. 8d. per share be declared upon the original stock, which, being for one-third of the year, is at the rate of 5 per cent. per annum, payable on the 9th day of September next, the Directors paying the income tax for the present out of the reserve fund.

The Postmaster-General has hitherto required the Company to carry the mail between Edinburgh and Glasgow only once a-day, by the 11 o'clock train; but from a correspondence which is at present going on with the Post-office, it is probable that arrangements may shortly be made for carrying two additional mails a-day.

The cost of locomotive power is a subject which has occupied the attention of the Directors. Within the last two or three years very great saving has been effected on many lines in this department, and, in consequence of the admirable gradients on your line, your Directors are happy to think that, from a minute and careful record which has been kept, your railway may bear a favourable comparison in this respect with any other line.

With respect to the additional capital which the Company were authorized by their new Act to raise, the Directors, in terms of the resolutions passed by the proprietors at the special general meeting on the 17th May, made an offer to each of the then shareholders of one new quarter-share for each of the old shares for which they stood registered in the books of the Company at that date, and the Directors are happy to say that their offer has, except in a very few instances, been accepted. The first call fell due on the 1st July, and 44,167*l.* of it has already been paid.

With regard to the sum which the Company have power to raise on loan, viz. 75,000*l.*, the Directors had, previously to the passing of the Act, borrowed on the individual credit of the majority of their number, 50,000*l.* upon loan notes, to be exchanged for debentures by the Company after the Act was obtained. The remainder they are now borrowing at 4 per cent., and they are glad to say that they have already obtained at that rate more than half of the sum required.

They are also happy to think that as the debentures, granted under the Act of Incorporation for the loan of 300,000*l.* at 5 per cent., fall in, which will begin to be the case at Martinmas, 1843, to the extent of nearly 80,000*l.*, they trust to be enabled to renew the loans at a reduced rate of interest.

The proprietors will recollect that at their special general meeting on 6th May last, they confirmed the declaration of forfeiture, made by the Directors, of 210 shares, and authorized the sale thereof. The greater portion of these shares has since been disposed of, and there are now no more shares to be forfeited.

The Directors are also glad to say that the arrears on the old shares are now reduced to a trifling amount.

After considerable opposition and with much difficulty, the Companies associated for the purpose of obtaining a commutation of the passenger-tax, and with whom your Directors cordially co-operated, have succeeded in getting this important object accomplished by the passing of an Act converting the tax into a duty of 5 per cent. The tax, though not pressing so heavily on this Company as on several others, would have proved a considerable burden on the profits of the undertaking, and the Directors therefore congratulate the shareholders on the relief thus afforded them.

In accordance with the resolutions of the shareholders, your Directors commenced the running of two Sunday trains on the 13th of March. The average number per day of persons who have availed themselves of them is 1025. The average receipts per day amount to 74*l.*

The Directors are happy to say that since the date of the last Report, steps have been taken, both in Edinburgh and elsewhere, towards the formation of a Compauy for making a railway from Edinburgh to Dunbar. The Directors formerly adverted to the great advantage which would accrue to this Company from such a line, and it is with much pleasure they have learned that still more active measures are likely in a short time to be adopted for carrying the object of the promoters into execution.

The Directors also understand that means are now about to be taken for forming a communication from Leith and the adjoining harbours towards your line. The benefit of such a communication for the receiving and delivery of goods would undoubtedly be great.

Digitized by Google

Your Directors are likewise happy to find that great interest is felt in the formation of a branch to join this line from Stirling. While such a line holds out fair prospects of remuneration to the projectors, there can be but one opinion as to its importance to your undertaking; and the Directors trust the period is not distant when this important feeder will be brought in to the main line.

In terms of the last Amendment Act, the change in the constitution of the Board takes place at this period. The number of Directors will now be reduced from twenty-four to fifteen. The whole of the Directors now go out of office, and it is optional to the proprietors either to re-elect fifteen of them, or to appoint other qualified shareholders in their place. The Board recommend that the new Directors be locally chosen in the following proportions:—

In Glasgow, which will be the head-quarters of the Company, and where the heaviest portion of the duties will consequently be	8
In Edinburgh for local purposes, in addition to general duties as members of the Board	5
In Liverpool	1
In Manchester	1
	15

The proprietors are aware that the Act abolishes the Edinburgh and Glasgow Committees, and provides that the whole powers confided to them shall be vested in the general Board, or be delegated to such Committees as the Board shall see fit to appoint. In the exercise of this power your Directors have accordingly appointed executive Committees on Finance, Goods and Passengers, Engines and Carriages, and Plans and Works, and they have every reason to believe that this machinery will enable them to conduct the affairs of the Company in an efficient manner.

Balance Sheet to 30th June.

CAPITAL ACCOUNT.

To amount received per last Statement		£1,233,234 18 7	
To amount of tenth call £21,540 0 0

	£11,034 14 7	
By interest on debenture warrants and loans	6,232 17 6	
	£17,267 12 1	
Proposed dividend £15,000 0 0		
Balance carried to reserve fund 1,449 4 2	16,449 4 2	
Total	£33,716 16 3	

The CHAIRMAN, in a few remarks, stated, that since the 30th of June the traffic had continued to increase. Since that time up to 20th August the passengers had been 110,374, an average of 14,716 per week. Of these the first class were 14,889; second class 26,828; and the third class 68,657. The receipts averaged 2,324*l.* a-week; while previous to 30th June the average was only 1,806*l.*—being an increase of 518*l.* a-week, and a weekly increase of 3,621 passengers. During the six months the railway has been open, there have been carried 315,642 passengers, while the Parliamentary estimate was only 340,000 for the whole year. (Applause.) He concluded by moving the adoption of the Report.

Mr. LEARMONTH seconded the motion, and expressed his great satisfaction at the results it exhibited. He hoped the proprietors would feel satisfied at the mode in which the concern had been managed; and at the dividend, regarding the amount of which the utmost care had been taken that the revenue was perfectly able to afford it. (Cheers.)

After a few words from Sir ANDREW AGNEW as to the Sunday trains, the Report was agreed to.

Bailie ROBERTSON moved that a dividend of 16s. 8d. per share for the four months, equal to 5 per cent. per share, be paid on the 9th September. This was seconded by Mr. Dykes, and agreed to.

Mr. WINGATE moved that in the meantime the income tax be paid from the reserved fund; the balance being retained as a contingent fund. This was seconded by Mr. Galbraith, and after some remarks by Mr. M'Gill Crichton, agreed to.

Mr. Leechman moved a vote of thanks to the Directors, and expressed his satisfaction at the admirable manner in which the affairs of the Company had been managed. This was seconded by Mr. Richardson, and, after a caveat by Mr. Crichton, saving himself from an approval of their conduct in regard to Sunday trains, was carried by acclamation.

Mr. THOMSON moved that the new Directors be the following:—

For Glasgow—Messrs. Leadbetter, Hamilton, Richardson, Drysdale, White, Smith, Douglas, Fleming. *For Edinburgh*—Messrs. Learmonth, M'Neil, Mackenzie, Finlay, Henderson. *For England*—Messrs. Nicol, Buckley.

This was seconded by Mr. ADAMS.

Mr. LEADBETTER said he found his name in the list now read, and he begged to state to this meeting, as he had already done to his colleagues, that he must decline to be a Director.

Bailie ROBERTSON expressed his deep regret at this determination, and hoped it would be recalled and reconsidered.

Mr. NICOL, Mr. SMITH, Mr. HAMILTON, and several other gentlemen, strongly pressed on Mr. Leadbetter to consent to remain in at least for the present.

Mr. LEADBETTER said he deeply felt their kindness; but his resolution, founded on circumstances to which it were better not to allude, was already taken.

Mr. Learmonth, Dr. Smytton, Sir Andrew Agnew, and Mr. M'Gill Crichton, also urged on Mr. Leadbetter to remain in office, at least for some time yet.

Mr. LEADBETTER said, that reasons of expediency as well as principle had led him to make up his mind to resign, and he hoped they would accept his resignation.

Eventually, the list as proposed was carried amid great applause.

Mr. EDMOND, after referring to the many valuable and laborious services of the Directors, moved that their annual allowance should be 750*l.*

The CHAIRMAN said the former allowance was 1,000*l.*; but the number of Directors being now reduced, it was thought proper to reduce the amount allowed previously. Resolution agreed to.

A number of memorials, remonstrances, &c., against the running of Sabbath trains, were presented by the Chairman.

Sir A. AGNEW said, there were deputations waiting, among others one from the General Assembly, with memorials against the Sabbath trains; and he complained that the Directors had informed them that they would not be admitted.

The CHAIRMAN said, the Directors considered that the memorials could be as well given in by a shareholder.

Considerable discussion ensued, in the course of which Mr. Crichton moved, and Mr. Phillips seconded, that the deputations be admitted.

Mr. M'NEIL opposed the motion, and after a long debate Mr. Crichton's motion was negatived without a division.

Sir A. Agnew and Mr. Crichton then retired, and returned with some large bundles of petitions, memorials, and remonstrances, of which those from the General Assembly and the Synod of Glasgow and Ayr were read. Mr. Crichton stated that those in charge of the Edinburgh Committee had 68,304 signatures; those of Glasgow 26,264; making a total of 94,568.

Reports were then read from the Committee appointed at last meeting to investigate into the genuineness of the signatures to the petitions given in in March. The Committee was equally divided, the one-half reporting that Mr. M'Neil's charge of forgery was substantially correct; the other that though many names were written in the same hands, that the parties had authorized their names to be put down.

After some conversation during which Mr. M'Neil referred to the letter from the Minister at Carron Shore, substantially admitting the forgery of some names, the Reports were laid on the table.

Mr. CADELL then, after entering into the details of the average number and proceeds of the travellers by the Sunday trains, moved that they be discontinued, which was seconded by Mr. John Henderson.

Mr. LEADBETTER also entered into a variety of details, to show that the Sabbath trains were a positive loss to the Company.

Mr. M'NEIL replied to these speeches at great length, and moved that the present system be continued.

Mr. M'Gill Crichton and Sir Andrew Agnew spoke at great length, but Mr. Cadell did not press the matter to a division. It was stated that the majority in favour of a limited number of trains was now 1,200. The meeting broke up about o'clock.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

DIRECTORS' REPORT.

THE near approach of the entire opening of the railway between London and Colchester, has induced the Directors to adopt a course with respect to the present general meeting of the shareholders, and the half-yearly Report of the proceedings of the Company, different from that which they have hitherto followed. The forward state of all the earthwork, and other works of every description, has now enabled the Engineer to calculate with confidence, that, by the 1st of October, the line will opened throughout to Colchester. Under these circumstances, the Directors considered that as many of the influential proprietors (the great majority of whom reside at a distance from the metropolis) are desirous of going over the line as soon as it is ready for the traffic, in order to inspect all the works, it would be a convenience to the shareholders generally, that the half-yearly meeting should be delayed until the completion to Colchester; and with this object it is suggested that the general meeting, advertised to be held on the 31st of August, agreeably to the Company's Act of Incorporation, be merely *pro forma*, and without transacting any business, be adjourned until after the opening of the railway. The adjourned general meeting will then assemble for the dispatch of business. As, however, the Directors are desirous of putting the shareholders, without delay, in possession of the fullest information relative to the affairs of the Company, they now publish, and will circulate the present Report; and all proprietors will, shortly before the 1st of October, receive a circular, informing them of the arrangements for the opening and visit of inspection, with the offer of tickets, entitling each to attend on that occasion.

The Directors cannot omit this occasion of cordially congratulating the proprietors on the near approach to a successful termination of the difficulties which have so long delayed the accomplishment of their hopes and expectations, and which have so greatly increased the anxieties and labours of the Directors, and of all who have been connected with the undertaking; and now, that their expectations are on the eve of being brought to the test of actual experience, they repeat their undiminished confidence, that this undertaking will speedily realise that substantial and profitable return which the proprietors have had such strong grounds to anticipate.

Whilst, however, the approaching opening of the railway to Colchester, and the prospective development of an ample and profitable traffic will afford to the proprietors much satisfaction, the Directors with regret have to announce that the revised estimates which have been laid before the proprietors, now prove, notwithstanding the apparent confidence which they merited, insufficient for completing the railway to Colchester, and putting the line into full operation. However much the Directors, in common with the other shareholders, may regret this circumstance, it will be obvious that they could ony rely for their information and government on the estimates of professional men, and they conceive that in having, at the instance of their proprietors, availed themselves of the assistance of Mr. Robert Stephenson, and (at a subsequent period) of Mr. Locke, in revising and confirming the estimates of the Company's Engineer, they adopted all the practicable means within their power for ascertaining the probable cost of the railway; and as the Reports from both these Engineers (who have had the greatest experience of any of the present day in undertakings of this description) confirmed the general correctness of Mr. Braithwaite's estimates, there did appear the strongest ground for confidence in their sufficiency. These revised estimates, which were laid before the proprietors in February, 1841, amounted to 2,800,000*l.*, but it is now found that this sum will be exceeded by about 200,000*l.* Every part of this excess, however, can be fully explained and accounted for; and it has chiefly arisen, as will appear from the Engineer's Report, either from unavoidable accidents, or from circumstances which could not be controlled, consistently with a due regard to the permanent interests of the undertaking. The Directors having instituted a strict investigation into all the particulars and the causes of this excess, have to state that a portion of it consists of 30,000*l.* for interest paid, and to be paid, on debentures issued under the sanction of the proprietors, as the best financial plan which could be adopted to provide the necessary funds for carrying on the works; and that there is a charge of not less than 45,000*l.* for repairing the land slips at the Gubbing's embankment, between Romford and Brentwood, which occurred subsequently to the opening of the line, and arose from the extraordinary wet weather of the autumn of last year, and from the extremely bad quality of the only description of material which could be obtained at that part of the railway. There is likewise an excess of 35,000*l.* on the amount paid for land and compensation, and there will be still some further small sums to be paid under this head, which cannot be at present ascertained. This latter excess arises partly from side cuttings and spoil banks, necessarily adopted to expedite the completion of the works, and partly from compensation to landowners beyond the estimates for deviations and advisable changes of gradients, and also for commutations for particular modes of communication, and from various other minor causes. For the particulars, and detailed explanation of all the other portions of the excess, the Directors refer to the annexed Report of their Engineer.

At the earliest opportunity after the completion of this last investigation into the estimates, and into the actual cost of the line, the Directors make known the fact of this excess to the proprietors, and it should be observed that several of the items have only recently arisen on the near approach of the works to completion. The excess will not occasion any difficulty to the proprietors in their financial arrangements, as the Company is in possession of sufficient Parliamentary powers to enable the Directors to procure the increased capital required, without obtaining another Act, or creating additional shares; and in order to relieve the original shareholders (which the Directors are enabled to do by the large loans that are now readily offered by the public), the payment of the remaining 2*l.* call will, under any circumstances, be deferred until the beginning of next year.

The usual accounts of the receipts and expenditure in the traffic department on the completed portion of the line, are annexed to this Report, as well as those relative to the capital. The former of these accounts continues to show a highly favourable and satisfactory result, the receipts of this half-year exhibiting an increase of 25 per cent. over the corresponding period of last year; and notwithstanding the disadvantageous circumstances under which a small portion of an extended line of railway must always be worked, the net available balance, divisable for the past half-year, after deducting all charges for the working expenses, depreciation of stock, and every other item belonging to this department, amounts to 11,208*l.* 6*s.* 4*d.*, being equal to a dividend of 4*s.* per share, which the Directors propose shall be paid on the 5th of October next to those proprietors who were registered in the Company's books on the 20th of August. The economical management which these accounts show of this small portion of the traffic, under the disadvantages of the short distance yet opened, gives the Directors great confidence in their anticipations of a further considerable reduction in the relative per-centage between the expenditure and the receipts when the line shall be opened to Colchester.

Since the proprietors last met, an Act of Parliament has been obtained for constructing, by an independent Company, a railway from Norwich to Yarmouth. The original Act for the incorporation of the Eastern Counties' Railway Company granted to them the power of making the railway through this district and the Directors found it necessary, for the protection of the interests of the proprietors, to oppose in Parliament the new Act, until such clauses were introduced as should secure the equitable rights of this Company, and prevent the diversion of the traffic into other channels.

The Directors have much pleasure in announcing to the proprietors, that they have at length finally concluded an agreement with the Directors of the Northern and Eastern Railway Company, by which all remaining questions between the two Companies have been satisfactorily disposed of, and arrangements promising considerable advantage to both will have a fair trial. The tolls on goods and all other articles, payable by the Northern and Eastern Company to the Eastern Counties' Company, which were not specified in the original Parliamentary contract, and which therefore, if not mutually agreed upon, must have been the subject of a reference, are finally adjusted. The Northern and Eastern Company are to rent and convert, at their own expense, into a station for their goods' traffic, a sufficient number of arches of the London Viaduct near Brick-lane, by means of which an accession to tolls from their traffic in goods will, it is expected, be shortly added to the Eastern Counties' Company's receipts.

An arrangement is also made to secure the extensive short distance passenger traffic between Ponder's End, on the Northern and Eastern line, and the Eastern Counties' London terminus, the Northern and Eastern Board binding themselves to charge fares sufficiently reduced to meet the present successful competition of the omnibuses; and the Eastern Counties' Board, as an experiment for a period of two years, have engaged to make certain corresponding reductions in their toll on the passengers within these limits. The long delay which has taken place in carrying into operation all these agreements, the Directors feel it due to themselves to state distinctly to their proprietors, has arisen from no obstacle on their part, nor any indisposition to facilitate, to the utmost of their power, all such arrangements as might contribute to the advantage and accommodation of the Northern and Eastern Company, and as would have disposed at once of all unsettled questions and differences between the two Boards. The non-payment by the Northern and Eastern Company of the past Government duty on their own passengers carried over the Eastern Counties' line, has for some time caused the only obstacle to a final adjustment, but this difficulty is now removed, as the Northern and Eastern Board have at last agreed, as part of the general arrangement, to an amicable reference of the point in dispute, which reference is to embrace not the mere legal technical question, but all the facts of the case, as well as the practice of other Companies. All possible question as to future payment of this duty is now finally settled by an Act of Parliament just passed, which, in converting the former duty of 1-8th of 1*d.* per passenger per mile into one of 5 per cent. on the gross receipts, has conferred a great boon upon the railway interest, and at the same time clearly defines that the carriers on, and not the proprietors of the road, are to be the parties liable for the payment.

By order of the Board,
HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE,
Deputy-Chairman.

August 23, 1842.

[The balance sheet will be given next week.]

ENGINEER'S REPORT.

To the Chairman and Directors of the Eastern Counties' Railway.

GENTLEMEN,—I beg to report, in the first place, the state of the several works, which are in such a position of forwardness that I am satisfied the line will be ready and open for traffic by the 1st of October next should fine weather continue, and the contractors do their duty; and I shall keep, as I have kept, the most rigid watch upon their proceedings, and at the same time affording them every encouragement.

The following account of the situation of the works under contract, from Brentwood to Colchester, will, I trust, prove satisfactory.

[Mr. B. here enters at length into the details of the various contracts, which, however, we must postpone.]

In recapitulating the extent of the foregoing works, it appears that since the commencement of operations, out of a gross total of 4,257,000 cubic yards of earthwork, 3,604,000 cubic yards have been excavated, and that there remain 653,000 cubic yards to be removed to complete the embankments and cuttings throughout

The greater portion of the line is already formed, ready for the ballasting and permanent way; of which about 14 miles of single and double line have been laid.

In order to give some idea of the extent of masonry between Brentwood and Colchester, the following account is submitted:—

There are in all 64 bridges and viaducts, 37 culverts and drains, and 18 level crossings.

Amongst the bridges the following are remarkable:—

The one at Shenfield Common is built with seven arches in 50 feet cutting. The chain river bridge at Mountnessing is in 52 feet embankment. The Cann viaduct consists of 18 arches, each 30 feet span, 44 feet in height, with massive wing walls to sustain the embankment. The Chelmsford viaduct is widened for the station to 62 feet, and will extend about 792 feet in length. The Chelmer River viaduct consists of three arches, 45 feet span, 38 feet high. The Boreham Mill Head viaduct consists of three arches, 30 feet span, 26 feet in height. The Hatfield Mill Head viaduct consists of three arches, 40 feet span, 40 feet high. The Witham Mill Head viaduct consists of four arches, 30 feet span, 25 feet high. The river Blackwater viaduct consists of three arches, 42 feet span, in 20 feet embankment. The river Colne viaduct consists of seven arches, 50 feet span, 53 feet in height, constructed on very difficult and expensive foundations, with massive retaining walls.

Besides these there are three very expensive turnpike road bridges—the three-arch skew bridge at Widford; the iron skew bridge at Coggeshall-road, and

Digitized by Google

the three-arch skew bridge at the Cambridge-road, Stanway.

All the requisite tools, turntables, engines, carriages, and other stock, are in preparation for the final opening of the line, and all the country stations are about to be erected, and are constructing on an economical plan, yet affording every comfort and accommodation for the passengers. The most essential part of the London terminus is fast approaching completion; and the offices are now occupied by the respective departments of both Companies.

The new engine-house at Hare-street, near Romford, is nearly completed, and the machinery and tools for repairing the engines are partly delivered, and ready to be fixed in their places. I trust that this building will be ready for use simultaneously with the use of the Railway below Brentwood.

I have now to call your attention to the cost of the line, and to some excess of expenditure (which will have been incurred when the line is completed), beyond the estimate of 2.300.000*l.*

The money appropriated to be expended between London and Brentwood, including the London station, amounted to 1,655,16*l.*, leaving a balance of 644,139*l.* applicable to completing the line between Brentwood and Colchester; and to erect the engine house and country stations; and to purchase the remaining locomotive stock, as per estimate.

Out of the 1,655,861*l.* the sum of 873,793*l.* was appropriated for the engineering works of the railway between London and Brentwood, exclusive of land, and the excess of expenditure in regard to this portion of the line beyond the latter sum will be 99.931*l.* 17*s.* 6d.

The line between Colchester and Brentwood, estimated as above 644,139*l.*, will cost 708,574*l.*, leaving an excess of 64,435*l.*, part of which is already provided for by stock in hand, convertible after the line is finished, and not wanted after opening for traffic, valued at 18,000*l.*, consisting of ballast engines, temporary rails, chairs, sleepers, waggons, carts, horses, and other surplus material, leaving 46,435*l.* to be charged to the capital of the Company, to be expended on this portion of the line. This amount includes an allowance for contingencies.

These two excesses amount to 146,366*l.* 17*s.* 6d. I ought, however, to state that this excess can be reduced by certain savings in the locomotive stock and country stations, to the extent of 40,000*l.*

I now proceed to explain whence chiefly the excesses have arisen.

The causes of increased expenditure on the portion the line between *London and Brentwood* have been these:—

1st. Amounts paid to contractors on excess of estimates for works on the London viaduct 44,986*l.*, arising from the unexpected varying and extraordinary increase of the depth in the foundations of nearly all the piers and abutments, consequent upon passing through crowded building property, intersected with sewers, old ditches, and numerous cesspools. Also from the increased width of the viaduct, and the foundations consequent thereon, having proved unexpectedly difficult and expensive; and the station approaches; extension of wharfing over Wheeler-street, Bell-alley; and alterations of plans through the interference of parish authorities.

2nd.—Extra cost of the London station, and carriage and other sheds; temporary engine-houses and water stations; and cutting down slopes at curves, and other earthwork, 9,945*l.*

3rd.—For repairs to the Gubbins embankment, Nag's Head and Brook-street embankment, and the Brook-street cuttings, in consequence of the extraordinary slips which have occurred, amounting to 45,000*l.*

The increased expenditure on the portion of the line between Brentwood and Colchester will be as already stated, net 46,435*l.*

1st.—An amount of 42,927*l.* has been incurred by a considerable increase in the masonry and side cutting, to ensure the speedy completion of the line, and to counteract the delay that must otherwise have been caused by the bad weather of last autumn and winter. This increase has occurred chiefly on the works at Chelmsford. In the vallies at Mountnessing, the Chelmer at Boreham, Hatfield, Witham, Kelvedon and Leyden, bridges and culverts of greater extent than originally contemplated have been necessarily adopted as a matter of absolute safety to the line, in consequence of the late unusual flooding to which these localities have been subjected. There has also been much additional expense in the erection of occupation bridges by direction of the magistrates, and of culverts and other works which have become necessary since the letting of the contracts.

2nd—I have added a further amount of 13,400*l.* for extra turntables, crossings, and water cranes, which I consider necessary, making the total increase 56 327*l.* It is obvious had I not effected savings on the construction of other portions of the line between Brentwood and Colchester, irrespective of masonry, the excess of cost beyond estimate would have been this latter sum; but I have brought down the excess, including contingencies of 35,500*l.* to 46,435*l.* Should the contemplated saving of 40.000*l.* on locomotive stock and country stations be effected, the excess on estimates on this portion of the line (masonry excepted) will be merely nominal,

Although from the foregoing statement a vast deal of work is still remaining to perform, such means have been resorted to in order to accomplish the completion as to leave no doubt about the result, provided we are fortunate with the weather.

In consequence of the circumstances of bad weather last year, and the necessity of performing a large amount of work within a contracted time, it is scarcely to be supposed that such work could be completed as originally intended without some sacrifice, and without involving the risk of causing an excess on the estimates submitted by me previous to letting the works. Such excesses as have occurred I have accounted for in this Report.

In conclusion, I beg leave to express my general satisfaction with the works hitherto executed by the contractors, and also my approbation of the present state of that part of the line now open to the public, except the continued subsidence at the Gubbins embankment, which has been hitherto an evil of great and serious magnitude; but I have good reason for stating, that in consequence of the precautions which have been adopted for securing these works, they will shortly become effectual, and equal to any other part of the completed line, which is in most excellent condition.

I do not wish unnecessarily to call attention to the difficulties which I have had to encounter and to surmount, in constructing, since the month of May 1841, a line of 38¼ miles in length, with nearly four millions and a half cubic yards of earth to move, but the wet weather of last year was of such unprecedented long duration, and the rains and floods so heavy, that practically the time allowed for the completion of these works has been reduced from eighteen to less than twelve months. The fine weather of this year has been most propitious, and I repeat my conviction that the line will be ready to be opened on the 1st of October nex'. —I have the honour to remain, gentlemen, your obedient servant,

(Signed) JOHN BRAITHWAITE.

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

The twelfth half-yearly meeting of the proprietors of this Company was held on Thursday, at the White Lion, Broad-street; Frederic Ricketts, Esq., Chairman of the Directors, in the chair. The notice convening the meeting having been read by J. B. Badham, Esq., the Secretary,

The Chairman addressed the meeting in the following terms:—I think it would be quite unnecessary for me to occupy the time of the meeting by my own observations, when the Report which the Directors have the pleasure of presenting to you so fully treats of every subject in connection with the Company's affairs. I must however take this opportunity of expressing my entire satisfaction at the favourable aspect of every department. The circumstances of your undertaking being all favourable and prosperous, will be the means of finishing the line in such a manner as I have no doubt will be perfectly satisfactory.

Mr. Badham then read the following

REPORT.

It is already known to you that the line from Bridgewater to Taunton was opened for public traffic on the 1st day of July last; earlier than the period agreed upon with the Great Western Railway Company, whereby the conditional payment of the full rent from the 13th of June, 1841, has been secured, subject only to the deduction of the sum of 500*l.*, in conformity with the arrangement announced to you in March last.

The share of toll belonging to this Company, over and above the fixed rent of 30,000*l.* for the line to Bridgewater, for the half-year ended on the 13th of June last, was 2,737*l.* 0*s.* 11*d.*, viz.:—

For 102,527 passengers, travelling 2,346,608 miles, at ¼d. per mile	£2,444 7 8
For 8.979 tons 4 cwt. 2 qrs. merchandise, 280,956 miles, as ditto	292 13 3
	£2,737 0 11

The passenger traffic of the first half of the year was, of course, less productive than the other, but the merchandise was considerably more than doubled; and the opening to Taunton will also secure a large increase in the number of passengers.

The amount of rent and toll, therefore, for the *whole year* ending on the 13th of June last, is as follows, viz.:—

Rent of the line from Bristol to Bridgewater	£30,000 0 0
Share of toll for the first half-year, as reported to you in March last	3,377 12 6
Ditto for the second half-year	2.737 0 11
	£36,114 13 5
Deduct—for estimated loss to the lessees from the delay of 13 days in the first opening of the line to Bridgewater	500 0 0
	£35,614 13 5

By the Engineer's Report of the state of the works, you will find that the portion agreed to be opened on or before the 1st day of July, 1843, will be ready before that time.

A proposition, which your Directors considered to be mutually advantageous, has been made to the Great Western Railway Company, so as to modify the agreement of February last, as to warrant the adoption of measures to secure the opening of the line throughout to Exeter in the year 1844, instead of only opening it from Exeter to Collumpton in 1844, and throughout to Exeter in 1845; but the lessees have not acceded to the terms proposed, and, if such continue to be their view, your Directors will carry on the works so as to secure the opening of the several portions of the line at the stipulated periods, or with such acceleration as the interests of this Company may be found to require.

The contracts for the White Ball tunnel, as well as two others for a distance of about five miles beyond it, have been advantageously let, and the whole of the timber and iron rails for the remainder of the line to Exeter has been contracted for on very satisfactory terms.

The entire amount of 500,000*l.* authorised by your Act of Parliament to be borrowed on debenture having been tendered some months ago, and several of the parties whose subsequent tenders could not therefore be accepted having offered their money on loan-notes, your Directors recommend to you to give the requisite authority.

A resolution will accordingly be submitted to you, to empower them to issue loan-notes in anticipation of such part of the remaining calls of 30*l.* per share as they may find expedient.

The amount will, in part, depend upon the sum that may be received from the shareholders themselves in anticipation of those calls; and as such payments in advance entitle the parties to interest at 5 per cent. per annum, it will be necessary to reserve a considerable portion of the 450,000*l.* for proprietors who may desire to avail themselves of that mode of investment.

To other shareholders, the postponement of the calls until the money is required to pay off the loan-notes, will no doubt be acceptable.

Your Directors are aware that many shareholders have either become proprietors or have enlarged their holding in the undertaking, in consequence of the allowance of interest on paid-up calls; and the beneficial effects of this measure have been decisive in the introduction of very many proprietors of the first respectability, to whose punctuality in paying their instalments the present prosperity of the Company is in no small degree to be ascribed. But your income under the lease, in fixed rent and toll, for the 45 miles now open, being upwards of 50,000*l.* a year, your Directors have to congratulate you upon the arrival of the period when a dividend, equal to the rate of interest hitherto allowed on paid-up calls, can be paid out of revenue, instead of capital, and they therefore recommend to you to declare a dividend of 1*l.* 8*s.* per share, payable after the 6th day of October next, on all shares on which 70*l.* per share shall before that day have been paid up.

If you adopt this change of system it will be necessary to pass a resolution to discontinue the allowance of interest, and to declare the dividend of 1*l.* 8*s.* per share in its stead.

Your Directors propose to pay the dividend without deducting the income tax.

Several projects have been brought before the public by different parties interested in procuring an extension of the railway from Exeter westward. Your Directors

Digitized by Google

Of course, fully sensible of the benefits likely to accrue to this line from the addition of a feeder from the populous and wealthy districts of Devon and Cornwall, will feel it their duty to give every encouragement to that plan which, after proper examination, shall appear to them the most feasible, and likely to offer the greatest advantages.

This question is the more important to the Bristol and Exeter Railway Company, as it materially affects the permanent establishment of a western mail packet station.

Your Directors feel gratified in adverting to the present position of your undertaking.

Forty-five miles of the line are in active traffic, yielding, under the lease, a clear income of above 50,000*l.* a year, with the prospect of a considerable increase at every future opening; the principal materials for the entire railway to Exeter are secured at the present reduced prices; and the contracts for the tunnel, and for several miles beyond it, are satisfactorily let.

The statement of receipts and expenditure to the 30th of June last, made up in the usual form, shows a balance of 189,266*l.* 5*s.* 8*d.* in the hands of the bankers at that time.

At present, after providing for the outlay, including a considerable sum for land and works beyond Taunton, the disposable balance amounts to upwards of 170,000*l.*

MR. BRUNEL'S REPORT.

To the Directors of the Bristol and Exeter Railway.

Bristol, 24th August, 1842.

Gentlemen,—The arrangements referred to in my last half-yearly Report, for securing the completion of the works between Bridgewater and Taunton, have proved satisfactory, and this part of the line has been opened to the public within the period stipulated for by the Great Western Railway Company.

Beyond Taunton, and towards Beam Bridge, a distance of upwards of 8 miles, and which portion it is necessary should be opened for traffic on or before the 1st July, 1843, the works are actively proceeding. The periods limited by the respective contracts, and the present comparative progress of the works, leave no doubt that this stipulation will be complied with, and that the opening will take place at least as much within the time fixed as in the case of the opening to Taunton.

The heavy cuttings in the neighbourhood of the White Ball tunnel have been carried on vigorously, and are in a very forward state. The small works between these and Beam Bridge are commenced. One working shaft has been sunk by the Company to the depth of the tunnel, for the purpose of affording full information to parties tendering for the execution of the tunnel. This work, divided into four contracts, has been let to experienced contractors, on fair and modetate terms. The principal works beyond the White Ball Hill to Collumpton have also been let in two contracts, comprising a length of nearly five miles, and on satisfactory terms. Between Collumpton and Exeter arrangements have been made with the landowners for facilitating the execution of the works at the several points where any improvements in the line, or diminution in the quantity of work, could be effected, and the letting and commencement of these will now be so arranged as to profit by the whole of the next summer.

The completed works between Bristol and Taunton are everywhere in an exeellent state.

I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

WM. MORTIMER, Esq., said he could have wished that a matter so important as the resolution he was about to propose had been placed in other hands, but he was sure the Report just read must afford the greatest pleasure to the proprietors, when compared with the Reports rendered at some former meetings, and when they remembered the difficulties they had encountered in the earlier stage of their career. Every gentleman present must indeed be gratified at the satisfactory account now presented, and the firm position which the Company had now attained, when instead of disputes with the Great Western Railway Company, arising out of the non-completion of portions of their line in the time stipulated, they were enabled not only to fulfil their engagements, but to anticipate them. He had therefore great satisfaction in moving that the Report be adopted.

G. JONES, Esq., seconded the motion, which was carried unanimously.

EDWARD DIVETT, Esq. M.P., said the resolution placed in his hands was one which it afforded him much pleasure to propose to the meeting, although it was simply a dry measure of finance, and he was convinced that the proprietors would have no difficulty in adopting it. It was that the Directors be empowered to borrow 450,000*l.* upon the loan notes of the Company at the rate of 5 per cent. interest. He proposed this, not as in any measure necessary in itself, but because the Directors, after a full consideration of the subject, thought it advisable. Finding that there was a large amount of money in the market, and their Act of Parliament not allowing them to borrow more than 500,000*l.* on debenture, they proposed this method; and in giving the Directors power to borrow 453,000*l.* in this form, the calls, of 30*l.* per share, yet to be made, would not be required for a considerable time, perhaps for years to come. (Cheers.) He was extremely glad to find that this proposition of the Directors was so acceptable also to the proprie,

Digitized by Google

tors. He would wish at the same time to be understood, that although the Directors would have this power, those proprietors who were desirous to pay up their calls in anticipation, and thus make an investment, would still have the advantage of being able to do so, and of receiving 5 per cent. interest upon them. He trusted this resolution would meet their unanimous concurrence. (Cheers.) He had now said all that was necessary upon this subject, but he could not sit down without expressing the very great satisfaction he felt in seeing that they were now come to a period at which he could congratulate them upon the satisfactory accomplishment of their undertaking, which was a most important one, not only to them as proprietors, but to the prosperity of the whole of the West of England, and he was confident that this line, if properly worked, would be one of the most remunerating in the country.

JAMES GIBBS, Esq. seconded the resolution, which was carried unanimously.

C. B. FRIPP, Esq., said, it was desirable that the resolution he was about to propose should emanate from the Board of Directors, but it was one in the propriety of which he trusted the meeting would fully concur. It was, that instead of allowing interest on paid-up calls, they should now declare a dividend of 1*l.* 8s. per share for the half-year, which was at the rate of 4 per cent. per annum upon those calls. They would see that as to pecuniary results it was the same as they had paid in the last two years, with only the notable exception that they were now paying dividends out of their revenue, instead of interest out of their capital. The Directors did not mean at all to throw discredit upon the course before pursued; on the contrary, it had no doubt been of most beneficial effect in causing proprietors to pay up their calls, and in drawing that capital, by which their undertaking has been brought to maturity, at a time when it was so much required. Since that time, it was most satisfactory to find that their revenue was now such as not only to allow the present dividend, but also, he hoped, to have a considerable balance towards the loan notes.

W. C. ROWE, Esq. seconded the resolution, which was carried unanimously.

Mr. HOLLISTER wished to know whether the sum of 1*l.* 8s. would always be paid as dividend, in any future circumstances of the Company?

Mr. FRIPP answered that there was no doubt it would. The Company were now paying dividends out of their revenue.

Mr. HOLLISTER begged to observe that it made a material change in the footing upon which shareholders had hitherto stood; and he wished to know whether the Directors were sure that when the line was completed, under any change of circumstances that might arise, they would be able to divide 4 per cent.

The SECRETARY said, that he could answer to that inquiry that the Company certainly would be able to do so. The income of the Company had now nothing contingent or problematical about it! but was secured in a certain definite and adequate rent. If there was any question at all, it was whether and how much the dividend might increase. (Cheers.)

Mr. KING then, in complimentary terms, moved a vote of thanks to the Directors: which was seconded by Mr. CORNISH, and carried by acclamation.

The CHAIRMAN, on the part of the Directors, having acknowledged the compliment.

A PROPRIETOR observed that there was a large balance of 180,000*l.* in the bankers' hands. Did the bankers pay interest on that balance?

The CHAIRMAN answered in the affirmative.

Thanks were then voted by acclamation to the Chaiaman, and acknowledged by that gentleman.

Mr. DIVETT then said, there was one gentleman to whose ability and constant exertions in the discharge of his office they were so much indebted for the prosperity of the Company, that he could not be content to leave the room without moving a vote of thanks to him. That gentleman was Mr. Badham, the Secretary—(applause)—and it was particularly in his (Mr. Divett's) province to make this motion, for he could testify, from the correspondence he had had with Mr. Badham on the affairs of the Company, and the full and circumstantial answers he received, to the assiduous and valuable services of that gentleman.

The motion, seconded by Mr. Gibbs, having been carried with applause,

Mr. BADHAM said, he was deeply obliged by this very flattering mark of their approbation, and that his study had always been, in devoting his energies to the service of the Company, to carry out the wishes of the Directors, being fully convinced that their judgment always led them to adopt that course which was most conducive to the interests of the Company. (Cheers.)

The meeting then broke up.

EDINBURGH AND GLASGOW RAILWAY—MODERN RACING.—A gentleman, on urgent business in Glasgow, arrived at the Edinburgh station on Monday morning, just as the nine o'clock train had started. A special engine was engaged, and, starting at half-past nine o'clock, overtook the train at Falkirk at ten minutes past ten o'clock, running the 23 miles in 40 minutes, 15 minutes of which time was occupied in stopping at three of the stations; the 23 miles were thus traversed in 25 minutes, being at the enormous speed of 55 miles in an hour.—*Edinburgh Chronicle.*

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the following Works:—

Contract No. 6, or Dinting Vale Viaduct Contract.—To commence at the termination of the Gamesley Contract, in a field No 226 on the plan, in the parish of Glossop, and to terminate in the field No 209 on the plan, in the said parish; the length of the viaduct being 484 yards or thereabouts.

Contract No. 7, or Longdendale Contract.—To commence at the termination of the Dinting Vale Viaduct Contract, and to terminate in a field No. 2 on the plan, in the parish of Glossop, near to the entrance of the Summit Tunnel; the length being six miles and 73 chains or thereabouts.

These Contracts to comprise the whole of the works necessary for the completion of the lengths of the railway herein mentioned, including the ballasting and laying of the permanent road, except the rails and chairs, which will be found by the Company. The contract is also to include the maintenance of the works for twelve months after their entire completion.

Plans, sections, specifications, and draft forms of contract may be seen on application to the Secretary, at the Railway Office, 15, Piccadilly, Manchester, on and after Monday, the 29th instant.

Sealed tenders, addressed to the Secretary, and endorsed "Tenders for Works," to be sent in on or before Monday, the 19th September next, after which day no Tender will be received.

Printed forms of Tender may be obtained at the office, and no others will be attended to. The Directors will not consider themselves bound to accept the lowest offer.

By order of the Board,
JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, Aug. 25, 1842.

TO RAILWAY COMPANIES.—During the last two Years the Advertiser has been employed as Passenger and Goods Clerk, at a First-Class Station; he is about leaving his present Situation, and is anxious to obtain another with some other Company. As to Respectability and Efficiency, the most Satisfactory References can be given.

Address, A. B., *Railway Times* Office, London.

LONDON AND CROYDON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of the London and Croydon Railway will be holden at the London Tavern, Bishopsgate-street, within the City of London, on Thursday, the 8th day of September next ensuing. The Chair will be taken at One o'Clock precisely.

Proposals will be submitted to the meeting for the raising of the additional capital, which, it was stated in the Directors' Report to the Proprietors at the last Half-yearly General Meeting, would be required for the purposes of the undertaking.

WM. ARTHUR WILKINSON, Chairman.
R. S. YOUNG, Secretary.

205, Tooley-street, August 24, 1842.

The Books for entering memorials of the transfer of shares will be Closed from the 59th of August to the 7th of September, both days inclusive.

BRISTOL AND EXETER RAILWAY COMPANY—TWELFTH HALF-YEARLY MEETING.—At the Half-yearly General Meeting of this Company, held at the White Lion Hotel, in the City of Bristol, on Thursday, the 25th of August, 1842.

FREDERICK RICKETTS, Esq., in the Chair,

It was unanimously Resolved—Moved by W. Mortimer, Esq., and seconded by George Jones, Esq—1st. That the Report of the Directors, now read, be received and adopted, and that they be requested to send a copy thereof to every Proprietor. Moved by Edward Divett, Esq., M. P., and seconded by James Gibbs, Esq.—2nd. That the Directors be, and they hereby are, authorised to borrow any part that they may think fit of the sum of £450,000, now remaining to be called up on the Shares in this Company, upon Loan Notes to be issued under the Coporate Seal, bearing Interest at a rate of not exceeding Five per cent. per annum, payable half-yearly, for such periods and on such terms and conditions for repayment as they may deem expedient. Moved by Charles B. Fripp, Esq., and seconded by W. C. Rowe, Esq.—3rd. That the interest at Four per cent. per annum, hitherto allowed to the Shareholders in this Company on their paid-up calls, be discontinued; and that instead thereof a Dividend of £1 8s. per share, out of the Revenue (being equal to the rate of Four per cent. per annum), be paid after the 6th of October next, for the Half-year, on all Shares on which the sum of £70 per Share shall before that day have been paid up. Moved by T. W. Hill, Esq., and seconded by W. Cross, Esq.—4th. That the best Thanks of the Proprietors be given to the Directors, for their able and zealous management of the affairs of this Company.

FREDERICK RICKETTS, Chairman.

The Chairman having quitted the Chair, it was Resolved by acclamation—5th. That the cordial Thanks of this Meeting be given to Frederick Ricketts, Esq., for his able and judicious conduct in the Chair; and it was also Resolved by acclamation—6th. That the best Thanks of this Meeting be given to our Secretary, J. B. Badham, Esq., for the zeal, attention, and talent, with which he has promoted the best interests of this Company.

NORTHERN AND EASTERN RAILWAY.—ALTERATION OF TRAINS AND REDUCTION OF FARES.—LONDON TO BROXBOURNE AND BISHOP'S STORTFORD.—On and after Monday, the 5th September, the Trains will run at the following times, taking passengers to and from Stratford, in addition to the usual stations:—

DOWN FROM SHOREDITCH.

8 0	o'Clock, to	Bishop's Stortford.
9 30	,,	Ditto.
10 30	,,	Broxbourne.
11 30	,,	Bishop's Stortford.
1 30	,,	Broxbourne.
3 30	,,	Bishop's Stortford.
4 30	,,	Ditto.
5 30	,,	Broxbourne.
6 45	,,	Ditto.
8 0	,,	Bishop's Stortford.

UP TO SHOREDITCH.

5 30	o'Clock, from	Bishop's Stortford.
8 0	,,	Broxbourne.
8 30	,,	Ditto
8 45	,,	Bishop's Stortford.
11 30	,,	Ditto
1 45	,,	Broxbourne.
2 30	,,	Ditto
2 30	,,	Bishop's Stortford.
4 30	,,	Ditto
6 30	,,	Ditto
8 0	,,	Broxbourne.

By order of the Board,
W. BOURNE, Secretary.

Office, High-street, Shoreditch.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDERS FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders for Loans of Money on Debentures, to be issued under the provisions of the Act of Parliament, and secured on their undertaking, in sums of not less than £200, for terms of four, six, or ten years, on Interest at the rate of £5 per cent. per annum, payable half-yearly.

The Tender must express the sums and terms of years, and be addressed to Mr. Saunders, at the Great Western Railway Office, Princes-street, Bank, or to Mr. Merrick, at the Company's Office in Cirencester.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 15th August, 1842.

The Company has a net Income of £17,000 per annum, payable half-yearly by the Great Western Railway Company.

ANTI-DRY-ROT COMPANY, KYAN'S PATENT.—The Directors of this Company particularly request that all noblemen and gentlemen who have not Tanks, but are desirous of availing themselves of the benefit of this Patent, will send intimation of such intention to their office, as the Directors have determined for the security of the public that their Inspectors shall attend within reasonable distance of their Stations to see that the process be properly applied.

2, Lime-street Square, August 25, 1842.

TAFF VALE RAILWAY COMPANY. — At a General Half-yearly Meeting of this Company, held at the Angel Inn, Cardiff, August 23rd, 1842,

Sir J. J. GUEST, Bart., M. P., in the Chair;

It was resolved unanimously—

1. That the Report of the Directors now read, together with the statement of receipts and expenditure, be received and approved; and that they be requested to print the same for the information of the Proprietors.

2. That a Dividend of 28s. per Share on the original Shares in the undertaking be now declared, payable on the 10th day of September next, to the registered Proprietors of such Shares.

3. That Walter Coffin, Esq., Thomas Carlisle, Esq., and Henry Rudhall, Esq., be re-elected Directors of this Company.

4. That the best thanks of the Proprietors be given to the Directors for their able and zealous attention to the interests of the Company.

5. That the thanks of the Proprietors be presented to the Secretary and Superintendent, for his energetic and very efficient services on behalf of the Company, and for the interest which he has ever evinced in its prosperity.

J. J. GUEST, Chairman.

The Chairman having left the Chair,

It was unanimously Resolved,—That the best thanks of the meeting be given to the Chairman for his courtesy, ability, and impartial conduct in the chair.

WARKWORTH COQUET HABROUR.—TO ENGINEERS, CONTRACTORS, AND BUILDERS.—Persons willing to contract for the finishing the North and South Breakwaters Piers, or either of them, now in course of erection at the mouth of the River Coquet, near Warkworth, in the County of Northumberland, are requested to apply by letter, or in person, at the Office of the Commissioners of Warkworth Harbour, at Amble, in Warkworth aforesaid, or to Messrs. Western and Son, No. 7. Great James Street, Bedford Row, London, where Plans and Specifications of the works remaining to be done may be seen, and particulars obtained, and where tenders will be received.

Amble, 20th August, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,

ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive TENDERS for the LOAN OF MONEY, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to GRANT MORTGAGES of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

INTEREST WARRANTS, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton, as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,

PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

TO MANUFACTURERS OF LOCOMOTIVE ENGINES, &c.—BRISTOL.—Extensive and Desirable Premises, suitable for a Manufactory of Railroad Engines and Machinery of every description, eligibly situated in the City of Bristol, near to the Stations of the Great Western, Bristol and Exeter, and Bristol and Gloucester Railroads, to be Let on Lease, from the 21st of December next, or sooner if required.

An establishment for the Manufacture of Railroad Engines upon an extensive scale is much wanted in Bristol.

Owing to there being but one house at present in Bristol in this line (Messrs. Henry Stothert and Co.), and the *gauges* of these Railways requiring Engines of peculiar construction applicable to this district, the Railroad Companies are compelled to seek their principal supply of Engines from London, Newcastle-upon-Tyne, and Manchester.

Part of the above Premises are in the occupation of Messrs. Acraman, Morgan and Co., who will go out at Christmas next, or sooner if necessary.

To view the Premises and for further information, apply to Mr. Edward Rankin, Solicitor, 20, High-street, Bristol.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY. — TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Office of the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY, Established at York, 1824, and empowered by Act of Parliament.—CAPITAL, £500,000.

PATRONS.

The Archbishop of York	Sir G. Strickland, Bart., M.P
The Marquis of Londonderry	Sir Francis Lawley, Bart.
The Earl Fitzwilliam	Sir W. B. Cooke, Bart.
The Earl of Tyrconnel	Sir W. A. Ingilby, Bart.
The Earl of Zetland	Sir Tatton Sykes, Bart.
The Earl of Yarborough	Sir E. M. Vavasour, Bart.
The Bishop of Ripon	Sir S. Crompton, Bart., M.P.
Viscount Morpeth, M. P.	The Archdeacon of York
Lord Wharncliffe	Archd. of the East-Riding
Lord Feversham	The Archd. of Cleveland
Lord Hotham, M. P.	J. Hen. Lowther, Esq., M.P.
Lord Howden, K.C.S.K.L.H. &c.	G. F. Barlow, Esq.,
	Robert Cracroft, Esq.
Lord Wenlock	Robert Denison, Esq.
Lord Worsley, M. P.	P. Saltmarshe, Esq.
Hon. E. R. Petre	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

TO IRON MASTERS.—The Liverpool and Manchester Railway Company are desirous to contract for the purchase of 250 Tons of best Railway Bars, of the parallel double T form—weight about 75lb. per yard.

Each Rail to be made exactly 15 feet in length, and in strict conformity with a template of the cross section, which may be seen at the Company's office, and which will be delivered to the contractor for his pattern—each end of every rail to be cut square and smooth to the precise sectional form.

The Rails to be made in a workmanlike manner, of the best No. 2 Mine Iron, free from cinder, constituting the Rails when made No. 3 best bar iron.

To be delivered at the Company's yard in Salford straight, and free from warp or twist; and the Railway Company to be at liberty to put every Rail to such test in proof of its strength and quality, by bending or breaking, as they shall think expedient, with power to reject all defective rails; the cost and charges on the Rails not accepted to be borne by the manufacturer.

The Rails to be delivered in 3 months from the date when the tender shall be accepted; and payment to be made by a banker's bill at 3 months' date, when the Rails shall have been delivered and approved. Tenders to be addressed to the Treasurer, and transmitted to the Lime-street Office, on or before Wednesday the 31st instant.

By Order of the Directors,

HENRY BOOTH, Treasurer.

Railway Office Liverpool, Aug. 17, 1842.

EASTERN COUNTIES' RAILWAY. — The Directors of the Eastern Counties' Railway Company are receiving Loans of Money in sums of not less than £500 each, for periods of one, two, or three years. Interest at the rate of 5 per cent. per annum will be paid half-yearly on amounts so advanced.

By order of this Board,

A. BULKELEY, Secretary.

Offices, Shoreditch Station,
August 25, 1842.

WEST LONDON RAILWAY COMPANY, late BIRMINGHAM, BRISTOL, and THAMES JUNCTION RAILWAY COMPANY.—NOTICE is hereby given, That pursuant to the Act of Incorporation the next Half-yearly General Meeting of the West London Railway Company will be held at the offices of the Company, No. 11, Abchurch-lane, in the City of London, on Friday, the 9th day of September next, at One o'Clock precisely, when the proprietors are earnestly requested to attend.

WILLIAM MORGAN, Deputy-Chairman.

Offices, 11, Abchurch lane, August 20, 1842.

KING'S COLLEGE, LONDON.—DEPARTMENT OF ENGINEERING, ARCHITECTURE, ARTS, AND MANUFACTURES — The CLASSES will be RE-OPENED on Tuesday, the 4th of October next.

Mathematics—Professor the Rev. T. G. Hall, M.A.
Mechanics—Professor the Rev. H. Moseley, M.A., F.R.S.
Chemistry—Professor Daniell, F.R.S.E.
Chemical Manipulation—W. A. Miller, Esq., M.B.

Workshop—Mr. W Hatcher.

Persons may enter as occasional Students for any special Lectures which they may desire to attend, upon payment of the fees for the same.

Further information may be obtained at the Secretary's office.

J. LONSDALE, Principal.

August, 1842.

PARISIAN BITUMEN COMPANY. — The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1½ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bogner, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

CAUTION TO RAILWAY CONTRACTORS AND BUILDERS.—ABSCONDED from the City of Rouen, in Normandy, on Sunday the 24th of July, JAMES QUAMBY, Stone Mason, formerly of Liverpool. He had been employed by Messrs. M'Kenzie and Brassy since January last, in constructing some bridges on the Paris and Rouen Railway, near St. Etienne de Rouvray. On the 23rd of July, he received the money for the work he had done, being upwards of 2,300f., and left Rouen on the following day, leaving his men's wages for one month unpaid. He is about 33 years of age, about 5 feet 8 inches high, of a florid complexion, aquiline nose, was usually dressed in a dark brown coat, (Newmarket cut), with bright buttons, and a blue neckerchief.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TWELFTH HALF-YEARLY GENERAL MEETING OF PROPRIETORS.—At a General Meeting of the Birmingham and Gloucester Railway Company, held in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo-street, Birmingham, on Friday, the 19th day of August instant,

Captain C. R. MOORSOM, R. N., in the Chair;

It was Resolved—

1. That the Common Seal of the Company be affixed to the Register of Proprietors.

[The Seal was affixed accordingly.]

2. That the Report of the Committee be received and adopted; and that, together with the statement of accounts, it be circulated amongst the Proprietors.

3. That this meeting perceives with great regret that the Report of the Directors does not warrant an expectation of a Dividend to the Shareholders for the half year ended 30th June, 1842; and, whilst the Shareholders present most cheerfully express their confidence in the Chairman and Directors, and their hope that they will continue their strenuous exertions for the interests of the Company, they trust that they will take under their immediate consideration the propriety of adding to the number of the acting Committee, so to ensure the most efficient administration of the affairs of the Company.

4. That the vacancies occasioned by the four Directors who go out of office (by rotation) in accordance with the Act, be filled up, by the re-election of Mr. Bellby, Mr. J. F. Ledsam, and Mr. Sturge; and by the election of Mr. Homer.

5. That the appointment of Auditors be left to the Board of Directors.

6. That the sum of 600*l* be placed at the disposal of the Directors for the ensuing 12 months.

7. That the principle applied to the acceptance of Calls overdue upon Scrip, as resolved at the last meeting, be extended to all the Calls now unpaid, at the discretion of the Directors.

8. That the thanks of the meeting be presented to the Directors for their services during the last six months.

C. R. MOORSOM, Chairman.

The Chairman having quitted the Chair,

Resolved unanimously—

9. That the thanks of the meeting be given to the Chairman, for his able, courteous, and impartial conduct in the chair.

TO RAILWAY COMPANIES, MANUFACTURERS, COALOWNERS, CONTRACTORS, and OTHERS.—Valuable Machinery and Steam-Engines, at Middlesbrough-on-Tees, to be Disposed of by Private Contract.

The Directors of the Stockton and Darlington Railway are desirous of selling the whole of the Machinery, Steam-Engines and Boilers, and Fire Extinguishing Apparatus, situate at the terminus of their line at Middlesbrough-on-Tees, and which were used for the purpose of shipping coals prior to the opening of the Middlesbrough Dock. The Engines, Boilers, and Machinery generally, are in excellent working order, and will be found particularly worthy of attention. There are two High-Pressure Steam-Engines, with two Cylindrical Boilers attached to each, the cylinder of one engine being 18 inches diameter, and working with a 5-feet stroke, the other 19 inches diameter and a 4-feet stroke, and both work with a beam and vibrating pillar. The boilers of one are about 18 feet 9 inches long, and 5 feet 6 inches diameter, the other 26½ feet long and 5 feet diameter. The whole of the valves and pipes attached are perfect, and one set of boilers is fitted up with Scott's Patent Collectors. Both of the Engines are in good working order.

The Machinery consists of the apparatus necessary for raising the coals to an elevation of 19 feet 6 inches above the level of the railway, and thence lowering them into the ships' holds by 8 drops erected after the approved plan first adopted by W. Chapman, Esq., Civil Engineer, of Newcastle-upon-Tyne. The spur gearing, fly wheels, shafting, sheaves, and chains, gearing for working the force-pumps of the Fire Extinguishing Apparatus, and all the sheaves, shafting, brake wheels, suspending frames, and the much admired machinery for lowering the empty waggons, are in good working order, and could be readily removed to any part of the United Kingdom by water or railway conveyance.

The whole of the above Machinery, Steam-Engines, &c., may be inspected by intending purchasers at any time, and further details obtained on application to John Harris, Engineer, Darlington. The whole will be disposed of in one lot, or the Steam-Engines and Machinery separately, as may be hereafter agreed upon.

Stockton and Darlington Railway Office,
August 22, 1842.

DRY-ROT AND DECAY — MARGARY'S PATENT.—The cheapest and most simple preparation for the Preservation of Timber, Canvass, &c., from Decay, the material being only 4d. per lb.

This Patent is used by her Majesty's Board of Ordnance; by Brunel, Locke, and other celebrated Engineers; and by Noblemen and Gentlemen on their Estates. It has been extensively used for Railroads in England, and is now on the Bristol and Exeter and Manchester and Sheffield lines. In France, on the Paris and Havre line. It repels the attack of Insects—as neither the White Ants, nor the *Tiredo Navalis*, so destructive in the Liverpool Docks, will touch any substance so prepared.

Licences granted, and Specimens of all sorts of Wood may be seen, at the Patentee's Office, Quality court, Chancery-lane, where every information will be given on the subject.

Rick Cloths, Cement Bags, &c., may be had of the Sole Agent, Mr. Lea, 97, Leadenhall-street.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	St. Ives
Cambridge	Huntingdon
Wells	St. Neots
Holt	Biggleswade
Dereham	Bury St. Edmunds

HORNE & CHAPLIN, Proprietors.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

ALTONA AND KIEL RAILWAY—CONTRACT FOR RAILS.—NOTICE is hereby given, That one of the Directors of the Altona and Kiel Railway Company will attend at the Caledonian Hotel, Adelphi, London, on Tuesday, the 30th of August instant, at Twelve o'Clock, to enter into a Contract for the supply of about 6,600 tons of Iron Railway Bars, to be delivered as early as possible after the opening of the river Elbe, in the spring of the ensuing year. For further particulars reference is to be made to the Engineer-in-Chief of the Railway, Mr. Buck, of Manchester.

The Tenders to be endorsed, "Tenders for Rails," with the name of the firm, and to be sent by Post under cover to Mr. T. H. Elmenhorst, London, on or before the 24th instant.

The parties Tendering, or an Agent on their behalf, are requested to attend at the Caledonian Hotel, at the time above mentioned.

By order of the Board,
H. STOPPEL, Secretary.

Altona, August 5th, 1842.

AYLESBURY RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of the said Company will be held at the Euston Hotel, Euston Grove, London, on Monday, the 29th day of August instant, at One o'Clock in the afternoon. The chair to be taken at half-past One precisely.

G. CARRINGTON, Chairman.
THOS. TINDAL, Deputy-Chairman.

Dated this 6th day of August, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun* evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, August 27, 1842.

"*Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom.*"—Bishop Hall.

No. 244. Vol. V.—No. 36. Part I.] SATURDAY, SEPTEMBER 3, 1842. [Price, with Part II., 1s.

MANCHESTER AND LEEDS RAILWAY—TO ENGINEERS, MILLWRIGTS, &c.—The Directors of the Manchester and Leeds Railway will MEET at their Offices, Hunt's Bank, Manchester, on Monday, the 3rd day of October next, to receive Tenders for the supply of One Pair of High-pressure Steam-Engines, constructed on the marine principle; Cylinders, 33 inches diameter and 5-feet stroke, with three boilers, capable of working at a pressure of 50lb. per square inch; also the Rope Geering required for working the Extension Line to Hunt's Bank, consisting of rope wheels, pullies, balance frame and weight, with shafting, pedestals, wall-boxes, &c., fixed complete.

The specification and drawings, showing the details of the rope geering and general arrangement of the engines, will be ready for inspection at the Engineer's office (Mr. Gooch's), Palatine Buildings, Hunt's Bank, Manchester, on and after Monday, the 19th day of September next. The Tenders must be delivered at the Secretary's office, on Monday, the 3rd day of October, 1842, not later than ten o'clock in the forenoon; and parties tendering will be required to be in attendance at three o'clock in the afternoon of the same day.

Manchester, August 31, 1842.

TO RAILWAY COMPANIES, MANUFACTURERS, COALOWNERS, CONTRACTORS, and OTHERS.—Valuable Machinery and Steam-Engines, at Middlesbrough-on-Tees, to be Disposd of by Private Contract.

The Directors of the Stockton and Darlington Railway are desirous of selling the whole of the Machinery, Steam-Engines and Boilers, and Fire Extinguishing Apparatus, situate at the terminus of their line at Middlesbrough-on-Tees, and which were used for the purpose of shipping coals prior to the opening of the Middlesbrough Dock. The Engines, Boilers, and Machinery generally, are in excellent working order, and will be found particularly worthy of attention. There are two High-Pressure Steam-Engines, with two Cylindrical Boilers attached to each, the cylinder of one engine being 18 inches diameter, and working with a 5-feet stroke, the other 19 inches diameter and a 4-feet stroke, and both work with a beam and vibrating pillar. The boilers of one are about 18 feet 9 inches long, and 5 feet 6 inches diameter, the other 26½ feet long and 5 feet diameter. The whole of the valves and pipes attached are perfect, and one set of boilers is fitted up with Scott's Patent Collectors. Both of the Engines are in good working order.

The Machinery consists of the apparatus necessary for raising the coals to an elevation of 19 feet 6 inches above the level of the railway, and thence lowering them into the ships' holds by 8 drops erected after the approved plan first adopted by W. Chapman, Esq., Civil Engineer, of Newcastle-upon-Tyne. The spur gearing, fly wheels, shafting, sheaves, and chains, gearing for working the force-pumps of the Fire Extinguishing Apparatus, and all the sheaves, shafting, brake wheels, suspending frames, and the much admired machinery for lowering the empty waggons, are in good working order, and could be readily removed to any part of the United Kingdom by water or railway conveyance.

The whole of the above Machinery, Steam-Engines, &c., may be inspected by intending purchasers at any time, and further details obtained on application to John Harris, Engineer, Darlington. The whole will be disposed of in one lot, or the Steam-Engines and Machinery separately, as may be hereafter agreed upon.

Stockton and Darlington Railway Office,
August 22, 1842.

WARKWORTH COQUET HABROUR.—TO ENGINEERS, CONTRACTORS, AND BUILDERS.—Persons willing to contract for the finishing the North and South Breakwaters Piers, or either of them, now in course of erection at the mouth of the River Coquet, near Warkworth, in the County of Northumberland, are requested to apply by letter, or in person, at the Office of the Commissioners of Warkworth Harbour, at Amble, in Warkworth aforesaid, or to Messrs. Western and Son, No. 7. Great James Street, Bedford Row, London, where Plans and Specifications of the works remaining to be done may be seen, and particulars obtained, and where tenders will be received.

Amble, 20th August, 1842.

ROYAL MAIL STEAM-PACKET COMPANY.—No. 55, Moorgate-street, London, August 26th, 1842.—The Court of Directors of the Royal Mail Steam-Packet Company hereby give Notice, That the First General Meeting of the Proprietors will be held on Wednesday, the 21st September, at One o'Clock, precisely, at the London Tavern, Bishopsgate-street, to receive a Report of the Proceedings of the Corporation.

None but registered Proprietors are entitled to vote or take part in the proceedings at this Meeting, and the holders of the Company's Scrip Receipts are therefore requested to leave them forthwith for registration at the Office, No. 55, Moorgate-street.

E. CHAPPELL, Secretary.

TO ENGINEERS, ARCHITECTS, SURVEYORS, CONTRACTORS, &c.—In consequence of Mr. Evans, of Oldham, declining Railway Contracting, his Engineer and Manager, Mr. Joseph Rogers, will shortly be at liberty for a new engagement. He is competent to undertake the management of any kind of Engineering works (except Collieries) as well as that of a General Surveyor, and can have recommendations not only from his present employer, but from some of the first Engineers in the kingdom. Would have no objection to go abroad.

Address (paid) Bolton-street, Chorley, Lancashire.

TO MANUFACTURERS OF LOCOMOTIVE ENGINES, &c.—BRISTOL.—Extensive and Desirable Premises, suitable for a Manufactory of Railroad Engines and Machinery of every description, eligibly situated in the City of Bristol, near to the Stations of the Great Western, Bristol and Exeter, and Bristol and Gloucester Railroads, to be Let on Lease, from the 21st of December next, or sooner if required.

An establishment for the Manufacture of Railroad Engines upon an extensive scale is much wanted in Bristol.

Owing to there being but one house at present in Bristol in this line (Messrs. Henry Stothert and Co.), and the *gauges* of these Railways requiring Engines of peculiar construction applicable to this district, the Railroad Companies are compelled to seek their principal supply of Engines from London, Newcastle-upon-Tyne, and Manchester.

Part of the above Premises are in the occupation of Messrs. Acraman, Morgan and Co., who will go out at Christmas next, or sooner if necessary.

To view the Premises and for further information, apply to Mr. Edward Rankin, Solicitor, 20, High-street, Bristol.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—New Eighth Shares.—First Call of Ten Shillings per Share.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an Instalment of Ten Shillings on each of the New Shares of £12 10s. in this undertaking, created under the provisions of the Act relating thereto, passed in the last session of Parliament, payable on or before the 23rd day of September next, should be called for, the Proprietors of such New Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of Ten Shillings on each such Share.

BANKERS.

London—Messrs. Glyn, Halifax, Mills, and Co., Lombard street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. and S. Evans.
Burton—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge Interest at the rate of £5 per cent. per annum, from the 23rd day of September next, on all sums which shall be tendered after that day.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
(Signed) THOMAS KELL,
Secretary.

Lawley-street, Birmingham, August 30, 1842.

MR. HALL'S SMOKE-CONSUMING APPARATUS.—MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—Letters and advertisements having appeared in your paper, and in others, denying the accuracy of the statement made by Mr. Kearsley, the Superintendent of the Locomotive Department on this line in his late Report to the Directors, that the Manchester and Leeds Company had made trial of the Apparatus in question, "*but with such unsatisfactory results as to cause them to abandon it,*" and Mr. Kearsley's information upon this quarter having been derived from me, and by me from Captain Laws, the Superintendent of the Manchester and Leeds Railway, I have thought it right, in justice to Mr. Kearsley, to apply to the latter gentleman upon the subject; and having obtained his consent to publish the correspondence, I beg leave to subjoin it.

I am, Sir, yours, faithfully,
J. F. BELL, Secretary.

Leicester, August 25, 1842.

My dear Sir,—You no doubt recollect the conversation which passed between us at Normanton when we last met.

The exact words I do not recollect, but the tenor of it (in which both Mr Hanson and Mr. Dixon also agreed) was that the invention of Mr. Hall for burning coal in lieu of coke, was on the whole a failure, and I quite recollect you adding, "Were we to adopt it, we should require climbing boys to sweep the chimneys."

This I related to Mr. Kearsley, adding that the opinion of Captain Laws, Mr. Dixon, and Mr. Hanson, all of whose Companies had tried Mr. Hall's Apparatus, were decidedly against it.

Mr. Kearsley, in his Report on the faith of this conversation states, that the Manchester and Leeds Company have made a "similar trial, but with such unsatisfactory results as to cause them to abandon it also."

In this he states what was beyond the *letter* of what you said, or what I repeated, which has led to a statement from a Mr. Smith, denying, on the authority of Mr. Fenton, your Locomotive Superintendent, that you have abandoned the plan, thus making Mr. Kearsley a "a gratuitous liar."

Would you object to my stating publicly that the above was the tenor of our conversation at Normanton?

Believe me very truly,
J. F. BELL, Secretary.

Captain Laws, Superintendent Manchester and Leeds Railway.

MANCHESTER AND LEEDS RAILWAY.

Superintendent's Office, Manchester,
August 31, 1842.

My dear Sir,—I cannot but think both Mr. Kearsley and yourself attach undue importance to the letter of Mr. Smith; no one who has had an opportunity of impartially judging of the effect of Mr. Hall's plan of burning coals in locomotive engines will suspect for a moment that Mr. Kearsley has made a misrepresentation with the view to deceive, in stating that this Company had at that time abandoned the plan; in fact the day before I met you at Normanton was about the first trip the engine made, since which she has undergone some alterations, but the opinion of an Engineer-in-Chief, Mr. Gooch, as well as that of Mr. Fenton, the Superintendent of Locomotives, as expressed at the Board on Monday last, when Mr. Kearsley's Report became a subject of conversation, was quite in accordance with it, and left little hope that any more engines would be fitted, or that which is now running, be continued.

I am, dear Sir, yours, very truly,
J. M. LAWS

J. F. Bell, Esq.

The principal alteration that has been made is in allowing more air round the fire box, and less through the tubes, which has much improved the engine; this is contrary to Mr. Hall's plan, which is to supply hot air through the tubes; but still the defects pointed out in Mr. Kearsley's Report are evident.

AYLESBURY RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Aylesbury Railway Company was held on Monday, at the Euston Hotel, Euston-square; THOMAS TINDAL, Esq., Deputy-Chairman of the Board of Directors, presided.

The SECRETARY (Mr. H. Hatten) having read the advertisement convening the meeting,

It was unanimously resolved, on the motion of Mr. J. B. Boothby, seconded by Mr. Hore, that the common seal of the Company be affixed to the register of shares, which was done accordingly, in presence of the meeting.

The CHAIRMAN said, he had very few observations to offer on the present occasion, as matters were much in the same state as when the Directors had last the pleasure of meeting the proprietors. Unfortunately, the action against Mr. Mount, in respect of certain calls, was still undecided. The Directors had nothing to do but to receive the half-year's rent from their very punctual tenants, the London and Birmingham Company, and to divide it among their own proprietors. There was, however, one important question to be brought before the meeting, and to which reference was made in the Report, namely, whether the proprietors should forego the half-year's dividend payable on the 29th of September, and not run further into debt, or whether they would secure a present benefit and incur future liabilities. It would be for the proprietors to decide which course they would adopt. He would now call upon the Secretary to read the Report.

The JOINT-SECRETARY (Mr. Acton Tindal) then read the Report of the Directors, as follows:—

REPORT.

The several matters, which were stated in the last Report as remaining incomplete from circumstances over which the Directors have no control, still remain in abeyance, and prevent your Directors from closing the capital account; before this can be accomplished it will also be necessary to decide the question intended to be submitted to the present meeting, namely, whether the shareholders will forego the next half-yearly dividend instead of contracting any further loan.

Your Directors are of opinion that it will materially improve the future interests of the shareholders, and they accordingly support the proposition to give up the dividend which would have been payable on the 29th of September next.

The Directors beg to add the customary half-yearly statement of the finances of the Company, beyond which nothing particular has transpired since the last general meeting, to call for any observations from the Directors.

Account of Receipts and Disbursements for Six Months, ending 30th June, 1842.

RECEIPTS.

January 1 to June 30, 1842—			
Two half-year's rent of the railway to 10th June, 1842	£2,500	0	0
Debenture No. 14	1,000	0	0
Total	£3,500	0	0

DISBURSEMENTS.

January 1 to June 30, 1842—			
Transfer to dividend account, half-year's rent to 10th December, 1841	1,250	0	0
For cattle and goods' sheds, and other works at the station-yard	410	4	10
Advertisements, printing, and incidental expenses	29	2	6
Solicitors' bills relating to conveyances of land, &c.	31	9	4
December 31, 1841—			
Balance due to the Treasurer	14	6	11
June 30, 1842—			
Balance in the hands of the Treasurer	1,764	16	5
On revenue account £1,250 0 0			
On capital account 514 16 5			
	£1,764	16	5
Total	£3,500	0	0

Balance Sheet Capital.

RECEIPTS.

Aug. 29, 1842—			
Gross receipts to this day	£49,685	12	6
Loans on debentures	9,430	0	0
Calls due on 50 shares, 900*l.*, for recovery of which proceedings at law are pending, but which, if allotted at 12*l.* per share, will raise	600	0	0
	£59,715	12	6
Balance in the hands of the Treasurer on capital account	514	16	5
Total	£60,230	8	11

PAYMENTS.

Aug. 29, 1842—			
Gross payments to this day	£58,600	16	1
Debts outstanding, estimated at	1,536	12	0
Further outlay for cottages for railway officers, estimated at	200	0	0
Total	£60,337	8	1

Statement of Revenue.

March 25, 1842—			
To fifth half-yearly dividend to December 31, 1841, 8*s.* per share, 2,500 shares	£1,000	0	0
Secretary's half-year's salary	25	0	0
May 11, 1842—			
Half-year's interest on 8,430*l.* debentures to this day	210	15	0
June 30, 1842—			
Balance in the Treasurer's hands, carried forward	416	5	0
Total	£1,652	0	0
Balance from fourth dividend account	£402	0	0
By fifth half year's rent to 10th December, 1841, received of the London and Birmingham Railway Company	1,250	0	0
Total	£1,652	0	0

THOMAS TINDAL, Deputy Chairman.

Mr. EDWARDS inquired whether the 50 shares, referred to in the accounts, were those in respect of which the Company were proceeding against Mr. Mount.

The CHAIRMAN replied in the affirmative.

Mr. EDWARDS inquired in what state the action against Mr. Mount now was.

The CHAIRMAN said, an action had, in the first instance, been brought against the party to whom Mr. Mount had disposed of the shares, and the Company had obtained a judgment against that party, who was now keeping out of the way. The fact was that Mr. Mount had transferred his shares to a man of straw, and it was thought that Mr. Mount had indemnified the transferee, and if he could be found, Mr. Mount, it was believed, would pay the sum in dispute. There was another action pending against Mr. Mount in respect of a call due previous to the transfer. This cause was now before the Exchequer Chamber.

Mr. EDWARDS inquired what sum had been paid upon the 50*l.* shares.

Mr. HATTEN said, the amount paid was 2*l.* per share, and the Company were now proceeding against Mr. Mount for a 5*l.* call.

Mr. EDWARDS wished to know whether Mr. Mount and the person to whom the shares had been sold would be willing to give up their interest in these shares, if they were relieved from all future liability in respect of them.

Mr. HATTEN had no doubt that they would at present give up all claim under such circumstances, but should the Company recover 5*l.* per share from Mr. Mount it was probable that, as 2*l.* per share had already been paid, that gentleman would pay up the remaining 13*l.* per share rather than allow the stock to be forfeited.

Mr. BOOTHBY said, if these shares were forfeited it might, perhaps, be better to raise by bonds the money which they represented—because, although sold at 12*l.* or 14*l.* per share, the dividend would have to be paid on 20*l.*, thus bringing it up to something like 7*l.* per cent.

It was stated, in answer to a question, that Mr. Mount was a man of means.

Mr. J. ROBSON inquired whether, if the proprietors should on this occasion forego a dividend, there would be any necessity hereafter of raising more money.

The CHAIRMAN said he found, from an examination of the accounts, and from the statements of the Secretary, that by foregoing the dividend the Company would be enabled, not only to pay what was due, but to provide for what they might hereafter require.

Mr. BOOTHBY was of opinion that the Company should always have in hand a fund to the extent of 400*l.* or 500*l.* to meet any contingencies that might arise, for although the Birmingham Company were bound to keep the road in repair, there might be, and were, various little matters upon which the lessors might insist, and it was as well that there should be some small amount upon which to fall back in case of emergency. With respect to the non-declaration of a dividend, he thought it much more desirable that they should forego one dividend altogether, than that they should for a term of years reduce the dividend to perhaps 3 per cent. per annum. He was sure, that to parties who might wish to dispose of their shares, the former course was by far the better. It would seem that after discharging the Company's liabilities, there would remain 400*l.* or 500*l.* to meet contingencies, and while the lease to the Birmingham Railway continued, which there was every reason to believe would be the case, this reserve would be sufficient.

Mr. P. CAZENOVE inquired how it happened that Mr. Mount should have been able to transfer his shares to another party, while there was a call of 5*l.* per share due.

Mr. HATTEN said, Mr. Mount had transferred his shares after the call had been made, but just two days before it fell due, and the Directors were compelled by the Act to register the transfer.

Mr. CAZENOVE said, in that case the Aylesbury Act must be different from other Railway Acts.

Mr. A. TINDAL said, it was precisely the same in this respect as the London and Birmingham Act.

The CHAIRMAN said, the whole legal question as affecting Mr. Mount, turned upon his right to transfer the shares in the interval between the declaration of a call and the day fixed for its payment.

Mr. CAZENOVE inquired if the offer of the Birmingham Company to renew the lease of the Aylesbury line was still before the Directors.

The CHAIRMAN said, no offer had been made; it was merely a matter of conversation.

In answer to a question, it was stated by Mr. Hatten that the existing lease expired in June, 1844.

Mr. EDWARDS gathered from the accounts, and the explanations which had been given, that the Company could not ultimately be losers in respect of Mr. Mount's shares.

Mr. BOOTHBY said, they had been estimated in the accounts only at 12*l.* per share, thus producing 600*l.* He thought this was the proper mode of stating it, but perhaps they might in the end realise 800*l.*, and in that case the Company would have 200*l.* more at command.

After some further conversation,

Mr. EDWARDS moved that the Report of the Directors be received, adopted, and printed for circulation among the proprietors.

Mr. GLEADAH seconded the motion.

Mr. CAZENOVE said, he did not object to the motion, but he would suggest to the Directors whether it would not be expedient to endeavour to dispose of the property outright to the London and Birmingham Company. The Directors very liberally gave their services gratuitously, but as they had only to receive money with one hand and pay it away with the other, he thought there was no occasion for any staff at all. He should be glad if it were ascertained previous to the next meeting whether the Birmingham Company would make a bid for the line.

Mr. BOOTHBY, although a Director of the Birmingham Company, would not take upon himself to say how such a proposition would be received by the Birmingham Board or the Birmingham proprietors. It would, however, be an indispensable preliminary that an Act of Parliament should be obtained by the one Company or the other, authorising

Digitized by Google

the sale and purchase. The Birmingham Company had recently purchased the Warwick and Leamington branch; and although the cases were not precisely similar, the Leamington line not having as yet been commenced, an Act of Parliament was necessary to enable them to complete the bargain. But if the Aylesbury Company could not sell their line, they might lease it in perpetuity to the London and Birmingham Company, and in that case an Aylesbury share would be equivalent to a bond bearing 4 per cent. interest. No doubt they were all aware that the lease of the Aylesbury line had not been profitable to the Birmingham Company, although their control over it unquestionably contributed to the convenience of the public, and perhaps to the credit of both Companies.

Mr. CAZENOVE said, a perpetual lease would entirely meet his views, but at present he merely threw out these hints for the consideration of the Directors.

The motion for the adoption of the Report was then carried unanimously.

Mr. RICKFORD (a Director) said, as he was the party who at the last meeting had suggested that the dividend for the half-year just expired should be foregone, he would now beg to bring forward a motion with that object. He was quite sure that the stock of the Company would thus be improved in value. The honourable gentleman then read a motion to the effect that no dividend be divided for the half-year ending June 30th, but that the Directors be authorised to apply a sum not exceeding 1,000*l.* to the payment of the outstanding debts of the Company. Of course interest would as usual be paid on the debentures. The fund applicable to the payment of a dividend was exactly 1,000*l.*, and therefore, that amount was specified in the motion.

Mr. GLEADAH seconded the motion.

Mr. EDWARDS wished to know how this motion would affect absent proprietors.

Mr. BOOTHBY said, all the proprietors had had notice that such a motion was to be brought forward, and if they did not attend the meeting it was to be presumed that they did not object to the proposition.

The CHAIRMAN said, the fact that such a motion was to be brought forward had not only been noticed in the last half-year's Report, but had been notified to every proprietor by circular.

The motion was then carried unanimously.

Mr. BOOTHBY inquired if there was any disposition on the part of the inhabitants of Buckinghamshire to extend the line to Thame or any other part.

Mr. RICKFORD jocularly observed that the Company would leave *that* to the Birmingham Company.

Mr. BOOTHBY replied, in the same strain, that it would be an additional recommendation to the Birmingham Company to purchase the Aylesbury line, if there was a prospect that the purchase-money would be applied to an extension of the line.

The CHAIRMAN announced that Mr. Carrington, the Chairman of the Board of Directors, had to the great regret of his colleagues, resigned his office, being about to proceed again to India. The honourable gentleman then read an extract from a letter addressed by Mr. Carrington to the Secretary, in which Mr. C. expressed an opinion that the time was come when some arrangement for the sale or leasing of the line in perpetuity should be come to with the Birmingham Company. The Chairman said, Mr. C.'s opinions were at all times deserving of consideration.

After some desultory conversation,

Mr. CAZENOVE moved a resolution to the effect that the Directors be requested to take measures for negociating with the Directors of the London and Birmingham Railway for the sale of the Aylesbury line, or a renewal of the lease.

Mr. ROBSON seconded the motion, which was then put and carried unanimously.

The CHAIRMAN said, the Directors had no further business to lay before the meeting, but he should be happy to answer any questions, or give any further information.

No one availed himself of the opportunity, whereupon

Mr. EDWARDS moved the best thanks of the proprietors to the Chairman and Board of Directors for their able services.

Mr. GURNEY seconded the motion, which was carried by acclamation.

The CHAIRMAN made a suitable acknowledgement, and the meeting separated.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

THE half-yearly meeting of the proprietors was held on Saturday last, at Hull, when the following Report was read and adopted. We shall give further particulars next week:—

REPORT.

Although the stagnation in the commerce of the country referred to in the last Report of your Directors, has continued longer, and been greater than was anticipated, they are gratified at being enabled to inform you, that the traffic in goods has realised a rather larger amount than in the half-year ending 31st December last; the passenger traffic, as usual in the first six months of a year, is less than in the six months ending with December, but it exhibits an increase of 1,178*l.* 5s. 7d. over the corresponding six months of 1841. Your Directors have adopted such means as are likely to increase the receipts under this head, by giving every possible accommodation to the public at very reasonable charges, being convinced that such a course was also the best calculated to promote the interests of the proprietors. By the statement appended to this Report it will be seen that the entire receipts on the traffic account, during the past half-year, including rents of carriers' warehouses, &c., amount to 22,586*l.* 13s., and the total expenses, including the unpaid accounts and 5,096*l.* 12s. 5d. for interest on loans, are 18,661*l.* 3s. 6d., leaving a balance—with the surplus of 236*l.* 16s. 5d. from the last half-year, after payment of the dividend—of 4,162*l.* 5s. 11d.; and your Directors recommend that a dividend of 10s. per share shall be declared, to be payable on the 21st September.

In their last Report your Directors referred to the means which were then being adopted, in order to reduce the expenses of the Company to the utmost extent, "consistently with the effective working of the railway, and the maintenance of the line in good condition;" this object has been steadily kept in view, and the Committees appointed for this purpose have devoted much time, and taken great pains, in examining the entire outlay in its minutest details, making such alterations and reductions as circumstances allowed of. By the arrangements now made, and the line having been got into a good and consolidated condition, a considerable saving will be made on the annual expenses; but it is necessary also to state, that with a still increasing traffic, which your Directors confidently anticipate, the outlay for conducting it must be increased; the business done will however, in proportion to its enlarged extent, be carried on at a cheaper rate.

The total number of miles travelled by the engines during the past half-year is 86,500, and the working expenses per mile run, estimated on the net outlay, exclusive of duty, taxes, and interest, are 33 12 100d. The total expenses per mile, including duty, &c., are 51 77-100d., a result which need not fear a comparison with any railway. The continued strict attention of your Directors will be devoted to the object of curtailing the expenses as much as possible, as well as to what is equally important, to use every means in their power for increasing the traffic. On a former occasion they alluded specially to this subject, and they are happy in being able to state that a considerable business in wood, coals, lime, &c., has been procured, and which is still increasing. Your Directors are convinced that there are very few articles for which a railway will not be found a suitable conveyance; and with reference to wood, one of the most bulky and least valuable commodities, the consumers in the interior find the great benefit of it, their goods being brought from Hull almost to their very shops in a few hours, whilst weeks, and even months, have been formerly required for conveying them, at certain times of the year.

One very important item in the expenditure hitherto has been the Government duty on passengers, which, especially on those travelling in third-class carriages, composing by far the greatest proportion of the whole, was very heavy; the duty on the entire receipts of the past half year from passengers being very nearly 10 per cent. To obtain an alteration in this tax has long been the anxious wish of your Directors, for they considered it to be not only burdensome, but unjust. In the early part of the present session of Parliament they applied to other Railway Companies which were interested in the question, and deputations from this and most of the Companies met in London, in order to endeavour to obtain the consent of the Government to a modification of the tax; the most strenuous and persevering exertions were used, and eventually they were crowned with success; the Railway Companies which were benefitted by the original mode of levying the tax, as compared with a per-centage rate, having been induced to agree to pay, and the Chancellor of the Exchequer to accept, a duty of 5*l.* per cent. on the gross receipts from passengers, instead of the tax of one-eighth of a penny per mile on passengers of all classes. The alteration commenced on the 1st of August, and will ensure a considerable saving to this Company. Your Directors think it right to record the unwilling efforts of their Chairman, Henry Broadley, Esq., M.P., in forwarding this desirable object, by constantly communicating with the deputations in London, as well as with the Chancellor of the Exchequer, on the subject; and also to express their high sense of the devoted zeal and indefatigable exertions of your Secretary, which greatly contributed to the satisfactory result of this very important negociation.

The number of passengers who have been conveyed during the half-year ending 30th June, are—

19,962	First-class, whose fares amount to	£3,293	13 10½
17,733	Second-class, ditto	2,498	11 5½
68,912	Third-class ditto	5,310	16 8
	Excess fares	36	7 1
		£11,129	8 8

Making a total of 103,607 passengers, being an increase in number of 15,539 over the corresponding period in 1841.

The total outlay on the construction account is 617,842*l.* 18s. deducting the amount received for land and property re sold. An increase of traffic on your line will make some further outlay necessary for the requisite accommodation it will require; in providing which, your Directors will always bear in mind that such accommodation be obtained as economically as possible.

The accounts of Mr. Charles Faviell, who was the contractor for the works on the Howden contract, have been before the arbitrators, whose award is shortly expected to be made; and your Directors have the satisfaction of being enabled to state that the proceedings in Chancery, as to the costs in the suit with Mr. Bell, have been brought to a termination, and that the result is as favourable as could be anticipated.

In their last Report, your Directors expressed their opinion that it would be desirable to go to Parliament, in the next session, in order to obtain power to convert the money borrowed upon mortgage and on loan into shares, and to increase the capital at such times as may appear to be most advantageous to the Company. A resolution will be submitted to you, sanctioning the application for such power, and they do not anticipate any opposition to the proposed Bill.

Your Directors have now to refer to a subject most important in its bearing upon the interests of the railway, and also of the town at large—the want of further dock accommodation—the great necessity for which has been apparent for several years past. This question has long engaged the anxious attention of your Directors; and the Directors of the railways connected with this line, especially those passing through the manufacturing districts, feel a deep interest in the question, and have repeatedly communicated with your Directors on the subject. The site of the proposed dock is the principal difficulty; the Dock Company having expressed their willingness to make another dock; and a short time ago, deputations from the Manchester and Leeds and York and North Midland Directors, accompanied by a deputation of the Directors of this Company, had an interview with a Committee of the Dock Company, in order to urge upon that body the necessity of making the proposed dock on the foreshore on the west, communicating with the railway—in preference to the Garrison, or the ground belonging to Mr. Raikes, on the east side of the town, very far from the present docks and seat of business. When it is considered that timber and deals are now carried in considerable quantities by the railway, and may be so to any extent—that there is now abundant proof that nearly every description of goods may be advantageously sent by it—and that the line, at a considerable cost, as been brought to the Humber Dock, so as to be more conveniently situated for business than any other railway in the kingdom—and further, that an expense of about 5,000,000*l.* sterling has been incurred to bring a railway communication from Liverpool and the manufacturing districts to Hull, the advantages of which are daily becoming more apparent, and better understood—and that, in a short time, the union of the Liverpool and Manchester Railway, with that of the Manchester and Leeds, at Manchester, will be completed, when goods will be brought from Liverpool to Hull in the same waggon without change, it cannot be supposed that the Dock Company will be regardless of these important interests, as well their own; but that they will see the imperative necessity of making the new dock to communicate with the railway. From these considerations your Directors, in connection with other Railway Companies, will not fail to press their views upon the Dock Company who, they hope, may take the same view of this important question.

Your Directors, whilst they again regret that the great and general depression in trade has continued longer than they anticipated, trust that there are now some cheering indications of improvement. In this our railway will be sure to participate. The traffic in goods, during the past half-year, has been considerable, and it is now steadily increasing both in goods and passengers, as the receipts during the month of June evince, and your Directors do not doubt that this railway will, ere long, take its stand among those which fairly remunerate the proprietors for the outlay. Already it has been of incalculable benefit to the town of Hull and the manufacturing districts, by affording great additional facilities for trade; and it is not doubted that much may be made to a still greater extent on the east coast, what Liverpool has been on the west coast of the kingdom—a principal outlet for the exports of the manufacturing districts, and the receptacle for their imports.

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

THE following is the Report of Mr. Kearsley, for which we could not find room when we reported the proceedings of the meeting. Subjoined is a letter from Mr. Hall, read at the meeting. The subject will be found noticed in our leading columns:—

To the Committee of Management.

Gentlemen,—In compliance with your resolution of the 20th of June last, that I should report to you my opinion respecting Mr. Hall's offer of the use of his apparatus for burning coal in our locomotive engines, I desire in the first place to refer you to my Report of the 3rd of January last, in which, after describing the experiments which had been made with the *Bee* engine, I stated, that a great reduction of expenditure from the use of coal is thence evident, "provided the action of the fire and the great body of gaseous matter generated and ignited by the apparatus, on the different parts of the boiler and engine exposed to it, be not so prejudicial as to counteract the saving in fuel by increased wear and tear." I then proceeded to remark, that "time and hard work alone can give practical proof on this point," and I added that "the application of the apparatus to the *Wolf*, which, when finished, will be much more complete than the *Bee*, will afford ample opportunity of testing the matter, and give convincing and unquestionable proof whether or not I shall be justified in sanctioning its more general adoption," . . . and indicate, "whether the great *apparent* advantage in the use of coal is nominal or virtual," . . . and enable me "to give you a decided opinion whether it will be to the interest of the Company to proceed to its general adoption."

The application of the apparatus to the *Wolf* engine, here adverted to, having been since completed, I have been enabled to make the further series of experiments I then contemplated with this engine, on the comparative effect of each description of fuel, when placed on our regular traffic, and the result, as it will be my duty to show you, is not satisfactory as regards the use of coal, the "advantage" resulting from the former trials having proved to be "apparent" only, or, as I otherwise expressed it, "nominal" not "virtual."

Before entering into the detail of these experiments, it will be proper I should state, that the apparatus as applied to the *Wolf* engine was fully approved of by Mr. Hall in every respect, and was made as complete and efficient as he conceived it possible to be.

The course of experiment I adopted in each case was to run the engine 1,500 miles at the rate of 100 miles per day, with our special goods' train, this being the most regular and the best adapted to give a correct result.

The quantity of coal consumed was at the rate of 65 lbs. per mile, or 9.1 ounces per ton per mile for the gross load moved, and a cost of 21*l.* 17*s.*, which, added to the driver's wages and other working expenses (exclusive of repairs), gave an amount of 48*l.* 6*s.* 10*d.*; but with the addition of the repairs undergone during, and subsequent to, the experiment, the gross amount expended, by running the above distance, was 81*l.* 14*s.* 6*d.*, or an average of 12½*d.* per mile. The rapidly destructive effect of the flame from the coal caused a delay of several days, not only during the progress of the experiment, but afterwards, before the engine could proceed to work with coke.

When these repairs were completed, she was again placed on precisely the same duty as in the experiment with coal, and kept in constant daily work for the same distance, namely, 1,500 miles. The quantity of coke consumed was at the rate of 53 lbs. per mile, or 7.2 ounces per ton per mile for the gross load moved, and at the total cost of 35*l.* 13*s.*, which added to the driver's wages and other working expenses as above (exclusive of repairs), gave an amount of 64*l.* 19*s.* 9*d.* and with the addition of all repairs during this period, amounting only to 1*l.* 7*s.* 1*d.*, gave a total expense of 66*l.* 6*s.* 10*d.*, or an average of 10½*d.* per mile, being 16 per cent. less than the cost with coal in actual expenditure, though with an effect 25 per cent. greater, weight for weight.

It must also be recorded that the water in the tender was hot during the experiment with coal, and cold during the experiment with coke.

During this latter experiment, the engine required no further repairs than the ordinary tightening of cotters, and is now in as perfect working order as when the experiment was commenced.

The amount of repairs caused by the use of coal cannot fail to appear very great, but it is an accurate statement of the repairs actually incurred in running the 1,500 miles with coal, and may be better understood when I state to you that in the course of the first ten days several of the steam joints at the smoke-box end of the engine were burnt out, causing some days delay. These were repaired, but by the time the experiment was finished, others had failed most extensively, which involved a general renewal of all the joints throughout that part of the engine, and caused a further delay of a fortnight before the engine could be again put to work.

But besides these effects I find there are others of a more important nature, which must tend to the great injury and depreciation of the engine, if not to serious accident, to which they cause a constant liability. The small particles of coal, which are driven in a half-burnt state through the tubes, are, after the engine has travelled a few miles, collected in a mass in the bottom of the smoke-box, and these being at length acted upon by the flame from the fire, are brought to such an intense heat that the cylinders become nearly red hot, which not only renders it impossible to keep any lubrication to the pistons, but incurs very great risk of the cylinders being cracked by the working of the pistons in this dry state.

The plates of the smoke box are also made red hot, becoming buckled and out of form, and all the stuffing boxes require repacking nearly every day.

I felt much dispointed with these results, and was at first somewhat at a loss to account for the difference in effect on this engine and the *Bee*. I now attribute it, however, in some measure to the size of the fire-box of the *Wolf*, as compared to that of the *Bee*, but still more to the running long distances with the *Wolf*, and pulling in all cases a nearly maximum load, which had not been done with the *Bee* engine.

It is a source of satisfaction to me to be confirmed in this view by the results communicated to me by Mr. Marshall, who is at the head of the locomotive department of the North Midland Railway, as to the working of Mr. Hall's apparatus on two of the engines of that Company. They first commenced running short trips with frequent stoppages, and such favourable effects were produced, that Mr. Marshall

Digitized by Google

was induced to place one of the engines on the traffic between Derby and Normanton, but a few days showed the same results as I have stated in the case of the *Wolf*. So intense and incontrollable was the flame, that the whole smoke-box end of the engine was a mass of fire, and the heat was intense enough to ignite the sand boxes, which are carried on the frame of the engine.

The fire was discharged from the chimney in such dense volumes, that the guards and enginemen were in constant fear of the goods being burned. The consumption on the North Midland Railway in these trials, was 25 per cent. more of coal than coke.

I have a statement also from Mr. Kirtlay of the Derby and Birmingham line, showing a very great loss to that Company in the consumption of fuel alone, insomuch that the burning of coal has been abandoned on that line altogether.

The Manchester and Leeds Company have made a similar trial, but with such unsatisfactory results as to cause them to abandon it also.

With these facts before me, elicited by my own experience, and confirmed by the experience of others, I most certainly cannot recommend you to proceed further in a project so dangerously uncertain in its results, and which would entail constant expense without any prospect of eventual good, with a certainty of requiring a much larger number of engines to do the same quantity of work.

I have given this subject much careful consideration, in the earnest hope of success; and I have taken every precaution to have the engine used in these experiments as complete in every respect as possible; nor is it without having weighed the matter fully and deliberately, in every point of view, that I have arrived at the decided conclusion I have announced to you: but the more I consider the subject, the more assured I am that my decision is sound, and such only as a regard to your interests can justify me in adopting.

I conclude by reiterating what I expressed to you 12 months ago, when this subject was first mentioned, viz., that "coal cannot be advantageously used as fuel for locomotive engines, under their present construction," and "running at the high speeds required on the railways of the present day."

I am, Gentlemen, your most obedient servant,
JOSIAH KEARSLEY.

Derby, August 9, 1842.

Derby, August 13, 1842; 11.45. a. m.

Gentlemen,—I have this moment for the first time seen a Report of Mr. Josiah Kearsley, dated 9th instant, to the Committee of Management of the Midland Counties' Railway. Mr. Kearsley's motives for not letting me see a copy of it, as he did on the occasion of his former Report, viz., of 3rd January, are obvious.

I have not time before you meet this morning to say more than that I pledge my word to prove in due time that the first mentioned Report is a tissue of most garbled and incorrect statements, to use the mildest terms, and that it will prove a lasting monument of disgrace to the writer both as a scientific man and as an honourable man. "Mighty is truth, and will prevail," as will ere long be shown in this case.

I have only time to use one argument in opposition to Mr. Kearsley's statements, viz., to repeat the offer contained in a circular I addressed to you on the 11th inst., to contract with you for the running of your trains at 20 per cent. less than the present cost of fuel, giving you the needful security for the due performance of my contract.

Requesting that this hurried letter may be read to the meeting now being held,

I am, Gentlemen, your most obedient servant,
SAMUEL HALL.

The Directors of the Midland Counties' Railway.

GREAT NORTH OF ENGLAND RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors was held on Tuesday last at Darlington, but the particulars have not reached us. The resolutions will be found in our advertising columns. The following is the Directors'

REPORT.

The Directors have to report that since the last meeting of the proprietors the Royal Assent has been given to an Act of Parliament, authorising the entire abandonment of that portion of the Great North of England Railway situated between Shincliffe West House and Newcastle. The Company is thus relieved from the very heavy responsibility of having to attempt the execution of works of great cost and unusual magnitude. The sanction of the legislature has also been obtained to the plan, already submitted to the proprietors, of forming a railway to Newcastle, by means of a Company on whose shares a fixed dividend of 6 per cent. is guaranteed for ten years by the various Railway Companies interested in the measure. The shares in the new Company have been all taken up, and the ground staked out, and in part purchased.

During the last half-year, almost the whole of the Company's engagements for materials and contract work have been discharged, and the contracts closed, with the exception of two, which are expected to be shortly settled. The only works of any consequence remaining are the bridges at Darlington Bank-Top and Haughton-lane, which will be commenced immediately.

The Directors observe with satisfaction that in coal, merchandise, lime, and fish, and in the local traffic generally, there is a progressive increase; at the same time, they cannot avoid the expression of their disappointment that the general revenue is below what, judging from the experience of all other lines, they conceived they were warranted in anticipating.

In drawing a comparison with the receipts of last half-year, it will be remembered that the first half of the year is invariably less productive than the latter half. The number of passengers conveyed during the last six months has been:— First-class, 14,833; second-class, 25,486; third class, 37,620; making in all, 77,939.

According to the arrangment already sanctioned by the proprietors, the expense of repairing the way after the 31st of March, 1842, is charged to the revenue account.

The usual half-yearly statements of accounts are submitted to the proprietors The revenue account will show a balance of profit on the half-year (after deducting the reserve fund, 4,268*l.* 13s. 5d.) of 9,503*l.* 8s. 9d. Out of this the Directors recommend a dividend to be declared of 1*l.* 5s. 0d. per share, which on 6,991 shares will amount to 8,738*l.* 15s 0d., leaving a balance of 764*l.* 13s. 9d., which they propose should be appropriated to paying the income tax, and the residue added to the reserve fund.

The Directors have to lament the extraordinarily depressed state of the country, and stagnation of trade, which have seriously affected the receipts of this line, in common with those of all other railways.

Revenue Account for the Half-year ending 30th June, 1842.

GLASGOW, PAISLEY, KILMARNOCK, AND AYR RAILWAY COMPANY — GENERAL MEETING.

[From the *Glasgow Constitutional* of Wednesday.]

THE eleventh half-yearly meeting of the shareholders of this Company was held yesterday, August 29, at 1 o'clock, in the Railway Office, Bridge street, Glasgow; JAMES M'CALL, Esq., of Daldowie, in the chair.

The SECRETARY (Mr. Smith) read the following

REPORT.

The severe depression which has existed in every department of trade, has placed it beyond the power of your Directors to lay before you any very flattering report of increased traffic during the period which has elapsed since the last meeting of shareholders. The utter prostration under which the industrial energies of the country have so long laboured, has had a marked effect on the traffic of railways throughout the kingdom, and on most lines there has been a considerable falling off in the revenue.

Your Directors, however, have the satisfaction to state, that notwithstanding the many disadvantages with which they have had to struggle, there has been an increase in some branches of their revenue during the past half-year, as compared with the corresponding period of 1841. In making a comparison, however, of the passenger receipts on the thorough line, during the above period, it must be borne in mind, that during this season no aid whatever has been derived from steamers from Fleetwood and Belfast; while last year the number of passengers was considerably augmented from these sources.

The revenue on the joint line, on the other hand, has undergone a material diminution in its amount; this your Directors are disposed to ascribe principally to the distress in which Paisley and its neighbourhood have been so long involved. Some portion of this falling off, however, may perhaps be attributed to the low fares and competition of the Canal Company, which your Directors have met by a reduction of the railway fares, and this the recent change in the mileage duty on passengers has enabled them to make without a corresponding pecuniary loss.

With regard to the goods and mineral traffic on the thorough line, a full comparison of the revenue of this half-year with that of its predecessor cannot be had, as this branch of the traffic was last year, previous to April, barely developed; but the following analysis will show the increase which has taken place in the four months, commencing with April—

	1841.	1842.	Increase.
April, ...	£716 4 3 ..	£1,150 3 1 ..	£433 18 10
May, ...	741 18 5 ..	1,136 19 10 ..	395 1 5
June, ...	872 17 3 ..	1,100 4 11 ..	227 7 8
July, ...	904 14 4 ..	1,195 12 4 ..	290 18 0

The receipts of this year would have shown a still greater increase, if the different ironworks on the line had been in operation; but the temporary suspension of the Blair ironworks, and the general depression of trade, especially in that of minerals, pervading the whole district intersected by the railway, have had a most unfavourable effect on this branch of the revenue. Your Directors, however, are glad to state, that another of the extensive ironworks in the immediate neighbourhood of the line is soon expected to commence working; and they earnestly hope, that the general revival of trade, now so confidently anticipated by the mercantile world, will tend largely to augment their receipts, as they are induced to think that no correct judgment can yet be formed of the ultimate point to which the goods and mineral traffic is capable of being extended.

The expense of working the line is nearly similar in amount to that incurred during the previous half-year, after an allowance is made for the additional month included in the present period. The principal reductions which have been effected are in the articles of coke, stationery, advertising, and printing; while, on the other hand, the economy practised in these has been neutralised, in some measure, by the deductions from the revenue caused by taxes and assessments of various descriptions, over which your Directors can exercise no control; but they beg to assure you, that they still continue to keep a vigilant watch over the expenditure of the whole establishment, and to enforce every reduction which has not the effect of impairing its efficiency. The ability which they feel to conduct a more extended traffic, without a corresponding increase of expense, induces your Directors to look forward with satisfaction to the opening of the Kilmarnock branch, when they trust that the working expenses of the line will be very considerably reduced in proportion to the receipts.

Your Directors have availed themselves of the powers conferred by the Company's recent Act of Parliament, to alter the half-yearly balances from 30th June and 31st December, to 31st July and 31st January. This alteration has been adopted for the purpose of equalising, as far as possible, the divisible receipts in each half-year, and to prevent consequent fluctuations in the amount of dividend.

It will be in the recollection of the shareholders, that at the last half-yearly balance, the sum of 1,544*l.* 16s. 3d. was carried to the credit of a depreciation and contingent fund; and on examining the accounts for the present period it will be noticed that this sum, under certain deductions, forms part of the balance of 11,797*l.* 12s. 6d. of undivided profits. Your Directors are still thoroughly convinced of the necessity which exists for a regular and specific appropriation of some portion of their profits to the formation of a fund to cover the depreciation of the plant of the railway, and to meet other contingencies, as provided for in their Act of Incorporation; and accordingly, at this balance, they have so set apart 860*l.* 2s. 6d.—a sum much too low, in their estimation, to serve as a model for future years; but, in doing this, they have been influenced by the conviction, that no true criterion of the resources of the railway can be formed from the results of the traffic during the last 18 months—a period of mercantile depression without a parallel in this country. Your Directors, however, in looking forward with confidence to an improvement in every branch of their revenue, will consider it their duty, in future, regularly to appropriate a larger portion of the profits in this manner, being firmly convinced that nothing will tend more to increase the confidence of the public in the management of the establishment, than to imitate the example of the leading English lines in this respect. They accordingly now place at your disposal the sum of 10,937*l.* 10s. which will allow you to declare a dividend of 17s. 6d. per share, payable on 15th September next.

The adjustment of accounts with the Greenock Company, relative to the apportionment of the price paid for the property at the Glasgow terminus, and of other unsettled matters, is in progress, and your Directors trust soon to have it in their power to report a final settlement.

Your Directors have great satisfaction in adverting to the complete success which has crowned the efforts of the associated Railway Companies, to obtain a modification of the mileage duty on passengers. This important change came into operation on the 1st of August, and instead of this Company being compelled to pay a tax of about 11 per cent. on their gross receipts, the mileage duty will in future be 5 per cent., besides relieving the Company, by the mode of its exaction, from a troublesome system of making out the returns. On the present revenue of the Company therefore, there will be a saving of at least 2,000*l.* per annum, and the gain will be proportionally increased, as the resources of the Company become more truly developed.

This modification of the mileage duty will afford great facilities in making arrangements for special trains and pleasure excursions, which your Directors are of opinion ought to receive every encouragement, as they consider it to be a public duty to afford to the working classes the means of health and recreation at a cheap rate; and they feel satisfied, that in pursuing a liberal policy in this respect, the revenue of the railway will not sustain any loss.

The shareholders are already aware of the steps which have been taken for the raising of additional capital under the new Act of Parliament. In obedience to the resolutions passed at the adjourned special general meeting of shareholders, held on the 22nd of June, your Directors caused a circular to be forwarded to each proprietor, offering the new quarter-shares in proportion to the number of old shares held at the time. Under that allocation, a large proportion of the shares was taken up, the unaccepted stock being chiefly that appropriated to shareholders residing in England, by whom the advantages of the scheme are not so well understood and appreciated. After the above allocation was made, your Directors, in compliance with the wish so generally expressed at the meeting above referred to, caused a second circular to be issued to all the shareholders, inviting applications for the remaining unappropriated shares; and they have now apportioned the whole new stock, with the exception of about 1,000 shares, among the proprietary: this unappropriated stock, your Directors have resolved to hold, in the meantime, for the benefit of the Company.

Your Directors are happy to report, from a recent personal inspection, that the works on the Kilmarnock branch are rapidly advancing towards completion; and Mr. Miller, the Company's engineer, states, "that he has never before seen a line of the same extent proceeding more satisfactorily." This fine season has been of the utmost value in aiding the operations of the contractors, by allowing a greater portion of work to be executed, and the embankments to be formed in a substantial manner. A considerable part of the permanent way has already been laid, and your Directors believe that it would be quite practicable to open the line on the 1st of January next; but they are of opinion that it will be better to delay the opening until the end of March, or the beginning of April, a period more favourable for traffic, by which time the embankments will have gained greater consolidation, and the after cost of maintenance on this account would be materially lessened. The erection of the requisite station house, &c. at the Kilmarnock terminus, is now under consideration, and it is expected that there will be a material saving in its expense, from the present low price of labour and materials.

Your Directors have lately been enabled to form a temporary arrangement with the proprietors of a steamer, to ply between Ayr and Stranraer, and the intermediate ports, in connection with the railway. They feel anxious to extend the traffic arising from steam-boats plying to ports on the Ayrshire coast, as they feel assured that, if judiciously cultivated, it cannot fail to be attended with the most favourable results.

The continuance of entire freedom from accidents on this line is a subject of sincere gratulation. The number of passengers since the opening of the railway, in August, 1840, amounts now to about 2,000,000.

The usual balance-sheets are appended.

JAS. M'CALL, Chairman.

Traffic Balance-Sheet, 30*th July*, 1842.

JOHN BASS, Manager of Joint Line.
J. FAIRFULL SMITH, Secretary to the Glasgow and Ayr Railway Company.

The CHAIRMAN said, he had but lately arrived from England, where he had been for some time, and he was consequently unable to attend the meetings regularly; but his friend Mr. Fleming, the Deputy Chairman, or some of the other Directors, would be ready to give such explanations as might be required by any of the shareholders. As one of the resolutions to be proposed, he might state, that owing to the Directors being reduced from twenty to twelve, it had been resolved to reduce the Directors' allowance from 600*l.* to 400*l.* He had sometime ago received a letter from Mr. Dykes and some other shareholders, that the number should be reduced even lower than twelve; but the Directors considered that in fixing the number at twelve for the present, they were acting in accordance with the Act of Parliament. He would therefore refer them to the Act of Parliament, which provided that the Directors should meet one hour before the present meeting, and by ballot determine which eight out of the twenty should retire. In accordance with this the ballot had been taken, and the Directors who were to remain in office were the following:—

Messrs. James M'Call, John Fleming, Lord Eglinton, Messrs. Wm. Brooks, H. Miller, G. M. Nisbet, James Campbell, Theo. Walrond, Archd. Smith, John Miller, John Leadbetter, and Wm. Logie.—Hereafter the number might be reduced to nine, but at present the Directors could go no lower than twelve.

Mr. DYKES thought they could have reduced the number to nine.

At the request of Mr. M'Clelland, Mr. Dykes' letter was read, which proposed a reduction to nine, the smaller number generally securing the best attendance and the most efficient exertion.

The CHAIRMAN said he had received the letter while in London, and he had written in reply that the proposal would not answer. If it were possible to secure proper attendance even with six Directors, he would have no objection, but they could not expect that mercantile men should give up their business, and sit as Directors night and day. On the Birmingham and Gloucester, and another railway, they had reduced the Directors to five working men, but they found that with that number the business would not work, and they had now increased the number. Even with the five the Chairman only attended regularly, and the result was, that although in one of the cases 5000*l.* were received from the Post-office, there was no dividend.

Mr. D. SMITH inquired if the Directors could inform him whether the construction account on the joint line were yet closed?

The CHAIRMAN—No.

Mr. D. SMITH asked if they could approximate to what might yet be required to finish the joint line; and also whether they could give any idea of the ultimate expense of the Kilmarnock line?

The CHAIRMAN stated, that in reference to the joint line they were in rather an awkward situation. It was not yet completed, but the Board had no control over it, it being under the charge of four Directors of the Greenock and four of the Ayrshire line. The delay had in some measure arisen from the absence for some time of the Engineer.

Mr. D. J. BANNATYNE said, the delay partly arose from difficulties in the settlement of an arbitrated case, and in this case only was there any doubt of what the expense would be. The statement given in by him was fully larger in amount than what he expected it would ultimately be.

Mr. CUTHBERTSON wished to know what the sum might be which was yet unpaid?

Mr. A. SMITH said, from 6000*l.* to 7000*l.* would be about the sum required to finish the joint line. The expense of the Kilmarnock line was expected to be about 175,000*l.*, of which about 90,000*l.* were paid. The whole cost of the main line and the Kilmarnock branch would be about one million. He did not anticipate any extra expense as to the plant of the Kilmarnock Railway, except for mineral waggons.

Mr. D. J. BANNATYNE said, the only doubtful claim was one by Major Montgomery, in regard to the amenity of his lands.

Mr. WEIR said, it might be recollected that at the last meeting he had objected to the amount of dividend proposed, as it encroached on what he thought should have been left as a reserved fund. Last year it only amounted to 1500*l.*, and by the proposed dividend of this year it would be reduced to 800*l.* While he gave the Directors every credit for their motives, he much doubted if the shareholders would not complain at the closeness of the 17*s.* 6*d.*, when they found that the interest on the debentures was calculated only on six months instead of seven. Besides 250*l.* required to the paying the income tax, there was 850*l.* for one month's interest on debentures, making a charge of at least 1000*l.* against last half-year's receipts not allowed for. In these circumstances, he was afraid the dividend of 17*s.* 6*d.* would not be sustained next half year; and although a dividend of 3½ per cent. would tend to keep up the shares, he thought it should be made 16*s.* 3*d.* instead of 17*s.* 6*d.* per share. This would leave a reserve fund of 1600*l.* He hoped the shareholders would not forget his former observation, that very low fares on railways would not pay. On the Birmingham and Gloucester Railway the fares were as low as 2*d.* per mile, and it was the opinion of persons of extensive experience that this was far too low; but the fares on the Ayr Railway were as low as 1½*d.* or 1¾*d.* It was expected that wonders would be wrought by the opening of the Kilmarnock branch; but it should be kept in mind, that against this there was 8000*l.* a year for interest of capital, besides 5000*l.* a year for working. In these circumstances the Directors should not be too sanguine of the Kilmarnock branch.

Mr. FLEMING, the Chairman, having left it to some of the Directors who were present at the various meetings to reply to questions, although not very adequate to the task, he would say a word or two in

Digitized by Google

answer to some of the remarks which had just been made. He was quite convinced that the Directors did not need to fear a more searching inquiry than had already been made by the gentleman (Mr. Weir) opposite, and for the general scope of his remarks he was sure they all felt indebted to him. As to the amount of the dividend, and the conduct of the Directors, he (the Chairman) was sure that Mr. Weir would do them thus far the credit of acknowledging that at the last meeting the shareholders had forced upon them a dividend greater than the Directors themselves considered it prudent in the circumstances of the Company to recommend. And as to the ground of his fears on the present occasion, he could assure the meeting that the Directors had given the subject the most anxious and attentive consideration before they determined to recommend a dividend of 17s. 6d. But after due deliberation they did resolve to agree to it. They had a much better opinion of the next six months than Mr. Weir seemed to have, and from careful consideration they were persuaded that the returns in the half-year to come would be greater than in the seven months now past; and it was to equalise the two half-years that the Directors had got the periods of balancing their accounts changed. They had, besides this, the prospect of realising a saving of 2,080*l.* from the change which had taken place in the rate of duty payable to Government, which saving would be available for next dividend. The Directors had in these circumstances recommended 17s. 6d., in the firm hope that they would be able to maintain it at that sum next half-year, and even to go beyond it by and by. The last speaker had mentioned one thing at which the shareholders might be astonished—the statement that it would cost 5,000*l.* a-year for working the Kilmarnock branch. The only additional outlay in regard to the plant of that branch which the Directors could contemplate was for additional mineral carriages, and perhaps an agency at a station, which the police could easily supply. This was all the additional plant they anticipated; and, on the whole, he had the most favourable opinion of the effect of opening the Kilmarnock branch. The great source of traffic would be the goods on that line; and there was every prospect of their getting the whole of that, independent of the passenger traffic. Besides, it was found on all railways that passengers increased as the means of accommodation were increased.

The CHAIRMAN said, the last meeting had overruled the opinion of the Directors, and resolved on a dividend of 17s. 6d. It was not pleasant to reduce the dividend now, unless they were afraid of having gone too far before, and were not sanguine of an improvement in the next six months.

Bailie LEADBETTER said, the Directors were anxiously desirous that the dividend should be kept up next six months, and although that involved future and uncertain events, he agreed with the Directors that there was a very fair prospect of keeping up the 17s. 6d. The Directors considered it better to keep the dividend within the mark, and had it not been for the shareholders, last dividend would have been less; but as this half-year's revenue was nearly the same as last, and as there was a good prospect for the next, the Directors had agreed to recommend 17s. 6d. As, however, the shareholders had raised the dividend last half-year, they might lower it to 16s. 6d. this one, and thus square accounts with the Directors.

Mr. P. BLAIR spoke in favour of keeping up the dividend to what the Directors recommended, particularly as he knew the Glengarnoch ironworks would be in blast in November, and those of Blair most likely during the winter.

After some further conversation, the Report was agreed to.

Mr. A. M'NEIL, advocate, moved that the dividend be 17s. 6d. per share, exclusive of the income tax. Seconded by Dr. ANDERSON.

Mr. WEIR moved, and Mr. C. BELL seconded, that it should be only 16s. 3d.; but after some remarks from Bailie Leadbetter and others, Mr. Weir withdrew his proposition, and Mr. M'Neil's motion was unanimously agreed to.

It was then agreed that the allowance to the Directors should be 400*l.* a-year; and after voting thanks to the Chairman and to the retiring Directors, the meeting broke up.

DUBLIN AND DROGHEDA RAILWAY.—Messrs. Dargan and M'Cormack are declared the contractors for the remaining works, unlet, of the Dublin and Drogheda railway, at 60,000*l.*, being bound to complete same by October, 1823. There were thirty tenders from contractors both from England and Scotland.

MANCHESTER AND LEEDS RAILWAY COMPANY—GENERAL MEETING.

THE twelfth half-yearly meeting of the shareholders in this Company took place on Thursday last, at the Company's offices, Hunt's Bank, Manchester. The attendance was not very numerous, about fifty gentlemen being present; HENRY HOULDSWORTH, Esq., the Chairman of the Board of Directors, presided.

Mr. JELLICORSE, the Secretary, having read the advertisement convening the meeting,

The CHAIRMAN said, their first business was to seal the register of proprietors, according to the requirement of the Act of Parliament. With regard to the particulars of the register, it might be interesting to the proprietors to know that there were now 752 proprietors upon the books: of these 452 were resident in Lancashire, and 330 out of Lancashire; of the latter, 94 resided in Yorkshire. Of the capital already paid up, 65 per cent. had been paid up by proprietors residing in Lancashire; 4 per cent. by proprietors in Yorkshire, and the rest by proprietors residing in other parts of the country. The Chairman then put the question that the seal of the Company should be affixed to the register, which was carried.

W. ENTWISLE, Esq., one of the Directors, was then called on to read the Report;—

DIRECTORS' REPORT.

The subject of the half-yearly revenue account now submitted to the proprietors will upon this, as probably on all future occasions, form the most prominent and interesting portion of the Report of the Directors, involving as it does the issue of a speculation always attended with many difficulties, but always holding out a fair prospect of ultimate remuneration. These expectations however never have been, and in all probability never will be, put to a severer test than in the half year ending upon the 30th June last, and the Directors will proceed at once to state the general results (the particulars of which will appear in the annexed accounts) without further preface, feeling assured that they need only refer in common with all similar undertakings to the period of commercial depression, now it is hoped passed over, as a sufficient cause for the partial disappointment which has been experienced.

The total receipts during this half year have been 109,747*l.*, or on an average 4,221*l.* per week, which amount, together with the receipts for the half-year ending December last, viz. 116,774*l.* will give an average for the twelve months ending on the 30th June last, of 4,356*l.* per week.

The total expenses chargeable on revenue during the six months ending on 30th June last have been 45,044*l.* including 6,436*l.* for rates, taxes, and duty on passengers, and 8,508*l.* for maintenance of way, the whole of which had previously to those six months devolved upon the Company; and coupling this result as before with that for the preceding half year, we shall find that upon a total gross receipt for the twelve months of 226,521*l.*, the total expenses have been 85,277*l.*, (or 37¾ per cent.,) exclusive of the charge for superannuation of working stock, which it is proposed to deduct from the income of the second six months in each year, as a means of equalising the net profits of the two half years, and maintaining the spring and autumn dividends at an equal rate, notwithstanding the unequal receipts of the two periods.

The proportion of interest on borrowed money chargeable on revenue account for the half year ending on the 30th June last, after taking credit for interest received, amounts to 33,107*l.*, so that the total charges upon the revenue for the half year, comprising accounts Nos. 3 and 4, and consisting of

Working expenses	£28,608
Rates, taxes, and duty on passengers . . .	6,436
Balance of interest chargeable on revenue . .	33,107
Amount to .	£78,151

leaving a net surplus upon the half year of 31,595*l.*, which forms together with the reserve of undivided profits a sum of 44,531*l.* at the disposal of the Company, independent of the depreciation fund in hand which remains for the present 7,605*l.* as formerly stated. Out of this undivided profit the Directors recommend that the income tax be paid, and in addition a clear dividend to the proprietors of

38s. 6d. on the 100*l.* shares	}	being at the rate of 2½ per cent. for the half year.
16s. 6d. „ 50*l.* „	}	
2s. 0d. „ 25*l.* „	{	being at the rate of 5 per cent. for the same period.

These payments will amount to 37,596*l.*, leaving 6,935*l.* as a reserve to be carried forward to the next half year.

The total disbursements of the Company on capital account up to the 30th of June last amounted to 2,913,110*l.*, leaving 335,890*l.* of capital unexpended.

The contracts upon the main line are all, with the exception of three, wound up and settled, as well as those on the Oldham and Heywood branches.

During the half year the Directors have procured what capital they required at a reduced rate of interest, and have also renewed on favourable terms a considerable proportion of the earlier bonds which have become due. They have also every prospect, from the improved state of the money market, and the increased confidence of capitalists in placing their money in railway securities, of materially lessening by degrees the charge for interest on the borrowed capital of the Company.

The Oldham branch was opened for passengers on 31st March, and has brought an accession of traffic which will be materially increased when the connection is completed with Liverpool.

The cost of this branch has not exceeded the estimate of 45,000*l.* given in the last Report.

The land for the Halifax branch has been purchased.

The proprietors are no doubt generally aware that, after much difficulty and anxiety, an amicable arrangement was concluded in April last, between the Liverpool and Manchester and the Manchester and Leeds Companies, for the immediate completion of the Hunt's Bank Extension line. In pursuance of the agreement the necessary land has been bought, and this Company has already entered into contracts for the works on that part of the line which extends from York-street eastward to the point of junction with the present line, and the works are already in active operation. The arrangement contemplates a joint station between the Liverpool and Leeds Companies at Hunt's Bank, plans of which are under the consideration of the two Companies, and the Directors are able to report that, from the activity displayed by the Liverpool Company in proceeding with the purchase of land, and obtaining a new Act of Parliament for a deviation considered necessary in order to avoid passing over part of the Bolton line, they entertain a confident expectation of completing a line for the transit of goods in the course of the ensuing spring, and of opening the whole line together with their joint passenger station at the central point of Hunt's Bank, during the following autumn.

Your Directors need not dwell upon the importance attached by them to a continuous railway connection between the Leeds line and the port of Liverpool, confirmed as their opinion has so frequently been by the proprietors. They feel assured therefore, that in the steps they took to obtain a survey of a northern line, when the Liverpool Company in March last came to the conclusion of abandoning the Salford Junction, they will have the approval of the proprietors, and under the circumstances their sanction to charge the cost of the survey to the extension line.

The local character of a very large proportion of the traffic has already been more than once referred to, as attested by the average receipt from and average distance travelled by each passenger, the former being 2s. 1¾d. and the latter 13¾ miles for the last half-year; and the apparent disproportion of through traffic has been still further increased by the opening of the Oldham branch line; but though the same causes will always keep these averages at a very low point, yet the Directors confidently anticipate a considerable increase in the number of through passengers, when the junction with the Liverpool Railway, and the opening of the northern line to Newcastle, shall have constituted an unbroken line of railway communication from the whole of this densely populated district as far north as the Newcastle and Carlisle Railway, and by that means with the whole north of England and Scotland, by a more rapid passage than can yet be effected.

The Directors have great pleasure in reporting that the efforts of this, in conjunction with other Companies, to obtain some modification of the tax hitherto charged on passengers of ¼th of a 1d. per passenger per mile have been successful, and that the tax has been altered to one of 5 per cent. upon the receipts from passengers of all Companies, which will effect a reduction of about 2½ per cent. in the tax hitherto levied upon the passenger receipts of this Company, and thereby more than compensate for the temporary deduction of 7d. in the pound, or about 3 per cent. imposed by the Income Tax upon the dividends of the Company.

For this result your Directors believe that those

Digitized by Google

railways, which from the lowness of their fares were previously taxed to the amount of 7, 10, and even 12 per cent. upon their passenger traffic, are mainly indebted to the able representations made and evidence given by Captain Laws, R.N., before the Board of Trade and the Select Committee on Railways, and your Directors have great pleasure in making their public acknowledgments to that gentleman for the great service he has thus rendered to this Company.

JOHN JELLICORSE, Secretary.

Audited and found correct,

SAMUEL E. COTTAM, Public Accountant.

August 26, 1842.

Applause followed the reading of this Report. The accounts were not read, a copy being in the hands of each proprietor.

The CHAIRMAN then spoke as follows:—Gentlemen, the Report which we present to you on the present occasion will I trust, upon the whole, be considered as satisfactory, although it necessarily partakes of the character of the times in exhibiting a smaller amount of business than we had reason to expect, and a smaller amount than is consistent with a due return for the enterprise in which we are engaged. In the absence of any exact measure of the amount of income we were likely to receive, I felt it my duty, about this time last year, to present to you some statements regarding the probable amount of traffic we might expect. Those estimates were the result of the development of traffic on other lines; and, inferring that the development of traffic on our line would partake of the same character, and probably proceed in something like the same ratio, we arrived at the conclusion that we had reason to expect a revenue during the year 1842, of something like 250,000*l.* I have no hesitation in saying that our revenue is, under the present circumstances, not likely to reach that amount, and it becomes therefore a question of interest how far the deficiency arises from temporary or from permanent causes. If this amount of revenue had been realised, I should have expected that about 116,000*l.* would have been the revenue of the first half year. Our income, as you will perceive by the accounts, amounts barely to 110,000*l.*, leaving, in fact, a deficiency of 6,000*l.* from what we had reason to expect. This deficiency amounts to about 5½ per cent., and the question of interest is, I think, whether there were temporary causes in operation during the past year to account for a deficiency to this extent. Now, I know of no way of measuring the effect of the causes that have been in operation. The existence of such causes is generally admitted by every gentleman present—the depressed state of trade, and the prejudicial effect which it must have on the revenue of those railways which exist in that part of the country where the depression is greatly felt. I say there is and can be no difference of opinion as to the cause; the only question will be as to the amount. Now, in order to arrive at that, it has appeared to us that there was no better way than to look at the amount of the depression of revenue in those other lines in our neighbourhood, which more or less partake of the character of our own; that is, lines passing through a manufacturing country, and depending more or less on the prosperity of manufactures for the amount of their traffic. If we take the three lines terminating in Manchester which have been longest in operation, and whose traffic we may assume to have reached a regular and maximum point, we find, in all these cases, that there has been a most remarkable diminution of income; in fact, the general diminution of income on railway traffic is seen by a reference to the Railway Reports—three out of four that I have seen for this last half year commencing with the fact of the diminution of their income arising from the state of trade. The Manchester and Liverpool Company in their Report state that the effect has been to diminish their income, but from causes which they allude to, and which are known here, no exact measure could be had of that effect by looking to their traffic in goods; but their traffic in passengers had been diminished to the extent of 4,600*l.* in the half-year, by a diminution of about 7 per cent. compared with the corresponding six months of last year. The Bolton Company, another line where we may presume the traffic to be dependant on the state of this district has suffered in a greater degree, their revenue having fallen off 940*l.* in the half-year, being at the rate of 9½ per cent. The Grand Junction Company also state that their traffic has been affected to the extent of 4,000*l.* odd, but that the Manchester branch of their traffic particularly has been affected to double the extent, or to the amount of 8,000*l.* This I think will satisfactorily show that we have a right to set off either the whole or a part of the deficiency that we regret, to these causes. And if these Companies have suffered to the extent of from 7 to 10 per cent., as I have shown, I think no one who looks to the district through which our line runs, who looks also to the character of our traffic, seeing that such a large proportion of it is local, as stated in the Report, our average receipts being only 2s. 1¾d. for each passenger, and the average distance travelled 13¾ miles—taking that into consideration, and seeing how much our traffic is dependant on the local condition of the population, I think we cannot but arrive at the result that the amount of deficiency which we regret, namely, 5½ per cent. in our passenger traffic, is almost less than we had reason, under the circumstances, to expect. I think, therefore, that we may assume the traffic of the last half-year to be, under the circumstances, more than we could reasonably expect had we foreseen the state of the district; and that for the future we may look on the present receipts as being the smallest which, under the most adverse circumstances, we can anticipate. (Applause.) Our working expenses we stated about this time last year, from the experience we had then had, we hoped to keep within 100,000*l.* per annum. Another half-year has passed; and you will perceive by the accounts that that expectation is likely to be realised. The amount of allowance for superannuation we have, for causes stated in the Report, not added to our expenses of this half-year. If this were added, the amount of our expenses would be at the rate of 100,000*l.* to 101,000*l.* for the year. We know that there may, even at the end of 12 or 18 months, during which the railway has been opened through, be still further expense which time will bring upon us; but, on the other hand, we have every reason to believe that there are branches in our expenditure which we may be able to diminish; so that we do not look for any great excess on this important point. With regard to the application, or rather to the principle of debiting the revenue account with the allowance for superannuation only once in twelve months instead of half-yearly, we think that is fully justified by the fact, that while the income of all railways is smaller during the first half-year than the second, the expenses are invariably larger. The maintenance of way is necessarily increased during the winter months; and the repairs of damage caused by the weather in the winter months falls upon the spring expenditure. At the same time, the expense of power is very much increased during the winter, and the wear and tear of the locomotive department falls chiefly upon the spring half-year. So that we conceive we are equalising the profits by carrying the whole of our depreciation fund to the debit of our revenue only once a-year; by that means we shall very nearly equalise the net profit, and shall have the means of equalising the dividends, which I believe is felt to be an important matter by the proprietors generally. I need not detain you further than just to allude to the arrangements which, after the last half-yearly meeting, we had the pleasure of making with the Liverpool and Manchester Company. Those arrangements were entered into with a spirit which leads us to hope, and expect, that when the junction is formed between the two Companies, our traffic will be conducted upon a principle of mutual co-operation, which will be beneficial to both Companies; and, since our Report was written, I am happy to say that a considerable contract upon that portion of the line which the Liverpool Company has to complete, has been let, amounting to about 40,000*l.*; which is a further indication of their determination to push on that important work. In the meantime, our own works are going on, and, shortly, we expect to be able to commence the works at the station. In connection with this matter, I would draw your attention to the subject noticed in the Report, as I am anxious, at all times, that the proprietors should fully understand every point that may be at all questionable in the proceedings of the Directors. The proprietors will perceive, by looking at the Report, that we have debited the extension line with the expense of a survey which was got up for a northern line to Liverpool. When the Liverpool Company determined upon abandoning the Hunt's Bank junction, the Directors of this Company felt that a communication between this line and Liverpool was of such importance, that it was exceedingly desirable to ascertain whether some other mode of effecting it could not be accomplished. A survey was, therefore, undertaken for the purpose of ascertaining what would be the expense, and what would be the character of a northern line to Liverpool. The facts that were elicited by that survey, had, we have every reason to think, considerable weight on the consultations of the Liverpool gentlemen, in determining them, at length, to fall into our views, and to complete the junction here. And as the abandonment of the northern line formed a distinct stipulation in the arrangement that was made between us and the Liverpool Company, it appeared to the Directors that it would receive the sanction of the proprietors, if they were to place the expenses of the survey to the debit of the extension line; that expense amounted to about 600*l.* With these explanations, I beg to submit the Report to the meeting, and to move that it be received, and that the proceedings of the Directors be approved and confirmed; also that the accounts, up to the 30th June last, be passed. (Applause.)

Mr. W. MARSHALL, of Preston—I have great pleasure, Sir, in seconding the adoption of this Report. I see no cause for us to despond at the statements contained in the Report; for the result is only what naturally might be expected, considering that this line is solely a commercial line. You

Digitized by Google

have instanced three lines in this district to show that we might expect a falling off; another instance might be taken to show the difference that we may fairly expect; because, if we look at the Brighton line, which is solely a pleasure line, we shall see that there the expectations held out by the Directors to the proprietors have fallen short, and have never been realised. We labour, certainly, under a very great depression in commerce, which has been unprecedented in its duration; but, notwithstanding that, the time will come when it will again be bright, and then, I have no doubt, our receipts will assume as high a standing as you have stated from that chair. I see no cause, whatever, for gloom; it is far better for us to have a plain statement brought before the Board, than that the Directors should attempt to bolster up the shares, by giving a larger dividend than can with propriety be declared. The dividend proposed is a very fair dividend; and when it is considered how easily money can be borrowed at 4 per cent., it must be a source of great congratulation among the proprietors to find that they are receiving 5½ per cent. I think it is a cause of great congratulation that things are no worse, considering the state of the times. I have great pleasure, Sir, in seconding the motion.

The motion was then put, and carried unanimously.

The CHAIRMAN—The next motion which we have to submit to you is—"That a dividend be now declared out of the net profits of this undertaking, for the half-year ending the 30th of June last, of 38s. 6d. upon the 100*l.* shares, and 16s. 6d. per share upon the 50*l.* shares, being at the rate of 5½ per cent. per annum; and of 2s. per share upon the 25*l.* shares, being at the rate of 10 per cent. per annum upon the amount paid up."

Captain PORTER seconded the motion with great pleasure. He thought the shareholders had many reasons to congratulate themselves: one, to which the Chairman had not alluded, was the moderate rate at which they had been enabled to borrow money. As a poor man, and having little money to spare, he had wanted to get 5 per cent. for it; but the character of this line was so good at the time, that he was happy to take 4. As it was very much to the interest of the Company to keep the men employed on the line in good humour with their employers, he suggested, as they were going to receive money, that something should be done by the shareholders for the Benevolent Society which existed among the men.

The CHAIRMAN was much obliged to Captain Porter for mentioning the subject. The Benevolent Society had been originated with a view to serve the Company's servants; and, though many persons might have seen reflections on the mode in which the business of that Society was conducted, still he thought that in the end every cause of dissatisfaction, if any well-grounded cause existed, would be removed. The feeling of dissatisfaction which had shown itself in one or two departments of their service, with regard to the mode in which the Benevolent Institution was managed was not known to the Board until some letters about it appeared in the *Railway Times*. A communication had been immediately made to those departments requesting that whatever grievances the men had to complain of, or whatever misunderstandings existed, they should be put in a written form, and addressed to the Board. That had been done, and a reply to every complaint had been drawn up by Mr. Entwisle, to whom the Board had deputed the business. And he thought it could not but tend to remove some causes of dissatisfaction on the part of the men, to know that a very short time would elapse before they would feel that their interest was likely to be materially promoted by the establishment of this institution. The Institution was under the management of a Committee elected in a popular form by themselves, and the Board had no interest and exercised no control over the management of the society beyond that of a mere veto. The Company having subscribed liberally and handsomely to the funds, the Directors wished that the business of the society should be carried on in the way originally contemplated, and that the whole benefit, whatever it might be, should devolve on the workmen; and there was no doubt that that would be the case.

The CHAIRMAN was about to put the motion, when

A SHAREHOLDER asked when the dividend would be payable?

The CHAIRMAN—In four days; we shall follow the practice of the last meeting. The motion was then put and carried unanimously.

The CHAIRMAN—I believe, gentlemen, we have now got through our business.

Mr. W. MARSHALL wished to ask one question of the Chairman. In the papers he saw a report of a trial at York, in which a verdict had gone against the Company for a very large amount. He wanted to ask if the engineer, who appeared to have displayed a great want of feeling, was still in the employ of the Company. In the report of the trial in the *Sun* newspaper, it was stated that after the individual fell from the carriage, the engineer refused to stop the train, saying the man must be killed, it would kill a hundred men, such a jolt as that; whereas the unfortunate individual had been pitched upon the opposite line. He had been wounded in the leg, which afterwards underwent amputation; and had a train been coming in the opposite direction, he must inevitably have been killed. As it was, he was taken up by some charitable individuals, his life was saved, and he was now in a situation to obtain damages by his action against the Company. The amount of damages given by the jury was large, but not too large, supposing the accident to have been entirely owing to the Company, and not at all the fault of the individual. But it appeared the man had been leaning against the door; if so, he was certainly acting carelessly; and it was not at all improbable, from the conduct of the engineer, that the jury had felt warmly on the subject, and had punished the Company because they had it not in their power to punish the engineer. His object in rising was to know whether this person was still in the Company's employ.

The CHAIRMAN said, he must confess that his feelings as to the amount of the verdict, and the feeling on the part of the Board generally was, that it was excessive and uncalled for. He did not become acquainted with the fact till he saw the report in the newspapers; but Mr. Brackenbury would be able to speak as to all the particulars. He would only say that the Board exceedingly regretted that any such accident should arise, or could possibly arise. They thought they had taken every possible precaution to prevent such accidents, inasmuch as they had two fastenings to the doors of the third-class carriages, either of them equal, as they supposed, to any emergency. And he thought that those fastenings and the precautions that were taken being perfectly adequate to the purpose, was proved by the fact that, since the opening of the line they had carried about two millions of third-class passengers in these carriages without any accident, with this single exception.

Mr. BRACKENBURY said that the charge of cruelty or want of feeling on the part of the engineer had been fully and satisfactorily explained on the trial, and Lord Denman had said that there was no ground for the charge. It appeared that the guard, who saw the accident, beckoned to the engineer to stop. The engineer looked up immediately, and saw a hat lying upon the ground, but seeing only a hat, and not having the slightest reason to suppose that anything else had occurred, he went on to his destination, they being then only three or four minutes distance from the usual stopping place.

Mr. MARSHALL said, he had never heard of the accident, and had only seen the report of the trial in the *Sun* newspaper; but the facts there stated were, that the guard said it was no use stopping then, for if the man had had a fall—it was impossible life should exist after such a fall.

Mr. BRACKENBURY said that was the charge against the guard; the engineer was not at all aware that such an accident had taken place. The moment the guard saw what had taken place, he beckoned, and put the brake upon the wheel, to warn the engineman that something had occurred. When he could not get the engineman to stop, he went back to his place, spoke to the other engineman, and, in the course of conversation, did say—"He will be dead enough by this time;" but that was after they had got some distance, when it was almost impossible for them to stop till they got to the station. It was endeavoured on the trial to give a different character to this expression of the guard, and to represent that he had said it in an unfeeling manner; but Lord Denman said, there was no reason to infer that the expression had been used in such a way; and it did not appear that it had been used in any unfeeling manner. With regard to the cause of the accident itself, the account given by the guard was a very clear and satisfactory one. He was sitting in a position where he saw all that passed. There were only three or four persons in the front department of that carriage; one by the person who was hurt; another, his companion who had been associating with him, and had had, as they supposed, a little wine; the third was the brother-in-law of the person who was hurt: and there was a fourth party. These were all who were in the first department of the carriage. The person supposed to have pushed the man who fell out said he did not; had that been proved, the charge against him would have been serious. He said he did not, and gave a different account. The guard said that he saw these persons in the carriage, that they were pushing each other, and that the person who had received the accident was forcibly pushed by his companion against the door, or the edge of the carriage; at the same time the door flew open, and he fell upon his back. The guard said he saw that very clearly. The man said to have pushed him denied that he did so. His brother-in-law denied it. The fourth man, on the arrival of the train at Leeds, stated to one of the servants of the North Midland Company, that the accident had arisen entirely from the person's own fault. With regard to the persons in the other compartment of the carriage, as the wind was blowing contrary to their course, they had their backs towards the other party; but they all, by some means or other, had seen this person fall out, at least several of them, and gave an account of it in direct contradiction to what the guard had said.

Mr. W. RAWSON—I think the pushing would not have thrown the door open, had it been properly fastened with both fastenings.

Mr. BRACKENBURY—No; I think it had not been properly fastened.

The CHAIRMAN—We have not yet elicited an answer to Mr. Marshall's inquiry about the man being discharged.

Mr. ENTWISLE said, the engineers had strict orders not to stop for hats being blown off; therefore this man, supposing that it was only a hat, had acted according to orders, and there was no reason why he should be discharged.

Mr. MARSHALL suggested that, if the evidence were such as had been stated by Mr. Brackenbury, it might be worth while to move for a new trial.

Mr. BRACKENBURY said, it was a question of credibility, and the jury had thought proper to believe the account given by several of the passengers on one side, against the account given by the guard on the other.

Mr. ENTWISLE said, the fourth person in this carriage, who had stated on the arrival of the train that the fault was the person's own, was subsequently brought up and appeared as the principal witness against the Company: though he had stated on his arrival at the station that it was the person's own fault.

Captain LAWS said that the statement was not confined to him, for almost every person who got out of the carriages at Leeds said the same thing, namely, "It was all his own fault." The person alluded to, after making this statement at the station, had gone over to Mr. Thackray, a clerk in the employ of the North Midland Company, and had told him the same thing, adding, that it served the man right, for he was half drunk—that he had upset a gig just before—that when he came to the Wakefield station, he insisted on smoking, but was prevented by the guard. This had also occurred in the carriage, for, though knowing that he had been forbidden to smoke in the station, the party began to smoke again in the carriage, but the guard stopped him. Then they began larking; the person who got hurt, knocked one of the others' hat off; and this person was making a dart at him to take his hat off, and shoved him against the door. That was the guard's statement when he arrived with the train; it was taken down at the time, and he gave his evidence most clearly, without at all varying from that statement upon cross-examination in Court.

Captain PORTER moved a vote of thanks to the Chairman and the Board of Directors, which was seconded by Mr. Marshall, and carried unanimously.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, 31 miles and 20 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+31+20.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181¼ (118¼+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 25*l.* 3s. 5d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company. The sum applicable to the purpose of the dividend declared on the 10th of March, was 11,125*l.*, of which amount 10,051*l.* 17s. 1½d. had been earned prior to July 31st, 1841.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,338*l.* 7s. 1d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 30*l.* 7s. 6d.; carriages, 61*l.* 4s. 0d.; dogs, 6*l.* 2s. 0d.; parcels, 268*l.* 9s. 1½d.; cattle, 26*l.* 8s. 0d.; corn, 12*l.* 4s. 2d.; heavy goods, 439*l.* 1s. 10d.; coal and lime, 134*l.* 18s. 2d. —Total, 978*l.* 14s. 9½d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,659*l.* 10s. 8d.; carriages and horses, 178*l.* 5s. 10d.; parcels, 228*l.* 13s. 8d.; mails, 50*l.* 5s. 9d.; merchandise, 914*l.* 5s. 9d.; minerals, 341*l.* 14s. 1d.; cattle, 1*l.* 18s. 6d. — Total, 4,387*l.* 14s. 3d.; including North Midland proportion of Manchester and Leeds traffic, and amount received from Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32¼ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 538,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TRAFFIC OMITTED.

Dundee and Arbroath Railway.—*Week ending August* 21—*Receipt from passengers (No. 8,579), 269l. 3s. 5d.; goods (207¾ tons), 43l. 18s. 1½d.; parcels, 12l. 16s. 8½d.; total, 325l. 18s. 3d.*

TO CORRESPONDENTS.

Ashburton.—*We would not, were we in our correspondent's position, sell out* either *stock. If he* MUST *sell—necessity having no law—we would recommend him to dispose of the shares in the older of the two lines. As usual, we must guard ourselves against giving any but general advice. Our correspondents must judge for themselves.*

Birmingham and Gloucester Railway.—A Shareholder *has evidently addressed his communication to a different journal from that which he intended. Vague charges will not suit us.*

The correspondent with the Greek signature should write personally to Captain Beauclerc. Our own opinion certainly agrees with that of our correspondent, that the gallant Director demeans himself by corresponding with parties who step so far out of their way to attack and vilify him.

J. W. *(Lime-street).—The shareholders of the Clarence Railway cannot, of course, be held liable for more than the amount of their shares. If, however, a new Act should be obtained, it would be for the original proprietors to consider how far it might be for their advantage to place the undertaking on a better footing by creating new shares. Matters can scarcely be worse; they may be better by such an arrangement. We think, however, that reform in the Direction of the Company is very much wanted. Perhaps we may hereafter advert more fully to this subject.*

W. B.—*We do not think the act referred to was imprudent, looking at the undertaking as* an investment. *If not compelled to do so, we think he ought not to sell just now.*

Traveller's *note shall be handed over to the authorities.*

Brighton Railway.—*If, as* One in the Secret *asserts, the Directors of the Brighton Railway make a point of circulating gratuitously among the proprietors copies of newspapers containing unscrupulous articles in defence of their official conduct, it concerns not us. Those who would offer, and they who would accept, such patronage are well matched. Whether the proprietors generally will chuse to be at the cost of these gratis issues, it is for* them *to determine. We should think there were three or four members at the Board who would not consent to saddle the Company with such a charge. If individual Directors please thus to expend their own money, no one has a right to quarrel with their judgment or their taste*

Hall's Smoke Consuming Apparatus.—*Mr. Eaton is informed that all further communications on this subject must appear in our advertising columns.*

Northern and Eastern Railway.—Your Fellow Sufferer *came too late.*

Edinburgh and Glasgow Railway.—*An addition to the advertisement relative to the second call on new stock was sent to us after that part of our paper in which it appears had gone to press. The addition is as follows:— "The proprietors will please observe that the receipt for the second and subsequent calls must be given by the bankers on the scrip—no other evidence of payment being admissible."*

Railway Communication with Scotland —*We have received a copy of Mr. Locke's Report on the Caledonian Railway, but at too late a period of the week to admit of even a glance at it.*

Received—A Shareholder *(Great North of England), and* A Shareholder *(Great Western), &c. &c. These letters shall not be lost sight of.*

We are much obliged to Mr. P. W. Dixon; it is impossible to avoid error in every instance of calls, amounts expended, &c., but we are always happy to be set right

We issue to day two sheets, whereby we have been enabled to give full details of several very important meetings. We do not anticipate the necessity of any further extra issue during the current year.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES	**113,374**
Railway Magazine	50,500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 3, 1842.

THE metropolitan railway meetings of the week have possessed very considerable interest, and will be found fully reported in other parts of our present paper.

The meeting of the SOUTH-WESTERN COMPANY, on Saturday, passed off very peaceably—a rare occurrence now-a-days. The previous rate of dividend was declared, or rather there was a slight augmentation to the extent of the Income Tax charge. It will be seen that the mode of paying this tax elicited an incidental discussion, in the course of which it was stated that the Great Western Company pursued a somewhat different plan from most other Companies, inasmuch as they had deducted the amount of tax from the dividend of every individual proprietor, instead of paying, as in the South-Western and most other instances, the tax in gross from some surplus balance. We certainly think the Great Western method is the proper one to be adopted. Observe how the other system operates. Every proprietor whose net income does not amount to 150*l.* per annum is, it was mentioned at the meeting, entitled, on application to the assessor of his district, to receive back the amount of tax calculated on his proportion of the dividend. Now, suppose A to hold 100, and B 99, shares in the South-Western Railway, and neither to have any other means of living. The dividend of 30s. a share will produce to A 150*l.*, and to B 148*l.* 10s. A immediately becomes liable to the Income Tax. B is exempt, and having gone through the requisite forms before the Tax Commissioners, is entitled to receive back 10½d. per share, or about 4*l.* 6s. Thus, from his 99 shares, B gets from the Railway Company 148*l.* 10s., and 4*l.* 6s. from the Tax Commissioners — making his total dividend about 152*l.* 16s.; while A, from 100 shares, has only 150*l.* This is an extreme case, but it shows how the plan usually adopted will operate in practice, and must ever operate, while the tax is paid out of any surplus fund, or in any way except by making the proper statutory deduction on every separate dividend warrant.

It will be seen that allusion was made at the South-Western meeting to the non-existence of a depreciation fund on that line. The Directors appear to be divided in opinion as to the policy of establishing such fund, although perhaps, after all, the difference would disappear if there were any surplus balance which, after keeping up the customary dividend, might be so appropriated. We have no doubt that the further development of the resources of the line, more especially in connection with the approaching completion of the Southampton Docks, will accomplish this desideratum.

Digitized by Google

Altogether the position and prospects of the line are very satisfactory. High praise was paid at the meeting to the regularity with which the trains now work, but not higher than is deserved. The contrast with the earlier experience of this railway is most marked and pleasing, and we trust that the character which the establishment now possesses will long be maintained.

The BLACKWALL meeting on Tuesday was of a very different complexion. There was not only no dividend—a circumstance sufficient of itself to put the proprietors out of humour—but the indications of unnecessary, not to say lavish, expenditure shown in the accounts, and confirmed by the questions put with so much propriety by several of the shareholders, tended not a little to excite dissent and murmuring. We give the Chairman full credit for the clear and candid manner in which (as he always does) he answered the questions put to him, but we cannot say that to our mind he succeeded in showing that the Board had done everything in their power to promote economy in the concern. Take for example the bills of the Solicitors. Can any thing be more outrageous than law charges of one kind or another to the amount of nearly 60,000*l.* in four or five years, on a railway of less than four miles in length, and, moreover, *with a twelvemonth's bill yet undelivered!* Pretty pickings there must have been here! Most farcical it was to refer the bills of one lawyer to the scrutiny of another. It is not only that, according to the very apposite proverb quoted by Mr. BIGG, "Dog don't eat dog," but how could Mr. MAYNARD or Mr. CROWDER know whether Mr. PEARCE and Mr. TYERMAN had or had not *made* work for themselves—how could they know that half the business done, and for which the charges were no doubt "professional" enough, might not have been avoided? It was the duty of the Directors to have seen to these matters at the time, but while they allow lawyers' bills to stand over for upwards of twelve months, without even being rendered, it is utterly impossible that they can have any efficient check upon the charges ultimately sent in. We wish some of the proprietors had brought forward a motion that the whole of the liabilities in this respect, and in every other respect, should be set forth at the next meeting, up to the very morning of that meeting. We do not like the system of credit, to which it appears not only the Solicitors but the Contractors of the Blackwall Company have "generously" agreed. Such generosity usually takes with it its own reward.

The Company are, it seems, about to raise the fares on the railway. We greatly doubt the policy of the addition of 2d. That it will materially affect the traffic of the river from Blackwall to Greenwich, Gravesend, and other of the nearer spots of attraction, there can be no doubt. The proprietors, however, seem content to make the experiment, and we sincerely hope it will succeed.

Of the steam-boat discussion we have spoken in another article. On this point our opinions differ very materially from the sentiments expressed by most of the gentlemen who addressed the meeting. On the cultivation of the steam-boat traffic rests their future prosperity.

We do not wish to say much with respect to the resignation of Mr. GEORGE RENNIE, and the subsequent efforts to re-appoint that gentleman to a seat at the Board. We entertain great respect for the ability and integrity of Mr. RENNIE, but we doubt extremely whether the course which he has pursued in this matter will redound to his credit. We hate all sham resignations. If Mr. RENNIE thought that by remaining at the Board he could be useful to his co-proprietors, who in so flattering a manner placed him there, he ought not to have retired, however distasteful to himself personally the office might have been. If he found that he could be of no use, he should at once and for ever have released himself from official responsibility. There should have been no coquetting with the Directorship, "letting I cannot, wait upon I would." Could Mr. RENNIE hope that if he were *thrust* back upon his colleagues, his own comfort or theirs would be promoted, or his usefulness increased? We regret that Mr. RENNIE was so ill-advised as to resign, or resigning, that he did not do so absolutely and unconditionally. The proprietors may nevertheless gain by Mr. RENNIE's loss of the election, for as Mr. LEVY remarked, Mr. RENNIE can, in opposition, look with better effect after the Directors, than if he himself held a seat at the Board.

Gloomy as are the immediate prospects of the Blackwall Railway, we do not despair of its ultimate success. The fallacy of engineering estimates, not only as to the cost of construction, but with respect to the current expenditure in working, has as usual given the proprietors occasion to despond, but with care and economy in future operations, we hope and believe that, even yet, the line will produce a fair return on the capital embarked in its formation.

The EASTERN COUNTIES' meeting was, as we announced last week, one of mere form, and stands adjourned to the 1st of October, by which day it is confidently said the whole line to Colchester will be ready for opening. We trust that this expectation will be realised. Never were works prosecuted with more vigour than those of the Eastern Counties' Railway have been during the last 12 months, and the progress which has been made, to say nothing of the admirable manner in which the works have throughout been executed, gives proof of what Mr. BRAITHWAITE, the able Engineer of the Company, could and would have effected, had he, like many other Engineers, been fortunate enough to be backed by an abundance of pecuniary means. We rejoice to find that this undertaking is rapidly attracting the notice of investors. We are satisfied that as now conducted it will prove one of the best speculations of the day. We entered at some length into this subject last week, and shall have something further to say respecting it when the line shall have opened throughout.

The AYLESBURY RAILWAY COMPANY, at their meeting on Monday, took the very unusual step of foregoing a half-year's dividend in order to clear off the outstanding debts of the Company. In this respect, we think, they acted with much discretion. Better by far to make a temporary sacrifice than entail a permanent burden on the concern. We quite concur in the suggestions that were thrown out by one of the most extensive and most intelligent shareholders (Mr. CAZENOVE), relative to the sale outright of the line to the London and Birmingham Company. It is quite evident that none but the Birmingham Company can work the branch line except at a loss (even *they* do not, it seems, realise a profit), and it is wholly needless that there should be kept up even the most economical establishment to receive money with one hand as rent, and pay it as dividend with the other. Let the line be disposed of at once if the Birmingham Company feel inclined to purchase. We believe the Aylesbury Railway originated rather in a desire to promote local accommodation than in the hope of direct pecuniary profit, and so far it has, we are given to understand, answered the expectations of its promoters.

THE "Steam-boat question" has within the last eight days been discussed at two different meetings (different in more respects than one) of railway proprietors, namely, the South-Western and Blackwall.

It is admitted on all hands—indeed it has never been called in question—that Railway Directors have no legal power to embark any portion of the capital raised by virtue of their Acts of Incorporation in the promotion of steam-boat or other similar speculations, however likely these speculations may be to conduce to the prosperity of the parent undertaking. But although there may be no legal authority for even a desirable and profitable diversion of a Railway Company's funds, *as a Company*, it does not follow that it may not be very much for the interest of the proprietors, as individuals, to patronise and foster, in the most direct way possible, every feasible scheme of the kind. The Blackwall and South-Western steamers are cases in point.

Look at the present position of the Blackwall Railway. With the exception of the West India Docks, from which very considerable traffic is, or will be, drawn, there is not, from the further terminus, nor at any intermediate part of the line, much business traffic to be expected. The main hope of the proprietors for a return on the capital embarked must rest, therefore, on the attractions and accommodation which the railway holds out to pleasure passengers. Its position, with respect to the Thames, presented from the first an ample field for cultivating this pleasure traffic; but it was soon found, that so powerful were the interests opposed to the railway, and so difficult the diversion of the river trade from its accustomed channel, that the line offered its facilities in vain. Under these circumstances, the Directors, with a spirit which does them the highest credit, undertook, upon their own responsibility, and from their own means, to construct a certain number of steam-boats to ply from the terminus of the railway—thus not only affording to the public increased means of accommodation, but unquestionably attracting other steam-vessels to the same spot; for there can, we think, be no doubt, that if the Directors had not taken this decided step, the owners of the then existing boats, and of the wharfs and landing-places higher up the stream, would have continued to pass the Brunswick Pier as before. What has been the reward of these Directors? Have they received the thanks of their constituents for the foresight which planned, and the zeal which carried out, the scheme? Far from it. The proprietors seem well-disposed enough to participate in the benefits which these boats have brought to the railway, but the moment a hint is given that, in the event of the failure of the steam-boat speculation, an appeal may possibly be made to those who have shared in the profit to bear a share in the loss, most anxious are they to repudiate all connection with the scheme; nay, they scruple not (some of them at least) to insinuate charges against the integrity and fair-dealing of the Directors! Is this manly—is it just? We think not, and we should have a much better opinion of those who are loudest in their condemnation of any formal connection

Digitized by Google

between the railway and the river, if they would stand forward as Mr. Levy did at the meeting, and while expressing their dislike to steam-boat speculations generally, offer, should occasion require, to bear a portion of that burden which was self-imposed by the Directors for their mutual benefit. We are glad to find that there is not much chance that any appeal for aid will be made to the Blackwall Company in respect of these steam-boats, but if there should, sure we are that the proprietors would, individually and collectively, be disgraced for ever, if they allowed the Directors alone to incur loss in such a cause.

We need scarcely say, that we are not the advocates of unnecessary expenditure on the part of Railway Boards, nor would we encourage them in prosecuting doubtful schemes in connection with their Act-of-Parliament speculations. Nevertheless, we cannot but think that there is a great deal of very needless squeamishness displayed on such points as these Blackwall steam-vessels. Let the principle be carried out, and see how it will operate. It was explained by Mr. Crawshay, at a recent meeting of the Northern and Eastern Company, that many sums of 10*l.* a month had been paid to coach proprietors to induce them to bring their vehicles upon that line immediately after it opened, and the practice was said to be general. It is well known, too, that many Companies are compelled to pay hard cash to omnibus proprietors to secure accommodation for passengers by the trains. Is the appropriation of the money of the railway proprietors to the keeping up or putting down of stage-coaches and omnibuses legal? If so, why may not the same money be expended in securing the co-operation of steam-boats? Do the anti-steam-boat sticklers say a word in reprobation of this kindred "misappropriation" of the Companies' funds? No; the Directors are complimented for their zeal in attracting traffic to the railway, and all passes off, not only without protests such as were so plentifully made at Tuesday's meeting, but with the utmost possible harmony.

The case of the South-Western steam-boats is somewhat different from the Blackwall. The prosperity of the South-Western Railway is not by any means so dependent upon ultra-terminal traffic as is that of the Blackwall; and in truth, we do not think that the establishment of even the most efficient steam communication between Southampton and Havre can permanently augment the receipts of the former railway. Doubtless for a time, and until other railways beyond the Channel are in as forward a state as the Paris and Rouen line, with its extension, may shortly be expected to be, a good deal of the French trade may be secured; and so unobjectionable in every respect is the scheme put forth for the establishing of steam communication between these points—so little risk is incurred—that we cannot doubt that the South-Western Railway proprietors will give the experiment a fair trial. The able Chairman and Deputy-Chairman of the Board, and their colleagues generally, prove so strongly how highly they think of the project, that we do not anticipate the smallest difficulty in the speedy completion of the scheme laid before the meeting on Saturday last.

The article which we published in our number of the 13th August, with reference to the South-Eastern Railway, having attracted considerable attention, we proceed to lay before our readers a table of the distances of the principal places to the north and south of the line, whence the traffic which we anticipated in the article alluded to must eventually flow to this railway, will arise. It has been urged, that as the Brighton Company have a station at Reigate, and as they have failed to obtain the Dorking and East Grinstead traffic, though their line has been open for 15 months, it is rather too much to expect that the Dover Company should attain that which their neighbours have not succeeded in securing. To this objection there are two answers:—1st, The high rate of fare as respects both those places, (the Brighton Redhill station being the railway point for the former, and the Three Bridges station for the latter,) which has always existed on the Brighton line, and, until last Wednesday, when the low fares came into operation, did exist from the Reigate and Godstone station of the South-Eastern line. 2nd, That the Brighton Redhill station was, and must ever remain, as compared to the Dover Reigate station, comparatively of an unapproachable character, in consequence of the very steep hill which lies at the back of the Somers' Arms Inn, and which every vehicle from and to Reigate has to surmount, but which, from the South-Eastern Company having completed a new approach to their station through Lady Warwick's property, is avoided, making, we are informed, a difference in draft alone, independent of distance, of one horse in a load in favour of the latter Company's station. The low fares, the saving in time, and the fact just referred to, will doubtless decide the Dorking question in favour of the Dover line. A person can be taken up at Dorking and put down at Charing Cross, or in the City, as a third-class passenger, for 3s., in 2¼ hours, against the charge, by road, of 5s.—exclusive of gratuity to the coachman—and 2¾ hours in time.

The East Grinstead traffic is an example of the impolicy of high fares. To get to London by road, the coaches pass under the railway where the line crosses the Godstone turnpike-road, and yet all the comforts of railway travelling could not divert it. The fate of that source of traffic is now, however, by the wise policy of low fares, indubitably and for ever sealed. The traffic from Westerham has already taken the turn, one omnibus running twice a day to the Edenbridge station, to the great advantage of the spirited proprietors, and the accommodation of the whole of that populous district.

The remarks made with regard to Dorking apply with greater force to Sevenoaks, where the road conveyances have to encounter the steepest hills of that hilly district, and are dependant for the continuance of their present prices on the same cause as that alluded to in our previous article as respected the Maidstone traffic to Gravesend, namely, that the full loads the coaches carried alone enabled them to run at low fares. Any portion of this traffic being diverted, the parties will either raise their fares, or the public must change their route from the river to the rail. The outside fare by coach between the Maidstone-road station and Maidstone is, we understand, settled at 1s.; the fare, third-class to New Cross, is 2s. 6d., and the omnibus fare thence 6d., so that a person will be able to pass from Maidstone to Charing Cross or the City, getting out at New Cross, with all the certainty of railway conveyance and its well organized adjuncts, for the very small cost of 4s., thereby beating untaxed steam upon the river both in time, as we before proved, and in price.

Dover in relation to the metropolis begins now to look like an approachable place, being, as the subjoined table shows, distant but 36 miles from Headcorn. Whether the latter is a place to and from which it is possible to work the Dover traffic we are not sufficiently acquainted with the country to say, but if it be, then it is clear that a very considerable saving in time, if not in expense, may be made in the journey to that place—bringing it in fact within the same distance as Brighton was before the railway opened. If it be not practicable, from local difficulties, for the Dover traffic to take to the rail, this comfort is at all events in store—that in a few months Ashford will be reached, when that and the Canterbury traffic must inevitably take the route which the public have patronised and will continue to patronise, so long as its superiority remains indisputable.

The amount received on the first two days, under the reduced fares on this line, were, as compared with the corresponding days—

At Reduced Fares.	At High Fares.
£199 10 10	£123 3 9
129 14 4	126 17 8

The extremely wet weather on Thursday must, in estimating the receipts of that day, not be forgotten; nor must the important fact be lost sight of, that the fares have been reduced 25 per cent., that no coaches ran to Maidstone or Dover, though, we understand, arrangements have been completed, by which coaches will on Monday run to four of the trains each way to Maidstone, and two Dover coaches on that day take to the rail, bringing Dover within 6¾ hours of London, and at fares much lower than those on the road.

In another part of our paper will be found the last Report of Mr. KEARSLEY, the Resident Engineer of the Midland Counties' Railway Company, to the Directors, upon the subject of using coal for locomotives instead of coke. It appears to be a finisher to Mr. SAMUEL HALL's hopes of inducing Directors of Railway Companies to save 50 per cent. by using coal exclusively. That gentleman's exertions to introduce into the working of railway lines any real improvement producing economy would be praiseworthy, and if every ingenious man who brought forward what he fancied was a useful invention, were to be snubbed and cut short, and sent about his business, and no attention given to his plans, this would indicate great ignorance, vanity, and prejudice in the governing body of a Railway Company, either in the Directoral or Engineering department, to which he should address himself. Mr. HALL was not so treated by Mr. KEARSLEY, or the Directors of the Midland Counties' Railway. He strongly addressed their pockets—he made a great noise, and they with propriety tried the experiment fairly, whether his novel plans would succeed. The contest of coal to turn its child, coke, off every railway in the kingdom began. So far so all well; and Mr. KEARSLEY appears to have acted most fairly, and to have done the utmost justice to Mr. HALL's invention. In January last he makes a Report to his Directors, which indicates a considerable degree of satisfaction up to that time, but still points out that much further experiment and trial are necessary. Acting with thorough sincerity, it would appear that a copy of this Report is sent to Mr. HALL, and the experiments continue upon another and more perfect locomotive. The result in the end is, that after this protracted and thorough trial, Mr. KEARSLEY is obliged to condemn and to abandon the system thus projected to produce a great saving, but which he found effected none in the aggregate.

What in the meantime has been Mr. HALL's conduct, and what is his conduct under the "heavy blow and great discouragement" of this last Report? Why of Mr. KEARSLEY's Report of January he publishes what he certainly calls an "extract," but so jointed together, beginning with "gentlemen," and ending with being the said gentlemen's "obedient servant," that nobody for a moment would conceive that the Report had left out anything but some indifferent matter, not appertaining to Mr. HALL's invention. Mr. KEARSLEY now publishes what was omitted by Mr. HALL, and it is very obvious that the Report would not have suited Mr. HALL's puffing objects had he not gutted it of this objectionable passage.* The retention of it would have made the Report of Mr. KEARSLEY the production of a man of science, caution, and careful experiment, whereas the publication under his name, put forth by Mr. HALL, has all the appearance of being written as a matter of bargain between Mr. HALL and himself, to advocate Mr. HALL's plans, and to get his invention sold. Hence, probably, has arisen an unjust impression in some of the shareholders' minds against Mr. KEARSLEY, which will now doubtless be removed, and the conduct of Mr. HALL, for this act of suppression, will be severely and justly reprobated. To justify himself is an impossibility. The trick is an old one, regarding the invariable non-success of which he may advantageously consult Mr. PINKUS, named in several of the late numbers of this journal.

Like a dissatisfied and discomfited man, Mr. HALL seems now to be bent on attacking Mr. KEARSLEY, and accordingly has issued an advertisement full of sound and fury. Mr. KEARSLEY is too thoroughly acquainted with the theory of *vapour* to care much about this threatened explosion; and he is not likely to be overpowered with testimony when all the identity of standing, profession, location, and character, which Mr. HALL gives to his first witness by his advertisement, is to call him up by the name of "WILLIAM SMITH, of Manchester," without further address or addition. Everybody is acquainted with the extreme rarity of the surname of "SMITH," and "WILLIAM" is a most unusual Christian name!

The foregoing remarks were in type, and intended for last week's publfcation. Since that time we have received copies of a correspondence on the subject, which will be found in our advertising columns.

THE citizens of Worcester seem resolutely bent on keeping railway communication from their doors. Were they avowed contemners of the facilities which this mode of transit presents, we should not wonder at their conduct, although we might pity their prejudice; but while in words they profess to be anxious to secure these facilities, they take care by deeds to prevent other parties from supplying them at their own cost.

The case appears to stand thus:—At an early period of the history of the Birmingham and Gloucester Railway Company, it was agreed that, in order to get rid of Parliamentary opposition, the Company should make a branch line to Worcester, which line should take a certain direction; and failing the fulfilment of this engagement, the Company were under bond to forfeit to the Town Council of Worcester a large sum of money—amounting, we believe, to 70,000*l.*—this money to be applied to the construction of the proposed branch. Circumstances occurred which prevented the Railway Company from carrying out the scheme—the Parliamentary powers for which have now expired; and relying on the bond, the people of Worcester opposed the Company in obtaining an amended Act, and opposed them successfully. Matters thus remained till recently, when the Company made overtures for the construction of another branch line which, as alleged, would be equally, if not more, convenient to the city of Worcester, and in other respects answer the purposes of the Company far better than the line originally projected. The most influential gentlemen in the town supported this arrangement, and we had strong hopes that Worcester would at length secure the full accommodation of a railway, when behold, at a meeting of the inhabitants last week, the proposal of the Birmingham and Gloucester Company was rejected, and matters remain so far in *statu quo!*

We really are amazed at the course taken in this matter by the people of Worcester. The local journals are filled with accounts of the meeting, but it would puzzle an impartial person—one removed from the partizan influences of the place—to make out upon what ground the proposition of the Railway Company has been refused. The only semblance of an argument is, that the construction of the proposed line might possibly interfere with a scheme now *in nubibus*, for a railway *via* Worcester to Port Dynllaen. Is there any prospect of the construction of such a line? We put the question to any man at all acquainted with the present position of railway speculations, whether there is the smallest chance that such a scheme will be made within the next ten years? We ourselves do not think that it will have even a Parliamentary standing within that period, if matters do not progress much more rapidly than they have done during the two or three years in which the merits of the project have been talked of, and made manifest—on paper. It is asserted by parties who know more of the locality than we do, that the construction of the branch now projected by the Birmingham and Gloucester Company would not interfere with the success of the more extended scheme to the Welsh coast; but were it otherwise, surely the people of Worcester must be hopelessly insane to thrust aside a present practical advantage for the sake of a contingent and very distant speculation, which after all cannot benefit them much more than that which they now contemn!

The object of some of the parties who unfortunately lead the citizens of Worcester by the nose, is evident enough. They know that the Birmingham and Gloucester Company are under the necessity of making another application to Parliament, and they hope by the present opposition to force them to carry out a scheme which would benefit no party but the oppositionists themselves. Circumstances are very much altered since the improvident agreement with the city of Worcester was entered into. The stock of the parent line is at a ruinous discount—the proprietors are receiving no dividend—and the scheme in which this branch to Worcester was but a link, is wholly abandoned. And yet the wiseacres of Worcester would compel, under threat of Parliamentary opposition, the carrying out of a particular

* The passage to which we refer will be found in the first paragraph of Mr. Kearsley's Report.

Digitized by Google

project, repudiating every other, even although it may be a much better one for both of the contracting parties!

Our advice to the Directors of the Birmingham and Gloucester Railway is plain and simple. Let them go as speedily as possible before Parliament; let them represent the case as it now stands, showing that they, the Directors, have endeavoured in good faith to carry out the spirit of the original agreement, and that the citizens of Worcester have contumeliously rejected every reasonable proposal made to them, insisting upon the exact stipulations of the bond; let them prove, as they readily can, that the plan now projected would fully answer, and more than answer, all the purposes that could have been hoped for from the construction of the branch originally in contemplation; let them do this, and greatly surprised indeed shall we be, if a Parliamentary Committee do not speak out very plainly on the point at issue, leaving the people of Worcester to find a railway for themselves.

We doubt very much, from what we have recently learned, whether *any* branch line to Worcester would pay its expenses; and, for the sake of the shareholders in the parent undertaking, we shall not be sorry should this piggish obstinacy on the part of the citizens absolve the Directors, as we are satisfied it must, from all moral liability—for we believe it would be difficult to establish any legal liability—to construct a branch line. We should be glad to know how many pounds or pence the parties who clamour so loudly for a trunk line through Worcester have ever subscribed, or are prepared to subscribe, towards the construction of *any* railway. A few hungry lawyers appear to be at the bottom of the agitation.

We should feel sorry for the fate which awaits Worcester were it not that the parties have, with their eyes open, brought it upon themselves. They deserve to suffer, and most assuredly they will suffer, and that severely, from their rejection of the very fair offer made to them. As one of the local journals (the *Worcester Guardian*) very properly remarks, the successful oppositionists are likely "to realise the fable of the dog, which sacrificed a positive and certain good, in his eager and unadvised attempts to grasp a visionary and uncertain shadow."

A CORRESPONDENT, whose note we publish in another column, calls attention to the system of rewarding railway servants for good behaviour, the effects of which are so strikingly exemplified on the London and Birmingham line. Our space will not permit us to enlarge upon this topic at present—and indeed it would be almost superfluous to *argue* upon such a point—but we cannot allow the opportunity to pass, now that the matter is fresh in the recollection of the railway public, from the reference made to it at the meeting by the able Chairman of the Birmingham Company, whose opinions are at all times worthy of the best attention of those who are placed in the position of Railway Managers—we cannot, we say, wholly let slip the occasion of very earnestly urging upon other Boards the policy of pursuing a similar course. Self-interest should lead to it, were other incentives wanting.

High praise—the very highest—is due to the London and Birmingham Board for the admirable mode in which they conduct the affairs of the Company—praise which, as Captain WATTS very truly observed at the meeting recently held, is re-echoed from one side of the kingdom to the other; but in nothing has their foresight been so much shown—in nothing has their skill in management been so successfully proved—as in the arrangements which they commenced at the outset, and which we are hapy to find they have now nearly completed, for the comfort and encouragement of their servants. They knew that how perfect soever in theory the plans of the superior officers of the Company might be, their successful operation must mainly depend upon the constant attention, the free, the friendly, zeal of subordinates; and this they took the most effectual means to secure, by the double motive of self-interest and of grateful feeling operating upon the parties employed. What has been the result? The London and Birmingham Railway servants, from the highest to the lowest, feel an interest in their work—they have a personal pride in the prosperity of the undertaking—they know that merit in whatever grade will not be allowed to go unnoticed or unrewarded; emulation is thereby excited, and the effects are daily appreciated by the public, in the remarkable absence of accident which has characterised this railway, and in the extreme efficiency, regularity and attention, which mark all its proceedings.

It were an ungracious task to contrast these results with those of the system in which certain pseudo-economists delight, who fancy they have effected a wonderful saving when they reduce their working expenses by 1*l.* a week, by deducting one shilling each from the poor pittance of twenty porters or policemen. It is from the servants of this latter class of Railway Managers—who for the most part end their economy where it began, namely, by grinding down the poor and unpatronised—it is from them that the numerous applications are constantly being made to other Companies for appointments. How should it be otherwise? The men feel that no interest is taken in their welfare by those who are their superiors in office; they find that every pretence is taken advantage of to court popularity or prop up crying abuses, by pressing upon *them*, and they care not how soon they get other employment, which may better their condition, but can scarcely make it worse. Hence they become dissatisfied and unsettled; and from this state of feeling to casual inattention or systematic negligence the transition is easy and rapid.

"But," say some of our philosophical gentlemen, "we are opposed on principle to this system of rewards; our servants are paid for their services, and these services, voluntarily undertaken, they ought to discharge to the best of their ability, without hope or prospect of extra remuneration." Granted that they *ought*; but *will* they? The smallest acquaintance with human nature will prove that it never has been so, and we may venture to predict that until the "march of mind" or morals has advanced much further than enthusiasm has yet dreamed of, it never will be so. A cold, formal, on-principle, plan of performing one's duty is a very different thing from embarking in it heart and soul, and it is this latter mode of service which we wish to see predominant in Railway Companies, and which a uniform system of considerate kindness, joined with the powerful attractions of self-interest, is so well calculated to secure.

We are advocates for a strict severity of discipline in cases of offence—many of our friends deem us far too severe—but we are equally, nay for that very reason, the advocates of a well-regulated scheme of reward, where reward is deserved. In fact, either system of management must, without the other, prove wholly inefficient in practice.

IT appears that with some difficulty, and by trenching on the depreciation fund, the Directors of the Glasgow, Paisley, and Ayr Railway have been able to keep up their former dividend. We had hoped that, instead of this, the amount to be divided among the proprietors would have been considerably increased; but the unexampled distress existing in that part of the kingdom may account for the non-development of the traffic.

The recent change in the mode of imposing the mileage duty will act most favourably on this Company, and we trust that when trade revives, and the branch of Kilmarnock comes into operation, the result will fully answer the expectations which have been entertained of so important a railway as the Glasgow and Ayr.

THE half-yearly meeting of the Manchester and Leeds Railway Company was held on Thursday last, and was characterised by the greatest possible harmony. A report of the proceedings and copies of the official documents will be found in another page.

A dividend of 2¾ per cent. per share was declared, clear of the Income Tax, from the working of the last six months. Taking into account the state of the commercial interests during that period, the result is fully as satisfactory as could be looked for.

The Report and its Appendices will be found very interesting, as will also the very able statements made in the Chairman's address.

IT will be seen from the report extracted elsewhere from a local journal, of a case tried at the late Yorkshire Assizes, that a gentleman named WHITNALL has received 1,000*l.* from the Manchester and Leeds Railway Company, as compensation for serious injuries sustained while travelling upon their line. If the Managers of the Leeds Company were really guilty of culpable negligence in respect of the construction of their carriages—which point, however, the non-publication of the evidence leaves very much in doubt—a heavy fine like this was very properly inflicted, and we trust the warning will not be lost upon other Boards of Direction. Our object, however, in alluding to the trial is, to point out the absurdity and inconsistency of the English law in cases of accident caused through misconduct. Mr. WHITNALL receives a severe injury—"so severe [says his counsel] that it considerably impaired his powers of usefulness, and must therefore affect his prospects during the whole of his future life." In consideration of this he has awarded to him compensation, so far as money can compensate for mutilation of limb. But had the sufferer been killed on the spot, and the prospects of those dependent upon him for support been thereby for ever overcast, not one farthing of compensation would *they* have received at the hands of those whose negligence had occasioned the melancholy bereavement. A Coroner's jury would have investigated the case, and if their decision as to the cause of the occurrence had coincided with that of the special jury above referred to, the 1,000*l.* fine would still have been imposed on the Railway Company, but would have gone into the pocket of the Lord of the Manor, or the coffers of the Queen—supposing the Com-

Digitized by Google

pany not to have been able (as Companies usually are) to upset the verdict imposing the deodand!

In this respect the law of England ought to be assimilated to that of Scotland, where the relatives of persons killed under circumstances such as we have glanced at, are empowered to proceed against those through whose misconduct death has been occasioned, in much the same mode as that adopted by Mr. WHITNALL against the Manchester and Leeds Railway Company.

It will be observed, from the notice, which appears in another column, of the general meeting held on Thursday last, that this unfortunate occurrence was brought under the notice of the shareholders. The version there given differs very materially from that of the local journal.

WE had the pleasure of recording, in our last number, the defeat of Sir ANDREW AGNEW and his friends, at the meeting of the Edinburgh and Glasgow Railway Company—a defeat so signal that these parties did not venture to go to a division. It was publicly stated, and not attempted to be denied, that, had a division taken place, the majority in favour of running Sunday trains would have been found treble that which was exhibited at the previous meeting.

In the *Scottish Guardian*, a journal laying claim to be the organ of the Agnewites, there is a long account of the proceedings which took place at the meeting. Of course we do not mean to encumber our pages with the balderdash and blasphemy (for what can be more blasphemous than most of the representations and assumptions of the agitators?) which were brought forward on the occasion, but there are one or two points which may deserve a passing notice.

As on the occasion of the previous meeting, a vast number of "deputations" were in attendance, with petitions against the running of Sunday trains—many of them, it is fair to presume, abounding in the forged signatures which it has been proved, and is admitted by the Agnewites themselves, were affixed to more than one of the previous documents. Sir ANDREW AGNEW moved that the deputations be received. This was very properly opposed by Mr. M'NEIL, a Director (of whose exertions we have in previous numbers spoken in terms of well-merited praise), who argued that the Railway Board were not appointed for the purpose of listening to oratorical displays, and of being lectured by strangers as to the course which they ought to pursue in the management of their own property, or upon the principles and practice of morality. The meeting, without a division, negatived the motion, notwithstanding the warning of Sir ANDREW that "in resisting the claims of the applicants they were opposing the moral law of God"—a statement which, as well it might, appears to have been received with deserved derision. The exclusion of the deputation, doubtless, tended to shorten the proceedings, which, nevertheless, extended to upwards of five hours, and probably also to render them less tumultuous than they would otherwise have been, albeit they were uproarious enough.

The tactics of the agitators will be illustrated by one fact. The Chairman, Mr. LEADBETTER, who is a strenuous, albeit not very consistent, opponent of Sunday travelling by railway, helped out his argument by reading a letter from one of the Company's clerks in Edinburgh, in which it was stated that three different houses had refused to send goods by railway—the impression sought to be conveyed being, that this refusal was owing to the existence of Sunday trains. It turned out, however, that the lowness of the canal charges was the moving cause, it being admitted that "if the railway rates were as low as the canal rates, the feeling on the subject of Sabbath trains would operate but little!"

The address of Mr. M'NEIL was in every respect admirable. Mr. CADELL, an Agnewite Director, had (said Mr. M'NEIL) talked much of public opinion.

"He (Mr. M'Neil) denied that Mr. Cadell's opinion was the opinion of the public—of the great majority of the people at either end of the island; and although his friend might console himself with such a reflection, he could not view him in a better light than the Puritans of Massachusetts, who 'Resolved first, that the earth is the Lord's, and the fullness thereof; resolved second, that what belongs to the Lord is the property of his saints; resolved third, that we are the saints.' (Laughter.) It was not because their friend said he had learnt public opinion that they were to assume that he spoke public opinion, any more than the Puritans were the Lord's people, because they had resolved it. Was it not a fact that they never would have got their Act from the legislature if they had proposed to exclude the Sabbath train? He had offered to test the point when they applied to Parliament, by inserting a clause prohibiting the running of Sunday trains, which would undoubtedly have been struck out. Did the proceedings of the legislature show public opinion opposed to Sabbath trains? He appealed to the reception of Mr. Plumptre's motion in the Lower House as decisive of the question there, and would it be said that the opinion of the House of Commons was no index of public opinion? Again, in the Upper House did they find a different feeling exhibited? When Lord Galloway brought forward his motion did they find it obtain a very considerable number of supporters? Would any man tell him after this that public opinion was against them? He appealed with confidence, and he knew with them that, if they were not supported by public opinion, they must go down. He would ask no unjust concession to what he knew to be public opinion, when he knew it would not be in accordance with his own views; but he asked an honest representation of what he knew public opinion to be. * * * When they considered that in the communication between the two cities from 20 to 30 horses were employed formerly, and a very considerable number of people, all of whom were deprived of the means of public worship—when he contrasted this state of things with the present arrangements, he could not but congratulate this Company on the great boon which the railway conferred upon the community. They kept no man from public worship by the Sunday trains—no servant of the Company was prevented from attending to his religious duties on the Sunday. Without injury to man or beast, they were enabled to convey a thousand persons a day, and to afford to many hundreds the means of Christian communion in the manner approved of by their consciences. When he reflected that the former mode of Sunday travelling was a conveyance for the rich alone, and that the improved conveyance enabled the poor to have the benefits of air and locomotion—when he considered, at the same time, that the poor had largely embraced the privilege without abusing it—the third-class passengers, being always the largest number, their servants would inform them, having conducted themselves with so much propriety, that not a single breach of the peace had taken place on the Lord's day—when he reflected that hundreds of their Roman Catholic brethren, for a few pence, had been enabled to attend Divine service in the church of their forefathers, who, without the railway, would have been altogether deprived of this privilege on that day, and who, were these facilities not given them, would be very differently employed indeed—he could not but congratulate the shareholders upon the establishment of their Sunday trains."

The only answer which could be given to this rational (aye, and religious) view of the subject, may be gathered from the speech of a fanatic named CRICHTON (an "Admirable CRICHTON," truly!), in which cant of all kinds, and the blasphemy to which we have already referred, strove for mastery:—

"They stood in the unenviable position of having made the first great inroad upon the sanctity of the Scottish Sabbath. I am a Scotsman, (continued Mr. Crichton,) every inch a Scotsman. I love my country, and I believe that every one present entertains the feeling of patriotism; but if there is one thing more than another that endears Scotland to me, it is because it has hitherto been the most religious country under the sun. They had struck the first great blow at this national distinction, and if they went on, would soon assimilate the Sabbaths of Scotland to those of France. The Company might prosper for a time, but by-and-by they would be called upon to drink of the bitter cup they were mingling for themselves. Of all the accidents that had taken place on railways, a large proportion had occurred on the Sabbath; and perhaps the most memorable instance had occurred in France, shortly after an unavailing remonstrance had been sent to the Crown against railway travelling on the Sabbath. That fearful calamity was yet fresh in their remembrance. It was not for them to say that it was sent on those people because they were more wicked than others; but they should receive it as a warning against this great sin which he and his friends were reprobating, and against which they were lifting up their testimony. He would not ask Mr. Cadell to push his motion to a division, seeing that the majority against it would be greater than on the former occasion. For himself, when he had done what he could to remove this evil, and did not succeed, he would withdraw from a Company upon which the blessing of God could never rest, and upon which the visible anger of God would yet be evinced. The day of retribution would come, and probably come signally against this Company, as having been the first to lead the way in the violation of God's holy day."

A good riddance, say we, of such pseudo-shareholders as this Mr. CRICHTON.

Sir ANDREW made a singular admission in the course of discussion. "*He had* [he said] *spent as much in posting every time he went to Edinburgh, as would carry him through by the railway for a whole year!*" May we not, under these circumstances, hope soon to see the leader of the agitation giving way? If Sir ANDREW would but view the matter aright, he might spare his pocket and his conscience at the same time.

It seems that Mr. LEADBETTER, the Chairman of the Board, at first declined to become a candidate for re-election, because he would not be a party to the running of Sunday trains. It would appear, however, that ultimately he was re-elected. We hope that there will be no yielding, no compromise, on the part of the proprietors in respect of the Sunday travelling question, in order to secure the services of any Director, or any set of Directors, however valuable those services may be. With due respect for Mr. LEADBETTER, we make no doubt that there are scores of individuals in the proprietary as well qualified as himself to preside over, or take part in, the management of the Edinburgh and Glasgow Railway. Mr. LEADBETTER's retirement may be a matter of regret, but we would not have an important public question decided by a reference to the personal feelings of any Director, however valued, or however zealous in his office.

THE *Debats* says, "the works on the Paris and Brussels Railway are at last on the point of being commenced."

Digitized by Google

THE Times of Thursday last, in its advertising columns, exhibited one of the most uncommon appearances it has ever displayed since railways began. Out of five railway advertisements, three were to announce reduced fares, viz., the Northern and Eastern, the London and Brighton, as far as Reigate, to compete to that point with the third—the London and Dover. We only regret, as respects the London and Brighton, that the reduction does not extend to Brighton. To this, if the line is to pay at all, it must come at last—and the sooner, for the interest of all parties, the better.

—o—

THE project for constructing a railway through Cornwall cannot fail to be considerably affected by the recent death of Lord Vivian, one of its most strenuous supporters. We fear the scheme is already all but abandoned.

As bearing on a railway to Falmouth, it is stated by the *Globe*, that instead of removing the packet station from that port, the Post-office authorities intend running a fast mail between Falmouth and Exeter, which will leave the former place some hours after the departure of the present mail coach, and will overtake the latter at Exeter. The present mail runs through Devonport, which is the longest route. The new mail will run through Oakhampton, a shorter route by nearly 20 miles, at the rate of 10½ miles in the hour, most extraordinary speed considering the hilly nature of the country. The present mail leaves Falmouth at a quarter to 5 in the morning; the new one will leave about four hours later, and the letters will reach London at 6 in the morning, the same as at present. "This [says the *Globe*] will be a very great accommodation, but it will scarcely satisfy the public so well as landing foreign mails at Dartmouth, or some port near the terminus of a railway, where a communication with London could be effected easily more than twice or three times a days." The Falmouthians must not trust too much to the permanence of such an arrangement. Without a railway, they cannot possibly maintain for any considerable length of time their present position.

—o—

THE Directors of the Edinburgh and Glasgow Railway have very judiciously taken advantage of her Majesty's visit to the North to run several additional trains daily. The short time required for a trip along the line cannot but attract thousands to the scene of Royal festivity, who otherwise would never think of leaving their homes.

—o—

THE Brighton Railway Directors have at length determined to issue monthly tickets, enabling the holders to travel on the line at pleasure. It is a pity that the experiment was not tried earlier in the season.

THE PATENT STUCCO PAINT CEMENT.

WE have this week to direct the attention of our readers to an addition to the number of cements, and which it is our firm belief will, if its qualities be really such as are represented, outvie them all. The circular introducing this article to the public enumerates the following as its principal qualities:—

1. Its strong adhesive properties, fixing most tenaciously to the *smoothest* surfaces, *even to glass*.
2. Its being highly repellant of water, and *thoroughly* impervious to wet or damp.
3. The chemical peculiarity of its composition *does not admit of the possibility of its vegetating*, and thereby becoming discoloured.
4. The safe and gradual rapidity with which it dries; *hardening the more by the greater exposure to the atmosphere*.
5. Its perfect freedom from any of the caustic qualities of lime stuccoes; and, *consequently*,
6. It may be painted upon as soon as dry; *a property possessed by no other cement whatever*.
7. It is not in the slightest degree affected by frost.
8. It may be kept in the cask as delivered from the manufactory for any length of time without deterioration, not requiring to be used (as other cements are) immediately after being manufactured. To merchants therefore, and exporters, even to the remotest parts of the globe, this cement will form a most *important item of commerce*.
9. To engineers and conductors of public works the use of this cement is strongly recommended in lieu of mortar, particularly in the construction of *railway arches* and *tunnelling*; its peculiarly tenacious property forming one hardened mass with the brick or masonry, or with whatever material it may be used; and it will be found particularly valuable in laying and pointing roofs, whether of slate or tile, in the most exposed situations, rendering the whole roof fixed and immoveable.

This cement is sold in a *fluid state*, fit for its mixture with the sand, at 12s. per cwt.: the proportions being *one-fourth part* of the fluid to *three-fourths* of sand, *thereby reducing the price of this cement considerably below that of any other yet offered to the public*.

One coat of the cement, so prepared, is sufficient to cover at once a brick front, without any preparatory coat of lime, seven pounds of the fluid cement being consumed in covering the square yard; but when laid on lime plaster, four pounds' weight to the square yard will be found enough.

These are startling assertions, and deserve investigation. We have strong reasons given to warrant us in the belief of their being well founded. The proprietors are gentlemen of the first respectability at Plymouth, in the neighbourhood of which the main ingredient in the formation of this compound is found. They are not urged by motives of cupidity to fraudulently allure the public into a temporary consumption of it, for the sake of a mere passing profit, but having their reputation pledged by the above statements, they seek to introduce for public utility the new cement, after having experimentally for three years and upwards tested its powers and nature in the most searching trials. It is impossible, therefore, that this invention can be regarded as a delusion intentionally perpetrated, let the result be whatever time may show. The proprietors have also given another proof of the genuineness of their own sincerity, by having gone to the expense of securing by patent the inviolability of their property in this article.

We have had exhibited to us specimens of various kinds—mouldings, cornices, surfaces of varied sorts, produced by the admixture of different sands, and showing different degrees of smoothness, according to the fineness or roughness of the alloy. Even casts of heads have been made from it, and exhibit all the hardness and durability of Scotch granite, after but a few hours of exposure to atmospheric influence.

The surfaces are as beautiful as any we have ever witnessed. There is an interesting and most successful trial of its capabilities upon the walls of a church in the city, which has been pointed out to us. It consists of ten square yards of what is apparently a walled-up window, and we learned it was but a day old when we viewed it. It left nothing to be desired that can be effected by cement. It has the beauty and neatness of stone, with all its advantages of endurance, at a cost of less than 2s. per square yard.

But it is not only as a covering that this cement is asserted to be highly useful. As a mortar it must also become a material of vast importance, should the above representations be found to be well grounded.

And here it is that our attention has been drawn to the ninth number of the catalogue of qualities, viz., to the fact, that in the construction of arches and tunnels "*its peculiarly tenacious property, forming one hardened mass with the brick* or masonry," will be shown. We all know of the extraordinary nature of the mortar or cement, or other binding bitumen, to be met with in the buildings of old, in which time has so indurated the cementing substance as to render it as tense as the brick or stone, and even more so. All speculation and effort to discover the nature of this compound have failed; and, indeed, the secret of the manufacture of it is lost. It will be a benefit to mankind should the Patent Stucco Paint Cement be found to supply the place.

Various as are the occasions calling for the use of cement, it is not easy to suggest one of greater urgency than in the formation of railway works; in which durability, strength, and firmness, are of the first importance, as the neglect of any one of these endangers not only human life, but all property in such undertakings. To contemplate as possible any appalling accident from the decay of the works before alluded to is sufficient to shake the stoutest nerve, as well as to alarm the minds of those whose *all* may be invested in such securities; and it therefore eminently becomes the duty of those intrusted with the management of them to employ every means to add to the security, by consulting at every opportunity the safety of all railway constructions. This cement may form a valuable invention to them.

Thus much for what is said as to the substantiality of the cement. Its elegance of appearance deserves a word or two of praise. Regarding it as not superior to other compositions, it claims a precedence from its very ready adaptation. To avail ourselves of a composition that requires but few hours to elapse after it has been laid on, to give protection to surfaces of either wood or brick, and to present to the eye a dry, hard, and neat and elegant appearance, is not possible but in the use of this cement. Time alone can corroborate the truth or show the fallacy of its other properties.

In conclusion, we beg to express our acknowledgements of the polite attention shown to us by Mr. Henry Mann, of the firm of Mann and Co., the agents for the proprietors. To this gentleman we are indebted for our information upon the subject, and whilst we have personally been gratified, we are thus enabled to lay before our readers some account of an invention which we really believe to be of vast importance to their interests.

HAYLE RAILWAY COMPANY—GENERAL MEETING.

THE general meeting of the proprietors was held on Thursday, at the Rectory-house, London Wall. It has never been the custom of this Company to admit the representatives of the press, and therefore we cannot give the particulars of what transpired. We have, however, received from a gentleman who was present the following copy of the Report. The sooner the Directors give their affairs the usual publicity the better:—

"The long-existing commercial difficulties in which the country has been placed, the interference

Digitized by Google

of the traffic, and various combining causes operating to check speculation occurring, your Directors have found much difficulty in accomplishing the task confided to them at the meeting in March last—that of finding parties disposed to co-operate in the contemplated extension of the line to Penzance. The anticipation that the shareholders generally would come into the measure, has also placed impediments in the way of carrying out the object, which requires time and constant foreign aid to overcome. The Directors had built much upon the able and zealous co-operation of Captain Moorsom, from his extensive intimacy with parties interested in similar undertakings; but they leave that gentleman to state to the proprietary the extent of encouragement which he has met with in his endeavour to promote the Company's views.

"Your Directors have also calculated greatly upon local aid, from a well assured belief in the value of the project to that portion of Cornwall through which the present line runs, as also the importance of its connection with the shipping port of Penzance. To what extent their expectations have been realised the proprietors will be informed by the Solicitor, Mr. Hill, of Helston, who attends the meeting.

"It may appear premature on the part of the Directors thus early, and at so inconvenient a season, to convene the shareholders—a step they would have refrained from taking had they not been compelled under the Company's Act to call the half-yearly meeting, which would not admit of any further delay beyond the day on which they are now assembled, and the necessity of previously holding a special general meeting."

PARIS AND ROUEN RAILWAY.

The general meeting of the shareholders in this undertaking (adjourned in consequence of the death of the Duke of Orleans) was held in Paris on Tuesday last.

As the authorities of the Company have not thought proper to forward to us a copy of Mr. Locke's Report to the Directors on the condition of the works, we can only state generally that according to that document they are progressing satisfactorily—that the purchase of land has been nearly completed—that the line will be constructed within the original estimates, and will in all probability be ready for opening in March next. It appears also that 29 millions of francs hah been received, and 21 millions spent, up to the date of the meeting; and that only 94 shares have heen forfeited in consequence of the non-payment of calls. The Report was ordered to be printed.

THAMES HAVEN DOCK AND RAILWAY.

In the *Times* newspaper of Saturday, June 30, there appeared the following advertisement, which as far as we know has not been published in any other journal:—

"Thames Haven Dock and Railway Company.—Notice is hereby given, that the half-yearly general meeting of the proprietors will be held at the offices of the Company on Wednesday, the 31st of August, at 12 for 1 o'clock, to receive the Report, to confirm the forfeiture of shares made by the Directors, and for other general business.

"By order of the Court,

"Henry Amsinck, Secretary.

"Offices, 2, St. Mildred's-court, July 28, 1842."

Accordingly, at 1 o'clock on Wednesday last, we sent a reporter to "the offices of the Company," but at that time there was no Director—no Secretary—no Solicitor—no Shareholder in attendance. About half an hour afterwards, a gentleman of our establishment, who happened to be in the City, called in St. Mildred's-court, and found the office closed, a written paper being stuck on the door—"Returns at ½-past 3." There was no one but an old woman in an upper floor to answer inquiries, and she, of course, knew nothing about the meeting.

Thus it would appear that the concern is now hopelessly defunct, and that all the galvanising skill of the gallant Secretary, with his promises of cent. per cent. dividends, and the assistance of disinterested testimonial-writers from the north, cannot impart to it even the semblance of life.

SHEFFIELD AND MANCHESTER RAILWAY.

The half-yearly general meeting of the Sheffield and Manchester Railway Company was held on Wednesday last at Sheffield. We regret that the pre-occupation of our space compels us to defer a detailed notice of the proceedings till next week. The Report and Resolutions will be found in our advertising columns.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

Mr. Richard Dawson, the Liverpool "Agent" of that renowned project, the so-called Edinburgh, Leith, and Newhaven Railway, has taken in high dudgeon the few remarks which we ventured to offer on this matter in our last number, and accordingly he has addressed to us the following letters, which we give as we received them—bad grammar, bad spelling, capitals, italics, and all:—

"To the Editor of the Railway Times.

"Sir,—I beg to forward you a copy of a communication I have this day made to the *Liverpool Standard*, in consequence of the very unmeasured manner in which you have thought proper to lash out in your paper of the 29th inst., and as an act of justice I shall expect you will take proper notice of it in your next paper. There is one point on which I beg to call your attention and that is the manner in which you have outstepped the bounds of Editoral authority, to interfere with my private arrangements. It is not for me to answer you, nor is it your province to say one word on the subject. I shall expect from you, therefore, to observe a little more caution.

"I am, Sir, your obedient servant,

"Richard Dawson.

"Liverpool, August 29, 1842."

"To the Editor of the Liverpool Standard.

"Sir,—The *Railway Times* of the 27th inst. has thought proper to quote from your paper, and I shall feel obliged by your inserting the following which may possible—get into the hands of this noted Editor of *Liberal mind* and *Gentlemanly feeling*, whose greatest delight is to attack respectability and in this instance he has been most iminently successful, as regards both the Board of Directors and the proprietors who attended the meeting alluded to in Liverpool, all of whom are well known amongst us, more particularly the respectable individual who filled the chair on this occasion, against whom neither Calumny nor reproach can rear her Hydra Head.

"I remain, Sir, your obedient servant,

"Richard Dawson.

"Liverpool, August 29, 1842.

"N.B. The Act of Parliament recently passed for the Regulation of Railways, requires that one month and ten days notice should be given before any railway can be opened, consequently the Commissioners could not grant permission for this line to be opened on the 29th inst."

"To the Editor of the Railway Times.

"Sir,—In your paper of the 27th August you have displayed your usual spirit, and I congratulate you that you have had the opportunity of exposing to the public the virulance of your disposition.

"I have too much regard for the respectable individuals with whom I am connected, *or* my own character, to enter into a controversy with one who has betrayed so much ignorance, which is only exceeded by impertinence.

"I think it only due to the Public to declare what has been set forth by the Directors, is all founded on facts. This line will be completed, and tho' no human institution is perfect, still perfection may be approached by *perseverance*, and this will be done by the Highly respectable and Honorable Men now constituting the Board of Directors of this undertaking, and as far as means and labour will admit—notwithstanding your vituperative Spirits they shall have the Services of the 'Agent.'

"RICH. DAWSON.

"Liverpool, 29 August, 1842."

We care not to enter into a discussion on the merits of the scheme with such a personage as Mr. Richard Dawson, but we should like to know what he can possibly mean by our interference with his private arrangements. All that we desired to know—and we ask it again—was, how it happened that Mr. Rich. Dawson, who formerly, and at no remote date, was sued by the Directors for large arrears of calls, and in consequence took especial pains to denounce the whole concern and its Managers, is now so forward in puffing it and them off in the newspapers and by circular. We said before, and we now repeat, that the paragraphs which we extracted from the *Liverpool Standard* were gross impositions on the public. Whether the "Agent" had anything to do with them is best known to himself. If we had said (although there are valid reasons why we did *not* say, and cannot say,) that the whole scheme was a downright swindle, we should only have been expressing the sentiments of a large number of the unfortunate individuals who have been entrapped into it by the impudent and mendacious representations of "agents" and others.

Mr. Richard Dawson is angry—so angry that he could not be courteous enough to address us in the first instance. Under the circumstances we might have declined inserting or taking the smallest notice of his ill-bred and illiterate missives, but we will not deprive him of any credit they may bring him. Whether his employers will thank him for provoking us to enter more fully into the details of the concern is a matter between him and them. Meantime we beg to assure Mr. Richard Dawson that neither his very polite language, as applied to the *Railway Times*, nor his threats, shall prevent us from exposing his barefaced puffing, wherever railways are concerned. In other speculations he may labour in his vocation uninterrupted by us. Perhaps Mr. Richard Dawson would be good enough to inform the public how it is, that holding such an opinion of the *Railway Times* as he now ventures to express, he should recently have been so anxious that that journal should aid him in proclaiming to the world the merits of the Newhaven and other schemes. We have to apologise to our readers for wasting so much space on such a subject.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—I was sorry to see in the *Railway Times* an exceedingly inaccurate, imperfect, and partial report of the Midland Counties' general meeting, taken from a Leicester paper; and, as a not unnatural consequence I must admit, some severe remarks made and threatened by you on the Managers of that undertaking. I am quite satisfied that you can have no object in doing injustice to a concern already sufficiently beset with difficulties; and I therefore beg to offer to your notice some correcting observations.

Digitized by Google

In the first place, the Leicester paper is published where a number of very small, and naturally disappointed, proprietors reside; and the report, I should say, was intended for them: for, difficult as it must have been to report correctly so disorderly and confused a meeting, lasting as it did some five or six hours, the reports in the other papers are tolerably fair and accurate so far as they go. It might be supposed that the Directors had overborne the general sense of the proprietors, by the quantity of proxies they had collected; but the fact was that these proxies had been spontaneously sent to them, and that the *only proposition* the noisy and clamorous parties at this meeting ever even brought to the vote, or made in a form to produce any possible practical result, was a motion to turn out, without reason assigned, two valuable efficient Directors—one of them the only Director the Company have at the important place Derby. This motion was entirely defeated, notwithstanding a most active canvass for proxies by the discontented.

But the worst part of this business is, the fact that all this outcry entirely arises *from the low receipts not affording a better dividend*, partly in consequence of the diversion of part of the original traffic (on the faith of which the Act was obtained) by the confounded Derby and Birmingham, Hampton branch towards London, and partly from the miserably depressed state of that part of the country. Mr. Heyworth of Liverpool, a large proprietor, whom I would not at all confound with the parties above alluded to, could only suggest advanced fares, (a questionable proceeding to say the least of it, in times like these), and a variety of reductions and economies, which show how little he can have known of the facts in relation to this undertaking. He almost, however, reproached Mr. Rathbone, one of the Directors, with not giving the Midland Counties' the benefit of his experience and knowledge as a Director of the London and Birmingham, Liverpool and Manchester, and North Union Railways. The answer of Mr. Rathbone, not given in the newspaper report, although Mr. Heyworth's long speech is printed *verbatim*, was, that not one suggestion derived from the *times* had he ever failed to send at once to his colleagues, and that not one of these suggestions had they ever failed to adopt and to act upon, and that he must call upon Mr. Heyworth to point out *one single thing* (*but pay* 10 *per cent. dividend*) *that these lines had done, and the Midland Counties' had not.*

It is a truth that the Midland Counties' Railway have on their line the admirable plan of upper works, rails, &c., of the railways above mentioned, and of the Eastern Counties' Railway, and the invaluable London and Birmingham plan of engine; and if they had not, I defy any effort to have prevented a dead loss on their traffic at this moment. Most other lines are far from being so fortunate in their plans. *Power* costs less per mile than on the London and Birmingham, and as little, allowing for the different price of coke, as on the North Union, and scarcely one-half of what it costs upon the Liverpool and Manchester and Grand Junction lines at as early a period of their operations—and indeed, until they recently adopted the London and Birmingham plans of proceeding to a great extent. Maintenance of way is already let at scarcely one-half what it costs on both the London and Birmingham and Liverpool and Manchester, and even the comparatively easy line of the Grand Junction; and cannot, I believe, be done lower at present. My knowledge of the integrity, activity, and business habits of the local Directors gives me great confidence that salaries and general charges are not unreasonable; and some of them I know to be most amply deserved, and such as would not command similar officers, if those we have should unfortunately leave us in disgust at such unfair treatment as they experienced at the general meeting.

All, however, that could possibly be done to good effect at the meeting was to suggest that two of the most sanguine of the reformers, Mr. John Ellis and Mr. Waters, should be placed on the Committee of Management, to try what they could do, when acquainted with the facts, to improve the condition and circumstances of the Company. I believe them to be intelligent men, who will act with honesty and enlarged views upon a practical question of considerable difficulty.

As to the paltry question of 1,200*l.* a-year to the Directors, the proprietors gave, and it rests with them to take away, the remuneration, if they choose. The Lancashire Directors do not touch it. The working men have it; and badly are they recompensed for the heavy trouble they have—many of them travelling fourteen miles from home in their own carriages, 50 times a-year, to the meetings.

Under these circumstances, a Committee of Inquiry and Investigation would not, I am sure, be submitted to. Nor ought it to be. If there be grounds for distrust in the mismanagement, take the resignation of the Drectors, which many of them will be glad to have accepted, and appoint others, who may have more ability, but cannot have more honesty and real, in the service of their proprietors.

I am, Sir, your most obedient servant, R.

St. Helen's, 25th August, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—I am very glad to find, by your Notices to Correspondents last week, that you have been undeceived as to the conduct of the Directors at the late general meeting, upon which you made in the preceding week some rather strong comments, in consequence of the so-called *report* of a provincial newspaper. I was present during the whole of the meeting, and I will take upon myself to assert that nothing can be more unfair and uncandid than the report on which your remarks were founded, nor, on the other hand, could anything have been more fair, open, or conciliatory, than the conduct of the Directors throughout the day. The accusations against the Directors consist of "impatience of criticism," "arrogant bearing," and "overpowering by their proxies all opposition." With regard to the two first charges, I will challenge the reporter, and every man who was in the room, to point out a single instance in which the questions or observations of shareholders, however unreasonable, and by *whatever* motive of a *personal* nature or otherwise dictated, did not receive the most patient hearing, and the fullest and most minute answers and explanations. The charge of "overpowering by proxies" is answered by a *fact*, namely, that there was only one question upon which the votes were counted, and this was, whether a motion should be carried at direct variance with a clause in the Act of Parliament or not, the Directors, of course, supporting the negative; and though the proxies considerably swelled the majority, there was still a majority of votes *present* in favour of the view taken by the Directors.

But, Mr. Editor, my principal object at present in addressing you is, to put you on your guard with respect to the journal which supplied you with the report of the late meeting. Whether it proceeds from carelessness, or wilfulness, or both or either alternately, it is not for me to say; but certain it is, that no one in its own neighbourhood ever thinks of placing an atom of reliance upon anything which that journal professes to insert upon the authority of its own reporters. In the present instance, a clue to the motive might be discovered, if it should *happen* to turn out that one of the most *really* virulent, but *professedly* candid, of those who dealt in insinuations against the Directors and officers of the Company at the late meeting, is a very near connection of the proprietor of the journal in question.

I am, Sir, yours obediently,

A MIDLAND COUNTIES' SHAREHOLDER.

Leicester, August 31, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—I was surprised to find in your Notices to Correspondents on the 27th inst. that you had received several letters, stating the report in the provincial journal of the Midland Counties' Railway was extremely unfair and partial. I beg to say I was at that meeting, and have also seen the *Leicester Journal*, and I believe it to be a faithful report of the meeting.

I am, Sir, yours, most respectfully,

SMITH FOWLER.

Nottingham, August 30, 1842.

[We have likewise received a note signed by six gentlemen, certifying that to the best of their belief the report in the *Leicester Journal* was "in every material respect a perfectly faithful and impartial record of the proceedings of the meeting." The note being marked "Private," we cannot publish the names of the subscribers without their permission, which perhaps they will have no objection to give.—Ed. R. T.]

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—Permit me, as a shareholder in the Midland Counties' Railway, to address a few observations, through the medium of your valuable paper, on the Report adopted, and the proceedings which took place, at the half-yearly meeting just held. But first allow me to thank you for the seasonable remarks which were given in the leader of your last publication touching the conduct of the Directors, and as to the duty which has manifestly devolved on the shareholders to make a strict inquiry into the present management of their affairs.

I cordially concur in the sentiments expressed by Mr. Heyworth, and one or two other gentlemen who attended the meeting, and I felt gratified on perusing their speeches to find, that men had been found among the proprietors present who had the manliness to speak out on the discreditable results of the last half-year's operations. But it would have been still more satisfactory if those gentlemen had founded resolutions upon the principles so candidly propounded by them, for it seems clear no good will result until measures are taken to show the Directors that they are not to do as they please when it has become so apparent their plans are unsuccessful. We must not depend upon their professed anxiety in order to introduce a more rigid economy. They have already told us what is the most we may calculate upon in this respect from their exertions, for the Chairman himself intimated that any suggestion would be useful which might lead to the saving of 100*l.*, the obvious inference of which is, that they have done all they mean to do.

Is it then to be tolerated that, because our present Board have made up their minds that no greater economy can be used, and that the traffic of the line is incapable of being augmented by the adoption of any other scale of fares, the shareholders must quietly submit to their dicta? I hope not; and that rather than do so they will at once call on the Directors to give place to men better deserving the confidence of their constituents. There is evidently too much of aristocratic blood in the constitution of the present Board to give one any hope that recommendations, unaccompanied by the adoption of measures which if properly united the proprietors have it in their power to use, will be of any avail; and I would therefore express a hope that the determination alluded to at the meeting, by Mr. Ormerod, will be persevered in, and a special meeting called with a view to an inquiry into the state of the Company's affairs, and to effect such changes as may be likely to promote the interests of the undertaking. As to the "salaries' charges," there surely can be no honest difference of opinion. It is little else than an insult to the proprietary to take 1,200*l.* of their money yearly to remunerate 24 Directors, when half the sum paid to half the number would even better ensure a due attention to their interests. *Such* a divided responsibility is, I think, an injury to the concern.

The Secretary would be well paid with one half his present salary, and even then he would be receiving, I understand, more than is paid to the Secretary of the Brighton Railway. Efficient officers should have due remuneration, but extra-

Digitized by Google

vagance ought to be out of the question; and if the gentleman who now fills the office—albeit with the ability for which credit is given him—considers the emolument too small at such reduction, I have no doubt there are numbers of efficient persons to be found who would consider themselves well paid on those terms, for the duties required in the joint offices of Superintendent and Secretary.

There are probably other items of still greater importance in which retrenchment can be made consistent with prudence, and I shall be glad to hear that an intelligent Committee of Investigation is likely to be obtained, to carry out the measures of reform which appear to be so much needed.

Distance from the place at which the meeting was held prevented my attending it, which I beg to offer as an apology for troubling you with this letter.

I am, Sir, yours, &c.,
A SHAREHOLDER.

August 22, 1842.

REWARDS TO RAILWAY SERVANTS.

To the Editor of the Railway Times.

SIR,—Having noticed your impartial and fearless advocacy of right against might upon *all* occasions, I am led to hope that you will excuse me troubling you, even at this busy season, to request that you will direct the attention of the railway Managers in general to the admirable system pursued by the London and Birmingham Company with respect to *rewards* for good behaviour, as with, I believe, that one exception, there does not appear to be any Company *sufficiently* aware of the value of making a distinction between a good, bad, or indifferent servant, so conspicuous as to render the first an object of general imitation.

You may perhaps agree with me in attributing the character which the London and Birmingham Company have so universally obtained for civility and attention, *chiefly* to their mode of treating the practical or working men belonging to the undertaking.

I am, Sir, yours, &c.
A RAILWAY AGENT.

August 15, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—You ask of "Inquisitor" *facts*, touching the proposal of Mr. Chas. Parker to lease of our Directors, for his clients, the above-named railway. You published his letter in your journal of the 16th August: I need therefore but slightly advert to its objectional tendency.

The proposal is to lease the railway for a term, at a rent to secure the proprietary 5 per cent. per annum on the outlay, and half the surplus profit, if any, beyond that rate; rent to commence from completion of the Hertford branch—say after an interval of 12 months or more—the same to be effected at 60,000*l.* cost, optional with either party; but if by the lessees, they would receive shares equivalent to the funds requisite.

What becomes of the traffic returns, say from 30th June, 1842, until this completion is effected, it occurring at a distant date?

The lessees apparently contemplate the immediate conduct and control of the railway. If they assume the immediate working of the line, is it meant that the present proprietary shall have no claim on earnings *until the Hertford branch is finished?*

It is stated—"rent to commence *then*." What means the clause about "working the line without remuneration," &c. &c. &c.?

Briefly, Mr. Editor, why should the proprietary lease our line at all, at any rate before its capability is fairly developed; it is yet in its infancy, the certainty of improved and improving returns is beyond question. If strangers are prompted to take it out of our hands at common interest, and to proffer as contingent benefit a moiety of surplusage (less naturally the estimate of cost of their *Direction*, &c.), it is right we should be awake to the value of our property.

It must also be remembered that this injudicious step, for a long space of time (namely, whilst the Hertford branch is under construction), would lay the value of the property open to that ruinously fluctuating estimate of it in the money market, so influential over the public mind—a stagnant position that no shareholder, I trust, will tolerate. We do not court speculation, but are content to await the steady improvement observable. As a shareholder I am determinedly opposed to the proposition of Mr. Charles Parker.

INQUISITOR.

P.S.—Our Directors, I believe, are disposed to construct the Hertford branch so soon as they can agree with the road trustees.

LONDON AND CROYDON RAILWAY.

To the Shareholders.

BROTHER SHAREHOLDERS,—I address this to you to remind you that the half-yearly meeting of this Company is now nigh at hand, and to call your attention to the accounts and proceedings of the meeting in March last, as those items to which I now refer will probably be brought again to your notice, in order to raise a further capital.

In the first place, I cannot but exclaim against the practice of keeping back the half-yearly accounts, which are only placed in the hands of the shareholders as they enter the room of meeting, and who are expected to pass them without having any opportunity to examine into their correctness; and from the multiplicity of the items, the greater number of the shareholders do not even understand them.

Thus, in the last account placed before the shareholders at the last meeting in March, the sum of 19,347*l.* 16s. was stated as expended and paid in removing the ground where the slip occurred at New Cross, independent of 1,971*l.* 9s. 4d. expended in repairing the line; and with respect to these two items, I must state my opinion that the charge was excessive in amount, and for these large sums at least four times the quantity of earth ought to have been removed. I do not wish to attach blame solely to our Directors, as I am well aware they are a body of gentlemen almost entirely at the mercy of Engineers, and of the Contractors of the Company, but I do mean to say that I think this large sum *was not judiciously and with due economy expended.*

In the next place, your Chairman stated he thought it would be necessary to raise a further capital of 50,000*l.*—in order to form a new road at Corbett's-lane, which would cost 15,000*l.*; for two new bridges on the line, 5,000*l.*, instead of level crossings; and the remainder to reinstate the line where the slip occurred. Now, as you must remember, Mr. Cubitt stated at the meeting that a further sum of 6,000*l.*, beyond the sum already expended, would be amply sufficient for permanently altering the slopes to prevent the possibility of a recurrence of a similar accident, and which I think is amply sufficient; and as to the forming of the new road at Corbett's-lane, it appears quite unnecessary, and at all events it will be quite time enough to think of making it when the present accommodation for the three Companies at New Cross and London Bridge *has been proved to be insufficient.* But as to the account furnished at the last meeting, it showed a balance in hand or due to the Company of 56,648*l.* 10s., independent of the small sum reserved for the dividend. I am aware from the above sum the expense of completing the Croydon Company's share of the new terminus at London Bridge must be deducted; but even then there will remain more than enough for making the bridges and completing the slopes at New Cross. Now, I really think it is high time for the Directors, instead of making unnecessary calls on the shareholders for *new crotchets or works which may never be required*, to pay attention to the interests entrusted to their care, by endeavouring to recover the traffic, which for the last six months has been nearly lost to the line, and by procuring for the shareholders some regular and permanent return for the large capital they have expended, and which has now lain dormant for so many years.

A. B.

August 24, 1842.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—My object in addressing you is, not so much to remark on the meeting held on Tuesday, as on the deplorable state of this concern. As a large holder of shares—and never having jobbed in them—I have been led to make some calculations, founded on the Report, and I find that the weekly receipts *throughout the year* should be 1,750*l.*, to enable the Directors to divide 5 per cent. per annum on the capital *already* invested, which you will allow is an utter impossibility. I then made a calculation founded on the present market price of 7*l.* 8s. per share, and found that the *average* receipts must be 1,100*l.* per week to give 5 per cent. on them, an amount we have certainly no reason to expect; for the season now passing away has been such that we can never hope for a finer, and the chances are, that the average of five years will be very much less favourable to our line. And lastly, I made a calculation of what our takings may be hereafter (for two or three years at least), which has convinced me that we cannot possibly reckon on a greater surplus *in the year* (from June last)—for a dividend, than 10,900*l.*, or 4s. 2d. *per share per annum.* Now, in such a state of things, I do think a special meeting should be called, for the purpose of discovering wherein such a wilful loss of money has been occasioned, and by whom; that such person or persons may be made to refund, or retire in disgrace from the concern—for in no other possible way than by reducing the capital account can this line ever be worth 8*l.* per share.

The meeting was to all appearances a packed one, the room being just large enough for the Directors and their friends, (hereafter let them in this copy the Brighton). I would also advise the Directors to be a little more courteous in future in their replies to the shareholders, and not by their almost uncivil mode of replying add to the suspicions already existing.

In conclusion, I would call on you to urge on all railway shareholders (not in the Direction) the necessity of having published, immediately on the close of the six months, the statement of accounts, and not allow the Directors and their friends *two months for speculating in the shares.* Blackwall shares in June were at 11¼, since then they have been constantly dropping in price.

Your obedient servant,
A CONSTANT READER.

London, 1st September, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The following will be found interesting:—

RECEIPTS.

1841.		1842.	
Week ending—		Week ending—	
July 10	£11,902	July 9	£13,633
July 17	12,826	July 16	14,463
July 24	13,823	July 23	20,627
July 31	14,191	July 30	15,007
Aug. 7	14,983	Aug. 6	15,463
Aug. 14	14,729	Aug. 13	14,718
Aug. 21	14,587	Aug. 20	14,755
Aug. 28	15,132	Aug. 27	14,499
Sept. 4	14,648	Sept. 3	14,535
	£126,766		£139,690

Being an increase for the nine weeks of this year, over the corresponding ones of last, of 12,914*l.*

The falling off of the receipts for two or three weeks past is owing to the disturbed state of the country, every railway having felt the effects, as their receipts will show—the Birmingham being this week 2,300*l.* less than last year.

I am, Sir, your obedient servant,
R. P.

RAILWAY FARES.

To the Editor of the Railway Times.

SIR,—About twelve months ago there was a short controversy in your paper on the subject of Mr. Ellet's Essay on Railway Fares between a Mr. Bernard and myself. I was just then about leaving this country for the Cape of Good Hope, for ten or twelve months; and I replied to Mr. Bernard's last letter in a letter finished at Portsmouth, about the 20th of July, a few days before I sailed, in which I exposed his misrepresentations and blunders. Not getting the *Railway Times* very regularly while abroad, I supposed my letter had been published in some of the numbers that had been mislaid; but now on my return I find that it was not. It is certainly rather vexatious that such a production as Mr. Bernard's should not have met its deserts; but after the lapse of time that has occurred, of course I would not now think of asking you to publish a reply. I will, however, feel much obliged by your informing me whether you ever received my letter; indeed I cannot but feel sure that if you had you would have published it. So that I fear that my messenger (a pilot, I think, coming on shore) proved faithless and pocketed the postage, leaving my letter to shift for itself.

I am, Sir, your obedient servant,
R. W. TOWNSEND.

[The letter referred to never reached us: and we think it would be useless now to renew the controversy.—ED. R. T.]

CANTERBURY AND WHITSTABLE RAILWAY.—The report which has been published in some of the local journals of the proceedings at the meeting of proprietors of the Canterbury and Whitstable Railway, does not fairly represent the state of that, we hope, now thriving concern. We have seen a copy of the general statement, and it is anything but "unintelligible" or "unsatisfactory." The only error appears to be in not distinguishing the ordinary annual payments from the extraordinary payments. For instance, the item in the expenditure "Secretary, 1,625*l.*," includes a payment of 400*l. arrears of interest*. The late "Treasurer's charge, 125*l.*" is for *five* years' salary. The other charge for salaries, 839*l.*, is partly arrears of several previous years. The charge for new materials, 1,150*l.*, is in fact a funding of 1,000*l.* capital, and of course not an annual expense. Many other items also require to be similarly divided. It appears that the balance of receipts over current expenditure is about 2,000*l.*, which is, we think, very satisfactory. Mr. T. L. Burch is appointed Secretary.—*Kent Herald*. [As we copied the account of the meeting from the local journals, we have much pleasure in complying with the wish of a correspondent that we should give the above explanation.—ED. R. T.]

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

	£	s.	d.
Bitumen prepared for cement, per ton	3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, ¼ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., ½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

MANCHESTER and BIRMINGHAM RAILWAY.—NEW ARRANGEMENT OF TRAINS.—

The Public are informed that on and after Tuesday, the 23rd instant, First and Second Class Passengers will be booked (on week days only) from Manchester to Chester, without change of carriage, at 7.30 a.m. and 4.45 p.m., and from Chester to Manchester, at 8.0 a.m. and 5.0 p.m.

FARES.—First-Class, 11s.; Second-Class, 8s., and intermediate Stations in proportion.

STOCKPORT MIXED TRAINS START DAILY AS UNDER.

FROM MANCHESTER TO STOCKPORT.

WEEK DAYS.—Morning, 7½, 8½, 9½, 10½, 11½.—Afternoon, 12½, 1½, 3½, 4½, 5½, 6½, 8½.
ON SUNDAYS.—Morning, 8, 9½.—Afternoon, 6, 7½, 9.

FROM STOCKPORT TO MANCHESTER.

WEEK DAYS.—Morning 8, 9, 10, 11, 12.—Afternoon, 1, 3, 4, 5, 6, 7, 9.
SUNDAYS.—Morning, 7½, 9.—Afternoon, 5½, 7, 8½.

The Stockport Trains stop at Rushford and Levenshulme to take up or set down Passengers, when required.

Private Carriages and Horses cannot be booked unless they are at the Station 15 minutes before the time specified in the Time Table. Carriage Trucks and Horse Boxes are kept at the principal Stations; but to prevent disappointment, it is requisite that one day's previous notice be given at the Station where required.

The Company will only hold themselves responsible for Luggage when it is booked and paid for according to its value; but they strongly recommend Passengers to have their name and destination, in all cases, legibly marked thereon.

Fees are not permitted to be taken by any of the Company's servants.

The Company do not allow Smoking in the Carriages or on the Stations.

By order,

Manchester, August 18th, 1842. E. J. CLEATHER, Manager.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—Incorporated by Act of Parliament, May 5th, 1837.—Capital, £700,000, in 7,000 Shares of £100 each.—At the Half-yearly Meeting of the Proprietors, held at the Cutlers' Hall, Sheffield, on the 31st of August, 1842;

MICHAEL ELLISON, Esq., in the Chair.

It was Resolved,—

Moved by Mr. T. A. Ward, seconded by Mr. J. Johnson:—

1. That the Directors' Report, together with that of the Engineer, as now read to the Meeting, be received and adopted, and printed for circulation amongst the Shareholders.

Moved by Mr. Kenyon Parker; seconded by Mr. Ironside:—

2. That the Abstract of Accounts now submitted be approved and distributed amongst the Shareholders.

Moved by Mr. Samuel Butcher; seconded by Mr. W. Hoyland.

3. That the Declaration of Forfeiture made by the Directors of the following Shares, being in number 1,419, be now confirmed; and that they be authorised and directed to dispose of the same Shares by sale or otherwise, as provided by the Acts of Parliament relating to this Company, for such prices and on such conditions as they may think fit.—(The Shares were then reported by their progressive numbers.)

Moved by Mr. Kenyon Parker; seconded by Mr. Ironside:—

4. That the Bye laws and Regulations passed at a Meeting of the Directors on the 1st day of December last, for the management of the traffic on the Railway, and which have already received the approval of the Lords of the Committee of the Privy Council for Trade and Foreign Plantations, be now confirmed, and sealed with the Company's seal.

Moved by Mr. Kenyon Parker; seconded by Mr. Ironside:—

5. That the Bye-laws and Regulations now produced, for the government of the Officers and Servants of the Company, be now approved and passed; and that the Corporate Seal be affixed thereto.

MICHAEL ELLISON, Chairman.

Moved by Mr. Kenyon Parker; seconded by Mr. S. Butcher:—

6. That the best thanks of the Meeting are due to the Chairman, for the able and impartial manner in which he has filled the Chair.

DIRECTORS' REPORT.

The period has again arrived when it is due from those placed in the direction of the affairs of this undertaking, to report to the proprietary such changes in its state and circumstances as have arisen since they met that body in February last. In performing this duty, the Directors feel that they have only one course to pursue— to give an honest and impartial exposition of facts, neither holding out expectations that may prove delusive, nor representing future prospects other than they appear; and to render a just and true account of the expenditure of such portion of the Company's funds as has passed through their hands.

In their last Report, the Directors announced a partial opening of the line, under prospects deemed by them to be very encouraging. They are now able to lay before the shareholders the results of the traffic upon this small part of the railway, during a period of little more than seven months. If those results should not prove all that could be desired, they will perhaps be allowed to pass for all that could be reasonably calculated upon. From the 17th November to the 30th of June last, the receipts for the carriage of passengers and parcels only amounted to £8,333 10s. 7d., and the expenses to £5,942 2s., leaving a surplus of £2,391 8s. 7d., from which should be deducted some outstanding claims, the amount of which could not be ascertained. The number of passengers conveyed during this period has been about 220,000—8,509 having passed over this part of the line in one day. Although the passengers have been thus numerous, the Directors have to congratulate the shareholders, as well as themselves, that, in the conveyance of them, not the slightest accident has occurred, nor has the most trifling injury been sustained by a single individual—passenger or servant—since this portion of the railway came into operation.

The attention of the Directors has been, and will continue to be, devoted to increase the receipts, by encouraging every species of profitable traffic; and in furtherance of this object they are now engaged in perfecting arrangements for the transit of coal, from the collieries near Dukinfield, to Manchester and other places. When these shall be complete, the Directors believe that a considerable revenue will be produced from this source, while at the same time the inhabitants of a populous manufacturing district will be insured a good supply of this essential article at a reduced price.

In order to render this Railway as accessible as possible to those towns and districts which appear likely to yield profitable traffic, the Directors have turned their attention to the formation of two distinct branches; one to connect the towns of Ashton-under-Lyne and Stalybridge with this undertaking; another to form a junction with the North Midland Railway, from Oxspring to Royston, past the town of Barnsley. There is no doubt that the present communication with the towns of Ashton-under-Lyne and Stalybridge is not such as it ought to be, whether we consider the convenience of the inhabitants, or the exclusion of all competition by coaches. The Directors are, however, persuaded that the contemplated connection with those towns, by a short railway, will not only remedy existing defects, but, by yielding much additional trade, prove a most valuable adjunct to our line; and they propose, under the sanction of the proprietors, to apply to Parliament, in the ensuing session, for powers to construct such a Railway. The Directors also propose, should they meet with due encouragement, and should they have the approval of the shareholders, to take preliminary steps to form a Company, and provide capital for the Barnsley junction, perfectly distinct from the present undertaking, so that the opportunity may be afforded to apply to Parliament, during the next session, for powers to carry out this object also.

The construction of the works between Manchester and Glossop is going on in a most satisfactory manner; and, notwithstanding the delay that has arisen from the disturbed state of the country during the last three weeks, the Directors hope they shall still be able to open to Glossop during the month of November. The works of the Summit Tunnel are also most successfully progressing, and the formidable difficulties attending this portion of the undertaking may now be regarded as conquered. Since the last Half yearly Meeting 1,495 yards of double driftway have been formed; which, in addition to what had previously been accomplished, amounts to 3,032 yards, leaving 4,268 to be completed, which the Directors have every reason to believe will be nearly, if not wholly, driven by the Annual Meeting in February next. To afford as accurate information as possible regarding the outlay upon this work, and to prevent mis-apprehension as to its actual amount, the Directors think proper to add the following short statement:—

Expended on Engines, Roads, Timber, Temporary Rails, &c.	£28,385	9	11
Expended in the Erection and Fitting-up of Cottages	3,853	9	11
Expended in Sinking Shafts	23,006	19	5
Expended in Driftways	21,577	17	6
	£76,823	16	9

For a more detailed account of the works upon the line, the Directors refer the Shareholders to the subjoined Report of their Engineer; they have, however, to state that they have advertised for tenders for the Dinting Viaduct and the Longdendale Contract, comprising the whole distance between the termination of the Gamesley Contract and the Summit Tunnel; and that they have let to Messrs. Buxton and Clarke, the Old Park Wood Contract; which latter measure, they are of opinion, will produce much satisfaction, by enabling the Company to yield employment to a considerable number of able-bodied poor of Sheffield and the neighbourhood, who, from the depressed condition of the manufacturing interests of this kingdom, cannot find employment in their respective callings,—and at the same time convincing the Shareholders that the Directors have no other wish or intention than to complete the line in its perfect integrity.

It will be in the recollection of the Shareholders that a Special General Meeting of that body was held in January last, when the Directors were authorised to apply to Parliament for powers to facilitate the providing of funds for carrying on the works. Such application was made, and, greatly to the surprise of the Directors, an opposition (instigated, no doubt, by a party whom it is not necessary to particularise) was got up against it, which, however, had no other effect than causing some additional expense to the Company. The Directors believe that this legislative measure has already been of considerable benefit, and would have improved their position still more, by enabling them to borrow upon the security of the railway, its works and tolls, such a sum as the Company was empowered to raise, had not the depressed condition of trade operated against it.

Having failed to provide this sum with sufficient rapidity, and wishing to avoid any further pressure upon the shareholders, the Directors determined to apply to Government for their aid in procuring a loan from the Public Works Loan Commissioners. Their application was favourably received; but considerable delay arose before a decisive reply could be obtained from the Commissioners. The Directors have, however, the satisfaction to announce, that those gentlemen have consented to a loan of 50,000*l.* on certain conditions, which, in substance, are—that the Company shall raise a like sum from their own resources, which, with the amount of the loan, shall be expended in future works of the Railway during the next twelve months; and that the extension of the line to Glossop shall be completed in February next. To these conditions the Directors have acceded; and it is hoped that the sum so granted will be advanced in the course of a month. As, however, this sum, aided by the means already possessed by the Directors, will not enable them to complete the railway, it is their intention, with the sanction of the proprietors, to apply to Parliament, during the next session, for powers authorising them to raise such additional capital as may be requisite for that purpose, as well as to obtain an extension of time for completion of the works.

Since the last half-yearly meeting, John Rodgers, Esq., finding that his other engagements would not permit him to give full attention to the affairs of this railway, has retired from the Direction; and the seat at the Board, thus become vacant, has been filled by the appointment of Mr. William Brodley, whose experience in railway concerns pointed him out as eminently qualified for the situation of a Director of this Company.

Having carefully revised the share list, the Directors have reluctantly concluded to recommend 1,419 shares for forfeiture, and now submit the same to the proprietors for that purpose; the preliminary business required by the Act of Parliament having been taken. The average amount paid on these shares is £16 9s. 3½d. per share.

The Directors cannot conclude this Report without assuring the shareholders that as they have hitherto, under the discouragement of adverse circumstances, used every exertion to uphold this undertaking, and to carry it to a successful issue, so they will, for the future, persevere in a like course, entertaining most confident expectation that, supported by the shareholders, and encouraged with their confidence, they will be able, within a much shorter space of time than has been calculated for them, secure the accomplishment of one of the most important railway communications in the kingdom yet remaining to be completed.

REPORT OF THE ENGINEER.

Gentlemen,—Since my last Report, read before the General Meeting of the Proprietors, the works in hand have progressed very satisfactorily. The double line of permanent road has been completed from Manchester to Newton, and that portion of the Railway now open to the public has been kept in a most efficient state of repair, and is in very good order. Stations for the accommodation of the coal trade have been built at Ardwick, Godley, and Newton, and a siding has been laid down at the expense of the Dunkirk Coal Company, connecting their colliery at Dewsnap with this Railway.

HATTERSLEY CONTRACT.

This contract is nearly completed, and ready for the permanent road, with the exception of the Tunnel at Hattersley, which, owing to the extremely wet nature of the ground, and the peculiarity of its formation, rendering it impossible to drain it, except from one end, has been a work of unexpected labour. I am happy to state however, that great progress has been made during the late fine weather, and I look with confidence to having this part of the line ready for opening in a short time. The Harewood Viaduct of 19 arches is nearly completed, 18 of them being finished, and the last one in hand.

ETHEROW VIADUCT.

One abutment is finished, and the other nearly so. The shafts of the two piers are built to the height of 30 feet above the level of the springing of the arches. The centres are now up in the middle arch, and the arched ribs of timber will be completed next week. The two side arches will then be proceeded with. Nearly the whole of the timber required for the viaduct is now on the ground. The progress of this work has been highly satisfactory.

GAMESLEY CONTRACT.

The deep cutting on this contract is now quite completed, and the side walls built in the bottom; the slopes have been dressed off and soiled. The embankments at each end of the contract are finished, with the exception of the trimming of the slopes, with which the Contractor is now engaged.

SUMMIT TUNNEL

Since my last Report, the shafts Nos. 2 and 3 have been sunk to the bottom, and No. 1 shaft has been sunk to the depth of 167 yards, leaving 15 yards still to sink. The progress of the driftway at each end of the tunnel, and at three of the shafts, will be seen from the annexed measurements:—

WORK.	Up to Feb. 1842. Yards.	From Feb. 1842, to Aug. 1842. Yards.	Total. Yards.
Western and eastern face	1419	464	1883
At No. 3 shaft	none	308	308
At No. 4 do.	40	407	447
At No. 5 do.	78	316	394
Total	1527	1495	3032

The total length of the tunnel is	5300	yards.
The length now driven	3032	"
Leaving still to drive	2268	"

The driftways of No. 2 shaft are not yet commenced; the men being engaged in forming a lodge for the water in the bottom. Our progress, at the present time, averages about 80 yards per week; but this will be increased when the driftways are worked from Nos. 1 and 2 shafts, which we expect to enter upon in a very short period. The water has very materially decreased, so that we can now keep it down without difficulty.

The line has been set out from Dinting Vale to the Tunnel, and the working plans, sections, and specifications are now ready, so that this part of the line will be let immediately. A portion of the line at the Sheffield end has been let to Messrs. Buxton and Clarke, and will be commenced upon forthwith.

I have great pleasure in stating that our Stock of Engines and Carriages are in excellent order, and are working in a very satisfactory manner.

I am, Gentlemen, your obedient servant,

ALFRED S. JEE.

Dinting-Vale, 30th August, 1842.

EASTERN COUNTIES' RAILWAY.—The Directors are ready to receive Tenders for the supply of Mixed-Class Carriages, Carriage Trucks, Horse Boxes, Cattle Trucks, &c., agreeable to Specifications to be seen on application at the Engineer's Office, at the Company's Station, Shoreditch. Parties wishing to Contract must send in their Tenders by Monday, the 12th inst., addressed to the Directors, and endorsed "Tenders for Carriages."

By order of the Board,

A. BULKFLEY, Secretary.

Offices, Shoreditch Station, 2nd September, 1842.

Omnibuses meet every Train at New Cross for Charing Cross, &c.

By order,
JOHN WHITEHEAD, Secretary.

London, 10, Coleman-street, August 16, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY COMPANY.—TENDERS for LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive TENDERS for the LOAN of MONEY for a term of three, five, seven, or ten years, at the option of the lender, and to grant mortgages on the undertaking, and all and singular the rates, tolls, and sums of money arising by virtue of the Acts relating thereto, and all the estate, right, title, and interest of the said Company in and to the same, bearing interest at the rate of 5 per cent. per annum, payable half-yearly, at the bank of Messrs. Glyn and Co., London.

The Tenders are to express the sums and term of years for which the loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,
JOHN WHITEHEAD, Secretary.

LONDON AND CROYDON RAILWAY COMPANY.—Notice is hereby given, That the next Half-yearly General Meeting of the Proprietors of the London and Croydon Railway will be holden at the London Tavern, Bishopsgate-street, within the City of London, on Thursday, the 8th day of September next ensuing. The Chair will be taken at One o'Clock precisely.

Proposals will be submitted to the meeting for the raising of the additional capital, which, it was stated in the Directors' Report to the Proprietors at the last Half-yearly General Meeting, would be required for the purposes of the undertaking.

WM. ARTHUR WILKINSON, Chairman.
R. S. YOUNG, Secretary.

20*, Tooley-street, August 24, 1842.

The Books for entering memorials of the transfer of shares will be Closed from the 59th of August to the 7th of September, both days inclusive.

EDINBURGH AND GLASGOW RAILWAY.—New Stock—Quarter Shares.—The Second Call, being £2 per Share, falls due, in terms of the Resolutions of the Shareholders, on Friday, the 2nd September. Interest at the rate of 5 per cent. will be charged from the above date on the amount of the Call unpaid; and Interest will be allowed by the Company, at the same rate, on all Calls paid in advance.

H. G. WRIGHT, Secretary.

Edinburgh and Glasgow Railway Office,
Glasgow, 27th August, 1842.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CEMENT.—To Architects, Builders, and Others.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co., Plymouth. Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface; no wet, or damp, or frost can have any effect on it; time hardens and improves it; a house covered with it becomes encased in stone. The cost is trifling. The invention is a fortune to builders; and to all who are interested in house property, old or new.

The sole Agents for the Patentees, are Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside.

CEMENT.—MOST IMPORTANT AND VALUABLE INVENTION.—To Architects, Engineers, Contractors, Builders, Masons, Plasterers, and the Trade, and also to Shippers.—The Patent Stucco Paint Cement, manufactured by Messrs. Johns, and Co. of Plymouth, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties:—Remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp: the more it is exposed to the atmosphere, the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime, and it may, therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour; nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other Cement, and its lasting qualities render it a fortune to builders and others investing capital in building speculations.

The Patentees have appointed Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents; at whose Warehouses any quantity may be had, specimens may be seen, and every information afforded.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

GREAT NORTH OF ENGLAND RAILWAY.—At their Thirteenth Half-Yearly General Meeting, held at the Company's Office, in Darlington, on Tuesday, the 30th August, 1842,

G. H. WILKINSON, Esq., in the Chair,

The Report of the Directors having been read, the following Resolutions were passed:—

1st. That the common seal of the Company be affixed to the Register of Proprietors now produced.

2nd. That the Report of the Directors now read be adopted, and circulated among the Shareholders.

3rd. That a Dividend of One Pound Five Shillings per Share be now declared, and be made payable on the 15th of September, 1842.

G. H. WILKINSON, Chairman.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

LONDON AND SOUTH-WESTERN RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and South-Western Railway Company was held on Saturday last, at the Nine Elms terminus, Vauxhall, and was numerously attended; ROBERT GARNETT, Esq., Chairman of the Board of Directors, presided.

The proceedings having been opened in the usual manner, the minutes of the last half-yearly meeting were read and confirmed.

The SECRETARY (Alfred Morgan, Esq.) then read the Report of the Directors, as follows:—

BALANCE-SHEET.

Capital Account, 30th June, 1842.

RECEIPTS.

On calls		£1,903,617 10 0
Loan on debenture bonds		630,100 0 0
Profit on shares, as per former account		21,807 10 3
Profit on tenth shares		1,350 10 6
Profit on Gosport shares		469 3 1
Interest		2,091 16 1
		2,560,336 9 11
Balance		5,195 5 1

	Total	£141,179 13 7

REPORT.

From the accounts now presented to this meeting the proprietors will perceive that the total traffic during the six months ending 30th June last, is 141,080*l.* 7*s.* 3d. The amount realised in the corresponding period of 1841 was 122,766*l.* 9*s.* 7d., showing an increase of 18,313*l.* 17*s.* 8d.; and of this 14,418*l.* 15*s.* 8d. has been received for the additional transit of passengers (the aggregate number in excess being about 38,100), and the remainder derived from other sources of revenue. The result of the traffic, after deducting all items of expenditure, with interest on borrowed capital, and adding sundry sums for rent, pier dues, &c., together with the balance of the last account, leaves an available amount of 69,371*l.* 6*s.* 7d., out of which the Directors recommend a dividend at the rate of 30*s.* per share; and they further recommend that the income tax from the 5th April be paid out of the current half-year's traffic.

Considering that the Gosport Branch Railway did not finally open until the 7th February—that 6,000 shares in that junction upon which interest has hitherto been paid out of capital, and 4,200 newly-created tenth-shares, together 10,200 shares, will participate in the present dividend—that the spring is always less productive than the autumnal half-year, and notwithstanding the continued stagnation of trade, the Directors congratulate the proprietors on being able to maintain the previous rate of dividend.

The Directors have with great pleasure learned that the Southampton Dock Company contemplate opening their tidal dock on the 29th instant. They look forward with great interest to the realisation of hopes so long entertained on this important subject, assured that by these means the natural advantages of Southampton will be developed, and its trade materially augmented. The steam and other vessels trading to that port will thus be enabled to embark their passengers, and ship their merchandise, direct from the railway; and the expense of intermediate carriage on goods hitherto devolving upon the Railway Company will consequently be saved. At Gosport also the spirit of improvement is evinced, an Act of Parliament having been obtained, and a contract taken, for constructing a floating pier, which will effect an essential saving of time and money to all travellers arriving at, or departing from, that place.

The Directors have likewise much satisfaction in adverting to a late Act of the French legislature, whereby it has sanctioned the continuation of the Paris and Rouen line to Havre, the most important mercantile port of France, and has assisted the undertaking by a gift of 320,000*l.* and a loan for 50 years, at 3 per cent., of 400,000*l.* The advantages of such an addition to the resources of this railway are self-evident, by creating a more expeditious and certain intercourse between the capitals of France and England. To render the chain of communication complete, the Directors will consider it their duty to encourage by every means within their power the establishment of a well-organised and effective system of steam navigation from the port of Southampton, believing that by adopting such a course they will best promote the general interests of the shareholders in the London and South-Western Railway Company.

ALFRED MORGAN, Secretary.

The Report was exceedingly well received.

The CHAIRMAN said, although the Report was rather brief, he believed it comprised everything which the Directors had to communicate to the shareholders. He thought it was matter of congratulation that, although the commercial embarrassments of the country had continued, and although they had been subjected to the full competition of the Brighton and Great Western Companies, which could not have failed to abstract some portion of their trade, their receipts had nevertheless increased to the extent of 18,000*l.* (Hear, hear.) This, he thought, showed a very satisfactory condition of revenue, and that it was based on a solid and stable foundation. There were some points of very considerable importance in connection with the railway, upon which, with the permission of the meeting, he would offer a very few remarks. With respect to the docks at Southampton, the opening which had been so long looked for, and with so much interest, was, he understood, to take place next week. The Paris and Rouen Railway would, he believed, be opened in May next, although the extension of that line to Havre must, from the natural difficulties of the country, be a work of time. He had recently passed through the district, and inspected the works of the Rouen line, and he had every reason to believe that the expectations of Mr. Locke, the Engineer, and of Mr. Bras-

Digitized by Google

sey, the Contractor, as to the opening in May, would be realised. As far as he himself, who was no engineer, could pretend to judge, the works were solid and substantial, and, with the exception of one bridge, they were under the control of Englishmen. The extension to Havre would, as he had already said, be a work of some difficulty; but the undertaking was under the able direction of Mr. Locke, and, therefore, no time would be lost in pushing it forward. The next matter to which he would allude, as of importance to the South-Western Railway, was the encouragement of steam communication between the ports of Southampton and Havre. There could be no doubt, he thought, that if ships of the first class were established between these ports, the great current of passenger traffic between London and Paris—or at least a large proportion of it—would pass by that route, thus materially increasing the revenue of the Railway Company. These points were of so obvious an importance that it was unnecessary for him to dilate upon them, and therefore, without further troubling the meeting, he should have much pleasure in answering any questions, or giving any further information that might be required.

The honourable gentleman resumed his seat amid much applause.

After a considerable pause,

The CHAIRMAN said, as no one seemed desirous of asking any question, he would beg to move that the Report of the Directors be received, adopted, and printed for circulation among the proprietors.

Mr. SAINTSBURY said, it was stated in the Report that the Income Tax was to be paid by the Company, and not by individual shareholders; and no doubt this plan would be acceptable to the great body of the proprietors. He thought, however, it was not the best means that might be adopted as regarded those whose whole income fell short of 150*l.* a year.

The CHAIRMAN believed the Company were bound by law to deduct the Income Tax, leaving it to individual proprietors, whose means did not reach the specified sum, to get their proportion of the tax refunded. He would appeal to the Company's Solicitor, Mr. Bircham, on this point.

Mr. BIRCHAM had given considerable attention to the Act, and was not aware that any other plan, substantially differing from that mentioned in the Report, could have been adopted.

Mr. SAINTSBURY said, it would be rash in him to attempt to decide where Directors, like doctors, disagreed, but he held in his hand a dividend warrant from the Great Western Company — their great neighbour, or, as it might be called, their rival — and from that document he found that the Great Western Directors deducted the Income Tax from every dividend individually, telling the proprietors, in black letters, at the foot of the warrant, that his proportion of the tax might be reclaimed from Government by any proprietor whose income did not amount to 150*l.*, proper notice being given to the assessor in his or her district. Either the practice of the Great Western Company was flagrantly wrong, or the plan now proposed was not the best that might be devised.

The CHAIRMAN said, the plan followed by the London and Birmingham Company, and, he believed, by almost every other Railway Company in the kingdom, was the same as that now taken in this Company.

Mr. SAINTSBURY could only say, that the Great Western Company took a different, and as it appeared to him a better, course. The Income Tax was in every respect so new that it was possible some further light might hereafter break in upon them as to its working. He merely put the question for the consideration of the Board. He could not help feeling that to parties whose incomes, like his, were under 150*l.* a-year, the Directors were making a present to Government, *pro tanto*, of the amount of the tax.

Mr. BIRCHAM felt satisfied that they were right, and that the Great Western Company must, to some extent, be wrong, and for this reason, that the Income Tax in this case was not payable upon the exact amount of the money divisible among the shareholders from the operations of the last half-year. It was payable on the profits of the year ended when the books were last made up previous to April 5, 1842—which might or might not be the identical sum, but might actually be less than the sum, to be divided amongst the proprietors in the current year, and therefore 7d. in the pound was properly paid, not on the present year's dividend, but on the profits of the previous year. The Act distinctly stated, that the Company, and not the individual proprietor, were to pay the tax, although the latter might have his proportion refunded if his gross income fell short of 150*l.* It would not be exactly 7d. in the pound on the present dividend, but 7d. in the pound on the proportion of the earnings of the year ending December, 1841, which fell to his share.

Mr. SAINTSBURY wished to know if he, as an individual, could get back his proportion, seeing that not he, but the Company, had paid it.

Mr. BIRCHAM thought so, certainly.

Mr. SAINTSBURY presumed, therefore, that the Great Western Company were not right in the course they had pursued.

The CHAIRMAN said, the plan now proposed would save the proprietors much trouble.

Mr. W. TITE was unwilling to prolong the discussion, but he thought the matter was not clearly understood. The Directors accounted to Government for 69,000*l.*, paying the tax upon that amount. The individual proprietor was not damnified, and therefore, if he were to receive back from Government a quota of the tax proportionate to his dividend, he would have to pay it over to the Company, as he himself had not suffered. (Cries of "No, no.")

Mr. BIRCHAM said, the proprietors, in effect, themselves had paid the tax. They had now a dividend of 30*s.*, but it would have been something more had it not been for the tax.

Mr. TITE clearly understood, then, that but for the Income Tax the dividend would have been larger. ("Hear, hear," and laughter.)

Mr. STEWART made some complaint of what he called an irregularity in the office.

The SECRETARY explained that it had arisen from Mr. Stewart's change of residence.

After some conversation, it was agreed that the matter would be arranged subsequent to the meeting.

A PROPRIETOR inquired how many of the Gosport proprietors had elected to share in the general dividend from profit, and how many had chosen to continue to receive 5*l.* per cent. in perpetuity under the terms of the Company's Act.

The SECRETARY said, parties holding 107 shares had sent in their election for 5*l.* per cent. in perpetuity, and 180 had not made any election in favour of dividend; the result of which was, that the whole of the Gosport shares, except 287, were now to participate in the general dividend.

Mr. C. HAY saw nothing in the accounts for depreciation of stock.

The CHAIRMAN would be glad to discover a fund from which this depreciation could be met. He, for one, differed from some of his colleagues on this point. He thought it desirable to have a reserved fund, not only for depreciation of stock, but to meet contingencies which might arise in so large an undertaking. Having divided all the money at their disposal, it being considered important to maintain the previous rate of dividend, they were not prepared to appropriate a sum to the establishment of a reserve fund. He had every reason to hope, however, that not only would this dividend be kept up, but that there would remain a sufficient surplus for such a fund. He thought the Directors would, if their means permitted, recommend such a course. He believed there was a source from which this might be effected without trenching on the revenue. Bonds, which had fallen due to the extent of 33,000*l.*, had been renewed at 4*l.* per cent. interest, so that if money remained abundant, the credit of the Company being undeniably good, they would thus be enabled to save, in interest, 6,000*l.* a year. He should be glad to see a moderate amount of reserve fund—say 10,000*l.*—and the Company were now in a position to establish it. It was, nevertheless, very satisfactory to state that the stock of both engines and carriages was, at the present time, very efficient. (Hear, hear, hear.)

Mr. WM. CHAPLIN (Deputy-Chairman) was quite satisfied that when they required a depreciation fund, they would have the means to meet it. (Hear, hear.)

Mr. KELLICK presumed, from what the Chairman had recently stated, that there was no present intention of capitalising the Company's debenture bonds.

The CHAIRMAN said that the matter had not yet came under the consideration of the Directors. He might state, that only about 5,000*l.* of bonds became due in January next, although a considerable amount was due in January, 1844.

Mr. SAINTSBURY had been requested by an absent friend to put two questions to the Directors, and from the frank and straightforward manner in which questions were always answered at these meetings, he was sure he should meet with a satisfactory reply. The first had reference to an obligation which he understood was imposed upon the Company, of making compensation to certain parties about Wandsworth for loss of water consequent on the construction of the railway. He himself had no knowledge of the matter, but his friend had understood that such obligation existed, and that means were about to be taken to enforce it; in which case, as in many others of a like kind, compensation would be sought for damage which had no existence. The other question was, whether the contract for the maintenance of way which had been entered into for 10 years, could be broken off short of that time, at the option of either party.

The CHAIRMAN said, with respect to the latter question there was decidedly no such option. He would refer to Mr. Bircham on the other point.

Mr. BIRCHAM thought that any discussion in that meeting in respect of the negociations now pending on the Wandsworth water question would be extremely improper. It was not a question of mere compensation for damage done to particular estates. Unfortunately, when the original Bill of the Company was encountering a strong opposition in the House of Lords, and when the Company were not in a condition to contest it, a clause was inserted in the Act throwing upon this Company the liability of constructing, and maintaining for ever, certain expensive works, to secure the supply of water in question; and, moreover, the Company were further bound to invest a sum of 6,000*l.* in the funds, to go on accumulating to 8,000*l.*, which 8,000*l.* was not to be spent on the works, but to be kept in perpetuity, to secure their maintenance; so that the Company had to incur, not only the expense of setting up the works referred to, but of keeping the large sum which he had named untouched. It would be wrong for him at all to mention figures; but it might be that a sum of money, larger even than the actual damage sustained by the parties, would be well bestowed to rid the Company of an annoying liability, and a source of litigation. An Act of Parliament had recently passed which gave the parties what they never before had, the power of treating with the Company on this matter.

Mr. SNOW saw in the accounts an item of 7,461*l.* for premises at Nine Elms. Was any return received from these premises?

The SECRETARY said, there was an item of 232*l.* for rent—125*l.* of which was derived from these premises.

The CHAIRMAN then put the motion for the adoption of the Report, which was carried unanimously.

Another resolution, for the payment of the divi-

Digitized by Google

dend on the 15th of September, was also carried unanimously.

The CHAIRMAN said, he had already stated that it was of great importance to the railway that an efficient system of steam communication should be established between the ports of Southampton and Havre, as well as with the Channel Islands and other parts of the coast. He was not prepared himself to make any proposition on the subject, but his friend Mr. Chaplin, who was conversant with the details, was prepared to explain his views upon this important matter.

Mr. CHAPLIN believed they were all agreed upon the importance of cultivating an efficient communication from Southampton to Havre, as well as with the Channel Islands, and the West of England. They could not be unacquainted with the fact that other interests were on the alert to a considerable extent, and endeavouring to effect the accommodation of the public from these quarters by other channels of communication. The Directors had been rather unsuccessful in introducing this subject to the public on one or two occasions. Perhaps it was that the plans proposed were not the very best that could have been devised; and so many similar Companies had been unsuccessful, that the public looked with suspicion on schemes where there was no Act of Incorporation to restrict the liability of subscribers, even when the prospect of profit was of itself sufficiently tempting. They had also had to contend against writers in the public newspapers. One of these, who had assumed the signature of "Scrutineer," had frequently animadverted on their proceedings. If that party happened to be present, he (Mr. Chaplin) would be glad if he would step forward, in order that if possible the question might be fully discussed, so as to remove the unfavourable impressions under which he appeared to labour. "Scrutineer" had, in one instance, asserted that 5,000*l.* had been abstracted from the Railway Company's dividends to be invested in steam-boats. Now the very reverse, as they were all aware, was the fact. The 5,000*l.* had merely been lent, and he believed judiciously lent, out of the Company's capital for a special purpose, and with the sanction of the proprietors. The result was, that the next half-year's dividend would be increased by 250*l.*, namely, the interest of the 5,000*l.* referred to, which otherwise would have been lying idle in the banker's hands. The subject of steam-boats had been brought before the railway proprietors by circulars and otherwise; but, as he had already said, they had not succeeded as they could have desired. At length they had propounded a plan to which he flattered himself the proprietors would feel inclined to lend their support. It was this. In the railway there were 46,000 shares of 50*l.* each, and if the holders of these shares deemed it desirable, it was proposed that they should advance 1*l.* per share for the benefit of the 50*l.* His colleagues and himself were prepared to come forward on the occasion. Already shares in the steam-boat speculation had been subscribed for to the extent of 25,000*l.* or 30,000*l.*; but when they came to construct new iron steam-vessels, which cost from 13,000*l.* to 15,000*l.* each, it would be seen that such a capital would soon be exhausted. More capital, therefore, was required. A plan had been drawn out, of which Mr. Bircham would read the outline. Assuming that 46,000*l.* was lent by the railway proprietors—for although some might decline to subscribe, others might feel disposed to increase their quota—there would altogether be the 30,000*l.* already taken up by the proprietors, be a capital of 76,000*l.* 000*l.* debentures or scrip would be issued, would be secured upon the steam-boats, be placed in the names of Trustees for rs, and 4 per cent. would be paid on the nt, previous to the payment of any dividend e 30,000*l.* The result would be, that there sufficient funds to set afloat an efficient comion for the welfare of the railway, and the o lending would be liable only for the 1*l.* a share, and from which they would derive an income somewhat better than the public funds of the country; and lastly, the 1*l.* would be so secured as to leave no chance of its being lost. Thus would they be freed from liability of partnership, and from all prejudice which might attach to steam-boat speculations; and he trusted and believed that a plan so reasonable, and so beneficial to the railway, would receive their warmest support.

[Mr. Bircham here read the document referred to by Mr. Chaplin.]

A PROPRIETOR inquired if they were called upon to come to a decision that day on the matter now submitted to them.

The CHAIRMAN said, certainly not. The Directors merely wished to put before the meeting a plan by which a sum of money might be raised for effecting a proper communication by steam-boats between Southampton and Havre. It was perfectly optional for any individual to lend his money or not. If the proprietors chose to express an opinion on the outline of the plan which had been laid before them, it might tend to promote the object, which all allowed to be one of very great importance. The sum of 40,000*l.* on loan would be sufficient, and 1*l.* per share would raise that amount, making allowance for Trustees and others who might feel disinclined to advance their proportion. He would only add, that individually he thought the establishment of such a communication of very great moment to the railway. (Hear, hear, hear.) It was for the proprietors to consider whether they would take a pecuniary interest in this minor scheme for the purpose of benefitting the major undertaking.

Mr. SAINTSBURY, as an individual, would cheerfully subscribe his 1*l.* per share, upon the amount of shares held by him in the Railway Company. He felt no hesitation in saying that the scheme presented a most eligible prospect for promoting the interest of the shareholders. He hoped that every gentleman present would see no objection to risking his one pound in the proposed undertaking, in the hope of realising profit to a large amount at no very distant period. The competition which was offered by other lines of railway showed the importance to the South-Western proprietors of establishing an efficient system of steam transit across the Channel, so as to increase the intercourse which already subsisted between France and the south-western coast. The proposition, in its present shape, appeared to him wholly unobjectionable, and he hoped would be extensively acted upon. At the last meeting he had prophesied that a great majority would throw their Gosport shares into the general stock, and he now found, that out of 6,000 shares there were only 287 that had not been so converted. He trusted that with the 46,000 shares a simular result would ensue as respected the 1*l.* loan.

The CHAIRMAN would with pleasure subscribe 1,000*l.* himself, and had no objection to act as Trustee. (Great applause.) He would suggest that the matter be discussed, and if the plan was generally approved of, that subscriptions be entered into at once.

Mr. SOUTER said, he did not hold many shares, but he would subscribe double his quota. (Hear.)

A PROPRIETOR, after alluding to the voluntary nature of the proposed loan, complained that the Report of the Directors was not put into the hands of the proprietors a week or ten days previous to the meeting, in order that they might be enabled to examine the items of account, and compare them with those of previous half-years. As a matter of right he would ask, or of favour request, that his suggestion be carried out. (Hear, hear.)

The CHAIRMAN said, although the Directors were anxious to afford every information, there was this strong objection to the course recommended by the honourable proprietor, namely, that if the Report and statement of accounts were previously circulated, and gave satisfaction to the majority of proprietors living at a distance, none but dissentients would attend the meetings, or perhaps there would be no meeting at all. ("Hear, hear," and a laugh.)

Mr. TITE said, he happened to be the individual who at the previous meeting elicited, by a question, the information then given relative to the Steam Navigation Company, and he, in common with the Directors, had been somewhat blamed for approving of the steps that had been taken. He deemed it the duty and interest of the railway proprietors to encourage steam communication between Southampton and other parts. It was obvious that by this means they could best compete with the rival railways, and take advantage of the facilities which the formation of the Paris and Rouen Railway would present in its extension to Havre. At the last meeting he had been jocularly asked by their worthy Deputy-Chairman, why, holding such views, he did not take shares in the steam-boat speculation. The answer was very obvious—he dreaded the unlimited responsibility which would thus fall upon him, and he had no doubt many others had similar fears. The scheme now propounded had no such objection, and he hoped they would do something more than wish well to it. The Chairman had given in the most handsome manner the best proof he could of his feeling towards the plan, and he (Mr. Tite) would do the same. It was right, however, that the proposition should be brought before the absent proprietors, and with that view he would, if perfectly in order, submit a motion which he had drawn up. The honourable proprietor here read his motion. It was to the effect, that the meeting, feeling the importance of establishing steam communication between Southampton and Havre, in connection with the railway, would do every thing in their power to encourage any scheme of the kind.

Mr. SOUTER seconded the motion, and suggested that the proposal should be printed and circulated among the proprietors.

Mr. J. B. BOOTHBY (a Director) supported the motion. He had always felt an objection to the unlimited liability of unincorporated joint-stock Companies, but the present scheme obviated all objection on that head. They were all aware of the measures now going forward in France for establishing a railway communication between Paris and Havre, by a continuous line. The great facilities thus offered, would overcome the superiority of the sea passage by Calais, if suitable steam-boats were established from Southampton. The main difficulty with steam-boat speculators was, that they ran their boats only at particular seasons of the year. They cared nothing for the railway, and the moment the number of passengers fell below that which would not only pay for the working of the vessels, but leave a profit, the boats were withdrawn from the station. If, by continuing to run the boats during the winter, ten or twenty passengers per trip were brought from Havre to Southampton, there would be a clear gain to the Railway Company of the whole amount of the railway fare, less the Government duty, since but for the boats those passengers would go by another route. If, therefore, by making some sacrifice, such a result could be obtained, he thought the railway proprietors ought to make it. They had, however, no power under their Act to do anything as a Company, and the scheme could therefore only be supported by individual subscriptions. The mode suggested by the Solicitor limited the responsibility of parties to the amount which they chose to subscribe, but as some of the Directors, including the Deputy-Chairman, did not fear such responsibility, and had become shareholders in the Steam-boat Company, they would thus have a direct control over its operations. He hoped, therefore, that the plan would be generally supported, not merely working at the return of 4 per cent. on the amount lent, but to the augmentation thus to be effected in the dividend of the railway. (Hear, hear.)

The CHAIRMAN said, he had received a letter from Mr. Locke who had to be present at a meeting of the Paris and Rouen Railway Company, as there was nothing particular requiring his attendance at the meeting to-day, and from that letter he would take the liberty of reading an extract. The hon.

Digitized by Google

gentleman then read the extract alluded to. It stated that great efforts were being made to divert the French traffic from Southampton, and that unless a better class of steam-boats were established, injury to the South-Western Railway could not fail to result. The new steamer from Brighton had the other day brought 60 passengers, most of whom but for that conveyance would have gone *vis* Southampton. The writer said he had never before felt so strongly the necessity of making every effort to secure a continuance of the French traffic, more especially as railway facilities on that side of the Channel were making rapid progress, and concluded by expressing his readiness to co-operate in any scheme having that object in view. The Chairman proceeded to say that Mr. Locke was an attentive observer, and that gentleman's opinion was confirmatory of his (the Chairman's) impression.

After some further conversation, Mr. Tite's motion was carried unanimously.

Mr. SAINTSBURY then brought forward a motion to give effect, as he said, to the previous resolution. It was to the following effect:—"Nine Elms, August 27, 1842. We, the undersigned, express our consent to the agreement, each with the other, to lend to the South-Western Steam-packet Company 1*l.* per share on the shares which we respectively hold in the South-Western Railway Company, or for such sum as we set opposite our names, agreeably to the proposition laid before this meeting." The honourable proprietor enforced his views at some length, and observed that the Railway Company had received an increase of dividend, which was now 1*l.* 10s. 10½d. per share, including the Income Tax.

Mr. BOOTHBY quite concurred in the spirit of the motion, but thought the hands of the Trustees would be tied up if any particular Steam-boat Company was specified. Such Company might not make the requisite arrangements to suit the views of the Railway Company. The money ought to be put into the hands of the Trustees, to be used at their discretion, whether in support of the South-Western Steam-packet Company — which he had no doubt would be the Company selected — or any other Company.

A long and desultory discussion followed on this point, in the course of which,

Mr. DREW (a Director) said, the South-Western Steam-packet Company had been selected, because they were already working boats in connection with the railway. It was quite clear that those who lent the 1*l.* must do so to some Company who had property of their own on which to fall back, or else they must become shipowners themselves. He himself was connected with the South-Western Steam-packet Company, but would have no objection to subscribe for the encouragement of any other Company who could better effect the object they had in view.

Mr. BOOTHBY explained, that it was not from any objection to the South-Western Steam-packet Company that he had demurred to the motion. On the contrary, he believed it probable that that Company would best perform the service; but he was unwilling that the operations of the Trustees should be fettered.

Mr. GREENAWAY proposed that the motion should be shaped so as to appoint a certain number of gentlemen Trustees to carry out the previous resolution.

The CHAIRMAN suggested that the Directors generally should be nominated as trustees.

Mr. WM. CASH thought if the Directors as a body accepted the trusteeship, and subscribed in proportion to their shares, it would have a material influence with the shareholders and the public.

It was explained that the Directors generally were in favour of the proposition.

A conversation ensued as to the number of Directors to be nominated.

Mr. CASH wished the largest possible number to act, so as to give confidence. Some gentlemen proposed ten, others seven members out of the fifteen comprising the Board.

Ultimately it was settled that the minimum number should be seven, although this would not prevent the whole of the Board from acting if they should think proper. It was understood that the Trustees should subscribe in proportion to their shares.

Mr. H. J. WARD seconded the motion so modified, and it was then carried unanimously.

Mr. SNOW thought it injudicious to leave so large a sum as the aggregate receipts of six months working in the hands of any private bankers, although he had great confidence in the Messrs. Williams, the present bankers of the Company.

Mr. CHAPLIN said, hitherto they had not been troubled with an accumulation of receipts, but the Directors would use their best discretion in preventing risk, or in allowing the receipts to be idle.

A PROPRIETOR (the same gentleman who had complained that the Report was not circulated previous to the meeting) thought the proprietors ought to be called together earlier than the end of August, since the books of the Company were closed on the 30th of June, and the concern was a ready-money one. He also thought the dividend should be paid on an earlier day. (Hear, hear, hear.) He said this for the credit of the Company, and not because he thought the necessities of the proprietors such as to require a more prompt division of profits.

The CHAIRMAN said, the Act of Parliament fixed the holding of the meeting in August.

Mr. CASH thought at least it might be held earlier in the month. He had no doubt it was a matter of importance to many persons that the dividend should be paid as soon as possible.

The CHAIRMAN said, the remarks which had been made should not be lost sight of by the Directors. (Applause.)

Mr. GILBERT then rose to move a vote of thanks to the Chairman and Directors, for the ability and zeal with which they had conducted the affairs of the Company. He attributed the present very flourishing condition of the railway to the great assiduity and attention which the Directors had bestowed on the interests of the undertaking, and he thought that a cordial vote of thanks from the proprietors was the least which they deserved. He hoped his motion would be cordially seconded. (Cries of "All, all.")

Mr. STEWART had much pleasure in seconding the motion. His object in rising was to state that he had recently travelled over the line, and nothing could exceed the accuracy with which the trains kept time. Throughout the journey he held his watch in his hand, and he ventured to say in no instance was the train two minutes beyond the time specified in the printed tables. (Hear, hear.)

The motion was then put by Mr. Gilbert, and carried by acclamation, and with great applause.

The CHAIRMAN begged to return thanks in behalf of his colleagues and himself. He would assure the meeting that the Directors had done, and would continue to do, everything in their power to promote the interests of the undertaking, and he was happy in being able to congratulate the proprietors on its present condition and future prospects. He would take this opportunity of alluding to a matter personal to himself. Some animadversions were made on his absence from the last two meetings—not ill-naturedly, but by a very influential journal, [the *Railway Times*.] To these the Board had replied in a satisfactory manner, but as some of the proprietors might not have seen that statement, he begged to say that before he left the country he thought it his duty to tender his resignation. At the next Board meeting, which was very numerously attended, a resolution was unanimously passed, requesting him not to resign his office. He merely mentioned this because it might appear strange that being absent for 12 months he should continue to hold office without being able to render personal service. He cordially thanked his colleagues for the mark of confidence and esteem then displayed, and he was sure that no body of gentlemen ever exhibited more zeal for the success of any undertaking than did those with whom he had the pleasure of being associated. (Much applause.)

The meeting then broke up.

A subscription list, towards the proposed loan to the South-Western Steam-Packet Company, was, at the suggestion of the Chairman, opened, and appeared to be pretty numerously signed as the proprietors retired.

HARTLEPOOL DOCK AND RAILWAY COMPANY.—GENERAL MEETING.

THE general meeting of the proprietors of the above dock and railway was held at the office, Hartlepool, on Friday, the 12th of August; ROWLAND BURDON, Esq., in the chair. The Directors' Report was read, which showed that there had been an increase in the trade of the Company during the past year of 5,108*l.* 17s. 2½d., and in the profits of 2,412*l.* 13s. 8d. This increase, although less than might have been anticipated at the last meeting, was satisfactory, since it arose entirely from the trade previously in connection with the railway. The new collieries which the Directors had hoped last year might have been ere this in full operation, had been delayed by causes not unusual in such undertakings, and the increase of trade from the Stockton and Hartlepool Railway, which the Committee expected would have taken place, they regretted to say had not been realised. In the present year the Committee confidently anticipated that two of the four collieries now in progress adjoining the railway would supply a considerable trade to the Company; and as other new collieries were about to be begun, there appeared no doubt but that, during the next three or four years, there would be a steady increase of revenue, fully equal to that of past years. Upwards of ten miles of way had been relaid with new rails, chairs, and fastenings of a heavier kind than those originally laid down. In conclusion, the Committee recommended a dividend of 8*l.* per cent. on the whole of the shares of the Company—one-half to be paid on the 1st of September, and the other on the 1st of March next—both payments to be free of the income tax.

The statement of receipts and payments, from the commencement of the Company, was as follows:—

RECEIPTS.

For shares	£259,884	10	0
Mortgages	176,226	2	6
Loans, Walker's estate	13,690	0	0
Dues	170,133	13	9
Old materials sold	24,105	0	6
Iron Company	2,500	0	0
	£646,539	6	9

PAYMENTS.

Parliamentary expenses	£10,885	2	9
Works	466,512	7	2
Middleton estate	12,000	0	0
Upholding works, salaries, interest, &c.	106,881	9	7
Dividends paid	50,064	16	10
Balance in hand	695	10	5
	£646,539	6	9

The revenue accounts for the year ending 30th June, 1842, showed that the total receipts had amounted to 44,289*l.* 2s. 4d., and the expenditure to 25,817*l.* 9s. 10d.—leaving a profit of 18,471*l.* 12s. 6d. The profit and loss account showed a balance of profit due to the proprietors of 13,187*l.* 7s.

The Report having been adopted, a series of resolutions were proposed, seconded, and carried unanimously, amongst which were the following:—"That 52,250*l.* be raised by issuing 2,090 shares of 25*l.* each, to pay off part of the sums borrowed, the shares to be appropriated by the proprietors in equal proportions, according to the amount of original capital stock held by them." "That any person proposed to become a candidate for the office of Director shall, for the future, give one month's notice of such intention."

Five Directors were then re-elected, and the thanks of the proprietors having been voted to the Chairman and Directors for their attention to the interests of the Company, the meeting adjourned.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Eastern Counties' Railway Company was held on Wednesday, at the London Station, High-street, Shoreditch; HENRY BOSANQUET, Esq., in the chair.

As it was understood that the meeting was to be merely *pro forma*, very few persons were present.

The CHAIRMAN said, the proprietors had already been informed, through the Report of the Direc rectors which had been transmitted to them, that it was proposed to adjourn the present meeting until the shareholders should have an opportunity of inspecting the works of the railway. Without further preface, therefore, he would beg to move that this meeting do stand adjourned to Saturday, the 1st day of October next.

Mr. CROPPER (a Director) seconded the motion.

Mr. PERRY (of Shenfield) doubted whether there was a legal power to adjourn the meeting. For the protection of the shareholders, the legislature had ordained that two meetings should be held every year to take into consideration the conduct of the Directors. These meetings were appointed to take place in the months of February and August, and therefore he should be glad to know if the present meeting could legally be adjourned.

The CHAIRMAN said, the clause in the Act which regulated the holding of these meetings, gave the proprietors authority to adjourn them to such places and to such days as they might deem fit.

Mr. PERRY expressed himself satisfied.

The motion was then carried unanimously, and the meeting adjourned.

In our last number we published the Report of the Directors, and extracts from the Report of the Engineer. For the purpose of future reference, we now give these documents, and the statement of accounts, in full:—

DIRECTORS' REPORT.

The near approach of the entire opening of the railway between London and Colchester, has induced the Directors to adopt a course with respect to the present general meeting of the shareholders, and the half-yearly Report of the proceedings of the Company, different from that which they have hitherto followed. The forward state of all the earthwork, and other works of every description, has now enabled the Engineer to calculate with confidence, that, by the 1st of October, the line will opened throughout to Colchester. Under these circumstances, the Directors considered that as many of the influential proprietors (the great majority of whom reside at a distance from the metropolis) are desirous of going over the line as soon as it is ready for the traffic, in order to inspect all the works, it would be a convenience to the shareholders generally, that the half-yearly meeting should be delayed until the completion to Colchester; and with this object it is suggested that the general meeting, advertised to be held on the 31st of August, agreeably to the Company's Act of Incorporation, be merely *pro forma*, and without transacting any business, be adjourned until after the opening of the railway. The adjourned general meeting will then assemble for the dispatch of business. As, however, the Directors are desirous of putting the shareholders, without delay, in possession of the fullest information relative to the affairs of the Company, they now publish, and will circulate the present Report; and all proprietors will, shortly before the 1st of October, receive a circular, informing them of the arrangements for the opening and visit of inspection, with the offer of tickets, entitling each to attend on that occasion.

The Directors cannot omit this occasion of cordially congratulating the proprietors on the near approach to a successful termination of the difficulties which have so long delayed the accomplishment of their hopes and expectations, and which have so greatly increased the anxieties and labours of the Directors, and of all who have been connected with the undertaking; and now, that their expectations are on the eve of being brought to the test of actual experience, they repeat their undiminished confidence, that this undertaking will speedily realise that substantial and profitable return which the proprietors have had such strong grounds to anticipate.

Whilst, however, the approaching opening of the railway to Colchester, and the prospective development of an ample and profitable traffic will afford to the proprietors much satisfaction, the Directors with regret have to announce that the revised estimates which have been laid before the proprietors, now prove, notwithstanding the apparent confidence which they merited, insufficient for completing the railway to Colchester, and putting the line into full operation. However much the Directors, in common with the other shareholders, may regret this circumstance, it will be obvious that they could ony rely for their information and government on the estimates of professional men, and they conceive that in having, at the instance of their proprietors, availed themselves of the assistance of Mr. Robert Stephenson, and (at a subsequent period) of Mr. Locke, in revising and confirming the estimates of the Company's Engineer, they adopted all the practicable means within their power for ascertaining the probable cost of the railway; and as the Reports from both these Engineers (who have had the greatest experience of any of the present day in undertakings of this description) confirmed the general correctness of Mr. Braithwaite's estimates, there did appear the strongest ground for confidence in their sufficiency. These revised estimates, which were laid before the proprietors in February, 1841, amounted to 2,300,000*l.*, but it is now found that this sum will be exceeded by about 200,000*l.* Every part of this excess, however, can be fully explained and accounted for; and it has chiefly arisen, as will appear from the Engineer's Report, either from unavoidable accidents, or from circumstances which could not be controlled, consistently with a due regard to the permanent interests of the undertaking. The Directors having instituted a strict investigation into all the particulars and the causes of this excess, have to state that a portion of it consists of 30,000*l.* for interest paid, and to be paid, on debentures issued under the sanction of the proprietors, as the best financial plan which could be adopted to provide the necessary funds for carrying on the works; and that there is a charge of not less than 45,000*l.* for repairing the land slips at the Gubbing's embankment, between Romford and Brentwood, which occurred subsequently to the opening of the line, and arose from the extraordinary wet weather of the autumn of last year, and from the extremely bad quality of the only description of material which could be obtained at that part of the railway. There is likewise an excess of 35,000*l.* on the amount paid for land and compensation, and there will be still some further small sums to be paid under this head, which cannot be at present ascertained. This latter excess arises partly from side cuttings and spoil banks, necessarily adopted to expedite the completion of the works, and partly from compensation to landowners beyond the estimates for deviations and advisable changes of gradients, and also for commutations for particular modes of communication, and from various other minor causes. For the particulars, and detailed explanation of all the other portions of the excess, the Directors refer to the annexed Report of their Engineer.

At the earliest opportunity after the completion of this last investigation into the estimates, and into the actual cost of the line, the Directors make known the fact of this excess to the proprietors, and it should be observed that several of the items have only recently arisen on the near approach of the works to completion. The excess will not occasion any difficulty to the proprietors in their financial arrangements, as the Company is in possession of sufficient Parliamentary powers to enable the Directors to procure the increased capital required, without obtaining another Act, or creating additional shares; and in order to relieve the original shareholders (which the Directors are enabled to do by the large loans that are now readily offered by the public), the payment of the remaining 2*l.* call will, under any circumstances, be deferred until the beginning of next year.

The usual accounts of the receipts and expenditure in the traffic department on the completed portion of the line, are annexed to this Report, as well as those relative to the capital. The former of these accounts continues to show a highly favourable and satisfactory result, the receipts of this half-year exhibiting an increase of 25 per cent. over the corresponding period of last year; and notwithstanding the disadvantageous circumstances under which a small portion of an extended line of railway must always be worked, the net available balance, divisable for the past half-year, after deducting all charges for the working expenses, depreciation of stock, and every other item belonging to this department, amounts to 11,208*l.* 6*s.* 4*d.*, being equal to a dividend of 4*s.* per share, which the Directors propose shall be paid on the 5th of October next to those proprietors who were registered in the Company's books on the 20th of August. The economical management which these accounts show of this small portion of the traffic, under the disadvantages of the short distance yet opened, gives the Directors great confidence in their anticipations of a further considerable reduction in the relative per-centage between the expenditure and the receipts when the line shall be opened to Colchester.

Since the proprietors last met, an Act of Parliament has been obtained for constructing, by an independent Company, a railway from Norwich to Yarmouth. The original Act for the incorporation of the Eastern Counties' Railway Company granted to them the power of making the railway through this district and the Directors found it necessary, for the protection of the interests of the proprietors, to oppose in Parliament the new Act, until such clauses were introduced as should secure the equitable rights of this Company, and prevent the diversion of the traffic into other channels.

The Directors have much pleasure in announcing to the proprietors, that they have at length finally concluded an agreement with the Directors of the Northern and Eastern Railway Company, by which all remaining questions between the two Companies have been satisfactorily disposed of, and arrangements promising considerable advantage to both will have a fair trial. The tolls on goods and all other articles, payable by the Northern and Eastern Company to the Eastern Counties' Company, which were not specified in the original Parliamentary contract, and which therefore, if not mutually agreed upon, must have been the subject of a reference, are finally adjusted. The Northern and Eastern Company are to rent and convert, at their own expense, into a station for their goods' traffic, a sufficient number of arches of the London Viaduct near Brick-lane, by means of which an accession to tolls from their traffic in goods will, it is expected, be shortly added to the Eastern Counties' Company's receipts.

An arrangement is also made to secure the extensive short distance passenger traffic between Ponder's End, on the Northern and Eastern line, and the Eastern Counties' London terminus, the Northern and Eastern Board binding themselves to charge fares sufficiently reduced to meet the present successful competition of the omnibuses; and the Eastern Counties' Board, as an experiment for a period of two years, have engaged to make certain corresponding reductions in their toll on the passengers within these limits. The long delay which has taken place in carrying into operation all these agreements, the Directors feel it due to themselves to state distinctly to their proprietors, has arisen from no obstacle on their part, nor any indisposition to facilitate, to the utmost of their power, all such arrangements as might contribute to the advantage and accommodation of the Northern and Eastern Company, and as would have disposed at once of all unsettled questions and differences between the two Boards. The non-payment by the Northern and Eastern Company of the past Government duty on their own passengers carried over the Eastern Counties' line, has for some time caused the only obstacle to a final adjustment, but this difficulty is now removed, as the Northern and Eastern Board have at last agreed, as part of the general arrangement, to an amicable reference of the point in dispute, which reference is to embrace not the mere legal technical question, but all the facts of the case, as well as the practice of other Companies. All possible question as to future payment of this duty is now finally settled by an Act of Parliament just passed, which, in converting the former duty of 1-8th of 1*d.* per passenger per mile into one of 5 per cent. on the gross receipts, has conferred a great boon upon the railway interest, and at the same time clearly defines that the carriers on, and not the proprietors of the road, are to be the parties liable for the payment.

By order of the Board,

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE,
Deputy-Chairman.

August 23, 1842.

ENGINEER'S REPORT.

To the Chairman and Directors of the Eastern Counties' Railway.

GENTLEMEN,—I beg to report, in the first place, the state of the several works, which are in such a position of forwardness that I am satisfied the line will be ready and open for traffic by the 1st of October next should fine weather continue, and the contractors do their duty; and I shall keep, as I have kept, the most rigid watch upon their proceedings, and at the same time affording them every encouragement.

The following account of the situation of the works under contract, from Brentwood to Colchester, will, I trust, prove satisfactory.

Contract No. 22.—The earthwork in this contract was intended to be run entirely to spoil, calculated at 480,000 cubic yards; of this quantity 445,000 cubic yards have been excavated, and there remains to complete 35,000 cubic yards. The bridge at Shenfield Common is 50 feet cutting, has been commenced; the north abutment is springing high, and the foundation of the adjoining pier and of the south abutment are now ready for the concrete. The permanent way has been laid for eight chains of single line on the north side.

Contract No. 12.—The estimated earthwork to be removed, in this contract, was 467,000 cubic yards; of which 326,000 cubic yards have been moved, and 141,000 still remain, partly going to spoil at Shenfield, and partly to embankment at Mountnessing. The masonry in this contract consists of the Heron-gate bridge, which is built springing high, and the arches are now being turned. The Chain River Bridge, the

Digitized by Google

arch of which is nearly turned; a temporary bridge has also been erected to expedite the bricking up of the abutments; the Hutton Bridge, which is completed; Mountnessing Road Bridge, the concrete and brickwork of which will be brought up above ground this week. The level crossing at Lord Petre's wood is in the course of construction. The south road of the permanent way is laid for 22 chains, east of Heron-gate Bridge.

Contract No. 12 A.—The earthwork is estimated at 390,000 cubic yards; of which 342,000 cubic yards are excavated, and 48,000 cubic yards remain to be moved. The masonry in this contract consists of bridges at Scholey's Wood, Billericay turnpike-road, and Offin's Farm, and culverts at Harrington's Farm and Offin's farm. All these works are finished; and eight chains of the south line of the permanent way are laid.

Contract No. 13.—The earthwork, estimated at 189,000 cubic yards, has been excavated to the amount of 179,000 cubic yards, leaving only 10,000 to go to embankment. The masonry consists of bridges at Burn's-house lane and Tanhouse Brook; and four barrel-drains and culverts, and a level crossing. All these works are completed, except Tanhouse Brook Bridge, which is now springing high. The permanent way is now commencing, and will proceed as rapidly as possible, to meet that in the adjoining contracts.

Contract No. 13 A.—The earthwork, estimated at 212,000 cubic yards, has been carried into embankment to the amount of 177,000 cubic yards, leaving only 35,000 cubic yards to complete. The masonry of this contract consists of bridges at Stock-lane, Ray Farm, Tabrum's Wood, Margaretting Hall, Slough-House Farm, and Justice's Farm; also a culvert at Margaretting Hall. The concrete for Stock-lane bridge is now being put in; the Ray Farm bridge is springing high; Tabrum's bridge is finished, all but the parapets. Margaretting Hall bridge, being a foot-bridge, will be immediately commenced. The remaining works are completed. Two additional drains have been erected and completed. The permanent way is laid for three-quarters of a mile, single line.

Contract No. 14.—The estimated amount of earth work is 315,000 cubic yards; of this quantity 272,000 cubic yards have been tipped, and 36,000 cubic yards remain to be excavated. The masonry of this portion consists of bridges at Killygrew's Farm, one field passage, and Winford River. The works are now executed, except Warner's occupation Bridge, which is commenced. The road is now ballasting, ready to receive the permanent way.

Contract No. 11.—The earthwork in this contract is 199,000 cubic yards, of which 129,000 cubic yards are now in embankment; 70,000 cubic yards remain, therefore, to be excavated to form the whole. The masonry consists of the Widford turnpike bridge; Cherry Garden-lane bridge, and the crossing on the level. All these works are completed, and 57 chains of permanent way are ballasted, consisting of 17 chains of double line, and 40 chains of single line, and with the assistance of an engine, which is running to facilitate the progress of the works, there is no doubt of their completion.

Contract No. 15.—The quantity of earthwork is 294,000 cubic yards, of which 219,000 cubic yards are tipped, and 75,000 remain to go to embankment. The masonry on this portion consists of the Cam River viaduct, the Chelmsford viaduct, the Chelmer River viaduct, the bridges at Bishop's Hall lane, Broomfield road, Stump-lane, Springfield-green, Danbury-road, and an extra culvert in the Chelmer Valley. Of the Cam viaduct nine arches are turned, and six have the centres removed; and the remaining nine are in a forward state. The centres of the Duke-street arch in the Chelmsford viaduct are struck, and the traffic open under it. Forty-four arches of the viaduct are turned, and the remainder in rapid progress. All the other bridge works are finished, except the bridge at Springfield-green, the piers and abutments of which are springing high, and the stone imposts are set and ready for the arching. A mile and quarter of permanent way is here laid down, and two engines are employed day and night, to forward the embankment.

Contract No. 23.—The earthwork is estimated at 118,000 cubic yards, of which 112,000 cubic yards have been excavated, leaving only 6,000 cubic yards to complete. The masonry consists of bridges at occupation road leading to fields, Springfield-road, New Hall Convent Avenue crossing; Boreham Mill-head viaduct; Boreham-road; also of four culverts, and two level crossings. The Springfield-road bridge is brought up springing high; Boreham Millhead viaduct only requires the stone coping to the parapets. All the other bridge and culvert works are completed. The level crossings are also nearly finished, and 175 chains of permanent way, consisting of 113 chains double line, and 65 chains single line, have been laid.

Contract No. 24.—The estimated amount of earthwork is 363,000 cubic yards, of which 309,000 cubic yards are already excavated, and 54,000 cubic yards are still required to be excavated to complete the embankment. The bridges on this portion are at Chantry-lane, Toppingoe Hall, Terling, and Fairsted-road, Hatfield Mill-head viaduct, Lovibond's occupation road and waterway, and Hatfield-road, besides an extra occupation bridge at Lovibond's farm. Of these works Chantry-lane bridge is ready for the centres; the foundations are out of the Terling and Fairsted-road bridges; Lovibond's Farm bridge is now commencing; the Hatfield Mill-head viaduct only requires the parapets. All the others are completed, and 142 chains of permanent way are now laid, being 67 chains of single line, and 45 chains of double line.

Contract No. 25.—The earthwork, estimated at 237,000 cubic yards, has been removed to the extent of 174,000 cubic yards into embankment, leaving 63,000 cubic yards still to be excavated. The masonry consists of bridges at Job's Wood, Blunt's Hall, Braintree-road, Witham Mill-head viaduct, occupation road in Witham Villey, Chipping Hill road; three culverts and a level crossing. Of these works Job's Wood bridge is commenced, and all the other bridges and culverts are completed, except the parapets of the Witham Mill-head viaduct, and of Chipping Hill bridge. Forty-eight chains of the permanent way (double line) are laid at the west end, and six chains of single line laid at the east end.

Contract No. 26.—The earthwork of this contract is 153,000 cubic yards, of which 139,000 cubic yards have been tipped, and only 14,000 cubic yards remain in the cuttings. The masonry consists of bridges at Rivenhall-end, Cranes-lane, Church-hill lane footway, Rye-mill, Coggeshall-road, and Feering-lane; and also 11 culverts and 3 level crossings. Rivenhall-end bridge and Rye-mill bridge are carried up to level of the iron girders, which are now fixing; Cranes-lane and Feering-lane bridges are built; all the culverts are completed; the Coggeshall-road bridge is now being set out; Church Hall-lane footway has been erected under the embankment, and the road crosses the railway on a level. Two miles and 30 chains are ballasted, and two miles and 15 chains of double line of permanent way are laid. An extra occupation bridge is now erecting at Feering.

Contract No. 27.—The earthwork consists of 58,000 cubic yards, of which 50,000 cubic yards are removed, leaving only 8,000 yards in the excavations. There are two bridges in this portion—one at Roder-lane, and the other over the river Blackwater. The former is just completed, and the centres are fixing for the construction of the arches of the Blackwater bridge.

Contract No. 28.—The earthwork amounts to 116,000 cubic yards, of which 84,000 cubic yards have been removed; the remainder of 32,000 cubic yards will be shortly tipped into the Stanway embankment. The masonry consists of the bridges at Darmsay Farm, Coggeshall turnpike-road, and four culverts and four level crossings. The arch of Darmsay bridge is turned, the brickwork of Coggeshall bridge is proceeding, and the culverts are being constructed. A level crossing (by order of the parish authorities) has been changed for an extra bridge, which is now in course of execution. A length of 95 chains is prepared for the ballasting; 22 chains of single line of permanent way are laid.

Contract No. 29.—The earthwork amounts to 272,000 cubic yards, of which 217,000 cubic yards have been excavated, leaving 55,000 cubic yards still to be tipped to form the Stanway embankment. There are four bridges to be erected, viz., at the Fordham-road, Wagstaff's field road, Minor Farm, and Cambridge turnpike-road. The two former are built, and the two remaining bridges have been some time in progress. Two extra culverts have been added in the embankment in this contract. A great portion of the cutting is ballasted, and 48 chains of double line, and 30 chains of single line, of permanent way have been laid.

Contract No. 30.—The estimate for earthwork is 193,000 cubic yards, of which 170,000 cubic yards have been removed, leaving 23,000 cubic yards to complete. There are two bridges in this contract—at Viner's Farm and at Baker's-lane. The first is completed, the latter is in a very forward state. The permanent way has been laid for a length of 42 chains of single line.

Contract No. 30 A.—The earthwork required to be removed was 261,000 cubic yards, of which 213,000 cubic yards have been excavated, leaving only 48,000 cubic yards to be completed. The masonry consists of a bridge at Iron-latch lane, the Colne River viaduct of seven arches, two culverts and one level crossing. The first is finished, and the viaduct is fast approaching to completion; all the arches are turned, and the backing and spandrils nearly up; the two culverts are built and the level crossing prepared. An extra occupation bridge is also in progress at Garrad's Farm; and 34 chains of double line of permanent way have been laid.

In recapitulating the extent of the foregoing works, it appears that since the commencement of operations, out of a gross total of 4,257,000 cubic yards of earthwork, 3,604,000 cubic yards have been excavated, and that there remain 653,000 cubic yards to be removed to complete the embankments and cuttings throughout

The greater portion of the line is already formed, ready for the ballasting and permanent way; of which about 14 miles of single and double line have been laid.

In order to give some idea of the extent of masonry between Brentwood and Colchester, the following account is submitted:—

There are in all 64 bridges and viaducts, 37 culverts and drains, and 18 level crossings.

Amongst the bridges the following are remarkable:—

The one at Shenfield Common is built with seven arches in 50 feet cutting. The chain river bridge at Mountnessing is in 52 feet embankment. The Cana viaduct consists of 18 arches, each 30 feet span, 44 feet in height, with massive wing walls to sustain the embankment. The Chelmsford viaduct is widened for the station to 62 feet, and will extend about 792 feet in length. The Chelmer River viaduct consists of three arches, 45 feet span, 38 feet high. The Boreham Mill Head viaduct consists of three arches, 30 feet span, 26 feet in height. The Hatfield Mill Head viaduct consists of three arches, 40 feet span, 40 feet high. The Witham Mill Head viaduct consists of four arches, 30 feet span, 25 feet high. The river Blackwater viaduct consists of three arches, 42 feet span, in 20 feet embankment. The river Colne viaduct consists of seven arches, 50 feet span, 53 feet in height, constructed on very difficult and expensive foundations, with massive retaining walls.

Besides these there are three very expensive turnpike road bridges—the three-arch skew bridge at Widford; the iron skew bridge at Coggeshall-road, and the three-arch skew bridge at the Cambridge-road, Stanway.

All the requisite tools, turntables, engines, carriages, and other stock, are in preparation for the final opening of the line, and all the country stations are about to be erected, and are constructing on an economical plan, yet affording every comfort and accommodation for the passengers. The most essential part of the London terminus is fast approaching completion; and the offices are now occupied by the respective departments of both Companies.

The new engine-house at Hare-street, near Romford, is nearly completed, and the machinery and tools for repairing the engines are partly delivered, and ready to be fixed in their places. I trust that the building will be ready for use simultaneously with the use of the Railway below Brentwood.

I have now to call your attention to the cost of the line, and to some excess of expenditure (which will have been incurred when the line is completed), beyond the estimate of 2.300,000*l.*

The money appropriated to be expended between London and Brentwood, including the London station, amounted to 1,655,16*l.*, leaving a balance of 644,139*l.* applicable to completing the line between Brentwood and Colchester; and to erect the engine house and country stations; and to purchase the remaining locomotive stock, as per estimate.

Out of the 1,655,861*l.* the sum of 878,793*l.* was appropriated for the engineering works of the railway between London and Brentwood, exclusive of land, and the excess of expenditure in regard to this portion of the line beyond the latter sum will be 99 931*l.* 17*s.* 6*d.*

The line between Colchester and Brentwood, estimated as above 644,139*l.*, will cost 708,574*l.*, leaving an excess of 64,435*l.*, part of which is already provided for by stock in hand, convertible after the line is finished, and not wanted after opening for traffic, valued at 18,000*l.*, consisting of ballast engines, temporary rails, chairs, sleepers, waggons, carts, horses, and other surplus material, leaving 46,435*l.* to be charged to the capital of the Company, to be expended on this portion of the line. This amount includes an allowance for contingencies.

These two excesses amount to 146,366*l.* 17*s.* 6*d.* I ought, however, to state that this excess can be reduced by certain savings in the locomotive stock and country stations, to the extent of 40,000*l.*

Digitized by Google

I now proceed to explain whence chiefly the excesses have arisen.

The causes of increased expenditure on the portion the line between *London and Brentwood* have been these:—

1st. Amounts paid to contractors on excess of estimates for works on the London viaduct 44,986*l.*, arising from the unexpected varying and extraordinary increase of the depth in the foundations of nearly all the piers and abutments, consequent upon passing through crowded building property, intersected with sewers, old ditches, and numerous cesspools. Also from the increased width of the viaduct, and the foundations consequent thereon, having proved unexpectedly difficult and expensive; and the station approaches; extension of wharfing over Wheeler-street, Bell-alley; and alterations of plans through the interference of parish authorities.

2nd.—Extra cost of the London station, and carriage and other sheds; temporary engine-houses and water stations; and cutting down slopes at curves, and other earthwork, 9,945*l.*

3rd.—For repairs to the Gubbins embankment, Nag's Head and Brook-street embankment, and the Brook-street cuttings, in consequence of the extraordinary slips which have occurred, amounting to 45,000*l.*

The increased expenditure on the portion of the line between Brentwood and Colchester will be as already stated, net 46,435*l.*

1st.—An amount of 42,927*l.* has been incurred by a considerable increase in the masonry and side cutting, to ensure the speedy completion of the line, and to counteract the delay that must otherwise have been caused by the bad weather of last autumn and winter. This increase has occurred chiefly on the works at Chelmsford. In the vallies at Mountnessing, the Chelmer at Boreham, Hatfield, Witham, Kelvedon and Leyden, bridges and culverts of greater extent than originally contemplated have been necessarily adopted as a matter of absolute safety to the line, in consequence of the late unusual flooding to which these localities have been subjected. There has also been much additional expense in the erection of occupation bridges by direction of the magistrates, and of culverts and other works which have become necessary since the letting of the contracts.

2nd—I have added a further amount of 13,400*l.* for extra turntables, crossings, and water cranes, which I consider necessary, making the total increase 56,327*l.* It is obvious had I not effected savings on the construction of other portions of the line between Brentwood and Colchester, irrespective of masonry, the excess of cost beyond estimate would have been this latter sum; but I have brought down the excess, including contingencies of 35,500*l.* to 46,435*l.* Should the contemplated saving of 40,000*l.* on locomotive stock and country stations be effected, the excess on estimates on this portion of the line (masonry excepted) will be merely nominal.

Although from the foregoing statement a vast deal of work is still remaining to perform, such means have been resorted to in order to accomplish the completion as to leave no doubt about the result, provided we are fortunate with the weather.

In consequence of the circumstances of bad weather last year, and the necessity of performing a large amount of work within a contracted time, it is scarcely to be supposed that such work could be completed as originally intended without some sacrifice, and without involving the risk of causing an excess on the estimates submitted by me previous to letting the works. Such excesses as have occurred I have accounted for in this Report.

In conclusion, I beg leave to express my general satisfaction with the works hitherto executed by the contractors, and also my approbation of the present state of that part of the line now open to the public, except the continued subsidence at the Gubbins embankment, which has been hitherto an evil of great and serious magnitude; but I have good reason for stating, that in consequence of the precautions which have been adopted for securing these works, they will shortly become effectual, and equal to any other part of the completed line, which is in most excellent condition.

I do not wish unnecessarily to call attention to the difficulties which I have had to encounter and to surmount, in constructing, since the month of May 1841, a line of 33¼ miles in length, with nearly four millions and a half cubic yards of earth to move, but the wet weather of last year was of such unprecedented long duration, and the rains and floods so heavy, that practically the time allowed for the completion of these works has been reduced from eighteen to less than twelve months. The fine weather of this year has been most propitious, and I repeat my conviction that the line will be ready to be opened on the 1st of October next. I have the honour to remain, gentlemen, your obedient servant,

(Signed) JOHN BRAITHWAITE.

LONDON AND BLACKWALL RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Blackwall Railway Company was held on Tuesday, at the London Tavern, Bishopsgate-street; WILLIAM ROUTH, Esq., in the chair.

The attendance was very large.

The CHAIRMAN opened the proceedings by stating, that the Report of the Directors, and the statement of accounts, had been in the hands of the proprietors since Saturday, but at the same time, as there might be gentlemen present who had not received a copy, he would, with permission of the meeting, call upon Mr. Kennell (Secretary *pro tem.*) to read it.

Mr. KENNELL according read as follows:—

REPORT.

Since the last half-yearly meeting in February, the proprietors were in the month of June specially called together, for the purpose of its being communicated to them that the new Act of Parliament had passed, whereby the Company had acquired the power of raising by loan an additional sum of 66,000*l.*

On that occasion a resolution was passed, affording the necessary sanction of the proprietors, to the borrowing of this sum upon the security of debentures, which the Directors have already in part carried into effect.

The Act referred to contained other clauses of importance to the welfare of the Company: it removed certain restrictions in reference to the sale of the surplus property lying within the limits of the City, and it granted additional facilities for the accommodation of the passenger-traffic, which are now in question, and are found to be of great service.

The half-yearly accounts from the 1st January to the 30th June, are now laid before the proprietors. It will be seen by the revenue account, that the gross receipts for the six months amounted to 21,932*l.* 1s. 9d., and that after paying all current charges and interest on money borrowed, a balance of 1,472*l.* 10s. 9d. only remains to the credit of that account.

It will, no doubt, to every one be a subject of regret, that no sum remains adequate to the making of a dividend, but the Directors consider, that although they, in common with the rest of the proprietors, are destined to experience disappointment in this respect, yet there are circumstances connected with the extent and nature of the traffic, which are calculated to afford a confident hope, that a fair profit will, at no distant day, result from the working of the railway.

It is well known that in all Railway Companies, the inconvenience of the present division of the year has been felt, the result of the last half-year being in all cases much larger than that of the first—this is still more felt in the Blackwall Railway, where the autumn traffic is always the largest; and it will not be unsatisfactory to observe, that the average weekly takings of the last four months, including the passenger-wharfage, have been,

In the month of May	£1,154
June	1,270
July	1,495
August	1,601

The Directors would particularly draw the attention of the proprietors to the statement annexed, of the receipts for the present year, as compared with the last, and they will not fail to observe how progressively the increase has been maintained; at the same time, it must be borne in mind, that that the working expenses have remained unaugmented, and are likely to continue so, whatever increase may take place in the traffic.

The source upon which the traffic has been considered greatly to depend, is that in connection with the river steamboats, which make the Brunswick Pier at Blackwall the place of landing and embarking their passengers. This source, although thus far largely productive, has not nearly reached the expectations formed of it, but it is most satisfactory to know, what indeed may be made manifest to any observer, that so far from being exhausted, it still possesses abundant means of affording an accession of traffic far greater than any former anticipation had warranted.

The increase that is steadily going forward in this description of traffic, may be illustrated by the following comparative account of the number of passengers who have passed between Gravesend and Blackwall during the summer months of 1841 and 1842, by the three iron boats, which the Directors of the Company and their friends provided for the sole object of promoting the railway traffic.

	Passengers.	Amount.
May, June, July, August, 1841....	137 629	£5,923 13 2
Ditto 1842....	197,644	8,152 7

In addition to these Gravesend steam-boats, all the boats belonging to the Star Company, and the Sons of the Thames Company, as well as several belonging to the Diamond Company, land and embark passengers at Blackwall; and to show how large the Gravesend traffic is becoming, it is worthy of being mentioned that no less than 70,000 persons were landed or embarked at the two piers of Gravesend in the first week of the present month, independently of multitudes of other persons who have landed in boats, or at the Rosherville Pier, and in proof of the fact before alluded to, as to the extent of the traffic not yet made available to the railway, it is ascertained that of these 70,000 persons only 28,000 embarked from or landed at Blackwall.

Steam-boats also are running from the Brunswick Pier, Blackwall, to Rotterdam, Antwerp, Ipswich, Dover, Ramsgate, Margate, Herne Bay, and Sheerness, and a constant communication every quarter of an hour is kept up with Woolwich and Greenwich.

The Directors cannot at present report any extensive progress made in the carrying of goods. The carmen, in order to retain their connection, have made successive reductions in their rate of cartage, and thus the traffic has hitherto but in a slight degree been diverted from its old channels.

The Directors have satisfaction in reporting that the permanent line and all the works of the railway are in a state of perfect efficiency; and the same may be said of the engines and machinery, as well as of the stock of carriages.

No one who is conversant with the present state of the river traffic to which the railway forms the grand connecting link with the metropolis, will entertain a doubt that very much remains yet to be developed for the benefit of the railway, and that the number of passengers will go on increasing. Should any be sceptical on this subject, they are invited to visit the Brunswick Pier and judge for themselves.

From the commencement the Directors felt persuaded that in opening out this new communication between the whole port of London and the City, it was sound policy to adopt a low rate of fares, and to this moment they do not at all regret having done so. After carrying upwards of four millions of passengers in little more than two years, the advantages of the railway must unquestionably have become extensively known and appreciated. The traffic being so established, the time is now arrived when the Directors believe that an increase in the fares may with advantage be adopted, and they accordingly propose that in the month of October the advance should commence. It is probable that the first effect of this measure will be to check the progressive increase in the number of passengers; but when it is considered that with an advance of 2d. per passenger, the fares by the railway will still be amongst the cheapest in the kingdom, it is reasonable to expect that the numbers will speedily recover this check, and that the receipts will be such as to afford a fair remuneration to the proprietors.

W. ROUTH, Chairman.

A Comparative Weekly Statement of the Receipts from Passengers.

		1,296 7 3
Total		£23,068 1 5
By balance		£1,472 10 9

The CHAIRMAN had no doubt that the proprietors present would like to ask a great many questions in further elucidation of the Report, and, therefore, he would not unnecessarily take up their time by any lengthened remarks. There were, nevertheless, one or two points upon which he would very briefly touch, and first, as to the expenditure. The Directors were pleased to find that the current expenditure for the half year did not exceed the estimate laid before the proprietors last year. He was sorry, however, that he could not hold out hopes of any very material reduction. In the items of rope, maintenance of way, sheaves, and office expenses, there might be some reduction. As regarded the cost of labour, the wages of station clerks, and other items, the subject had been twice under the consideration of the Directors, and after the fullest investigation by special Committees, he did not think that much further saving under these heads could be effected. There was one item in which a saving would at once be carried out —he meant the Direction. The Board had unanimously resolved, that while the revenue of the undertaking would not admit of the declaration of a dividend, they themselves would not accept any remuneration for their services. (Applause.) With respect to the traffic, it was, as would be seen from the Report, progressively increasing. True it still fell far short of what had been expected; but, nevertheless, the improvement was satisfactory. To the increase of traffic and the augmentation of fares recommended in the Report, the proprietors must look for a return upon the capital embarked in the undertaking. They would observe what was said in the Report as to the proposed increase of charge, and with the meeting the decision must rest. Perhaps he ought to take that opportunity of stating that Mr. George Rennie, one of the Directors, had tendered his resignation, which resignation had been accepted by the Board. Mr. Rennie had communicated his determination in a letter addressed to him (the Chairman), which, if Mr. Rennie desired, should now be read.

Mr. RENNIE thought it would be as well first to discuss the contents of the Directors' Report, and then to bring forward the subject of his resignation, as he wished to offer a few observations respecting it.

There were, however, loud cries of "Read, read," and the Chairman accordingly read Mr. Rennie's letter, and the answer to it, as follows:—

(COPY.)

"Chesham-place, 25th August, 1842.

"Dear Sir,—It is now nearly six months since I came to the conclusion that my services at the Board of the Blackwall Railway Direction could be of but little use to the proprietary; and considering the circumstances of the steam-boat question not altogether agreeable or satisfactory either to my colleagues or myself, I have therefore to beg that you will place my resignation before the Board at the next meeting.

"I have delayed until now to inform you of the above determination, as I thought it only due to the proprietors to complete the year since my election, as well as to state to them, very briefly, at the meeting my reasons for retiring.

"On accepting the appointment of Director, I did not imagine that I could be of much more use than by the opportunity it would naturally afford me of becoming intimately acquainted with the details of the working of the line, to enable me to form a more accurate opinion as to the ultimate success of the undertaking, as well as its past management. It is, however, due to you and the other Directors to be informed of the nature of the observations which I propose to make at the general meeting.

"I have had sufficient experience of the world to be willing to acquiesce generally in the decisions of the majority with whom I may have to act, nor do I think that I can be charged with unreasonable pertinacity in maintaining those views in which I have differed from my colleagues. My withdrawal from your Board has therefore no reference to those questions on which we may have come to different conclusions.

"It is evident that the main cause of depression under which this property now suffers, arises from the mistaken calculations of the Engineers as to the cost of construction, and the current expenses of working the line. It would, however, perhaps be rather hard on the Directors to assume that they ought to have foreseen the fallacy of those calculations, and perhaps the novel and untried nature of the mechanism required will serve to a certain extent as an apology for the great inaccuracy of the Engineers' estimates. With regard to the amount of traffic, I am disposed to think that the anticipations on this point will, at no distant period, be fully realised.

"In endeavouring to develope this traffic the Directors have at great personal liabilities undertaken an extensive steam-boat speculation, and on taking my seat at the Board I found myself the only party not embarked in it. Having been in no way committed to the original prospectus, wherein such flattering prospects are held out to the shareholders, I want perhaps *esprit de corps* to induce me to join in the steam-boat undertaking; and although this has seldom been alluded to, you must be aware of the many tedious hours that I have been present to hear discussions on matters con-

Digitized by Google

nected with these boats, but which I, as a Railway Director, could claim no vote in.

"Feeling, therefore, that from the circumstance I have above alluded to, there are no persons so much interested in carrying out the capabilities of this railway, as yourself and the original Directors, and being unwilling to be exposed constantly to the conclusion that either I or my colleagues are in a wrong position at these discussions, I have decided on retiring.

"Very faithfully yours,

(Signed) "GEORGE RENNIE, Jun.

"William Routh, Esq."

(COPY.)

"London Tavern, August 30, 1842.

"Dear Sir,—I have the honour to acknowledge the receipt of your letter of the 25th instant, tendering your resignation of a seat at this Board, which has this morning been laid before a special meeting of the Directors, and has been accepted.

"Having been informed that, in a casual conversation with Mr. Pearce, on Sunday last, you appeared to be under the impression that your co-Directors of the Blackwall Railway were dissatisfied with your declining to participate with them in the steam-boat undertaking, which had been formed to aid the purposes of the railway, I think it right to state to you, and in so doing I am speaking the sentiments of my colleagues, Messrs. Harvey, Salomons, Farncomb, Robertson, Ferrers, and Haigh, the only Directors now present, that this impression is altogether erroneous.

"I am, dear Sir, yours, faithfully,

(Signed) "WILLIAM ROUTH.

"George Rennie, jun., Esq."

The CHAIRMAN was not aware that he had any further observation to make on that subject, except to state that a gentleman who had previously been a Director of the Company for two or three years, was willing to accept the vacant seat—he alluded to Captain Mangles. Should the proprietors elect that gentleman, as he had no doubt they would, it would be satisfactory to the Directors to act with an individual with whom they had formerly been associated, and it was gratifying to them to find that one who was so intimately acquainted as Captain Mangles was with their past proceedings, should feel inclined again to join them. (Hear, hear.) He was now prepared to answer as far as he could any question that might be put to him.

Mr. RENNIE would have preferred that the subject of his resignation should have been deferred until the Report had been fully discussed; but as the matter had been alluded to, he would trouble the meeting with only a few remarks. As a matter of courtesy he had tendered his resignation to the Directors, although he looked upon himself as elected by the proprietors, to whom he was responsible. He had purposely abstained in his letter from going into details as to what had rendered his position with respect to the other Directors uncomfortable, but from what was mentioned in the Chairman's reply, he could not help entering somewhat further into particulars. About nine months ago, namely, about three months after his election as a Director, a question had been brought forward at the Board having reference to the steam-boat speculation, upon which question he (Mr. Rennie) wished to offer an opinion, although it was not his intention to vote upon it. This, however, was objected to, and finding that he was not to be allowed to have even a voice in these matters, he had on every future occasion when these steam-boats came under discussion, left the table, and sat by the fire, or read the newspaper. More recently Mr. Roskell, then a Director—and as that gentleman had not recently attended the Board meetings, he did not know whether he was still a Director or not—had written a letter to his colleagues, expressing an opinion that all the Directors ought to be responsible in respect of the steam-boats; and as the Board had not repudiated these sentiments, he (Mr. Rennie) necessarily felt uncomfortable in his position. He never had had any intention of embarking in the steam-boats, and he knew that in the opinion of many of the proprietors, and he believed of some of the Directors also, it was desirable that there should be at least one member of the Railway Board unconnected with these boats. He had not sought this discussion, but he would not shun it. He was ready to admit from the Chairman's answer, which had just been read, that his impression as to the feeling of his colleagues towards him was erroneous; but it would be allowed that the impression was, under the circumstances, a very natural one. (Hear, hear.) By writing such letter, he had meant to put the steam-boat question fully before the meeting. He should be glad to be relieved from the office of Director, but if the meeting were of opinion that he ought not at such a time to desert the undertaking, he was content to remain. (Hear, hear, hear.) His object in tendering his resignation was, as he had already said, to give the proprietors at large an opportunity of deciding the steam-boat question, and upon the propriety of having at the Railway Board one member unconnected with that speculation. He gave, and always had given, every credit to the Directors for undertaking so considerable a risk. (Hear, hear, hear.) Bad as was the position of the railway, he believed it would but for these boats have been much worse. (Applause.)

Mr. JOHN PEARSON said, as the Chairman had invited questions, and no one else seemed disposed to put any, he himself would do so, more especially as regarded the expenses. He was the more incited to do so from the circumstance that, simultaneously with the Directors' Report, he had received the Report of another Company, owning a line between two of the most important towns in the empire, which presented a striking contrast in some of the items of its expenditure to the Blackwall Railway. And first of all he would call attention to the enormous item of 10,000*l.*, paid within the last six months, under the head of "Solicitors' and Law Charges." (Disapprobation.) This was in addition to another item of 1,605*l.* for "Vendors' Costs on Conveyances:" a charge which probably it would be said was unavoidable. In the other railway to which he had referred, and of which the capital was larger than that of the London and Blackwall, the total outlay for law and Parliamentary expenses, including the obtaining of a new Act, was only 8,300*l.*, whereas here, in addition to the 10,000*l.* and 1,605*l.* already alluded to, there were previous charges under the same heads, making altogether upwards of 58,000*l.* (Renewed disapprobation.) There were other items of expenditure which, although individually small, amounted in the aggregate to a large sum, and which made it clear to his mind that, to say the least, a very unnecessary expenditure was incurred on the Blackwall Railway. He saw in the accounts a charge of 267*l.* for "Passenger Check Tickets" for the six months, whereas in the railway to which he had before alluded the expenditure under this head was only 32*l.* (Hear, hear.) Then again, advertising cost 250*l.*, a very heavy item; and stationery and office expenses cost 700*l.*, whereas on the other line this item amounted to only 56*l.* So great a difference could not, he thought, exist without throwing blame upon the Blackwall Company for needless expenditure. He had no hesitation in naming the line to which he had referred—it was the Edinburgh and Glasgow: a line, as he had already said, passing between two of the most important cities in the empire. There was another item in which the contrast was equally striking. For Direction, on the Blackwall line, the charge for the six months was 600*l.*; on the Edinburgh and Glasgow Railway it was 250*l.* He begged to say, however, that he did not quarrel with Directors being well paid when efficient services were given in return. With respect to the working of the line, he was sorry to find that the traffic was not conducted with the same regularity as before. (Hear, hear, hear.) He had frequent occasion to pass to and from the Herne Bay and Margate boats, and whereas formerly the passengers used to get from Blackwall to town in little more than a quarter of an hour after the arrival of the boat at the pier, it was now very frequently from 20 to 30 minutes, so that passengers thought it useless to disembark at Blackwall. On Saturday he himself had been upwards of half-an-hour after reaching Blackwall before he could get to London. These irregularities could not fail to affect the railway very injuriously. (Hear, hear.) With respect to the raising of the fares, he doubted whether such an augmentation would succeed, even with the second class; he was quite sure that it would not succeed with the first class. He had seen much of the world, and he was satisfied that when persons who would willingly pay 6d. had (to use a common phrase) to "break the shilling," they would choose some other mode of conveyance. Let the Directors look at the Croydon Railway, on the other side of the river, and they would see that his views were there confirmed. He did not wish to move a rider to the resolution which would no doubt be proposed for the adoption of the Report, but he was anxious that some further explanation should be given of the points to which he had alluded. There was another question which he wished to put, but without any desire to do so offensively towards the Directors, namely, whether the Board, collectively, held at this moment the same interest in the railway as on the occasion of the last meeting. Allusion was made in the Report to the reductions which the carmen had made in the cost of transmitting goods. He thought, if it were worth the while of the carmen to make such reductions, it would well suit the policy of a large and influential Company to do the same. (Hear, hear, hear.)

Mr. BIGG wished to add a few questions to those which had already been put. He saw in the capital account an item of 121,200*l.* due on "temporary loans," and he wished to know how these loans were secured—for what time—and at what interest? He wished also to know if any further sums were due to the Company's Solicitors, and if so, to what amount? Was anything still owing for carriages or trucks, and if so, how much? Of what items was the gross sum of 28,049*l.*, stated in the accounts without any explanation as expended on works during the six months, composed? (Hear, hear, hear.)

The CHAIRMAN said, he would answer as many of the questions as he could; some of them related to accounts, and which he could not answer off hand. With respect to the Edinburgh and Glasgow Railway, he was not aware of the character of the property lying between the termini, but he took it for granted that it was not very densely populated. When he mentioned that on the Blackwall line there had been upwards of 1,000 cases of property sold, and transfers made out, they would see that the law charges must necessarily have been large, since it was necessary that the Company should verify every title. Then there were no fewer than 178 jury cases tried, and tried too with good effect, besides more than 50 cases of compensation under the 50 feet clause. He had no doubt that, if an accurate comparison were instituted, it would be found that the law expenses of the Blackwall Company were in proportion (taking into consideration the circumstances of each) less than those of the Edinburgh and Glasgow.

Mr. PEARSON said, he had heard the Chairman gave the same explanation respecting the law charges at the last meeting. He did not so much complain of the 22,329*l.* previously paid for law expenses as that 10,000*l.* should have been paid under this head during the last six months.

The CHAIRMAN said, the fact was that the Solicitors had kindly given the Company credit when labouring under difficulties. The 10,000*l.*, although paid during the last six months, had been incurred previously. (Cries of "Ah!" ah!" and much disapprobation.) With respect to the check tickets, the arrangements of the Company were necessarily very intricate. Sometimes they carried as many as 10,000 passengers a day. With reference to the Directors, he trusted his previous statement was satisfactory to the meeting. (Hear, hear, hear.) As to irregularities in the traffic, they could not at all times be avoided. Sometimes a steamer came to the pier five minutes behind her time, and heavily

Digitized by Google

laden with luggage, so that delay was unavoidably caused. He would contend, however, that there was no unnecessary irregularity. In fact, the trains worked more regularly now than during the previous year, to which the honourable proprietor had referred. With reference to the disgust which it was said the Herne Bay and Margate passengers entertained towards the line, it was, he thought, a sufficient answer to state, that whereas the number of these passengers availing themselves of the railway in the months of May, June, and July, 1841, was 7,000, in the same months of the present year the number had reached 20,000. (Hear, hear, hear.) The question of raising the fares was, he would admit, a large question. It was quite possible that some who now travelled by the first class would, if the fares were raised, go in the second class. He believed, however, that experience proved that where fares were not too high—as they certainly were on the Croydon line—the augmentation of receipts from a higher fare would more than compensate for the diminished number carried. With respect to the number of shares held by the Directors, it was larger at this moment than at the period of the last meeting. (Hear, hear, hear.) Upon the carriage account there might be about 1,500*l.* still due, but he would not pledge himself to the precise amount. With regard to the works, the item in the accounts had been paid to Mr. Jackson principally for works on the extension line, Mr. Jackson having generously given the Company credit in their troubles. As to the carmen, the Directors had fixed the charges by railway at as low a rate as they considered prudent, and he was of opinion that this opposition, like other oppositions which the Company had encountered, would ultimately yield to the force of circumstances. There was one other point to which he would allude, namely, the Solicitors' bills. (Hear, hear, hear.) The Directors, not being solicitors, had deemed it right to refer these bills to two eminent solicitors, Mr. Freshfield and Mr. Maynard, and these gentlemen had certified that the charges were not only not extravagant, but moderate. (Cries of "Oh, oh," and "Hear, hear.")

Mr. Bigg said, his question had reference to the further sums still due to the Solicitors.

Mr. Tyerman (one of the Solicitors) spoke to the Chairman, and was understood to intimate that the amount could not be large.

Mr. Aaron A. Goldsmid entered at some length into the question of Mr. Rennie's resignation. The Directors deserved praise for the zeal they had displayed, but every one must see that Mr. Rennie's retirement had arisen from delicacy of feeling. ("Hear, hear," and "No, no.") In order that the meeting might have an opportunity of expressing their sentiments on this subject, he begged to move that Mr. Rennie be requested to remain in the Direction. Perhaps some one would second the motion. (Loud cries of "All, all," and "No, no.") He had not thought it necessary to use any argument on this point. He thought Mr. Rennie's merits were too well known to require mention. (Applause and uproar.) He (Mr. G.) gave the Directors every credit for their motives in embarking in the steam-boat speculation, but he did not think that any member of the Board should be called upon to join in a scheme which was only collaterally connected with the railway. As well might he be asked to take shares in the docks, or in any other project bearing upon the prosperity of the railway. (Hear, hear, hear.)

The Chairman thought the Report had better be disposed of first.

A Proprietor here asked what was the amount of surplus property unsold?

The Chairman said, the surplus unsold property, as valued by Mr. Tite, amounted to 66,600*l.*

Mr. Saintsbury rose to second Mr. Goldsmid's motion, although he agreed with the Chairman that the Directors' Report ought first to be discussed. In conformity with the Chairman's invitation, he begged to ask a few questions. The Chairman had mentioned one or two items of expenditure in which reduction might take place, but he had not alluded to the mileage duty. The mode of levying the tax had, as they were aware, recently been altered, and he had understood that the change would benefit the Blackwall Company in common with others. Was it so? As to passenger checks, he thought the cards given were much too expensive. The honourable proprietor here referred to the checks used on Board the 4d. steamers from London Bridge, and thought that if flimsy papers succeeded on board the boats, where the passenger had to take care of the ticket throughout his journey, they would answer equally well on the railway, where they were immediately on receipt torn in half, and the other half taken away before entering the carriages. He then alluded to the proposed raising of the fares, and mentioned the case of a friend of his, the owner, he said, of several ships, who always travelled in the cheapest class carriage, but who had told him that, although he wished to save 2d. whenever he could, he would still travel by railway, even if the fare were 1s., so long as it presented its present facilities. The honourable proprietor also stated that many persons—clerks and others—were allowed by their employers to charge 6d. for the fare, although they used the 4d. carriages. He was strongly of opinion that the change of fare was at least worth an experiment. He had intended to refer to the charge for Direction, which he thought somewhat high. The statement of the Chairman had, however, given a different aspect to that question. Had the Board maturely considered how far the work would be well done if it were performed gratuitously? (Hear, hear.) His own observation showed that an unpaid Executive was seldom or ever an economical Executive. (Hear, hear.)

Mr. Bigg begged to repeat his question as to the amount of the temporary loans—the security—the time for which they were contracted—and the rate of interest. His other question as to the Solicitors' bills still remained unanswered. (Hear, hear, hear.)

The Chairman said, the debts of the Company amounted to 68,000*l.*, part of which had been borrowed at 5 per cent. and part at 6 per cent. interest. (Murmurs.) As to the Solicitors' bills, the parties were present, and would no doubt answer for themselves. With respect to the mileage duty, the amount paid during the last six months had been 1,416*l.*; under the new arrangements the amount would have been 1,000*l.* As to the passenger tickets, if the honourable proprietor would wait for a quarter of an hour at the terminal station, he would see that it was impossible to make use of the flimsy tickets to which he had alluded. It was absolutely necessary, as a check upon their money-takers and other servants, that they should use Mr. Edmondson's machine, which was now adopted on 13 railways, not one of which carried so many passengers as the Blackwall. Frequently they had 800 passengers by a single train, and without that machine it would be impossible, as he had already said, to have any efficient check on their servants. It might seem strange that the tickets should be torn up immediately after being delivered, but it was indispensable to prevent a recurrence of those frauds to which the Company had been exposed during the first year after the opening. He need not enter into particulars as to how these frauds were committed, but it was a boast with some that they had travelled by the railway a dozen times with the same ticket. In fact, the Company could not tell to what extent they had thus been defrauded. He entirely coincided in the sentiments of the honourable proprietor that unpaid services were not the best. Under present circumstances, however, the Directors were unanimous in their determination not to receive any remuneration. He trusted the time was not far distant when the proprietors would be able to pay, and then they could consider how it might be best carried into effect. (Hear, hear, hear.)

A Proprietor gathered from the accounts that there were arrears on calls to the extent of upwards of 27,000*l.* He should like to know to whom these shares belonged.

The Chairman said, the arrears on old shares amounted to about 2,000*l.*, and on new shares to about 26,000*l.* With respect to these arrears, he thought he would be answering most satisfactorily, and most delicately, if he assured the meeting that none of the arrears were in the smallest degree jeopardised.

The Proprietor thought it singular that at a late meeting the shareholders should have been called upon to grant powers for raising 66,000*l.*, when there were nearly 30,000*l.* of arrears outstanding upon calls.

The Chairman said, it had in this Company, as in others, been deemed best not to press too sharply for such arrears, especially as they were bearing full interest.

Another Proprietor made a reference to the cost of fuel on the Greenwich line, which, he said, was not much more than half that of the stationary power on the Blackwall Railway.

The Chairman said, the coals used by the Blackwall Company were delivered at a very low price—namely, 14s. per ton. The comparative cost of locomotive and stationary power it would be useless now to discuss. The stationary system had been adopted on the Blackwall Railway, and could not now be changed. It should be remembered too, that if locomotives were used, and stoppages made at so many stations, the journey to Blackwall could not be performed in less than half an hour.

Mr. A. Goldsmid saw in the accounts an item of 1,250*l* for "rope." Had the Directors discovered the kind of rope most suitable?

The Chairman thought they had. They were now using a rope of stouter wire. The parties interested in that invention had offered to contract for the rope at 2,500*l.* a-year, but the Directors thought it could be accomplished for less, and had therefore declined the offer.

After some further conversation,

Captain Page moved that the Report of the Directors be received, adopted, and printed for circulation among the proprietors.

Mr. Williams seconded the motion.

Mr. Bigg said, his question as to the Solicitors' further bills had not yet been answered. (Loud applause.)

Mr. Pearce (of the firm of Pearce and Boulger, solicitors) said, all the bills that had been sent in to the Directors had been paid. The bills had, however, not been made up from this time last year, and he could, therefore, give no accurate idea of their amount. (Much hissing, and cries of "Shocking," "Shameful," &c.)

Mr. L. Levy inquired what rate of fare it was now proposed to establish.

The Chairman said, if the Report of the Directors were adopted, the meeting would be pledged to an additional 2d.

Mr. Bigg said, he was not one of those who, because the results of a speculation were not so satisfactory as could be desired, would look with a miscroscopic eye for the detection of items of which to complain. But when he saw so many heavy items as the accounts now before the meeting comprised, he could not help putting it to all parties concerned whether some wholesome reduction of expenditure ought not to be made at once. (Hear, hear, hear.) He desired to cast no imputation upon the Directors; but it behoved these gentlemen, acting as trustees for the shareholders at large, most minutely to investigate every source of expense. With respect to the Solicitors' bills, it was not enough to refer them to Messrs. Kay and Freshfield, or Messrs. Crowder and Maynard. "Dog don't eat dog"—(laughter)—and it was a most invidious position in which to place gentlemen so respectable as he had the pleasure of knowing Messrs. Crowder and Maynard to be. He must complain that at the last meeting the Chairman had not intimated that so large a sum as 10,000*l.* was to be taken, for Solicitors' bills, from the amount then authorised to be raised; and what made it more difficult to bear was, that they now heard, from one of the Solicitors, that a twelvemonth's bill was still outstanding, the amount of which could not even

Digitized by Google

be conjectured. (Hear, hear, hear.) He was surprised that a gentleman so astute as the Chairman had not anticipated that such a question would have been put, and come prepared with an answer. (Hear, hear, hear.) To leave these matters and come to the working of the railway, it appeared from the Chairman's statement, that the rope cost 2,500*l.* a year. He thought this a very large sum, but perhaps it could not be diminished. Then as to maintenance of way. He found from the accounts that it amounted to about 300*l.* per mile per annum, whereas in other Companies where heavy engines were used, and of course the upper works thereby much deteriorated, the average charge for maintenance was from 185*l.* to 200 guineas per mile per annum. He should like to know how this difference was to be accounted for. (Hear, hear, hear.) He did not make these remarks offensively, but for the purpose of impressing upon the Board the necessity of practising economy, and the more so as he found that by some sort of *hocus pocus* they had last half-year a balance of 13,000*l.* available for dividend, whereas now the balance was little more than 1,000*l.* He regretted to see the paragraph in the Report relative to the steam-boats. He did not call in question the good intentions of the Directors, but he must protest against being by his vote in any way pledged to any connection with such a speculation. (Hear, hear, hear.) There was no legal power to appropriate one farthing of the Railway Company's funds to a purpose like this. (Hear, hear.) He must once more express his regret that his questions as to the 121,000*l.* of temporary loans—for how long they had been incurred—the nature of the security—and the rate of interest—had not been answered. (Hear, hear, hear.) He would again disclaim all wish to give offence to the Directors. [The honourable proprietor, whose address, from his position in the room, we could very imperfectly hear, sat down amid much applause.]

The CHAIRMAN would assure the honourable proprietor, that no question which could be put would give offence to the Directors. His colleagues and himself had the satisfaction of knowing that they had done their best; and, although, they would rather that such terms as *hocus pocus* had not been used, it should not disturb the good temper with which they desired to give every explanation in their power. The honourable proprietor had said that it became the duty of the Directors to look to a reduction of the expenditure. The Directors would feel that the reproach was well merited, if they had not already given an almost daily attention to this important matter. (Hear, hear.) The honourable proprietor said it was idle to refer the Solicitors' bills to other solicitors; what then were they to do? (Cries of "tax them.") By the way, he had not concealed the amount of the bills, but had stated more than once their amount. The Solicitors had been perfectly willing to submit their bills to taxation, but he (the Chairman) had taken good opinion on the matter, and he found that if the accounts were to be submitted to a taxing-officer, the Solicitors would be entitled to make out new bills, and in that case the taxed bills would amount to more than the whole amount now claimed. (Hissing, and other marks of disapprobation.) It was quite clear that a number of charges would be allowed by a taxing-officer which a solicitor might not, as between himself and client, choose to insist upon. With respect to the sope, the Directors had thought that the proferred contract for 2,500*l.* a-year was too high, and that was the reason why they had not accepted it. The honourable proprietor was wrong as to the cost of maintaining the road. The contract was 170*l.* a mile per annum. The 300*l.* to which the honourable proprietor had alluded, included the expense of sheaves. It was true that the works were not subject to the passage of heavy locomotives, as upon other lines, but then it should be borne in mind that from the very nature of the traffic the cost of labour was most materially augmented. Trains were upon the line every five minutes in the day, so that there could be no continuous labour in repairs for more than five minutes; whereas on most other railways there were two or three hours interval between the trains. (Hear, hear, hear.) He thought he had already answered the question as to the interest on loans. As to the security, part was borrowed from the Company's bankers on the security of a portion of the surplus property, and part on the personal responsibility of the Directors. (Hear, hear, hear.)

Mr. LEVY thought they ought not to separate today without coming to some distinct understanding with respect to the steam-boats. It seemed as if all of them were very willing to share in whatever benefit might be derived by the railway from the running of these vessels, although few appeared to like the prospect of incurring any liability in respect of them. (Hear, hear.) He hoped that today they would know the full extent of their liabilities in that respect. (Loud cries of "None, none.") If they could do without the boats, let them be discontinued; if they could not do without them, the railway proprietors ought not to shrink from their proper share of the responsibility incurred. (Much disturbance.) It would be a far more manly course to do so at once than to participate in the benefits without incurring any portion of the risk, and as a large shareholder in the railway he was prepared to do as he recommended, although by no means partial in general to steam-boat speculations. (Renewed tumult.) With respect to the fares, as he was the party who at the previous meeting first recommended an increase, he was glad to see that such increase was about to be carried into effect. He thought, however, they were going somewhat too far, and that 7d. and 5d. would be more profitable. (Cries of "No, no.") Such was his opinion, knowing something of these matters, but of course he would submit to the decision of the meeting.

The CHAIRMAN felt very much obliged to Mr. Levy for the honest and straightforward way in which he had spoken of the steam-boat question. It did him great credit. (Hear, hear.) At the same time he (the Chairman) begged to say again, that the railway proprietors had incurred, and would incur, no liabilities in respect of these boats. (Hear, hear,) The Directors had established them on their own sole responsibility. They were now running at a profit, although that profit, as explained at a previous meeting, was not to be divided. Should any reverse arise, it was probable that the Directors would lay the case before the railway proprietors; but he would state most distinctly, that no person should be asked twice. (Hear, hear.) As regarded the fares, he need not tell his friend Mr. Levy, with whom he had frequently conversed on the subject, that the question had engaged the most anxious consideration of the Board—first, as to the policy of making any increase at all; secondly, as to the time; and lastly, as to the amount. After mature deliberation, the Board had put forth the recommendation contained in the Report; and he was sure that no person would be more rejoiced than Mr. Levy to find that the increase suggested proved successful. (Hear, hear, hear.)

Mr. SALOMONS (a Director) went at some length into the matter of the steam-boats, contending that if at any future day a reverse should arise, the railway proprietors, for whose benefit these boats were established, would be morally bound to share in the loss. It was no use mincing the matter. He felt that he had incurred a heavy responsibility in respect of these boats, from which, except as they brought revenue to the railway, he could derive no profit, and might sustain loss. He thought, therefore, that, should occasion require, the railway proprietors, as honourable men, ought to bear a portion of the responsibility—for it was as much their speculation as the speculation of the Directors. [The honourable gentleman was frequently interrupted by strong marks of dissent.]

Mr. BIGG must again say, that as a Company, they were not in the smallest degree mixed up in these boats, and could not be held responsible. (Hear, hear, hear.) What they might choose to do as individuals, was a totally different question.

Mr. RENNIE entirely concurred with the honourable proprietor (Mr. Levy) in thinking that something ought at once to be done, so as to place the question of the steam-boats upon a proper footing. There was already such a jumble between the affairs of the railway and the steam-boats, that a separation ought at once to take place. (Hear, hear.) He gave the Directors full credit for integrity of purpose, and for the risk which they had incurred, but he would contend that their duties as Railway Directors were incompatible with their interests as steam-boat proprietors. For example, the stores of the railway and the stores of the steam-boats were placed under one roof, and under the management of one person—a servant of the Railway Company. ("Hear, hear, hear," and "Oh! oh!") He begged he might not be misunderstood. He had not the most distant impression that anything was wrong, or that the railway proprietors had not full justice done to them, but he must object to the principle. (Hear, hear.) It would be hard to say that the Railway Company should not lend some aid to a speculation established for their benefit; but, as he had said before, the position of the Directors as managers of the railway, was not compatible with their position as steam-boat owners. [Mr. SALOMONS—Why not?] If he were pressed for further reasons, he would instance this very case of fares. Last spring, the question of raising the railway fares was discussed at the Board, and it was difficult to say to which side the majority leaned. Now, might it not happen, that as owners of the steam-boats, the Directors might, in order to attract traffic to these boats, desire to keep the fares of the railway very low? (Hear, hear, hear.) He would repeat, that he imputed nothing wrong to his late colleagues, but he hoped that this important matter would soon be settled. (Hear, hear, hear.)

Mr. ECCLES had no doubt that if a larger profit had arisen from the steam-boats, the Directors would not have wished the railway proprietors to participate in it, and therefore the Directors ought now to take the chances of the speculation wholly upon themselves. He thought credit was due to the Directors for their zeal in promoting the Company's interests, and he hoped they would continue to study economy, and if possible to carry it still further, since upon the reduction of the expenditure depended the only hope of a dividend.

Mr. PEARSON would entirely repudiate the doctrine advanced by Mr. Salomons. ("Hear, hear," from the Chairman.) He was sorry that the question had been mooted, as it was quite clear that the Railway Company were not in the smallest degree liable. If the steam-boats had been useful to the railway, had not the railway been useful to the steam-boats? (Hear, hear, hear.) He thought the meeting would agree with him, that they ought to have nothing whatever to do with such speculations. (Hear, hear, hear.)

The CHAIRMAN could only repeat what he had on previous occasions stated, namely, that the boats were the sole property of the Directors, who had established them—that there was no liability on the railway proprietors in respect of them, and that there was no prospect of any appeal being made to them. At the same time, although the Directors had no claim on the Company, they undoubtedly had a claim on certain individuals who had originally encouraged the scheme, and no doubt there would be others who agreed with his friend Mr. Levy on this subject. It was, however, quite useless to discuss the question, as even if the meeting were unanimous in determining to share the liability, they had no legal power to apply the funds of the Railway Company to such purpose. (Hear, hear, hear.)

Mr. GREENAWAY saw by the accounts that the expenses for station clerks, and police, porters, &c., amounted to about 5,000*l.* for the six months, or nearly 200*l.* per week, whereas on the Great Western Railway, which was 35 times as long as the Blackwall, and had 14 stations, the expense under this head was only about 170*l.* per week. With respect to the passenger tickets, he was satisfied that frauds and mistakes would be committed

Digitized by Google

unless machinery was substituted for men and boys. Of a party consisting of 20. persons, with whom he recently travelled on the railway, 4 had their tickets in their pockets after the train had started.

The CHAIRMAN held in his hand a list of all the servants, and he did not see that they could dispense with any of them.

Mr. ECCLES said, the Chairman had at a previous meeting estimated the cost of working the line at about 500*l.* a week. It appeared from the accounts to be much more.

The CHAIRMAN said, he had stated at the time that his estimate was exclusive of interest on debentures, rates, taxes, and mileage duty. If these were deducted the weekly expenditure would be found to be about 500*l.*

A PROPRIETOR inquired if the capital account were to be considered closed.

The CHAIRMAN said, it was so nearly so that it might be said to be closed. He saw no reason why he should not adhere to his statement on this point made at the last meeting.

A PROPRIETOR inquired why Mr. Stephenson, if he were Engineer to the Company, was not present at the meeting.

The CHAIRMAN said, Mr. Stephenson was not the Company's Engineer. In fact they had no Engineer, the line being under the superintendence of the clerk of the works. Mr. Stephenson would, nevertheless, have been present out of courtesy to the meeting, but had been called away by unavoidable business.

Some conversation followed as to the fares, from which it appeared that the adoption of the Report would pledge the meeting to the proposed increase, whereupon,

Mr. GOLD moved as an amendment, that the Report be adopted, with the exception of the paragraph relative to the fares.

Mr. SEDGWICK seconded the amendment, which, however, on being put, was negatived by a large majority, only four hands being held up in its favour.

The original motion was then carried, there being only three or four dissentients, apparently not the parties who had voted for the amendment.

A PROPRIETOR said, the prospect of a dividend of 10 per cent. per annum had originally been held out by the promoters of the line. Now, it seemed they could scarcely get 1 per cent. Was this great difference attributable solely to the excess of the Engineer's estimates?

The CHAIRMAN said, it was attributable partly to the excess of the estimates, and partly to the fact that the traffic resources were not yet fully developed.

Mr. GOLDSMID now, amid great interruption, brought forward his motion relative to Mr. Rennie's re election.

Mr. RENNIE said he was quite willing to remain in the Direction if the proprietors desired it. He had resigned in order to give the proprietors an opportunity of expressing their opinions on the steam-boat question. The honourable proprietor then referred to the fact that he, in common with the other Directors, had signed promissory notes on behalf of the Company to the extent of 35,000*l.*, but he had no fear upon that score.

Captain MANGLES had not intended to be present at the meeting, and he was sorry he had come. If he had thought that Mr. Rennie had intended to offer himself again as a candidate, he (Captain Mangles) would not have accepted the offer made to him of a seat at the Board, coupled as that offer was with a share in the responsibility of the steam-boats. He was a holder of 160 shares, and felt much interest in the success of the railway. He should have been glad to be associated once more with those with whom he had previously acted in harmony, but had he entertained any idea that Mr. Rennie would again grasp at the crown which he had thrust from him, he should not have placed himself in his present position. (Applause and uproar.)

Mr. RENNIE would again repeat that he had resigned to give the proprietors an opportunity of expressing their opinion. If it were the wish of the proprietors, he would not desert the undertaking at a time when the Directors were to receive no remuneration for their services. (Confusion.)

Mr. A. GOLDSMID, when he proposed the re-appointment of Mr. Rennie, was not aware that his resignation involved any question of policy. He had made the motion solely on the general merits of Mr. Rennie.

The CHAIRMAN said, his colleagues and himself had, in the first place, to apologise to Captain Mangles for the position in which they had placed that gentleman. Mr. Rennie had positively resigned—[Mr. RENNIE—"Yes, to the Directors"]—and the Board, deeming it their duty to propose some one to fill the vacant seat, had thought the proprietors would be glad to secure the services of Captain Mangles. He was happy to hear Mr. Rennie speak of his late colleagues in the way he had spoken. He (the Chairman) was sure they deserved it. With respect to the re-appointment of Mr. Rennie, of course the causes which had led to his resignation would continue. Two-thirds, or perhaps three-fourths, of the traffic of the railway depended on steam-boats. The steam-boat traffic was daily becoming more and more important, and the Directors did not think their time misspent in endeavouring to foster and extend it. If any gentleman thought otherwise, it certainly could not contribute to the harmony of the Board, or to the good of the undertaking, that such gentleman should be chosen a Director. ("Hear, hear," and interruption.) With respect to the stores, of which mention had been made by Mr. Rennie, a Committee had been appointed to investigate the arrangement. Mr. Rennie was a member of that Committee, and had admitted that the arrangement was on a good footing. [Mr. RENNIE—"Yes, for the present."] Mr. Rennie had not up to that day proposed any different arrangement. (Hear, hear, hear.)

Mr. RENNIE had certainly brought no charge against the Directors in respect of the steam-boats. ("No no," from the Directors.) On the contrary, he would say once again, that he considered they had a strong moral claim on the proprietors should any reverse take place.

After some further desultory discussion,

Capt. PAGE said, that although he gave Mr. Rennie full credit for his good intentions, it was necessary that the unanimity of the Board should be preserved. He would therefore move as an amendment to Mr. Goldsmid's motion, that Capt. Mangles be elected a Director of the Company.

Mr. WILLIAMS would with pleasure second the motion. When the hon. gentleman admitted that he sat by the fire reading the newspapers while his colleagues were discussing matters of great importance to the railway, he thought it high time that he should give place to some one else.

A scene of the utmost tumult ensued, half a dozen persons addressing the meeting at once. When the uproar had somewhat subsided.

Mr. LEVY observed that Mr. Rennie, being an honourable and able man, would serve the Company much better in opposition than by having a seat at the Board. It was necessary that the Directors should act harmoniously, and therefore he would support the election of Capt. Mangles.

A show of hands was then taken, when there appeared 33 hands for Capt. Mangles, and about the same number for Mr. Rennie, whereupon the Chairman said he must trouble the meeting to divide, the supporters of the two candidates taking different sides of the room.

Another uproarious display followed and lasted for several minutes, during which Mr. Goldsmid consulted with Mr. Rennie.

Mr. GOLDSMID then attempted to address the meeting, but such was the confusion that it was some time before he could make himself heard. He repeated what he had previously stated as to moving Mr. Rennie's re-appointment, and said that Mr. Rennie, now thanking the proprietors for their almost unanimous approval of his personal conduct, begged to withdraw his name. (Renewed disturbance.)

The CHAIRMAN thought no division was necessary under such circumstances.

Some of Mr. Rennie's supporters were, nevertheless, very clamorous for a division, and Mr. Rennie said it was a matter of perfect indifference to himself, but, if the meeting wished it, he should not object to a division.

The proprietors then took opposite sides of the room, Mr. Levy warning them that he should, if necessary, demand a ballot.

Tellers were then appointed, and, amid great confusion the numbers were announced—

For Captain Mangles.....	43
For Mr. Rennie	37
Majority.....	6

whereupon the Chairman announced that the election had fallen upon Captain Mangles. The friends of the two gentlemen received the announcement with mingled plaudits and hisses.

Captain MANGLES returned thanks. If he were to analyse the ranks of his opponents, it would probably be found that many of them were connected with rival steam-boats. (Cries of "Hear, hear," groaning, hissing, and other discordant noises.) He would repeat that he would not have come forward if he had not thought that Mr. Rennie's resignation had been *bonâ fide*. To that resignation Mr. Rennie, as a man of honour, should have adhered. (Renewed tumult.)

Mr. LEVY proposed a vote of thanks to the Chairman and Directors for their zealous and valuable services; and to the Chairman for his impartial conduct that day.

There were loud shouts of "No, no," from a portion of the meeting; but, as nearly as we could make out, the motion was supported by about two-thirds of the proprietors present.

The CHAIRMAN said, his colleagues and himself felt obliged to those who had joined in the vote, and he hoped that on a future occasion they should meet those who had not supported it under more favourable circumstances, and consequently in better humour.

The meeting, which towards its close was one of the most disorderly of the season, then broke up.

A HINT TO RIOTERS TO DESTROY THE RAILWAYS.—An anti-Corn-law and Radical organ of Manchester contained on Saturday the following morceau:—"The invention of standing armies for ever deprived the people of that power of combined resistance which their ancestors could oppose with effect, because, equally with those who were brought against them, they had arms, and an intimate knowledge of their use, derived from habitual practice in boyhood, youth, and manhood. Numbers of ill-armed and undisciplined people are of no avail against troops, and a very small body of soldiery, directed with immeasurably less skill than is required to form a Napoleon or a Wellington, would put the largest force to route that the mere people of any country can bring into the field. Added to this, *the invention of the locomotive power, which has revived the formation of the military roads, by means of which anciently the fragments of a Roman legion readily maintained the possession of the island against the whole of the inhabitants, has strengthened the Government, by enabling it to pour its entire military forces within a few hours upon any given quarter.*" !!—*Liverpool Standard.*

POLITICAL STEAM RACING—WHIG v. TORY.—Two Lancashire engine, employed on the Stockton and Darlington Railway, have performed the following surprising feats during the year ending the 30th June:—The *Whig* engine travelled 21,757 miles, the *Tory* travelled 21,759 miles; multiplying the miles by the tons—*Whig* carried 1,079,079 tons over one mile, *Tory* 1,077,287 tons, during twelve months' regular work. *Tory* travelled *two* miles more, and *Whig* carried (over one mile) 1,792 tons more than *Tory*.—*Leeds Mercury.*

NORTH MIDLAND RAILWAY COMPANY —GENERAL MEETING.

In our number of Saturday last we gave a sketch of the proceedings of the North Midland Railway proprietors at their meeting held in Derby on the previous Thursday. We now publish the official documents and some further particulars, for the latter of which we are indebted to the *Leeds Intelligencer*:—

W. Leaper Newton, Esq., Chairman of the Board of Directors, presided.

R. Frost, Esq., Secretary, read the notice convening the meeting, and also the minutes of the previous half-year.

The Chairman then announced that the first business was to affix the seal of the Company to the register of proprietors, which was done *pro forma*.

The Secretary read the Report of the Directors for the present half-year. It was as follows:—

DIRECTORS' REPORT.

The Directors, in presenting their twelfth Report, regret that they are called upon to share with the proprietors in the disappointment necessarily resulting from the continued failure of traffic, compared with those anticipations of success which were originally formed of this great undertaking.

Much of this failure, during the last half-year, is doubtless attributable to that commercial depression which has affected in a greater or less degree the traffic of every Railway Company throughout the kingdom.

Still, after making due allowance for this cause of deficiency, it cannot be concealed that the expectations of the public have been disappointed. It may, however, be confidently assumed that the return of commercial prosperity, and the extension of railway communication to Newcastle-upon-Tyne, will create a large increase in the traffic of passengers as well as of merchandise. In the meantime, the attention of the Directors has been fixed upon the best means of increasing the carriage of goods, and of effecting a reduction of expenditure, as the sources from which at present they can best hope to draw a remunerating return for the great outlay of capital which has been incurred.

The principal retrenchment in expenditure will be found to be in the reduction of salaries and wages, which amounts, since October, 1841, to 10,106*l.* 1s. 4d.

It must, however, be observed, that a considerable portion of this sum is referiable to capital, and will not appear in the revenue account; and that some part of that which belongs to revenue does not enter into the account of the half-year ending 30th June last, because common justice required, that in the dismissal of the officers and servants of the Company, either due notice should be given to the retiring parties, or a compensation should be made when they were discharged without notice.

The Directors, in the difficult and embarrassing position in which they have been placed, have spared no pains to carry out retrenchment to the utmost extent which they thought practicable; and they pledge themselves to prosecute this part of their labours, and not to relax their efforts until the expenses are reduced to the lowest point compatible with the efficient working of the line.

They must, however, take leave to remind the proprietors, that nothing is more difficult than to institute a fair comparison between the working expenses of different lines, whilst Railway Companies pursue such different methods of keeping their accounts, and whilst their respective receipts bear so great a disproportion to their expenditure.

The Directors turn with more satisfaction to that portion of their accounts which, notwithstanding the depressed state of trade, shows an increase of 15,815*l.* 12*s.* 9d. on the surplus balance of the last half-year, compared with the corresponding half-year ending the 30th of June, 1841.

The net profit amounts to 31,854*l.* 3s. 1d., out of which the Directors recommend there should be declared a dividend of 23s. upon every whole share, 10s. upon every half share, and 6*s.* 8d. upon every third share, leaving a balance of 2,784*l.* 3s. 1d. They further recommend that the income tax be not deducted from the dividend, but be accounted for and paid out of the above balance, and that the sum of 2,000*l.* be carried to the credit of the depreciation fund. This dividend, small as it is, is nearly double what the dividend of the corresponding half-year ending 30th June, 1841, would have been, if it had been calculated on the profits of six, instead of extending over a period of 14, months.

The duties of every department, since the date of the last Report, have been performed with order and regularity; and it is gratifying to state, that the traffic of the line has been so conducted as to secure the safety of every individual passenger.

It was further resolved—

"That a Committee of seven proprietors, each of whom shall hold not less than ten shares in the North Midland Railway Company, be now appointed for the purpose of examining the position and future management of the Company, with a view to increase the prosperity of the undertaking, and to report to a future meeting."

"The above Committee to consist of Mr. Alston, Mr. Brancker, Mr. Murgatroyd, Mr. Starkey, Mr. Wilson, Mr. Waddingham, and Mr. Hudson."

The Chairman having left the chair,

It was unanimously resolved—

"That the thanks of the meeting be given to the Chairman and the Directors, and to the Auditors, for their valuable services."

WM. L. NEWTON, Chairman.

The Secretary next read the cash account, which we subjoin:—

Statement of Capital Account, from 31st December, 1841, to 30th June, 1842.

Debtor.	To 31st Dec. 1841.	Since.	To 30th June, 1842.
To payments before Act was obtained	£41,349 12 3	....	£41,349 12 3
To land and compensation	380,206 0 1	1,187 10 1	381,393 10 2
To works—road	1,702,110 15 7	6,366 16 0	1,708,477 11 7
To works—stations and cottages	335,360 19 5	34,650 5 7	370,011 5 0
To permanent way, rails, chairs, sleepers, &c.	353,443 3 6	7,640 5 9	361,083 9 3
To engineering, salaries to engineers, clerks, office charges at Chesterfield	56,175 17 7	1,799 18 4	57,975 15 11
To surveying and land valuing	9,595 6 8	1,270 14 0	10,866 0 8

Water			33	8 0
Expenses (special trains)			13	0 11
Sundries			75	3 0
Salaries of superintendent and clerks, stationery, and petty expenses			363	14 4
			£8,621	5 6
Less received from Sheffield and Rotherham for loan of waggons and trucks			135	18 8
Total			£8,485	6 10

R. FROST, Secretary.

The CHAIRMAN then rose and addressed the meeting at considerable length. He commenced by saying that he was extremely happy to see so numerous an attendance of proprietors, because he wished that every one of them should judge for themselves with regard to the statements which it would be his duty to lay before the meeting. He thought that it would make the matters to be treated upon more simple and plain, if in the observations he should find it necessary to submit to the meeting he laid down a sort of classification of the topics which would come under review. It was impossible that the Directors could meet the shareholders on the present occasion without entertaining something like a strong feeling. They stood there not merely to render an account of their stewardship during the last half-year, but also to answer certain charges, the imputation of which they felt it necessary to remove. (Hear, hear.) In the first place he would deal with those charges, and afterwards briefly advert to the accounts which had been read, and to the future prospects of the Company. The charges brought against the Directors were four in number. The first was, that the form of their accounts was not so satisfactory as those of other Companies. The second was that they had adopted a closeness in their proceedings which was unusual in undertakings of this description. The third was that they had not adequately carried out the retrenchments which they had pledged themselves in some degree to do; and the last was that they had been guilty of favouritism, and had exercised the patronage which was placed at their disposal in a manner not beneficial to the interests of the Company. Now, as to the first charge, that their accounts were not in so satisfactory a state as those of other Railway Companies. He was not there to contend that the accounts were in so perfect a state as they ought to be, or as he could wish they should be. (Hear.) But he must say this, and honestly, that if the accounts were not satisfactory, yet upon a comparison with those of other lines, he did not find that there was any material difference as to the mode in which the entries were made, or in the details which they furnished to the proprietors. (Hear, hear.) And until he was told in what respect the accounts of the North Midland Company were not so very satisfactory, he did not see how he could meet this charge in a more specific manner than he had done. (Hear.) As to the next charge, that the Directors had conducted their proceedings with a closeness not observable in other Companies, he would appeal with confidence to any shareholder whether he had not uniformly answered every question put to him in as clear and unequivocal a manner as it was possible for language to render it. (Hear.) His anxiety had ever been, and still was, that every shareholder should know the exact position in which he was placed with regard to this Company. The Directors courted inquiry; they desired everything they did to be scrutinised in the closest manner, and they found no fault whatever with the shareholders for adopting such a course. (Hear, hear.) If they had declined to give a list of the staff, as had been asked for, it was solely in consequence of the anxiety which they had felt that the Company's clerks should not be interfered with in the ordinary discharge of their duties He knew of no Company by whom it had been done, and if they gave it to one Committee, might not another Committees ask for the same thing; and if they gave it to one individual, might not the whole body of shareholders ask for it too? (Hear, hear.) They had no other motive for withholding the list than the one to which he alluded, and if their conduct in this respect had afforded grounds for dissatisfaction, it was for the shareholders to say whether such a list should be generally circulated in future. (Hear, hear.) He now came to the third charge, which was a most material one, because if the Directors had not redeemed their pledge in carrying out the retrenchments promised, he at once admitted that the shareholders would have good reason to find fault with their proceedings. But how stood the fact? Since the month of October last year, the greatest possible anxiety had been manifested on the part of the Directors to effect the resolutions proposed, and the Report showed to what extent they had succeeded in their object. (Hear, hear.) But there was one other remark on the charge of closeness which he thought it desirable to make, because he thought it would show that it had no part of their object whatever. Through the medium of the Secretary, an offer had been made to twenty different Railway Companies to exchange their lists of the staff on each, in order that they might be able to compare their expenses, and to see in what manner any benefit might result from such a comparison. (Hear, hear.) He thought this fact would show that there was no disposition to observe anything like closeness, for if twenty Railway Companies had had the offer of seeing the staff of the North Midland, the Directors could have no possible object in withholding the same information from the shareholders. (Hear, hear.) But reverting to the question of retrenchment in the expenditure, it would be seen by the Report, that since October, 1841, they had effected a reduction in the cost of the staff amounting to 10,106*l.* 1s. 4d. (Hear, hear.) Now, the meeting would bear in mind that by the Report of the Committee of Investigation a hope was expressed that a reduction would be made in the expenditure, amounting to 13,088*l.* As he had already stated, they had since October, 1841, effected a reduction of 10,106*l.* 1s.4*l*., and previous to that period a reduction of 2,150*l.*, making 12,256*l.* 1s. 4d. out of the 13,088*l.*, so that it could not reasonably be said that the Directors had done nothing to carry out the promised retrenchments. (Hear, hear, hear.) But they did not rest upon that alone for their justification. They were contemplating to reduce the salary of the resident engineer from 1,000*l.* to 600*l.* a-year. (Hear, hear.) That reduction they had not yet been able to effect, and he would state the reason why. The contracts were not yet wound up, and when there was so serious a difference between the Company and some of the contractors, he would ask whether the shareholders would recommend them, as men of sound judgment and common discretion, to say that the resident engineer should have no greater remuneration than if he had nothing more to do than to take care of the permanent way, or whether they thought that the interests of the Company would be as intently looked after as if they gave a remunerating salary? He would ask the shareholders fairly, whether they could honestly ask the Directors to take such a step? But whether they did or did not, the Directors had taken the responsibility upon themselves to continue the salary at 1,000*l.* for another year, and when the contracts were wound up, it would be reduced to 600*l.* After that it must be left to the Directors to regulate the remuneration by the services ordinarily rendered by a resident engineer. The Directors could not bring about impossibilities. For instance, with respect to the Secretary's office in London, which they had upon a lease, they were anxious to get rid of it, and they had taken every possible step to effect that object, but they could not obtain an offer anything like adequate to what they thought the premises were worth. Under these circumstances, he would ask whether the Directors had not boldly redeemed the pledge they had given? They could not foresee every contingency that might arise, but when he told the shareholders that they had come within 100*l.* of the reduction originally proposed, he would ask whether they had not fully carried out their pledge. (Hear, hear.) The next point to which he would advert was the half-yearly statement of accounts, which showed a surplus balance of 31,854*l.* 15s. 1d. Now they could not compare that balance with the surplus balance of the previous half-year. No one acquainted with railways would think that the half-year ending in December could be compared with that ending in July. (Hear, hear.)

Mr. R. JOWETT (of Leeds) here reminded the Chairman that he had omitted to reply to the fourth charge urged against the Directors.

The CHAIRMAN felt indebted to the honourable proprietor for having reminded him of this omission. The fourth charge was that the Directors had been guilty of "favouritism" and "patronage." Now he was at a loss how to meet this charge until he was made acquainted with the description of favouritism alluded to. For himself, he was so perfectly unconscious of any favouritism—and he could say the same on the part of his colleagues—that he did not know where or how to place his finger with regard to such a charge, and therefore he could only repeat that before he could return an answer, he must know what sort of favouritism was meant. With respect to patronage, he knew of none which was not exerted for the benefit of the Company. The only patronage he could charge himself with having used was, that he had recommended one ticket collector and eight porters. But perhaps they might say that this was only till he had succeeded to the office of Chairman. Now, since that period he had recommended one clerk at a salary of 80*l.*; whom he recommended the Company to keep, if he proved an able and efficient one, but not otherwise. There were two other large appointments he had recommended, viz., two boys, one at 7s., a week and the other at 10s. (A laugh.) If they did not perform their duty, they would be dismissed without the least hesitation, and beyond this no patronage in any shape whatever has been exerted. (Hear, hear.) He would now briefly allude to the accounts, and he would ask whether there was any railway in the whole kingdom that could present a better statement than was now submitted by the North Midland? When he said any railway, perhaps he was assuming too much, for there were many in which the accounts had not been passed, but of those that were so, he would ask if any of them could say that their balance was nearly double what it was in the corresponding half-year of 1841? (Hear, hear.) But it might be said that this Company made a very small dividend. ("Hear, hear," and laughter.) That was true, but the Directors could not make traffic. All they could do was

Digitized by Google

the affairs of the Company so as to increase the traffic upon the line to the utmost extent of which it was capable. (Hear, hear, hear.) If the country was in so depressed a state that traffic could not be brought upon the line, what was the position of the Directors? Were they to be charged with neglect or indifference to the prosperity of the undertaking? (No.) If the North Midland line was the only one on which the traffic was deficient; or, if there was a falling off when all other things were increasing, why then the proprietors would have just reason to inquire how far the conduct and management of the Directors might have contributed to such a result. But was there any instance in which the deficiency complained of did not exist? No doubt there had been a great diminution of traffic on the North Midland line during the last half year, but the same fact would apply to all other railway undertakings. (Hear.) With regard to the last point to which he should refer, he confessed he approached it with some difficulty, because no person could be more unwilling than himself to hold out any prospect if he did not think there was a fair probability of its being realised. (Hear, hear.) But he thought that there were symptoms in the last half-yearly accounts indicative of coming prosperity. He thought they might reasonably look forward to a termination of that severe commercial depression which had so long hung over the country, and that in proportion as that depression had had the natural effect of very materially reducing the traffic upon the North Midland line, so in the same proportion would a return to prosperity tend to an increase. He certainly must say that when the shareholders were disposed to find fault with the working expenses on this line, they acted a little hasty towards the proprietors. He did not mean to say that those expenses were not high—on the contrary they must be high when the receipts were so low. (Hear, hear.) Where the receipts were high the expenses would be smaller, and where they were low the expenses would be high, and that was precisely the condition with the North Midland Company. (Hear, hear.) But in the half-year ending June, 1841, the per-centage on the cost of working was 56⅞th, whereas it was now reduced to 48¼th. Then again, with regard to their present position, he begged to inform the shareholders that there were still eight contracts uncompleted—three of which, however, were likely to be brought to a speedy conclusion. In the case of the remaining five, there was a very large amount in dispute with the contractors, and until the accounts were referred, or put into a train of being settled in some other way, he could give the shareholders no idea as to the manner in which they would be wound up. (Hear, hear.) The Directors had not yet come to a reference with the contractors, because if the latter forced them to go into court, the court would refer the dispute at last, and therefore the Directors thought they might save that expense, and refer them in the first instance. (Hear, hear.) With regard to their future prospects, there was one source from which a beneficial result might be expected, though that was problematical. He alluded to the formation of a short branch from the Eckington station to the Chesterfield Canal, for the purpose of carrying corn into those parts of the north into which there was a reasonable probability of its being taken. Having expressed his views on all the matters which suggested themselves to him, he had no hesitation in saying, that he thought they might fairly expect to have an increase in the receipts of the Company, and a diminution in the expenditure—two objects which the Directors always had endeavoured, and would still endeavour, to promote. (Hear, hear.) He regretted to have detained the meeting so long, but under the peculiar circumstances in which the Directors were placed, he conceived he had only discharged his duty to his colleagues, as well as to the proprietors, in making these explanations. ("Hear, hear," and applause.)

Mr. Alston presented to the meeting the Report of himself and Mr. Brancker, the Auditors of the Company, which was read by the Secretary. It was as follows:—

REPORT OF THE AUDITORS.

Since the half-yearly meeting in February last we find our recommendation to exact security from the various individuals in responsible situations has been generally complied with, and that there is now a better system in the stores department, although we continue to think that, as far as possible, everything should be contracted or competed for, and that all important orders or payments should be countersigned by the Chairman of the Stores Committee.

We lay before this meeting the return of stores ordered during the last 18 months, showing a great decrease in the respective half-years, although this is chiefly in the last six months, owing to a larger expenditure in 1841, on capital account, for wheels, furniture, and stock.

We conceive it our duty to the shareholders also to bring before them two important points connected with the balance on the 30th of June. There appears no less a sum due by various Banking Companies than 61,780*l.* 16*s.* 3*d.*, and of this only 26,527*l.* 16*s.* 1*d.* bearing any interest to the Company. Of the latter amount, 21,824*l.* 1*s.* 11*d.* is in the hands of the Liverpool Bank, at 3½ per cent., who charge a banking commission; and 4,703*l.* 14*s.* 2*d.* with Beckett and Co., of Leeds, who allow 2½ per cent. interest, and charge a banking commission. The remaining 35,253*l.* 2*d.* was without interest, of which, however, Messrs. Crompton and Co. agreed in July to take 12,000*l.* at 2 per cent. interest.

There is also 17,382*l.* due to the Company by the Manchester and Leeds, York and North Midland, Midland Counties', and Birmingham and Derby Railway Companies, which we strongly urge should be brought to a prompt and final settlement.

Having received lists of the general staff in April and August, we are happy to notice a reduction in number during that time to the extent of 63, chiefly employed on capital account, the number being 715 in April, and 650 in August; and in comparing the lists of staff now kept by the Manchester and Leeds, North Midland, South-Western, Grand Junction, Great Western, and Midland Counties' lines, we are glad to find the number of people on this road, the expense of working, &c., bearing a satisfactory comparison on the point of economy and efficiency with other leading railways.

We have again found the heads of departments intelligent and active in their respective duties; but we consider it most important that the Secretary should exercise an influence and control over every part of the Derby establishment.

The superintendence of the whole line is expensive, and the expenses of the permanent way not under the control in payments of the Secretary and Audit Office, Mr. Swanwick's warrants only being requisite. We think great benefit might arise by the concentration of the whole of the offices at Derby, and cannot fully see the necessity of Mr. Swanwick being resident at Chesterfield. This department appears to us to require revision and improvement.

£8,438 is a large amount for maintenance of way for the half-year. Economy is here much required, and we call attention to the example of the Edinburgh and Glasgow Railway Company, who have taken that duty under their own management, and the cost there is only 120*l.* per mile.

We find the system in the dispatch of trains is improved, and cannot suggest any alteration now, as the third-class carriages only go early in the morning and evening, and compete less with the first and second.

The number of—

First-class passengers from Jan. 1, to June 30, 1841, was 59,323, producing 19,483*l.* 10*s.*
Second-class passengers from Jan. 1, to June 30, 1841, was 105,289, producing 19,255*l.* 14*s.* 2*d.*
Third-class passengers from Jan. 1, to June 30, 1841, was 228,552½, producing 15,26-*l.* 13*s.* 7*d.*
First-class passengers from Jan. 1, to June 30, 1842, was 65,261, producing 20,743*l.* 8*s.*
Second-class passengers from Jan. 1, to June 30, 1842, was 106,174, producing 17,091*l.* 10*s.* 4*s.*
Third-class passengers from Jan. 1, to June 30, 1842, was 223,972, producing 18,669*l.* 12*s.* 1½*d.*

J. T. ALSTON,
P. W. BRANCKER, } Auditors.

JAMES SUTTON, Esq., High Sheriff of the county, alluded to the correspondence which the Chairman stated had taken place with twenty other Railway Companies, and inquired if any answer had been returned by them as to what the expense of working those lines was in comparison with the North Midland.

The CHAIRMAN repaid, that answers had been received from 12 out of the 20, and that some of them were very favourable to the propositon of exchanging the list of staffs, whilst in other cases the Directors seemed disposed to give the matter more mature deliberation. In that position the question remained at present.

Mr. SUTTON further inquired whether all the parties filling responsible situations in the service of the Company had completed their securities.

The CHAIRMAN said that there were but two clerks whose securities were not completed, but which were in course of being made so. He might state with respect to those parties, no monies passed through their hands.

Mr. JOSHUA BOWER observed, that there was an item of 2,326*l.* 9*s.* 9*d.* charged under the head of law expenses. He should be glad to know what those expenses were.

The SECRETARY stated, that part of the sum was for work done previously to the last half-year, and the remainder for their last Act of Parliament.

Mr. J. RAND called attention to the large amount of 8,438*l.* 7*s.* 7*d.* charged for the maintenance of way, and asked what it included.

The CHAIRMAN was extremely glad that this question had been put, because it would appear that the maintenance of the permanent way on the North Midland line was let on very high terms as compared with other lines that might be enumerated. Mr. Mitchell, of Inverness, had said that in a comparison between the Edinburgh and Glasgow line and the North Midland, there might be a saving of 7,000*l.* per annum effected in the maintenance of way alone. ("Hear, hear," and laughter.) He (the Chairman) was certainly much struck at what appeared to him so satisfactory a statement, and he accordingly called upon their Resident Engineer to show how it was that the maintenance of way let at so much higher rate than that of other lines. When the inquiry was made, it was found that the contract for the Edinburgh and Glasgow line did not include the maintenance of fences or bridges, nor road approaches, nor the slopes of embankments beyond the superficial cutting. Neither did it include the finding of blocks, or sleepers, or rails, or chairs, or keys, or spokes, or engine power, or the clearing away of snow, or the maintenance of switches, or sideways, or turntables. Now with respect to the North Midland, the contractors were required to find their own policemen, and to keep the road in a state of repair, which necessarily saved the Company a very heavy expense. (Hear, hear.)

Mr. RAND wished to inquire whether the locomotive department was in an efficient state.

The CHAIRMAN would answer that question by saying that the instructions invariably given by the Directors to their Resident Engineer was to keep up the highest possible state of efficiency in the locomotive department. (Hear, hear.) With respect to this department of the expenditure, it would be easy to reduce their power, but the expenditure had never been limited, and although it was large, he was satisfied that in the long run it would be found to be true economy. (Hear, hear.)

Mr. RAND inquired whether there were any stations which did not pay, and if so, whether there was any prospect of their paying ultimately?

The CHAIRMAN believed there was not one. There might be some which did not pay to any great extent, but not one that did not pay at all. (Hear, hear.)

A SHAREHOLDER would feel obliged to the Chairman to furnish the meeting with the expenses of the Normanton station.

The CHAIRMAN replied that the expenditure on the wages account was 1,623*l.* 10*s.* 7*d.*, and on account of salaries 100*l.*, making 1,723*l.* 10*s.* 7*d.*

Mr. M. STOCKS suggested to the Chairman whether it would not be desirable to read a complete list of the expenses at all the stations.

Mr. MARTINEAU (of London) thought that such a course would be detaining the meeting unnecessarily, and he for one protested against their time being occupied in discussions which could lead to no practical result. (Hear, hear.) If what he had heard stated was correct, there seemed to be a disposition on the part of certain gentlemen to bring forward charges against the Directors. ("Hear, hear," and "No, no.")

Mr. RAND begged to say that if the remark used by the honourable proprietor who had spoken last referred to him, he begged most unequivocally to disclaim any intention of bringing charges against the Directors. (Hear, hear.) He thought the questions he had put were such as a shareholder was fairly entitled to ask, and for their satisfaction he begged to put another, namely, what property the Company possessed in Derby?

The CHAIRMAN said that in giving this answer he was afraid he should be under the necessity of going a little back. (Exclamations of "No, no.") Then he did not wish to do so. His only anxiety was to show that he had no wish to keep any thing back. (Hear, hear.) The number of houses occupied by the servants of the Company in Derby, was 99, and there was a little land in what was called the "old meadows," with respect to which no division had taken place between the Birmingham and Derby and the Midland Counties' lines. Beyond this he knew of nothing in Derby belonging to the Company but one small field.

Digitized by Google

Mr. RAND inquired the amount of the bills remaining unpaid?

Mr. BRANCKER stated that 3,000*l.* was owing on the London end, but the whole of that amount would not come from this Company. He thought the amount of bills owing would be under 2,000*l.*

Mr. RAND begged to state that the answers he had received were very clear and explicit, and he felt indebted to the Chairman for them.

Mr. J. CARR, of Sheffield, begged to ask the Chairman if he knew from what quarter the charge of favouritism came?

The CHAIRMAN said that he had the authority of Mr. Carr himself for saying that the account given in the *Sheffield and Rotherham Independent*, of a meeting of the Sheffield Board of Inquiry, was a correct one, and in that Report Mr. W. Jackson said that there was "great patronage on the part of the Directors, and he was afraid that they had been guilty of favouritism to the injury of the public." (Loud cries of "Hear, hear.")

Mr. CARR did not think it was to be taken for granted that Mr. Jackson was alluding to the Chairman or Directors of the North Midland Company. ("Oh, oh," and laughter.)

Mr. MARTINEAU was of opinion that one great point had been lost sight of, namely, that this railway had cost immensely more than was originally expected, and because it had not happened that the traffic was equal to the extra cost it was contended that the Company were not carrying on a profitable concern, and the entire blame was thrown—not upon the original estimate, but on the present body of Directors. (Loud cries of "Hear, hear.") He regarded such a proceeding as extremely unfair, and under the circumstances he should beg to move "That the Report be received and adopted."

Mr. ALDAM seconded the motion.

Mr. VICKERS certainly found fault with the Directors for not having taken the means which he conceived would be for the interest of the Company, and he hoped that a Committee of Inquiry, or a Sub-Committee of the Board itself, would be appointed, to investigate the entire affairs of the Company. (Hear, hear.) With the permission of the meeting, he would lay before them the result of the reduction in the fares, derived from inquiries he had made at the Sheffield station.

Mr. ALSTON conceived that Mr. Vickers was entirely out of order, inasmuch as he was entering upon a question which was understood to have been disposed of last year, and certainly what appeared in a newspaper six months ago, must be altogether irrelevant to the business of the meeting. (Hear, hear.)

Mr. BRANCKER adverted to the charge at present made per ton for carrying coal, which he thought too low, and he moved a resolution to the effect that at the expiration of the present arrangement with the coal-owners, on the 1st of November, they should revert to the old charge of 1½d. per ton.

The CHAIRMAN called order. The question before the meeting was the adoption of the Report. (Hear.)

A SHAREHOLDER asked whether the Directors contemplated any further reduction in the management of the line, because that would influence him in the vote he should give. (Hear.)

The CHAIRMAN thought he had already answered that question. He begged to state again that the Directors had pledged themselves to reduce the expenditure to the lowest possible standard consistent with the efficient working of the line. (Hear, hear.)

Sir JOHN SIMPSON would beg to ask the Chairman whether he thought any further reduction could be made? (Hear.)

The CHAIRMAN could not give any definitive answer.

A SHAREHOLDER observed, that if the last answer had been in the negative, he should have recommended the shareholders to look out for Directors who would effect a reduction. He believed that 20,000*l.* a year might be saved. (Much laughter.)

The CHAIRMAN should be glad if the honourable proprietor would point out in what manner. (Hear.)

A SHAREHOLDER was of opinion that many more servants were employed than were necessary for the concern.

The CHAIRMAN should be glad if the Shareholder would make any communication to him on the subject of a reduction in the staff, and he pledged himself that if the object were practicable it should be attended to. (Hear, hear.)

Mr. CARR thought that the shareholders were entitled to the publication of the entire list of officers, which had been asked for, and the fact of its being refused was a proof that there was a great deal of closeness in the proceedings of the Directors.

The CHAIRMAN begged to say that if the meeting thought it desirable to print the list, the Directors would be glad, only let it be the act of a Committee, and then the officers would not be interrupted in the discharge of their duties.

Mr. CARR read a letter from Mr. Mitchell, of Inverness, in reply to a circular issued by the Directors, which Mr. Mitchell conceived had not been written in good faith, or otherwise what was the reason he had been told that the books of the Company would be open to his inspection, at Derby, and that when he got there, that inspection was refused. Mr. Mitchell concluded his letter by saying that probably the Directors never supposed that he would have travelled 500 miles on such a subject. ("Hear, hear," and laughter.) Mr. Carr was proceeding to read some further correspondence when,

Mr. MARTINEAU interfered, observing that Mr. Carr appeared to be reading a letter from Mr. Somebody to Mr. Somebody else, neither of whom, so far as that meeting was concerned, were known anything about. (Calls of "Order," and "Go on.")

Mr. CARR thought the answers he wished to elicit were very important, because he had been told by many of the proprietors that they had embarked the whole of their fortunes in this undertaking, on the strength of promises made by the late Chairman and Directors, and eight of that number were Directors at present, and had sanctioned all the abuses. (Loud cries of "Hear, hear.") He had no hesitation in saying that at least one million of money had been thrown away in the making of this line, and yet the same Engineer and Assistant Engineers were kept upon the staff. (Hear, hear.) Who could doubt, then, that some extravagance which had been practised before would be still kept up. In the Committee of Investigation which was asked for, there was no intention to propose a vote of censure upon the Directors as a body. All that he and those who acted with him wished for was to see how they could best extricate the Company from the difficulties in which they were placed. (Hear.) So far from the appointment of such a Committee being calculated to inflict injury, he thought that considerable benefit would arise, because he was convinced that it would place the railway in the confidence of the proprietors, thus rendering it a safe object for investment, and not as it now was, a fluctuating medium for speculation and gambling. (Applause.) He therefore begged to move the following resolution:—"That a Committee of Inspection consisting of twelve proprietors, each of whom shall hold ten shares, according to the 32nd clause of the Act of Parliament, be appointed for the purpose of examining into the accounts of the Company, and report to a special general meeting for that purpose."

Mr. JOSHUA BOWER seconded the motion.

Mr. J. E. TAYLOR, of Manchester, inquired whether the proposition of Mr. Carr was to be considered in the shape of an amendment upon the original resolution.

Mr. CARR asked whether, if the original motion was put first he should be permitted to propose his resolution subsequently?

The CHAIRMAN did not see how the resolution moved by Mr. Carr could be put, when the grounds on which it was moved were that the accounts were unsatisfactory. (Hear, hear.) He thought it would be more in order to move the accounts were not satisfactory. Mr. Newton then read the clause of the Act of Parliament, ordering that the accounts should be laid before the half-yearly general meetings in August and February, and that if they should not be considered satisfactory, then in such case the meeting should have power to appoint a Special Committee of Inquiry, who should examine the accounts and report thereon.

Mr. JOWETT contended that such a case had arisen, for the accounts could not be considered satisfactory. (Loud cries of "Hear, hear.")

Mr. RAND was bound to concur in the opinion expressed by Mr. Jowett, but in so doing he did not cast the slightest imputation on the Directors, as gentlemen. (Hear, hear.) On the contrary, he believed they had done their best for the proprietors. The accounts were *bona fide*, and not the slightest imputation rested upon the Directors. But it could not be denied that the hopes of the North Midland Company had been subjected to a very severe disappointment. (Hear, hear.) They had been told to expect that they should receive a very handsome dividend on their property, but after all these promises they were only receiving 1*l.* per share. (Hear, hear.) He thought that the appointment of a limited Committee, and defined in its object, would meet the wishes of a very large body of the shareholders, and he trusted it would have the hearty concurrence of every gentleman composing the Board of Directors. (Hear.)

Captain WATTS thought the difficulty which presented itself was in the acceptation which they would put upon the word "unsatisfactory." It might have two acceptations. It might mean that the accounts were not satisfactory in point of amount, or that they were not satisfactory in point of correctness. Now, he did not believe that there was any irregularity or want of rectitude in the accounts, but he did think that the amount of profit realised fell far short of what the shareholders had a reasonable right to anticipate. (Hear, hear.) Surely, then, there could be no impropriety in appointing a Committee to see if there was a probability of that profit being increased. (Hear.)

Mr. STOCKS was of opinion that if the resolution was moved under the clause read by the Chairman, it must apply to the accounts being unsatisfactory, but that would not prevent the shareholders, in a general meeting, from appointing a Committee to examine into the general working of the railway.

Mr. TAYLOR was of opinion that the question resolved itself into this—whether any greater economy could be adopted in the management of the line. (Hear.) He did not know what might be the result of the proposed appointment, but if it would be satisfactory to a large body of the shareholders he thought that would be a sufficient reason for its adoption. (Hear.) On the other hand, they had a statement of accounts laid before them, sanctioned and examined by two Auditors; and unless gentlemen could speak more specifically as to the reasons why they were not satisfactory, he thought Mr. Alston and Mr. Brancker were sufficient guarantees for their correctness. (Hear.)

After some other conversation, the motion under discussion was amended as follows, and adopted:—"That a Committee, consisting of seven proprietors, each of whom shall hold not less than 10 shares in the North Midland Railway, be now appointed, for the purpose of examining into the position and future management of this Company, with a view to increase the prosperity of the undertaking; and report to a special general meeting, or to an adjourned meeting for that purpose."

The CHAIRMAN then put the original motion, which was carried, the Report of the Auditors forming part of it.

The following are the gentlemen constituting the Committee:—Mr. Alston, Mr. Brancker, Mr. Murgatroyd, Mr. Starkie, Mr. Wilson, Mr. J. Haddingham, and Mr. Hudson.

It was then agreed that a dividend of 20*s.* on the whole shares, 10*s.* on the half shares, and 6*s.* 8*d.* on the third shares, for the half-year, should be paid to the proprietors, free of the Income Tax, on the 15th of September.

A protracted discussion ensued, occasioned by the introduction of a proposition by Mr. Brancker to increase the charge for carrying coal to 1½d. per ton. The matter was ultimately disposed of by its being agreed to leave it to the consideration of the Committee.

A vote of thanks was given to the Chairman for the honourable and gentlemanly manner in which he had conducted the business. A similar compliment was also paid to the Auditors, with a request that they would continue their services.

The meeting broke up shortly before 6 o'clock, having occupied nearly five hours.

PLEASURE EXCURSIONS ON RAILWAYS.

EDINBURGH AND GLASGOW RAILWAY.

THE visit of Father Matthew to Glasgow has, as might have been expected, produced great stir among the total abstinence brethren of Edinburgh; and considerable numbers, we are informed, took advantage on Tuesday of the railway, to join the procession in Glasgow, and take part in the proceedings there. A special train started from the Edinburgh terminus with 500 passengers—each individual having a large rosette in his breast, and the teetotal medal suspended by a broad green ribbon round his neck. They had also an excellent band of musicians and several flags with them, and the anticipation of a joyful day was visible in every countenance. The train was joined by parties from Linlithgow, Falkirk, and Kirkintilloch, with their respective bands, increasing the number of passengers to about 700. The party belonging to Edinburgh returned in the evening by a special train at 10 o'clock.—*Caledonian Mercury.*

BIRMINGHAM AND GLOUCESTER RAILWAY.

THE *Gloucester Journal*, after extracting from the *Midland Counties' Herald* the account of the general meeting which we gave last week, publishes the following. At the urgent request of a correspondent we give it a place in our columns, without in any way pledging ourselves to the facts or opinions there put forth :—

"We have extracted the foregoing from a report which appears in the *Midland Counties' Herald*; but a correspondent, who is also a shareholder in the undertaking, has informed us that the statement which is there given of the election of Directors does not, by any means, convey a fair account, either of the discussion or of the result, and at his request we insert the following statement and commentary :—

"On Friday, the 19th instant, a meeting of the Birmingham and Gloucester Railway proprietors was held at the Waterloo Rooms, Birmingham, which was very numerously attended, and which lasted from 12 to 7 o'clock, much dissatisfaction and acrimonious feeling having arisen. A large body of proprietors, represented by a Committee, have been desirous of an alteration in the Board; and a question was to be decided whether an effort should be made to destroy the system, or supplant the Directors by a vote of want of confidence. The former has been partially accomplished by a resolution proposed by Mr. Baker, and agreed to by the meeting.

"Two vacancies had been filled up in the Board by the Directors, before the meeting, viz., by the election of Messrs. Moore and Ledsam, who, with two other retiring Directors, viz., Messrs. Sturge and Beilby, were eligible for re-election by the meeting.

"Mr. John Homer was proposed by Joseph Sturge, and on a show of hands for and against him was declared duly elected.

"Mr. J. F. Ledsam was proposed, but he declined being put in nomination after the vote come to by the election of Mr. Homer.

"Mr. G. Ellins was proposed by Mr. Tate, and on a show of hands, for and against him, was declared duly elected.

"A scrutiny was demanded by one of the sitting Directors, contrary to a very strong feeling in the meeting.

"Mr. Tate was next proposed by Mr. Hughes, and a show of hands being against him, a scrutiny was demanded, but which was withdrawn at Mr. Tate's request.

"Mr. Beilby was next proposed by Mr. J. F. Ledsam, and a show of hands being in his favour, a scrutiny was demanded by Mr. Hughes.

"Mr. Charles Sturge was next proposed, and a show of hands being in his favour, he was declared duly elected.

"Mr. J. F. Ledsam was again put in nomination, and on a show of hands he was declared duly elected.

"A contention has arisen which will give much employment to the long robe, in regard to these elections. Mr. Ellins's friends having insisted that he is duly elected, a scrutiny having been persevered in against protest, as between Ellins and Beilby, when it is contended that the scrutiny should have been taken as on the show of hands, viz., for or against Ellins, and the same in regard to Beilby, and not as against each other. Mr. Beilby's own scrutineer having made a return that there were 1,499 votes for Ellins and 1 against him; for Beilby, 2,775, none against him; also another return, showing Beilby's majority over Ellins, on which the Chairman declared Beilby elected.

"Mr. Ellins presented himself, under the authority of two legal opinions, at the Board on Tuesday, to take his seat under protest from himself and shareholders that all acts during his expulsion are illegal.

"We think much credit is due to the Committee of shareholders for their industry and perseverance in getting the system remodelled; the abandonment of the Chairman to his system in concurring to an alteration, by keeping his seat after the rider to the Report was carried, is a proof that a new system was necessary to develope the resources of this valuable line; and we trust now new infusion is given to the Board that it will be equally so in the executive, and that the continued complaints will cease, and the undertaking become satisfactory to the shareholders and public.

"After a show of hands had been decided in favour of Mr. Ellins, and a scrutiny insisted upon against a very general feeling of the meeting, the Chairman declared he should resign his seat if the meeting elected Mr. Ellins; this determination being, no doubt, come to by him in consequence of Mr. Ellins having been one of the Committee of shareholders who had asked for an investigation into the Company's affairs. Is it courteous, or even justifiable, that a large and intelligent proprietary should be awed into submissiveness to the Chairman, by a declaration so irregular and so uncalled for, and particularly to reject a gentleman supported by so large a majority of the meeting, who was one of the first promoters of the measure, one of the largest subscribers, and still one of the largest proprietors; for the simple reason of having come forward in an honest and manly way with an endeavour to benefit himself in common with the other proprietors by trying to effect such improvements as are necessary for the prosperity of the undertaking, the necessity of which has been established in his mind by a residence on the line and close attention to the detail? We may add, what we cannot consider as any proof of public confidence in Captain Moorsom's principle of management, that the shares of the Company fell 10 per cent. on the London Exchange the day after the above meeting."

MANCHESTER AND LEEDS RAILWAY—THE MANUFACTURING OUTBREAK.

[From the Private Correspondent of the *Standard*, London evening paper.]

THE speedy check given to the turn-outs and evil-disposed persons in the extensive manufacturing districts of Lancashire and Yorkshire may be attributed, mainly, to the facilities afforded by railways in conveying troops and ammunition to the different plague-spots on the respective lines at the moment of disaffection. By this means, only, were the machinations of the League successfully counteracted in Bolton, Horwich, and Chorley, and the adjacent coal districts on the line of railway. At Blackburn and Preston, to which places the railway does not extend, we find the most serious conflicts took place, the rioters deeming themselves safe from reinforcements of the executive. In like manner, on the Manchester and Liverpool and the Manchester and Birmingham Railways, the towns and villages in the counties of Lancaster and Stafford were kept in order, or the peace, if broken, was speedily restored by the constant communication with head-quarters at Manchester and Birmingham, and Birmingham and Weedon.

But no railway is more advantageously situated, or has done more towards keeping the peace of England, than the Manchester and Leeds, running as it does through the "back-bone of England," and embracing in its circuit, the most extensive manufacturing districts of the country, and therefore the very hot-beds of sedition and violence. From the very commencement of this outbreak, the excellent superintendent, Capt. Laws, seems to have hit upon the very means that have proved so completely successful, if not in restoring order, at least in rendering disaffection comparatively harmless. Perfectly aware of the danger of the sudden impulses of a lawless mob, and alive to the importance of instant demonstration, by the aid and experience of the chief inspector, Mr. Hall, the gallant Captain established scouts on the whole line, and was hourly in possession of the state of the country to the extent of 60 miles. Clerks were ordered to report instantly any *emeute* in their respective neighbourhoods, and intelligent guards were instructed to possess themselves of every fact without exaggeration. By this means, plans of operation could be laid down at head quarters in Manchester, for any of the towns and villages on and adjacent to the line, and a body of military could be dispatched by a special engine, which was kept ready night and day, either to Oldham, Rochdale, Littleborough, Todmorden, Hebden Bridge, Halifax, Bradford, Huddersfield, Wakefield, or Leeds, in almost as short a period of time as it would take the troops to get ready for an ordinary parade. At many of the places above mentioned there was neither a soldier nor policeman stationed. For instance, at Hebden Bridge and neighbourhood the bands of lawless colliers were numerous, and their intimidation and robbery were carried to a great extent. A special engine was kept at that station with "steam up," and within an hour could have brought force enough to have overawed and apprehended the ruffians. Again, at Rochdale, symptoms of a serious outbreak were visible at night, and in the morning a "brush" was expected; a special engine, however, with a couple of rifle companies, came down in the morning to a very early breakfast, and so spoiled the sport. To this railway, too, we owe the safe custody of the Halifax rioters, and the earliest information of the attack on the soldiery, and the contradiction of the villanous reports so sedulously circulated about that town and Huddersfield, which reports raised no small degree of alarm in the public mind at Manchester. On the whole, no establishment, situated as it is, could have been better managed; for, by the excellent precautions of Captain Laws, and the vigilance of his chief officer and subordinates, the first attempt of the rioters on the engines was frustrated, and the offenders secured, since which time not the least violence has been offered, nor the slightest damage been sustained.

The superintendence, throughout this critical time, has been what we might have expected from an officer of her Majesty's navy. Sagacious and business-like in precautionary measures, and prompt and resolute of action. The reputation of the Manchester and Leeds Company has been considerably raised in this affair, and we have no doubt that the Directors will receive other thanks than we are constrained by gratitude for the courtesy of their chief officer, and the obliging manner of their chief inspector, to render.

The receipts of the Company for passengers must certainly have, in some degree, suffered by the unsettled state of the country through which the line passes, when it is considered how many visit this line purely to enjoy the "boundless store of charms which nature to her votary yields." It is far distinguished above all others for its beautiful scenery, running as it does through one of those extensive vales which are not common to England.

The softness of the features and richness of the landscape in its immediate vicinity is scarcely surpassed in any country. In the distance we have the rude, the gigantic, and the sublime, in constant succession, and as we fly, as it were, on the wings of the wind around the bold mountain, or wend our rapid course through the delightful and luxuriant valley, it is impossible not to feel an extatic enjoyment heightened in proportion to our course. The momentary darkness of the 2½ miles tunnel only prepares us for the magnificent burst of all that is great and grand on our emerging, and gives a relief to the eye from the intoxication consequent on its unceasing revels. There is river, hill, hollow, bridge, tree, and meadow, and all the competent parts of a landscape that imagination might conceive for pourtrayal in the studio. It is idle to say that scenery cannot be enjoyed to perfection in a railway carriage. The numerous visitors by the Manchester and Leeds at once disposes of the assertion, and one journey on the line is enough to satisfy the most fastidious.

EASTERN COUNTIES' RAILWAY.

THE whole of the works in progress along the entire line to Colchester have been recently inspected by Mr. Hall, the Managing Director, and Mr. Braithwaite, the Engineer, and we have reason to believe that the utmost satisfaction was created by the very promising appearance of affairs. It is now almost reduced to a matter of certainty, provided the weather remains settled, that the line will be opened for business at the commencement of October. The Company will thus have fully redeemed all—and more than all—their pledges; and will have deserved the thanks, not only of the shareholders, but of every inhabitant of this county, for the unceasing activity with which they have attended to their duties; and have eventually overcome prejudices and influences which none but themselves can know the discouraging extent of. The works are particularly well executed, and much credit is reflected upon the contractors for the excellence of the workmanship. We feel bound to notice, in particular, the viaduct at Lexden, constructed by Mr. Fievel. The taste and solidity displayed in this beautiful piece of architecture, may challenge competition with any building of a similar character, on any other railway line throughout the kingdom. We hear the Company had occasion to receive tenders for loans; the offers have been exceedingly numerous, and this is one important indication of the prevailing impression in the money market, that this undertaking is a safe, and is likely to be a most profitable investment. It gives us much pleasure to refer to a paragraph copied from the *Railway Times*, from which we obtain the information that a subsidiary railway is in contemplation from Witham to Maldon. Mr. Braithwaite, whose talent and enterprise stand second to no practical engineer in the kingdom, is said to have already made a commencement. The completion of the line will give such an impetus to the trade and prosperity of Maldon, as to make the event a new era in its history.—*Essex Mercury*.

CYLINDRICAL RAILWAY WHEELS.

THE following is an extract from a pamphlet by Mr. Rankine.* Mr. R. is the author also of a paper published in the Edinburgh University Annual for 1840, entitled "An Essay on the Laws of the Conduction of Heat, and on their application to the Solution of some Geothermal Problems," which essay is noticed in the Report of the British Association for 1841, page 9, by Professor Killand; and Mr. Rankine's name is associated with those of Fourier, Poisson, Libri, and others of the first men in Europe:—

The objects of the experiments on resistance which I have made on the Edinburgh and Dalkeith Railway were two-fold:—

First, to ascertain the resistance to the motion of a carriage with cylindrical wheels on a straight line.

Secondly, to find the additional resistence to the same wheels on moving round curves of different radii, laid according to the formulæ given in the preceding section.

The method pursued in all the experiments was the only one which appears to me to be satisfactory in such inquiries:—it consists in bringing the carriage up to a certain speed, and then allowing it to run loose until it stops of its own accord. The instants at which the carriage passes several points at given distances apart, are then noted, and from these data the velocity at given instants may be calculated; and consequently, the loss of velocity in a given time, which is the most accurate measure of the retarding force.

The initial velocity of the carriage in all the experiments, when first allowed to run loose, was comparatively low; seldom exceeding 10 or 12 miles an hour; and I could detect no sensible diminution of the resistance as the velocity diminished. Hence it must be concluded, that these experiments shew simply the resistance arising from friction; and that the resistance of the air, which increases rapidly when the velocity becomes high, did not sensibly affect them, except when wind interfered with the results.

The following is an abstract of several experiments on the resistance of cylindrical wheels on straight lines of railway.

No. 1.—*Level Straight Line.*

The carriage having been set in motion, and allowed to run loose, travelled
288 feet in the first 30 seconds.
573 feet in the next 125 seconds.
Mean velocity during the first 30″ = 9·6 ft. per sec. = velocity at the end of 15.″
Mean velocity during the next 125″ = 4·6 ft. per sec. = velocity at the end of 30″ + 62½″ = 92½.″
Loss of velocity in 92½″—15″ = 77½″ 5·0

To find the ratio of the retarding force to the weight of the carriage, divide the loss of velocity in one second, or $\frac{5}{77\frac{1}{2}}$ by the accelerating force of gravity in a second, or 32 feet. Hence resistance in fractions of the load $= \frac{5}{32 \times 77\frac{1}{2}} = \cdot00202$.

This amounts to about 4½ pounds per ton of load, or somewhat more then 1-500th.

The carriage stopped of itself at the end of the 125 seconds; hence in the last 6½ seconds, a velocity of 4·6 feet per second was lost.

This would indicate a resistance of $\frac{4 \cdot 6}{32 \times 62\frac{1}{2}} =$ ·00230 of the load; but as it is difficult to ascertain with minute accuracy the instant of the carriage stopping, I do not regard this last result as of any value, except in so far as it proves that the resistance in this experiment did not sensibly diminish with the velocity, and consequently that the resistance of the air was inappreciable.

Experiment No. 2.—*On the same portion of Railway, the motion being reversed.*

The carriage running loose, travelled
333 feet in 30″:—mean velocity 11·1 ft. per second = velocity at the end of 15″.
834 ft. in the next 157″:—mean velocity 5.3 ft. per second = velocity at the end of 30″ + 78½″ = 108½″.
Loss of velocity in 108½″—15″ = 93½″:— 5 8 feet per second,
Retarding force in fractions of the load $= \frac{5.8}{32 \times 93\frac{1}{2}}$ = .00197 = 4·41 lbs. per ton, or rather less than $\frac{1}{500}$.

Experiment No. 3.—*Ascending a Gradient of 1 in 9,000.*

432 feet in 30″:—mean velocity 14.4 feet per second = velocity at the end of 15″.
675 feet in the next 60″:—mean velocity 11.25 feet per second = velocity at the end of 60″.
Loss of velocity in 60″—15″ = 45″:—3.15 feet per second.
Gross retarding force in fractions of load, $\frac{3.15}{32 \times 45}$ = .00212
Deduct, effect of gravity = $\frac{1}{9000}$ = .00011
Retarding force on a level, = .00201
= 4½ lbs. per ton nearly, or $\frac{1}{500}$, as before.

Experiment No. 4.—*Ascending the same Gradient.*

444 ft. in 30″:—mean velocity 14.8 ft. per second = velocity at the end of 15″.
384 ft. in the next 30″:—mean velocity 12.8 ft. per second = velocity at the end of 45″.
582 ft. in the next 60″:—mean velocity 9.7 ft. per second = velocity at the end of 90″.
First result.—Loss of velocity in 45″—15″ = 30″ 2.0 ft. per second.
Gross retarding force $\frac{2.0}{32 \times 30}$ .. = .00209
Deduct for the effect of gravity $\frac{1}{9000}$ = .00011
Retarding force on a level = .00198
Second Result.—Loss of velocity in 90″—45″ = 45″:—3.1 ft. per sec.
Gross retarding force $\frac{3.1}{32 \times 45}$ = .00215
Deduct effect of gravity, $\frac{1}{9000}$ = .00011
Retarding force on a level, .00204

These experiments, although not numerous, are very satisfactory, from their remarkable agreement. The following is an abstract of their results:—

No. of Experiment.		Retarding force in fractions of load.
1	.....	.00202
2	.....	.00197
3	.....	.00201
4	First result	.00198
	Second result	.00204
Mean		.002004 =

4.489 lbs. per ton.

The smallness of the number of experiments in this table was owing to the difficulty of getting weather sufficiently calm. In the following table are contained the results of several experiments which were rendered inaccurate by wind; but which on an average, confirm the foregoing experiments in a remarkable manner.

		Resistance in Fractions of Load.
No. 5.	against a slight breeze ...	·00250
,, 6.	slight breeze favourable..	·00188
,, 7.	do. do. adverse	·00250
,, 8.	do. do. do.	·00261

,, 11.	slight breeze favourable..	·00182
,, 12.	do. do. do.	·00144
,, 13.	do. do. do.	·00183
,, 14.	do. do. do.	·00150
,, 15.	do. do. do.	·00174
,, 16.	do. do. adverse	·00210
Mean of 12 experiments		.00199

This mean result is somewhat less than that of the accurate experiments; which evidently arises from the favourable winds having preponderated.

These experiments establish the fact beyond a doubt, that the resistance of the carriages, on a level straight line, is rather less than 4½ lbs. per ton of gross load; and that this resistance does not vary sensibly for velocities less than 10 or 12 miles an hour.

Now, the average resistance of the very best carriages with conical wheels, at like velocities, has been established by a great variety of experiments to be at least 9 lbs. per ton, or $\frac{1}{250}$th part of the load. The superiority of cylindrical wheels on a straight line of railway is thus placed beyond a doubt; and it is almost self-evident that the advantage will increase rapidly with the velocity; for it is now admitted by almost every person conversant with the subject, that the resistance of the railway carriages generally used increases with the velocity at a rate which cannot be accounted for by the resistance of the atmosphere, nor in fact by anything except the vibration occasioned by the conical form of the wheels, which gives rise to a rubbing friction on the treads and flanges of the wheels, and on the ends or shoulders of the journals.

It now remains to be ascertained to what amount the resistance of carriages with cylindrical wheels is increased on travelling round curves, the rails of which have been laid so as to counteract the tendency to deviate outwards.

The experiments I shall quote are few in number, owing to the rare occurrence of weather calm enough to allow of their being made with a sufficient degree of delicacy. From the great care and precision, however, with which those few experiments were made, I consider them to be quite conclusive.

Experiment No. 1 was made on a curve of 1304 feet radius, having the outer rail elevated 5.7 inches above the inner, to suit a velocity of ten miles an hour.

On this curve there is a gradient of 1 in 225, on which the carriage remained stationary when undisturbed; but the slightest force was sufficient to set it in motion downwards. Having been set in motion down the slope at a rate of ten miles an hour, it preserved that velocity of its own accord, without sensible diminution, as far as the bottom of the gradient.

Hence, the retarding force was exactly equal to the accelerating force arising from gravity; that is to say, $\frac{1}{225}$ of the load, or .00444. = 9.95 lbs. per ton.

Experiment No. 2.—The carriage was set in motion on a level curve of 1900 feet radius (the elevation of the outer rail being 3.9 inches), and the spaces which it traversed observed at intervals of ten seconds. The results were as follow:—

Times.....	10″	10″	10″	10″
Spaces	109½	97½	85½	73½ ft.
Mean velocities	10.95	9.75	8.55	7.35 ft. per sec.
Retardation in each 10″	1.2	1.2	1.2	ft. per sec.

Uniform retarding force, $\frac{1.2}{10 \times 32}$ = .00375 of load.

Experiment No. 3 was also on a curve of 1900 feet radius, having the outer rail elevated 3.9 inches.

* An Experimental Inquiry into the advantages attending the Use of Cylindrical Wheels on Railways, with an explanation of the theory of adapting curves for those wheels, and its application to practice; and an account of experiments, shewing the easy draught and the safety of carriages with cylindrical wheels. By W. J. Macquorn Rankine, Civil Engineer. Edinburgh: R. Grant & Son, 82, Princes Street.

Digitized by Google

The spaces in this experiment were observed at intervals of five seconds, as follow :—

Times.....	5″	5″	5″
Spaces	60	57	54 ft.
Mean velocities	12	11.4	10.8 ft. per sec.
Retardation in each 5″	0.6	0.6	ft. per sec.

Uniform retarding force, $\frac{0.6}{5 \times 32}$ = .00375 of load = 8.4 lbs. per ton.

The following is an abstract of the results of these experiments :—

Radii	1304 feet	1900 feet
Resistance	.00444	.00375 of load
Deduct resistance on a straight line	.00200	.00200
Surplus resistance due to curvature	.00244	.00175
Multiply by radii	1304	1900
Products....	3.18	3.32

These products are sufficiently near equality to justify a conjecture that the excess of resistance on curves properly laid, above that on a straight line, varies in the inverse ratio of the radius; and this conjecture is rendered extremely probable by its being what theory would lead us to expect; for the amount of sliding friction on the outer rail, as we have seen in the Second Section, varies in the inverse ratio of the radius, and the friction of the ends of the journals against the inside of their boxes being proportional *(cæteris paribus)* to the elevation of the outer rail, varies in the same ratio. The friction of the ends of the journals, indeed, in the carriages on which my experiments were made, is reduced to a very small amount, by their being terminated in an accurately turned segment of a sphere, which touches the end of the box in a very small central space only; and this small amount may be considered as compensated by the diminished pressure on the sides of the axles.

These are the only elements in the surplus resistance on curves; for, as I have stated, when the rails are properly laid there is no oscillation nor rubbing of the flanges of the wheels against the rails.

The product of the radius of 1900 feet by the corresponding surplus resistance being taken as the most near the truth, the following formula will represent the probable resistance on a curve of any radius, in fractions of the load :—

$$.002 + \frac{3.3}{\text{Radius in feet.}}$$ which is equivalent to

$$\left\{4\tfrac{1}{2} + \frac{1.4}{\text{Radius in miles.}}\right\}$$ lbs. per ton.

The following are some of the results of this formula for different radii :—

Radius in miles.	Resistance in lbs. per ton.	Radius in miles.	Resistance in lbs. per ton.
¼	10	1	5.9
⅜	8.2	1½	5.4
½	7.3	2	5.2
¾	6.4	3	5.0

This formula is suited to a gauge of 4 feet 8½ inches. For other gauges the surplus resistance on curves will probably increase in the simple ratio of the gauge.

As it was apprehended that an elevation of the outer rail of curves greater than six inches might cause discomfort to the passengers, this was the greatest elevation allowed in laying the rails of the Edinburgh and Dalkeith Railway; consequently the curves of radii less than 1200 feet, of which there are several, are not laid exactly according to the rules in the second section; and the resistance on them exceeds what it would be if they were set to the correct theoretical elevation. The experiments on these curves, however, afford an approximate verification of the rule I have just given. The following are the results of two series of experiments :—

Radii,	635	670 feet
Resistances,	.00784	.0075

The surplus resistances, deducting .002 as the resistance on a straight line, are respectively

.00584 .0055

And their products by the respective radii

3.7 3.68,

which, though they are greater than those deduced from the experiments formerly quoted (because the elevation being only 6 inches, is not sufficient to counteract the tendency to lateral motion), are yet sufficiently near them to afford an auxiliary confirmation.

I have only to observe, in concluding the detail of experiments, that the carriages used were not pattern carriages, made for the purpose of having little resistance (as has been the case in some inquiries), but were chosen at random from among those used in the daily traffic of the railway.

It is generally understood that the average resistance of the best carriages with conical wheels, at velocities less than twelve miles an hour, is about ·004 of the load, or nine pounds per ton nearly; and that there is no material increase of resistance on curves above the resistance on straight lines: that is to say, on curves of the radii commonly used on well-constructed railways, which are scarcely ever less than a mile.

The experiments I have quoted in the preceding section therefore prove,—

First that the resistance of carriages with cylindrical wheels, on straight lines of railway, at velocities less than twelve miles an hour, being ·002 of the load, or 4½ pounds per ton nearly, is only one-half of the resistance of carriages with conical wheels.

Secondly, that the resistance of carriages with cylindrical wheels on curves laid with a proper elevation of the outer above the inner rail, according to the rules given in the second section, is very little greater than the resistance with conical wheels, when the radius of the curve is a quarter of a mile; and less than the resistance with conical wheels when the radius is 3-8ths of a mile; and that it continues to diminish rapidly, as the radius of the curve increases.

These results are confirmed in a striking manner in the daily traffic on the Edinburgh and Dalkeith Railway, the passengers on which are drawn by horses at a speed of ten miles an hour.

The journey between the foot of the fixed engine plane at Edinburgh and the station at Dalkeith, a distance of 11,740 yards, is regularly performed by the horses in 40 minutes: each horse drawing a carriage with from 30 to 40 passengers, weighing altogether about five tons. Of this distance, 8349 yards are straight, and 3391 yards curved; and as many of the curves are very quick, I have found the average resistance on them to be about 10 lbs. per ton. The total effect produced by one horse is shown in the following calculation.

Distance. Yards. Feet.	Load. Tons.	Resistance. Per ton.	Resistance. Total.	Effect. In lbs. raised one ft. high.
Straight 8349=25,047	5	4½ lbs.	22½ lbs.	563,557
Curved 3391=10,173	5	10 lbs.	50 lbs.	508,650
Divide by time of journey (=40 minutes)				1,072,207
Pounds raised one foot per minute by one horse, at 10 miles an hour				26,805

This result certainly proves that the resistance has not been *underrated*. Its approaching so near to the value which the best authorities have assigned to the *maximum* effect of a horse, although the speed is so much greater than that at which the maximum effect is held to be produced, may be accounted for, partly by the short time of working and partly by the breeding of the horses; for the rule that the maximum effect is produced at 2 or 3 miles an hour, is evidently applicable to heavy draught horses only.

The horses on the Edinburgh and Dalkeith Railway are not at all distressed by the work they perform. Indeed passengers have often remarked, that at the end of the journey the horses seem little more fatigued than if they had run the distance at the same speed unloaded.

The following calculation shows the mechanical power which would have been necessary to perform the journey above described with a load of 5 tons, had conical wheels been used; taking the average resistance on curves and straight lines to be 9 pounds per ton :—

Distance. Yards. Feet.	Load. Tons.	Resistance. Per Ton.	Resistance. Total.	Lbs. raised 1 foot high.
11,740=35,220	5	9 lbs.	45 lbs.	1,584,900

This amount of mechanical power is nearly half as much again as the amount at present expended in performing the same journey; so that if conical wheels had been used instead of cylindrical wheels, either the velocity of travelling, or the loads conveyed, must have been very much diminished, or three horses must have been employed for every two that are used at present; and the cost of locomotive power—which is at present 26 100th of a penny per passenger per mile, being less than on any railway in Britain except the London and Birmingham—must have been increased nearly in the same proportion. Thus a saving of power, in the ratio of 2:3 nearly, is effected on the Edinburgh and Dalkeith Railway, by using cylindrical wheels, with curves adapted for them, as herein explained; although, from the great number and excessive quickness of the curves on that railway, it presents one of the most unfavourable cases possible for displaying their advantage.

Supposing a line of railway to be straight throughout, the saving of power by the use of cylindrical instead of conical wheels would be in the ratio of 1 : 2, the resistance being reduced from 9 to 4½ lbs. per ton of load. Hence we may state generally, that the power required to produce a given effect, at a velocity of 10 or 12 miles an hour, is diminished by the use of cylindrical instead of conical wheels in a ratio varying from that of 2 : 3 to that of 1 : 2, according to the number, extent, and quickness of the curves on the line.

We have no experiments to enable us to ascertain the exact amount of saving at higher velocities; but it may safely be concluded beforehand, that the saving will increase with the speed; for it is known, that the oscillation of conical wheels causes the resistance to increase rapidly with the velocity; whereas cylindrical wheels, having no tendency to oscillate, ought, from all that is known on the subject, to move with an uniform resistance at all velocities. In confirmation of this principle, the experiments I have quoted show that there is no perceptible variation of resistance at velocities varying from 2 or 3 miles an hour to 10 or 12.

The saving of power effected by using cylindrical wheels however, is a minor advantage in comparison with their superiority over conical wheels in point of safety. It is well known that locomotive engines moving at a high speed are liable to be thrown off the rails by trifling obstacles; and, indeed, that they sometimes leap off spontaneously, without having met with any obstacle that can be detected. This evidently arises from the circumstance that a carriage, and especially a locomotive engine, with conical wheels, never moves straight forward but for an instant at a time, so that whenever a small accidental obstruction, or an increase of speed beyond a certain limit, causes it to leap higher than the depth of the flanges, it is almost certain to alight off the track.

This source of danger, which has been the cause of many accidents, is entirely removed by the use of cylindrical wheels.

I am fortunately able to produce a remarkable proof of this fact, in an accident described in a paper which I some time since laid before the Institution of Civil Engineers. Thirteen empty waggons ran amain from the summit of an inclined plane 1,160 yards long, sloping at the rate of 1 in 30; and notwithstanding the weight of some of their breaks, acquired a high velocity which it was impossible to estimate exactly. They met with no obstruction until they reached the bottom of the plane, where a three-inch plank was laid across the rails, for the purpose of throwing them off; they all leapt over the plank in succession, alighted, without a single exception, on the rails beyond it, and

Digitized by Google

continued their course at a velocity of about 20 miles an hour.

This occurrence is attributable solely to the use of cylindrical wheels; and, remarkable as it may appear, is only one out of innumerable instances in which carriages have leapt over stones and other obstacles without being thrown off the rails.

LONDON AND BIRMINGHAM RAILWAY —CHURCH AT THE WOLVERTON STATION.

SEVERAL weeks ago we gave the substance of the following Report, which even then we had in type. Its publication has, however, been postponed from week to week by the pressure of the meetings. We now give it principally with a view of placing on record so interesting a document. We are glad to find that since the Report was drawn up, the whole of the money required has been subscribed, with the exception of about 200*l.*, a sum so small, that we cannot doubt it will be raised forthwith by the wealthy poprietors of the most extensive railway speculation in the kingdom.

The Committee who were charged with the disposal of the money voted at the general meeting of the proprietors of the London and Birmingham Railway in August, 1840, towards the fund for establishing a Church of England chapel at Wolverton, have to report their proceedings in furtherance of this object.

Having communicated to the Trustees of the Radcliffe estate the resolution of the proprietors above referred to, the Committee represented, through their Chairman, how desirable it was that no time should be lost in giving the advantage of religious instruction to the industrious population which had been concentrated at Wolverton, and it was with much regret that the Committee learnt that difficulties arising out of the nature of the trust would unavoidably delay, for a season, the fulfilment of the good intentions of the Trustees. Anxious, however, that arrangements should be made for the performance of Divine Service, the Committee recommended that the reading room, at the station, should be provisionally adapted to this purpose. It was accordingly licensed, as a chapel, by the Bishop of Lincoln, on the application of the Directors; and the Rev. Geo. Weight was appointed to officiate as Chaplain.

The Committee have now the pleasure to lay before the subscribers an extract from the minutes of the Trustees, and a letter from Mr. Glyn, Chairman of the London and Birmingham Railway, in reply, containing details of subsequent proceedings:

"June 11, 1842.

"Extract from the Minutes of the Radcliffe Trustees, at their adjourned meeting, held this day at Sir Robert Peel's house, Whitehall.

[Attended by Mr. Glyn, the Chairman of the London and Birmingham Railway Company.]

"It appears that since the meeting of the Trustees in June, 1841, and in consequence of the resolutions then entered into, the Rev. George Weight has been nominated and licensed by the Bishop of Lincoln, as the Chaplain of the station.

"That a reading room, capable of holding 230 persons, has been there fitted up as a temporary place for the performance of Divine Service, but it is found to be very inconvenient, and quite inadequate for the purpose.

"It is manifest, therefore, to the Trustees, that every effort ought to be made to remove the evil, by providing a becoming and suitable place of worship, to be effected by building a plain but substantial chapel, capable of holding 600 persons, with a burial ground attached thereto, and a house for the residence of the minister.

"The Trustees cannot but entertain the belief, as well as hope, that the Railway Company will participate in this sentiment, and will feel that, independently of religious considerations, it would be, even in a merely secular point of view, most advantageous that the population which have settled at the station should have afforded to them the comforts of religious consolation, and the benefit of receiving such spiritual instruction as is deemed to be essential even in the smallest and least populous parishes.

"The Trustees have therefore determined to make a proposal to the Directors of the railway, the acceptance of which will enable them, with greater confidence, to apply to the Court of Chancery for permission to devote a portion of their trust funds to the accomplishment of so great and necessary an object.

"The Trustees calculate that the sum of 4,000*l.* will be sufficient to build the chapel, the minister's house, and the wall surrounding the burying ground.

"In addition, therefore, to what the Trustees expressed their willingness to do towards the attainment of these purposes, (by their minutes of 18th June, 1840,) they now propose to appropriate 2,000*l.* out of the trust funds towards a building fund, and earnestly invite the Railway Company out of their corporate funds, or by private subscriptions, to contribute a similar sum, with the assurance that, as soon as the Railway Company are prepared to lodge in the hands of a banker 2,000*l.*, the Trustees will immediately make application to the Court of Chancery to sanction the important object in contemplation.

"The Trustees beg that, in a matter of such importance, they may receive, from the London and Birmingham Railway Company, an official answer, in writing, to this proposition.

(Signed) "GEORGE BRAMWELL,
"Secretary to the Ratcliffe Trustees."

"Office, Euston-square, 4th July, 1842.

"Dear Sir,—I have to acknowledge the receipt on the 27th ult. of the minutes of proceedings of the Radcliffe Trustees, at their meeting of the 11th of June, in which they propose to appropriate 2,000*l.* out of the trust funds, in part of a sum of 4,000*l.* which they calculate will be sufficient for building the intended church at Wolverton, the minister's house, and the wall surrounding the burying ground, as soon as the Railway Company are prepared to lodge 2,000*l.* in the hands of a banker as their portion thereof.

"In expressing the sense of the Directors of the importance of the service which the Trustees, in addition to what they have already pledged themselves to, are thus disposed to render to the industrious population now residing in the parish of Wolverton, I feel that in justice to my colleagues and the proprietors of the London and Birmingham Railway, I ought to state what has been done on their part in furtherance of the common object. Before, however, I proceed to do so, allow me to recall to your recollection, that at the meeting of Trustees on the 18th June, 1840, which I had the honour to attend, I expressed a doubt whether it would be possible for me to induce the proprietors, composed of members of different religious persuasions, to vote as a hoby a sum of money for a Church of England chapel.

"The difficulty which I then submitted to the Trustees was obviated at the general meeting of the London and Birmingham Company on the 7th August, 1840, by the liberal grant of 1,000*l.* on the motion of a Dissenter, and although in deference to the scruples of some of the proprietors, about 50*l.* of this sum has been subsequently withdrawn, there remains 950*l.* of it applicable to the purposes of the grant. Private contributions to the amount of from 500*l.* to 600*l.* have come in further aid of it, and there is now about 1,500*l.* immediately applicable to the fund, being 500*l.* more than was originally expected for this object. The Company, in addition to the church fund, have expended nearly 2,000*l.* in the erection of their schools, and reading-room for the men, which has since been provisionally used as a licensed chapel for the minister appointed by the Bishop of Lincoln.

"They have also appropriated as a present residence for the minister one of their best houses at Wolverton, rent free, and they contribute 50*l.* per annum towards his stipend.

"The result of this expenditure has been most gratifying, the schools which are open to children of all religious persuasions are numerously attended, and are used not only by those from the resident families, but also by children from the neighbouring parishes. Inadequate as the accommodation afforded by the present chapel for the religious wants of the community confessedly is, the population which is concentrated at Wolverton acknowledge with gratitude the benefits derived from the ministry of the Rev. G. Weight, and from the efficient instruction of their children in the schools which are under his immediate superintendence. Already is the influence of the system developing itself in the generally improved character and happiness of this interesting establishment, and present experience is eminently calculated to stimulate the Trustees and the Directors in the advancement of their common object.

"The Directors have little doubt, that it will shortly be in their power to announce that they have realised the amount required by the Trustees towards the church fund; and I shall be much gratified in advising you of the same, at the earliest opportunity, for instruction as to its disposal.

"I am, dear Sir, yours, faithfully,
"GEORGE CARR GLYN, Chairman.

"To George Bramwell, Esq."

It only remains for the Committee to report the subscriptions which have been raised to this date, and to express their earnest desire that the sum of 552*l.*, still wanting to make up the 2,000*l.* which is to be paid to the Trustees, may be speedily obtained from the contributions of proprietors of the London and Birmingham Railway, and others who, appreciating the benefits which labouring communites derive from religious instruction, may be inclined to lend their aid to so important an end.

By order of the Committee,
R. CREED, Secretary.

July 25, 1842.

Contributions in aid of the proposed new church to be erected at the Wolverton station.

RAILWAY ADJUDICATION.

WHITNALL v. THE MANCHESTER AND LEEDS RAILWAY COMPANY.—(SPECIAL JURY.)

Yorkshire Summer Assizes, August 26. — Mr. Knowles, Mr. Adolphus, and Mr. Watson were for the plaintiff: Mr. Baines, Mr. Tomlinson, and Mr. Wilkins were for the defendants.

Mr. Watson having opened the pleadings,

Mr. KNOWLES stated the case. This was an action which the plaintiff, Edward S. Whitnall, had been compelled to bring against the defendents, to recover damages for a very serious injury which through their negligence and fault he had sustained —an injury so severe that it considerably impaired the plaintiff's powers of usefulness, and which must, therefore, affect his prospects during the whole of his future life. The plaintiff is a young man, he (the learned counsel) believed not yet 22 years of age; he is the son of a person who was well known in one part of this county, being the chief engineer of the Low Moor Iron Works. And the plaintiff himself had been educated and brought up to that business; and at the time of his receiving the injury in question, he was about entering into business in that line for his own support. The defendants are a very powerful and important body, called the Manchester and Leeds Railway Company; they are an incorporated body, and carry passengers from Manchester to Leeds. They did so not only on their own line, which extended from Manchester to Normanton, but, by an arrangement with the North Midland Railway Company, also from Normanton to Leeds, their own carriages being permitted to go on, as well as their own servants, to Leeds. There were different carriages in that mode of conveyance. There was the first-class carriage, a very commodious and very safe mode of conveyance, generally speaking. There was a second-class carriage, not quite so commodious, perhaps, as the first-class carriage, but still a carriage on the same plan, and he dared say equally safe. There was a third-class carriage, which was represented by the model before him (the learned counsel). That of course was not so commodious as the others, nor was it to be expected that it should, because the fare is considerably lower. The third-class carriage was very appropriately called the "waggon," for it resembled a waggon more than anything else. There were no seats in it, and the passengers were therefore obliged to stand. And when the carriages are in rapid motion, especially when any jerk occurs on the line, the passengers have to go to the side or to the middle of the carriage, or to lean against the door, in order to preserve an upright position. If they did not do so, the passengers would run the risk of being thrown against one of the sides. The plaintiff became a passenger in a third-class carriage from Wakefield to Leeds on the 1st of March this year. On that day he dined at home between one and two o'clock. He had taken nothing to his dinner in the shape of liquor but a little beer. Between two and three in the afternoon of the day in question, two persons of the names of Gray and Brook called upon the plaintiff, for the purpose of accompanying him to Leeds. They remained a short time at the plaintiff's house, and during that time had each of them two glasses of wine and no more. They proceeded to the railway station for the purpose of going to Leeds by the four o'clock train. A short time after the train arrived on its way to Leeds. The plaintiff became a passenger, as did also his friends, and took their places in a third-class carriage. They were introduced into a carriage of which an exact model lay before him (the learned counsel). There were in the carriage some ten or twelve other passengers. The engine was first in the train; then came a carriage for luggage, and then the carriage in which the plaintiff was a passenger. They proceeded without any circumstance that deserved any particular notice until they came to Woodlesford. At that time the plaintiff and his companions did each light a cigar, and were standing in the hind part of the carriage. He (the complainant's counsel) understood that it was to be made a charge against the plaintiff that he smoked a cigar, but he (the learned counsel) could not see what connection that had with the event which afterwards happened. The guard on seeing the parties employed in this way, went up to them, told them what the regulation was in that respect, and desired them to desist from smoking. The three parties without hesitation complied with the request. Shortly after this circumstance occurred, Mr. Gray, one of the plaintiff's friends, went to the middle of the waggon to speak to Mr. Booth. The plaintiff, who had before been standing at the end of the carriage, went up to Mr. Gray, touched his foot, and called his attention to something which he had to say. Mr. Gray returned with the plaintiff, and they came back to the position which they had occupied before. Gray was standing with his back to one of the sides of the waggon, and the plaintiff was reclining against the door. Suddenly, and witnout any notice, —without anything in the world occurring to draw the attention of the plaintiff, or that of any of his friends—the door of the waggon flew open, and the plaintiff was thrown out and fell with one leg upon the line. Immediately the whole train of carriages behind passed over the leg, and it was superfluous to state that the leg, boot and calf, were all mixed in one mass together, and the leg was irrecoverably lost. The attention of the guard was called to the circumstance, the position of the plaintiff was pointed out to him, he was implored immediately to get the train stopped, and see what could be done to the sufferer. The guard, in answer, said that the man must be dead, that there was no use in stopping the trains, and that a fall like that must kill any man. The train went on, and the man was left where he had fallen. He was thrown with the head and breast on the other line of railway, so that if a train had come up from Leeds, he must have been killed, as there was a bend on the line at that part, and they could not have seen him, or, at all events, they could not have stopped the train. If the train had been stopped, the plaintiff might have been carried to Leeds in ten minutes, and there received the best surgical assistance. But, as it was, forty minutes elapsed before a train reached him from Leeds. The plaintiff was taken care of by some labourers on the line, and afterwards conveyed back to Wakefield, where, on the same evening, his leg was amputated a little below the knee. The learned counsel charged the Company with negligence in reference to the formation of the carriage, and the door of which latter was not properly fastened. A number of witnesses were examined for the plaintiff.

Mr. BAINES, for the defendants, contended that the accident was not caused by any fault of the Manchester and Leeds Railway Company, or of their servants, but that it was attributable to the misconduct and imprudence of the plaintiff himself. The plaintiff and his friends were conducting themselves in an improper and riotous manner before they got into the carriage at all, and while they were in the carriage they behaved in a frolicsome manner. Gray gave the plaintiff a push which forced him up to the end of the carriage; the door gave way, and he fell out. The guard gave a signal to the engineman to stop the train, but as the engineman did not see the accident, but only saw a hat fall out of one of the carriages, he thought that the object for stopping the train was to pick up the hat; and knowing that that was against the regulations of the Company, he did not stop the train. There was no pretence for casting an imputation of harshness upon the Company, for they afforded all the assistance to the plaintiff after the accident that could be done.

Witnesses were then called in support of the defendants' case.

Verdict for the plaintiff, damages 1,000*l.*—*Halifax Guardian.*

IN RE THE GREAT WESTERN RAILWAY.—The parish of Corsham having assessed the Great Western Railway Company at the rate of 1,450*l.* per mile, an appeal against it came on for hearing at a petty sessions at Chippenham last week. Mr. Knapp, of Bristol, and Mr. Saunders, Secretary to the Company, attended on behalf of the Great Western; and Mr. Goldney, of Chippenham, represented the parish of Corsham. It was also contended on the part of the Company that 400*l.* per mile would be an ample sum. Mr. Goldney relied on the half-yearly returns, as showed in the public statements issued to the shareholders. The case occupied the bench some hours, and the decision was adjourned.—*Wilts paper.*

ACCIDENTS ON RAILWAYS *NOT* RAILWAY ACCIDENTS.

AN accident occurred to the down train at 6 o'clock on Friday morning last, on the Sheffield and Rotherham Railway near Jordan Dam, by which Matthew Mettam, a labourer on the railway, in the employ of Mr. Penketh, the contractor for the way, lost his life. It appears that the man was seen at some distance, walking between two lines of rails, and that the engine-driver sounded his whistle; but the labourer continued his course, and appeared to pay no regard until the engine approached very near to him, when suddenly he stepped aside upon the very line on which the engine was travelling. The engineman seeing this, immediately reversed the engine and applied the brake, but it was impossible in so short a space to pull it up so as to prevent its running him down. The engine was stopped almost directly, but the man was quite dead, having got entangled between the wheel and the firebox. This ought to serve as a warning to men engaged on the works. We are informed that the poor man was steady and industrious, but was habitually so regardless, when at work on the line, of the passing of the trains, as never to think of getting out of the way until the engine was almost upon him. An inquest was held over the body before Thomas Lee, Esq., Coroner, at Masborough, on Saturday, when a verdict of "Accidental death" was returned.—*Sheffield paper.*

Yesterday an inquest took place at the Railway Tavern, Boxmoor, before F. T. Osbaldeston, Esq., and a jury, touching the death of W. Sibley, a platelayer on the London and Birmingham Railway. It appeared by the evidence of Spring, a comrade, that the deceased left him to go home, on the line, about ½-past 11 o'clock on Saturday evening; he was rather tipsy. Falkner, a policeman, said he received information that s man was lying dead on the railway. He immediately went, and found the body of the deceased; he was dead, but the body was warm. This was about 5 o'clock on Sunday morning. Miller, the forman or the York up-train, at a ½-past 4, deposed to seeing something lying on the road, and on arriving at Watford examined the guard of the engine, and found it covered with hair; it was lying so near the train that it must have struck it. Abbot, the engine-driver of the Birmingham train, saw the body lying at ½-past 4, and stopped at Boxmoor to give information of the circumstance. Mr. Morry, surgeon, stated that when he first saw the body it was warm, but the vital had fled; the bones of the head were severely fractured, and there was an extensive division of the vessels of the brain; there was also a severe fracture of both parietal bones, many portions of which were pressed upon the brain, and must have caused instantaneous death. The wife of the deceased stated that her husband had not been at home all night; and the supposition therefore is that he lay down to sleep, and thus met with his melancholy fate. The jury found a verdict of "Accidenal death," levying a deodand on the engine of 2*s.* 6*d.*—*Daily papers* of Tuesday.

On Tuesday, as the 2 p.m. train from Ayr was leaving Paisley towards Glasgow, and at a short distance from the former place, a young seaman, belonging to Paisley, leaped from a third-class carriage after his hat, and was taken up insensible, in which state he still remains. His life is despaired of.—*Ayr Advertiser.*

HULL AND SELBY RAILWAY.—At a General Meeting of the Shareholders in the Hull and Selby Railway Company, held pursuant to notice in the Court of Requests Room, at the Town Hall, in Kingston-upon Hull, on Saturday, the 27th day of August, 1842, at Twelve o'Clock at Noon,

RICHARD TOTTIE, Esq., in the Chair,

The following Resolutions were passed:—

1st. Moved by Thomas Wilson, Esq.; seconded by Mr. Henry King—"That the Report of the Directors now read be received and adopted."

2nd. Moved by Mr. Alderman Gresham; seconded by Mr. George Hammond, of Chester—"That in conformity with the Report of the Directors, a Dividend of Ten Shillings a Share on the Capital Stock of this Company be now declared, to be payable on or after the 21st day of September next, at any of the undermentioned Banks:—

HULL.	LONDON.
Messrs. Pease and Liddells.	Sir R. C. Glyn, Bart, & Co.
Messrs. Samuel Smith, Brothers, and Co.	Messrs Smith, Payne, and Smiths.

And that the Books kept for the Transfer of Shares in this Company be Closed for 14 days previous to the day appointed for the payment of such Dividend."

3rd. Moved by R. M. Craven, Esq.; seconded by Mr. Charles Wilkinson—"That the Treasurers be authorised to pay the Income Tax on the amount of the Dividends out of the Company's Current Account Fund, in order that the Shareholders may receive their respective Dividends without deduction."

4th Moved by James Henwood, Esq.; seconded by Jos. Robinson Pease, Esq.—"That in accordance with the recommendation contained in the Report, the Directors be empowered to apply to Parliament in the next Session for an Act to authorise the creation of New Shares, for converting the present debt of the Company of £183,000 (or such part thereof as the Directors may deem expedient) into Shares, and for increasing the capital of the Company to an amount not exceeding £67,000, at such time or times as may appear to the Directors advantageous to the interest of the undertaking."

RICHARD TOTTIE, Chairman.

The Chairman having left the chair, it was moved by James Henwood, Esq.; seconded by Thomas Carlill, Esq., and carried by acclamation—"That the thanks of this meeting be presented to the Chairman for presiding on this occasion, and for his conduct in the Chair."

NOTICE is hereby given, That in conformity with the foregoing Resolution, the Books kept for Registering the Transfer of Shares in this Company will be Closed on the 6th day of September next, for 14 days.

GEORGE LOCKING, Secretary.

Hull, August 27th, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the following Works:—

Contract No. 6, or Dinting Vale Viaduct Contract.—To commence at the termination of the Gamesley Contract, in a field No 226 on the plan, in the parish of Glossop, and to terminate in the field No 209 on the plan, in the said parish; the length of the viaduct being 484 yards or thereabouts.

Contract No. 7, or Longdendale Contract.—To commence at the termination of the Dinting Vale Viaduct Contract, and to terminate in a field No. 2 on the plan, in the parish of Glossop, near to the entrance of the Summit Tunnel; the length being six miles and 73 chains or thereabouts.

These Contracts to comprise the whole of the works necessary for the completion of the lengths of the railway herein mentioned, including the ballasting and laying of the permanent road, except the rails and chairs, which will be found by the Company. The contract is also to include the maintenance of the works for twelve months after their entire completion.

Plans, sections, specifications, and draft forms of contract may be seen on application to the Secretary, at the Railway Office, 15, Piccadilly, Manchester, on and after Monday, the 29th instant.

Sealed tenders, addressed to the Secretary, and endorsed "Tenders for Works," to be sent in on or before Monday, the 19th September next, after which day no Tender will be received.

Printed forms of Tender may be obtained at the office, and no others will be attended to. The Directors will not consider themselves bound to accept the lowest offer.

By order of the Board,

JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, Aug. 25, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	St. Ives
Cambridge	Huntingdon
Wells	St. Neots
Holt	Biggleswade
Dereham	Bury St. Edmunds
Fakenham	Bishop Stortford
Newmarket	Hockerill
Thetford	Harlow
Holbeach	Hertford
Wisbeach	Hoddesdon
Chatteris	Waltham Cross
March	Ware

Also to

St. Leonards	Maidstone
Hastings	Godstone
Rye	Reigate
Battle	Worthing
Cranbrook	Lewes
Tenterden	Eastbourne
Tunbridge Wells	Horsebridge
Tunbridge	Hailsham
Penshurst	Uckfield

From the

Spread Eagle, Gracechurch-street.
Swan-Two-Necks, Lad-lane.
Cross Keys, Wood-street, Cheapside.
Golden Cross, Charing Cross.
George and Blue Boar, Holborn.
Spread Eagle, Regent Circus, and
Griffin's Green Man and Still, Oxford-street.

HORNE & CHAPLIN, Proprietors.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,

THOMAS DODGSON, Secretary.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent per annum, and payable at the Company's Bankers in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb 1842.

ONE THOUSAND GENTLEMEN in and round the metropolis have, during the last six months alone, taken into general wear the ELASTIC CRAVAT. The Patentees can warrant them to retain their shape, and confidently recommend them as the best and cheapest wear of any article of the kind. Also, Walking and Riding Belts, &c. &c. F. HUGHES and Co., Anatomical Machinists, 247, High Holborn, opposite Day and Martin's, under the especial patronage of H. R. H. Prince Albert, and the principal Nobility and Gentry of the United Kingdom.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and TAX Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post-office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases. &c. By J. L. CURTIS and Co., Consulting Surgeons, London.

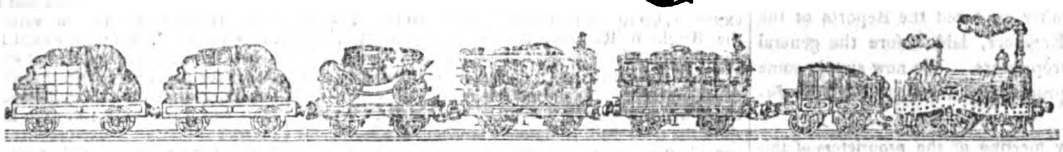
TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High-street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—Sun evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.



Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church,), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, September 3, 1842.

By Order,
JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the following Works:—

Contract No. 6, or Dinting Vale Viaduct Contract.—To commence at the termination of the Gamesley Contract, in a field No 226 on the plan, in the parish of Glossop, and to terminate in the field No 209 on the plan, in the said parish; the length of the viaduct being 434 yards or thereabouts.

Contract No 7, or Longdendale Contract.—To commence at the termination of the Dinting Vale Viaduct Contract, and to terminate in a field No. 2 on the plan, in the parish of Glossop, near to the entrance of the Summit Tunnel; the length being six miles and 73 chains or thereabouts.

These Contracts to comprise the whole of the works necessary for the completion of the lengths of the railway herein mentioned, including the ballasting and laying of the permanent road, except the rails and chairs, which will be found by the Company. The contract is also to include the maintenance of the works for twelve months after their entire completion.

Plans, sections, specifications, and draft forms of contract may be seen on application to the Secretary, at the Railway Office, 15, Piccadilly, Manchester, on and after Monday, the 29th instant.

Sealed tenders, addressed to the Secretary, and endorsed "Tenders for Works," to be sent in on or before Monday, the 19th September next, after which day no Tender will be received.

Printed forms of Tender may be obtained at the office, and no others will be attended to. The Directors will not consider themselves bound to accept the lowest offer.

By order of the Board,
JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, Aug. 25, 1842.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at 18, High-street, Hull, and 29, Austin Friars, London.

At Liverpool, they have appointed Messrs. Carpe and Telo; and at Bristol, Messrs. P. Mase and Son, their Agents.

The undersigned particularly request all buyers of the C C N D, to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

TO DIRECTORS AND ENGINEERS.—A Gentleman who has been engaged in the construction of several lines of Railway, wishes for a Situation as Assistant Engineer. He has a good practical knowledge of Railway work in all its various details, including Surveying, Levelling, &c. &c., and has had considerable experience in the getting up of Parliamentary Plans and Sections for Railways, with books of reference thereto. The highest testimonials as to character and ability can be shown.

Apply by letter, post paid, to J., *Railway Times* office.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a speedy and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

PONTOP and SOUTH SHIELDS RAILWAY COMPANY.—CALL of £10 per SHARE.—The Directors of the Pontop and South Shields Railway Company having resolved that a call of £10 should be made on each of the Shares in the undertaking, payable on the 10th day of October now next ensuing, the proprietors of Shares in this Company are hereby required to pay the sum of £10 upon each of their Shares, on or before that day, to Messrs. Sapte, Banbury, and Co., 77, Lombard-street, London.

ROBERT STEPHENSON,
Chairman of the Board of Directors.

Guildhall Buildings, London, 7th September, 1842.

MR. SAMUEL HALL'S PATENT SMOKE-CONSUMING APPARATUS.—The following papers may be had gratuitously, on application by letter to Messrs. H. and W. Good, No. 60, Moorgate-street; or of Mr. Hall, No. 18, King's Arms Yard, London.

Refutation of Mr. Josiah Kearsley's incorrect Report to the Directors of the Midland Counties' Railway respecting the above Apparatus.

Remarks on Mr. John Fox Bell's Defence (if Defence it may be called) of Mr. Josiah Kearsley's misstatements, as advertised by Mr. Bell in the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*, of the 3rd instant. Also,

An Exposé of the pretended claims and overweening vanity of Mr. Charles Wye (*alias* Counsellor) Williams, as displayed in his paper published last week in the *Mechanics' Magazine* and the *Mining Journal*.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—EXTENSION LINE.—CALL of £10. per Cent., being £5 per Share.—The Committee of Management of this undertaking having resolved, at a Meeting held in Bristol this day, to call, under the provisions of the Acts of Parliament relative to the said undertaking, for an Instalment of £5 per Share, Notice is hereby given, That the Subscribers to the said undertaking, and Proprietors of Shares therein, are required to pay, on or before the 24th day of September instant, to any one of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.,—

London—Messrs. Barnett, Hoare, and Co,
Bristol—Messrs. Miles, Harford, and Co.; Messrs. Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; The West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Company.
Manchester—Messrs. Jones, Loyd, and Co.

By order of the Committee of Management.
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who remain in arrear for this Call after the above-named 24th day of September.

5th September, 1842,
Office, Exchange-buildings, Bristol.

DRY-ROT AND DECAY — MARGARY'S PATENT.—The cheapest and most simple preparation for the preservation of Timber, Canvass, &c., from Decay, the material being only 4d. per pound.

This Patent is used by her Majesty's Board of Ordnance; by Brunel, Locke, and other celebrated Engineers; and by Noblemen and Gentlemen on their estates. It has been extensively used for Railroads in England, and is now on the Bristol and Exeter and Manchester and Sheffield lines. In France, on the Paris and Havre line. It repels the attack of insects, as neither the White Ants, nor the *Teredo Navalis*, so destructive in the Liverpool Docks, will touch any substance so prepared.

Licences granted, and Specimens of all sorts of wood may be seen, at the Patentee's office, Quality-court, Chancery-lane, where every information will be given on the subject.

Rick Cloths, Cement Bags, &c., may be had of the sole Agent, Mr. Lee, 97, Leadenhall-street.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

In our last number appeared the Reports of the Directors and Engineer, laid before the general meeting of the proprietors. We now supply some details of the proceedings from the *Sheffield Independent*:—

The half-yearly meeting of the proprietors of this railway was held at the Cutlers' Hall, on Wednesday noon, when MICHAEL ELLISON, Esq., was called to the chair.

The CHAIRMAN said, he took the chair in the absence of the Chairman and Deputy-Chairman, because he was very ready to discharge any duty which he might be required by his brother Directors to undertake. He regretted the absence of the Chairman and Deputy-Chairman, who were better acquainted with the details of the business than he could be. Though, most anxious to see the undertaking brought to a successful issue, yet they were well aware that his engagements were so numerous as not to allow of that minute attention to detail which might qualify him to give answers on every point. He must, therefore, draw largely on the indulgent consideration of the meeting, and where he could not give the explanation that might be required, he had no doubt his colleagues who had taken a more active part in the Management could do so. The Directors had nothing to conceal from the shareholders, and would be happy to give all the information that was in their power. It was their object to present an honest and fair statement of facts.

Mr. STEVENSON then read the notice convening the meeting, and the seal was affixed to the register of the proprietary.

Mr. STEVENSON then read the Report of the Directors and the Engineer.

Mr. T. A. WARD moved that the Report of the Directors and the Engineer be approved and printed.

Mr. JOHNSON seconded the motion.

Mr. SPENCER said, it appeared a great number of shares were to be forfeited, as many as had been before, and he wished to know before this was done, whose those shares had been originally. He had reason to suppose that some of them might belong to Directors themselves. And if they were thus making their escape, it was not fair to the shareholders, who had been compelled to pay up to the whole number of their shares as best they could. He thought that if any of the Directors had transferred their shares to A, B, C, or D, men of straw, who never could or meant to pay, and were then getting those shares forfeited, they stood in a different position from what, as gentlemen, they should. With regard, also, to going again to Parliament, they might repeat that operation till they found their expenditure consisting chiefly of Parliamentary expenses. Objecting, therefore, to this, and to the forfeiture of the shares, he moved as an amendment that the accounts and Report be received (not adopted.)

Mr. E. UNWIN seconded the amendment.

The CHAIRMAN said, as to the parties to whom the shares originally belonged, the Directors could not give that information, unless called for by a majority of the meeting. With regard to what the Directors might have done with their shares, he could only answer for himself. He knew that none of his were forfeited, and he was sorry to tell them so. At the first meeting at which shares were forfeited, the names were published, which exposed the Directors to considerable animadversion. They were told that it was not usual with other Companies, and ought not to have been done by them. Of course, therefore, the Directors could not give the information which Mr. Spencer required, unless it were drawn from them.

Mr. KENYON PARKER suggested an alteration of the form of the resolution, as follows:—"That the Reports now read be received and approved."

Mr. WARD and Mr. JOHNSON assented to the change.

Mr. E. UNWIN had seconded the amendment, because he did not approve of going to Parliament again. They had been once too often.

Mr. IRONSIDE supported the resolution, but wished for an explanation of a statement he had seen as to the coaches running between Ashton and Manchester, in competition with this Company. He saw in the accounts that 300*l.* had been received from Mr. Thomson's sureties; but as the defalcations arising from Thomson's misdeeds was 1,080*l.*, he thought the Directors could not have seen this item, or they would have paid the money out of the allowance made to them. He merely threw this out as a hint. (Laughter.) He did not like going to Parliament again, but it appeared to be necessary. It was satisfactory, however, to observe, that their Parliamentary and engineering expenses, up to the present time, were 40,000*l.*; while the Brighton Railway, before getting its Act, had spent 200,000*l.*

The CHAIRMAN said, there had no doubt been a considerable falling off in the traffic, of which one cause was the disturbed state of the district. At one time the mob had completely stopped the traffic for some hours, and that becoming known to the public, had no doubt had a bad effect. Some of the falling off arose from the coach opposition between Manchester and Ashton. He could not understand it, for he had been of opinion that coaching had no chance of contending with traffic by railway. He thought it was an unfortunate circumstance that the fares on the railway had been raised a trifling sum, which had served as a pretext for putting stage-coaches upon the road, and since that time the traffic had been rather falling off. Whether it would be more wise to return to the first table of fares, required serious consideration. It might not always be advisable, in the first instance, to increase fares, but when once done, it was awkward to go back again, for such a course was liable to bring Directors into disrepute. He hoped, however, that the asking of the question would be of use. In regard to the defalcation of Thomson, he made no question that the Directors were in a great degree culpable. It certainly implied a want of vigilance to allow a man to be guilty of a fraud, and not have sufficient security to cover what he had done. He did not know what might be the feeling of the Directors about supplying the deficiency from their own resources, but for his part he had no sort of objection to it.

Several Directors explained, that the loss arose from no negligence on the part of the Board, but from forgeries committed by Thomson.

Mr. APPLEBY said, it was impossible that any body of Directors could take precautions so as to prevent such dishonest practices as Thomson had been guilty of. As a Director, he had had on several occasions to examine and pass accounts, and he had also to appear as a witness at Liverpool in relation to one of the forged documents which had passed under his notice. The imitation was so perfect that he did not discover the forgery, for of course he had no suspicion of such a thing being done. He thought it could hardly be expected that the Directors should be answerable for a fraud committed by such means.

Mr. W. JACKSON supported the resolution. He thought the publication of the names desired by Mr. Spencer would do harm, but no good. He thought one of the greatest advantages of this Company was its poverty—(hear, hear)—as the greatest misfortune of a neighbouring undertaking had been its wealth. He wished to know what the branch to Ashton would cost? And did they anticipate opposition?

The CHAIRMAN replied that the estimate of cost was 56,000*l.* They expected the assistance of Lord Stamford, who was the person most interested; but if he opposed, they must abandon it.

Mr. JACKSON thought, if they had to go again to Parliament, they should consider the expediency of reducing the number of Directors.

The CHAIRMAN said, they should be obliged to go again to Parliament, whether they wanted to borrow money or not, for an extension of time, for within the period prescribed by the Act they could not complete the undertaking. He agreed as to the number of Directors, that large bodies were unmanageable, and that 8 Directors would be better than 16. He had always thought 16 too many. The shareholders would be aware that a line to Ashton and Staley Bridge was originally contemplated as part of the undertaking; but in consequence of the capital not being sufficient, that part of the line was abandoned. But the line as then proposed would have been very expensive. By taking the direction now proposed, it would be much less expensive, and it would form a most valuable adjunct to the line. If it could be carried, and the Directors would use their best exertions to accomplish it, it would be a source of considerable traffic. They would then hear of no coaches from Ashton competing with the line. The line was now nearly a mile from the centre of Ashton; and when persons were on the coach, they would often think they might as well go forward by it for so short a distance as to Manchester as to change to railway.

Mr. WARD asked, was it proposed to raise the money by borrowing, or by new shares? and if the latter, were they to be 100*l.* shares, or inferior shares?

Mr. STEVENSON said, the Standing Orders of Parliament would prevent their borrowing, unless they first raised money by subscription. Of course they could issue shares only at their market value at the time.

The CHAIRMAN said, the mode of raising the money had not yet been determined upon by the Directors. If the shares rose in value, the money would easily be raised. If not, it would be difficult to raise it.

Mr. INGLESON asked how it was there were so many shares for forfeiture, when they understood that all the forfeitures that were intended had been made before? How was it that only 16*l.* each had been paid on these shares?

The CHAIRMAN said that all that were ready for forfeiture at the former meeting, were forfeited, but the Directors could not say that those were all that would be forfeited. These shares had paid on the average only 16*l.* each, because the Directors, with all their efforts, had been unable to get any more.

Mr. INGLESON repeated Mr. Spencer's request for the names of the original shareholders.

The CHAIRMAN said, the Directors would not give the names, unless required by a majority of the meeting, because they thought it would be injurious.

Mr. INGLESON thought those who had paid so little as 16*l.* should be exposed.

Mr. TURNER said 16*l.* was the average. Some had paid 30*l.* or 40*l.*, others had only paid up 5*l.*

Mr. INGLESON thought then, that there had been a good deal of partiality.

The CHAIRMAN said, the Directors had been much accused of harshness in pressing for the payment of calls, and they certainly had pressed for payment as hard as they could, but there had been no partiality. He saw no good purpose in the publication of the names; but if a motion to that effect were made, it must be entertained.

Mr. SPENCER said, Mr. Jackson had said the poverty of the Company was one of its advantages, and he had once been of the same opinion. But when persons, by getting shares forfeited, and buying them again at 32*l.* 10*s.*, could get interest on 82*l.* 10*s.*, it was a great temptation. If they had the names of the original owners of the forfeited shares, they should probably find that this had been done. If this were not true, he challenged proof to the contrary. If true, he did not know how those who had done so stood in their own minds. He thought, considering the great burden of the station toll on third-class passengers for short distances, they should see if the Manchester and Birmingham Company would not be contented with something less.

Mr. APPLEBY thought Mr. Spencer's first remark required some reply. He could scarcely comprehend it; but Mr. Spencer seemed to insinuate that some of the Directors had got rid of shares by forfeiture, and then bought shares at 32*l.* 10*s.* to receive interest on 82*l.* 10*s.* If that were the insinuation, Mr. Spencer might be assured it was not the case. No interest was paid on any shares, but such as had paid up 82*l.* 10*s.*

The CHAIRMAN said, the charge did not appear to apply to the Directors collectively, and therefore he could only say for himself, individually, that it did not apply to him.

Mr. TURNER said, as the sweeping charge of Mr. Spencer must go forth to the public, conveying the imputation that some of the Directors had made an improper use of the power they possessed, he deemed it due to himself to state, that he had not sold any shares, and the shares he had, he had taken at par. He made a contract with the Company to take shares for his land; but between that time and the time when his land was required, the shares fell to 50 per cent. discount, yet he still took them at par.

The amendment was then put and negatived, and the original resolution, that the Report be received and adopted, was put and carried.

Mr. KENYON PARKER then moved that the accounts be approved, and distributed among the shareholders.

Mr. IRONSIDE seconded the motion.

Mr. COLLIER wished to know to what extent the portion of the line now open was productive, for he understood there were some outstanding accounts, connected with the traffic expenses, that would reduce the balance.

The CHAIRMAN said, the Directors did not wish to be understood that the seven miles of the line now open could be very profitable. It was not likely that it should be so. Many of the expenses were the same for a seven miles' traffic as they would be for 14. The present balance would be reduced to the extent of several hundred pounds by outstanding claims.

Mr. TURNER said, some of the traffic expenses had been considerably reduced. At first, owing to the newness and stiffness of their machinery, they consumed 30 lbs. of coke per mile. It was now reduced to 22½ lbs., and they expected a further reduction.

The CHAIRMAN said, that the station tolls payable

Digitized by Google

to the Manchester and Birmingham Company took the greater portion of the receipts for the third-class passengers for short distances. But the tolls would form a smaller proportion of the longer traffic. They had paid in station tolls 1,774*l.*

Mr. SPENCER thought that the Manchester and Birmingham Company might make some abatement in the tolls on third-class passengers, considering the competition to which this Company was exposed.

The CHAIRMAN said that every effort had been made to procure a mitigation of the tolls; but the Manchester and Birmingham Company would not take less than the law gave them.

Mr. W. JACKSON observed, that the passenger duty had amounted to 10 per cent. on the receipts; but the new mode of levying the duty would reduce that one-half. He hoped that, in future Reports, the Directors would state the number of passengers of each class, and the revenue from each.

The CHAIRMAN intimated that this should be done.

Mr. CHAPMAN, a Director, in allusion to the remarks of Mr. Spencer, declared that he had now the same shares as he had had from the first.

The adoption of the accounts was put and carried.

Mr. S. Butcher moved, and Mr. Hoyland seconded, the confirmation of the forfeiture declared by the Directors of 1,419 shares.

The bye-laws of the Company having been sanctioned by the Board of Trade, were then confirmed, and ordered to be sealed. The laws relating to passengers, it was stated, were posted at the stations, and each servant of the Company had a book containing the laws relating to them.

Mr. SPENCER then moved—that the Company views with regret the issue of shares at a discount of 50*l.* each, and to prevent such issue in future, that no shares be issued at a discount, unless by the sanction of a special or general meeting.

The CHAIRMAN thought the proper time for this motion was gone by. The proprietors might be sure the Directors would issue the shares on the best terms they could; but they were bound to provide the means to carry on the works. They were engaged in heavy liabilities which must be met, and it would be a great misfortune if that could not be done. The shares might be first offered to the shareholders, and if they were disposed to take them up at a high rate, of course the Directors could have no objection.

The motion, for want of a seconder, fell to the ground.

Mr. Kenyon Parker then moved, and Mr. S. Butcher seconded, a vote of thanks to the Chairman.

Carried unanimously.

The CHAIRMAN said, he was obliged to the meeting for deeming his services worthy of thanks. He assured them he was greatly interested in the undertaking—more largely than he could wish, as a shareholder, and if he had had a fair opportunity to get quit of some of his shares, he should have been glad. But he had kept them at great inconvenience to himself, because he was determined to be no party to anything that he thought might prejudice the undertaking. He was also interested in it as belonging to this town, and as connected with a nobleman who had immense property here. He was convinced this railway would be one of the best things for this town, and he should devote himself as much as he could to bringing it to a successful issue. He hoped that, notwithstanding all the discouraging circumstances, they might shortly meet to celebrate the opening of the line.

The following are the accounts laid before the meeting:—

General Abstract of the Receipts and Expenditure from the formation in 1836, *to June* 30*th*, 1842, *inclusive.*

GREAT NORTH OF ENGLAND RAILWAY COMPANY—GENERAL MEETING.

[Abridged from the *Yorkshireman.*]

THE thirteenth half-yearly meeting of the Great North of England Railway Company was held on Tuesday, August 30, at the Company's Rooms, Northgate-street, Darlington; G. A. WILLIAMSON, Esq., of Harperley Park, was in the chair.

There was a good attendance of shareholders.

The CHAIRMAN observed, that the first preliminary business of the meeting was to affix the seal of the Company to the list of shareholders.

Two shareholders having retired and complied with the intimation given by the Chairman,

The CHAIRMAN called upon the Secretary to read the Report of the Directors. [This document we published last week.]

The CHAIRMAN then rose and said, that he begged, at that stage of the business, to make a few observations on the Report, and on the object of the meeting of that day. His remarks should be very few indeed, inasmuch as, according to his judgment, the business of railway meetings was conducted in a much more satisfactory manner by questions being put to the Chairman and the Directors, than by indulging in long speeches. The first part of the Report related to the extension of the line. The shareholders would observe that they had got rid of the burthen of carrying the line forward between Shircliffe, West House, and Newcastle. This, to him, appeared very gratifying

Digitized by Google

feature in the Report. Almost the whole contracts, too, which they had entered into, were already closed, with the exception of two—these being the two bridges proposed to be erected at Darlington Bank Top and Houghton-lane. The next subject which would claim the attention of the meeting was the state of their financial affairs. These, to some of the shareholders, might appear in no very flattering condition; but undoubtedly the Directors had had to contend with times of extraordinary difficulty, and circumstances, too, arose, over which they (the Directors) had had no control, all of which conspired to increase the expenditure, and necessarily diminish the receipts of the Company. It did to him appear, however, that they were about to encounter a revival of their hopes; and he trusted that they might now look safely forward to the realisation of those flattering anticipations which, perhaps, they had a little too prematurely assumed on former occasions. ("Hear, hear," from Mr. Watson, of Newcastle.) The consequence of the temporary depression in their affairs might possibly disappoint the proprietary as to the amount of dividend to be declared; but all would agree, he thought—all men of business would admit—that it was at all times best to act upon what they had actually realised, and refrain from promises they were not confident they could fulfil. In the dividend about to be declared they would not trench in the slightest degree upon the reserve fund; on the contrary, they would rather increase it. (Hear, hear.) He would now move that the Report just read be adopted.

Mr. JOSEPH WATSON said, there was an item in the accounts which he should like explained. For stationery, printing, advertisements, &c., he found a sum entered of 4,665*l.* 7*s.* 3*d.* Now, he wished to know why this was not placed against the traffic account.

The CHAIRMAN explained that it included an old account, which had not been discharged.

Mr. WATSON—Are there any more old outstanding accounts?

Mr. OXLEY believed not. The account at present alluded to had been standing since 1836.

Mr. WATSON said, he should like to hear the item of salary, agencies, &c., explained.

Mr. OXLEY said, that Mr. Stephenson, the shareholders were perhaps aware, had given his services to the Company, and for which he had received 750*l.* There were other items which they had paid for engineering, agencies, &c. &c.

Mr WATSON said, his question was—Why were not these items carried to the current expenses?

Mr. OXLEY said, he wished gentlemen distinctly to understand that these items would not occur again?

Several gentlemen having expressed considerable dissatisfaction,

Mr. JAMES EDDOWES said, he hoped gentlemen would bear in mind that when the Report was presented in March last the line had been open three months. At that period it was deliberately stated, that the whole expense, including everything, would not reach 1,000,000*l.* In the September account following—after due time had been allowed the Directors for correcting any misstatements into which they might have fallen—the shareholders were again told by Mr. Oxley that the expenses would not reach beyond 1 500,000*l.* In the next Report of March, 1842, they found an increase in the estimate to the extent of 67,000*l.*—and this, too, without offering excuse or explanation for so extraordinary a state of things. Again, in the present Report, there is a third increase of 124,000*l.* Certainly this was a most extraordinary state of things. It was utterly impossible but that the Directors must have known, at the time they made their deliberate statements, that they were deceiving the shareholders. Under these circumstances he would be sufficiently candid and straightforward to say, that the proprietors of that line had not been dealt with either with openness or sincerity. It was very painful for him to say so, but the best friends of the Company were those who called upon the Directors to explain the cause of so much discrepancy of statement. (Hear, hear.) The expenditure he could characterise as nothing short of reckless and extravagant; and when the Directors had paid such enormous sums as they seemed to have done, they must be expected to be called to account.

The CHAIRMAN said, that he must protest against the language in which the honourable proprietor who had just sat down had indulged, and in which he had charged the Directorate with a want of openness and sincerity. They may have been guilty of an error of judgment; but he would challenge any gentleman to show that they had ever indulged in intentional misstatements, or been guilty of insincerity. They may have been unexpectedly called upon to meet demands and charges made upon them, but that did not involve a want of candour or openness on their parts. Perhaps, too, after all, the Directors ought, in the first instance, to have been allowed a greater sum to meet contingencies.

Mr. JAMES EDDOWES said, that with great deference to the learned Chairman, he still persisted in his original statement, and would not retract his expressions. After two meetings had been held—at the first there might have been a mistake in the estimate formed—the statement of the probable expense of the line was again and again reiterated by the Directors; and, therefore, he (Mr. Eddowes), certainly did think that some of the Directors must have known the extent of the probable liabilities of the Company. What with the aid of the books, the Solicitor to the Company, the Engineers, the Finance Committee, &c. &c., they could not help being aware of the probable extent of their liabilities. He, consequently, would not withdraw the charge which he made against the Directors, but would persist in alleging that the proprietors had been unfairly dealt with. (Hear, hear.)

The CHAIRMAN said, he would not enter into recrimination, or keep up the present tone of the debate. With regard, however, to the charge of "recklessness" being brought against the Directors, he would remark that if the term was applicable at all, it applied to the Engineer and not to the Directors. The Board had acted altogether under the advice of the Engineer, and consequently were not responsible for any misstatements he might have made.

Mr. OXLEY said, he felt bound to express his obligation to those gentlemen who regularly attended the half-yearly meetings of the Great North of England Railway Company; and so far as he was concerned he felt no feelings of unkindness towards those gentlemen who usually examined into the interests of the Company. He thought, however, he would be excused if he felt hurt, and indeed irritated, at the observations just cast on a Committee of gentlemen, composed of as honourable men as ever he knew; and certainly he did think it most unwarrantable in a stranger to come into that meeting—for of Mr. Eddowes neither he nor his colleagues knew anything—and now that the mad career of the people for railway speculation was past—now that a collapse in public sentiment had taken place—now that even the price of iron had fallen—he did, he said, think it rather unfair, under all these circumstances, that a gentleman, a stranger hitherto to the Company, should enter that room on that occasion, and charge those who had spent their nights and days in the service of the shareholders, and for the benefit of the line, not only with want of candour, but positively with want of honesty. ("Hear, hear, and No, no.") But let that pass, and let him come to the subject of the expenditure. He frankly admitted that the expenditure for erecting the line was considerably more than what he had ever thought of; but at the period he made his original statement as to the amount of the cost, he spoke from what he then did know, and was ill prepared for circumstances which subsequently arose. Because of this, however, was he now to be told that he made his statements with a view to deceive the proprietors. Gentlemen ought to be aware that Directors formed their estimate of the cost of railways upon the statements of their Engineer. The Directors of the Great North of England line had done no more than this, and it was therefore too ban that they (the Directors) should be charged with dishonesty merely because their Engineer had committed an error. He deplored as much as any man the great expenditure which had taken place; but sure he was, that if those gentlemen who now brought the charge of dishonesty against the Directorate had seen everything they had had to contend against, they would have been persuaded that nothing better could have been done than the adoption of the course which had been pursued. The Directors were absolutely compelled to put confidence in their Engineer—they had no other alternative—they were compelled to engage parties to purchase land—in short, he saw no other course for the Directors to have pursued than that which they had followed.

Mr. JAMES EDDOWES replied, that Mr. Oxley had informed the proprietors that they must blame the Engineer, and not the Directors, for the reckless expenditure which had taken place. Now, he begged to inquire whether the Engineer was a master or a servant. When the Directors found that their expenditure was actually more than doubling the original estimate, why did they not instantly discharge him who had led them so much astray, why did they not turn round and say, "We can't suffer you to go on any longer this way?" Had they acted in this manner, they would thereby have been establishing a feeling of good will and confidence between the Directors and the shareholders. As it was, their conduct had had a contrary effect.

Mr. OXLEY replied, that the blame of the increased and unexpected expenditure did not lie altogether with the Engineer. There were many circumstances which had contributed to increase their difficulties. There were bridges to be built, viaducts to be erected, and a great many unexpected claims upon the Company, which ully accounted for the increased expenditure. There was no one item in the books which the Directors wished to keep back or leave unexplained. It is said that they had been guilty of insincerity. He denied it emphatically. The fact was, if they had been enabled to pay a good dividend, gentlemen would be as smooth as oil. Because they were unable so to do, parties came into that room and unjustifiably attacked those who had borne the burden of the day. Had the Directors not acted as they had done, and fought for the interests of the line as vigilantly as they had done, the whole property would have been swamped.

Mr. PLEWS said, he had no objection to explain every item in the first half-yearly account. [The speaker then went on to account for every principal item, by explaining for what purpose it had been expended—such as the building of bridges, the purchase of land, &c. &c.]

Mr. BAKER said that he had traced the difficulties they had had to encounter to the fact of there being too many Directors, and to their having trusted too much to their Engineer.

Mr. WATSON said that Mr. OXLEY had complained of statements being thrown in his teeth, and with being taunted with estimates he had formerly given. To be sure he was. Why, the statements he had made were coolly and deliberately reiterated from time to time by the whole body of the Directors. It was proper, therefore, to allude to them, particularly when experience had so sweepingly falsified them.

Mr. CLARKSON said, the truth was, that in some of the purchases of land made by the Directors, they (the Directors) were both the buyers and the sellers. He could not help thinking that the Board of Directors had acted extravagantly. Among the proprietors of the Great North of England Railway were many widows, who had put in their all—or nearly their all—in order to realise something like an interest. It was for them he felt, and not for himself. As to the management of the line generally, he thought there were more cats than there were mice! (Laughter, and "Hear, hear.") What they wanted was working men—men who would look to the interests of the shareholders generally. If those who had purchased the Branch Croft line from the Stockton and Darlington Railway Company—if they were both the buyers and the sellers of that property, as it was said positively they were, why then, he thought they ought to be called upon to refund part of the money. It had cost the Great North of England Railway Company 20 000*l.*; and by universal consent it was not worth 2,000*l.*

Mr. PLEWS explained that the land itself, exclusive of the line, was worth 2,000*l.* But the fact was, that they must either have abandoned a portion of their line, or made the purchase in question. He denied the imputation of their being both the buyers and the sellers.

Mr. OXLEY said that the negociation was carried on all along with a view of making as good a bargain as they could. They had no alternative but to make the line according to the instructions of their Engineer. Judging, however, from the price of land adjoining the town of Darlington he would only say, that if they had not purchased the Bank Croft line at the time they did, it would have cost them 40,000*l.* instead of 20,000*l.* at the present time.

Mr. PEASE explained at some length, that no member of that Board had any connection with the purchase made from the Stockton and Darlington Company, or, indeed, had taken any part in the negociation.

A PROPRIETOR (whose name we could not hear) inquired whether the Directors intended to dispose of their surplus engines and land.

Mr. OXLEY explained, that at present the engines could only be disposed of at a great loss; and as it was expected that they would have to work a portion of another line, it was thought desirable to retain them in the meantime. With respect to the surplus land he would only observe, that he did not think every one was aware of the great increase in the value of land in the neighbourhood of railways. A period, he thought, would arrive, when they would be enabled to dispose of their surplus land on much more favourable conditions than they could do at present. Under these circumstances the Directors did not think

Digitized by Google

it advisable actually to thrust their surplus land into the market, when, by waiting a short time they would receive a much higher price for it.

Mr. BEAUMONT inquired whether all the law expenses had been paid; and whether there was a likelihood of there being any more.

The CHAIRMAN repaid, that the law expenses had not been all discharged. Gentlemen, however, should understand that by "law charges" was meant all expenses to which they had been put by adverse parties as well as by their own act.

Mr. RUTSON said, he would only express a hope that the line would be worked in the best manner possible. If the Directors did not do so, they might rely upon it that they would stand no chance of making it a profitable concern. Complaints were already made of the slowness of the line. He begged to inquire whether the Aine and Raskelf stations paid their expenses.

Mr. PLEWS—Oh yes.

Mr. OXLEY then made some general observations as to the arrangements the Directors had made in reference to putting on third-class carriages on the line.

The CHAIRMAN observed that Sir Robert Peel and Lord Aberdeen had travelled on their line that week, and they said that it was the smoothest line they had ever travelled upon, in their lives

Mr WATSON here rose, and inquired whether those gentlemen who were Directors of the Stockton and Darlington Railway Company had ever taken their seats at that Board.

The CHAIRMAN replied in the affirmative.

Mr. WATSON continued—Then he had to make distinctly a charge against those Directors, of their having been acting throughout for their own interests. [Mr. Watson then commenced to open his case, but before he had proceeded far he was stopped by the Chairman as being out of order. We apprehend, therefore, that it would be very unfair were we to give publicity to the opening remarks of Mr. Watson, as directed against the Board of Directors, because, seeing tha the speaker was declared out of order, a d interdicted by the Chairman from proceeding, the gentlemen attacked were also consequently prohibited from replying. Of course, our readers may easily understand, that the charge made against the gentlemen in question was founded upon the fact of their holding the duplicate office of Director of two Companies—the Stockton and Darlington, and Great North of England Railway Companies.]

The CHAIRMAN having decided against Mr. Watson proceeding,

Mr. WATSON said that the subject was a most important question, and he ought not to be precluded from proceeding.

The CHAIRMAN said, he must interpose his authority to prevent Mr. Watson from proceeding. He (Mr. Watson) was utterly out of order. Let him show, if he could, that the Directors of the Great North of England Railway Company had acted along with those of the Stockton and Darlington to the detriment of that line, but let him not argue upon assumption, or drag in a body of men over whose conduct they, of course, had no control.

Some little further conversation then ensued, after which the Report was adopted by the meeting.

The CHAIRMAN then read the next resolution from the chair, which was that a dividend of 1*l.* 5*s.* per share be declared; and that it be made payable in September next.

After a brief conversation of a rather irrelevant character, the resolution was adopted unanimously.

Mr. BAKER then said, that he had been deputed by the shareholders residing in the town of Thirsk to move a resolution to the effect "that it was the opinion of that meeting that greater economy should be displayed in the management of the line generally, and that the Directors should be reduced to the lowest number which the law would allow." He (Mr. Baker) would not press his resolution to a division, in the event of the Directors present giving a pledge to that meeting that the recommendation contained in the resolution he held in his hand would be acted upon.

The CHAIRMAN observed, that a reduction in the number of Directors had already taken place. Two had seceded, and four more would shortly also withdraw. Thus the number would at once be reduced to the lowest number which the law allowed.

After a short conversation, the subject then dropped.

Mr. WATSON then rose and said, that he begged leave to submit the following resolution to the meeting, and which he proposed should be adopted. It was—"That a list of the shareholders in this Company, having a mark affixed to the names of those who are qualified as Directors, together with a balloting paper showing the number of Directors to be elected, shall be forwarded to each shareholder at least seven days before the day of the general meeting to be held in the month of February in each year, and that the election of Directors shall henceforth be made in the following manner, viz., the shareholders present at the annual general meeting shall appoint two scrutineers, to whom the balloting papers shall be delivered by the shareholders present, on their own account, or as proxies lawfully appointed, and the persons who shall be declared by the scrutineers to have the largest number of votes upon these lists shall be the Directors."

Mr. T. SMITH said, that some little time ought to be given to the shareholders to consider the question, before they were called upon to adopt a resolution of so important a character.

A long and desultory conversation then ensued as to the propriety or impropriety of adopting the resolution.

Mr. MEWBURN (Solicitor) explained that it was his impression that they could not legally adopt the resolution in question. No rule could be laid down at one general meeting for the government of a subsequent general meeting. It would be absurd were they to place upon their books a motion, having for its object the governing of the conduct of a general meeting, and which rule such general meeting would not be compelled to adopt.

A PROPRIETOR then moved as an amendment that the resolution in question should be placed on their books, as a notice of motion, to be hereafter considered.

Mr. PEASE seconded the amendment.

The amendment having been put from the chair, there were found to be 16 for it, and 17 against it.

The original motion was also put from the chair, when, by a strange coincidence, there were found to be 16 for it and 17 against it. Both the amendment and the original resolution were consequently declared to be lost

A long conversation then ensued as to the practice of giving free tickets to the railway servants to travel on the line when and where they pleased. Mr. Baker intimated that the privilege had been much abused; and had been made a source of profit to the servants

The CHAIRMAN observed that he had never heard of the privilege being abused.

After some little recrimination the subject was dropped.

A vote of thanks was then passed to the Chairman for the able and impartial manner in which he had discharged the duties of his office, after which the meeting adjourned.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

THE half-yearly meeting of the proprietors was held at the Town Hall, Hull, on Saturday, August 27; R. TOTTIE, Esq., Vice-Chairman of the Board of Directors, took the chair, and expressed his regret at the absence of the Chairman, H. Broadley, Esq., M. P., whose application to his legislative duties had rendered some relaxation both for the body and mind necessary, and who was, in consequence, taking a little excursion, he believed, on the continent.

Mr. LOCKING, the Secretary, read the Report, which we gave last week.

THOMAS WILSON, Esq., rose to move the adoption of the Report and accounts, but put a variety of questions to the Secretary, from whose replies it appeared that the expense of truckage of goods to the station, about 1*s.* per ton, is shared between this Company and the other lines benefitted by the particular traffic; the other Companies also make an allowance for the use of this Company's warehouses. The maintenance of way had decreased thus—during the three last half-years, 59*l.*, 53*l.* 11*s.* 10*d.*, 51*l.* 8*s.* 10*d.* per mile, and it was hoped the current half-year would not exceed 48*l.* There was an advantage on both sides in letting the maintenance by contract; the Directors wished the line to be consolidated before they let it, but had now advertised for contracts. The line was now in good condition, as most of the shareholders had had an opportunity of witnessing. As to locomotive power, there is no railway in the kingdom where the expense per mile is so low. Mr. Wilson considered the replies and prospects of the undertaking as satisfactory. He anticipated a still further increase in goods' traffic, and had much pleasure in moving the resolution, which Henry King, Esq., seconded.

Mr. THOMAS CARLILL gathered from the replies of the Secretary that the expenses of collecting goods were 10 per cent. upon the gross receipts; this he thought might be amended. He also wised to know why, with an increase of traffic amounting to 3,866*l.* 5*s.* 1*d.* over the corresponding period of last year, there was an increase of 2,097*l.* in the expenses of working?

Mr. LOCKING entered into a full explanation, reading minutes of all the items in which an increase or decrease of expenditure had taken place. The balance was as stated by Mr. C. Amongst the items causing the additional expense were 357*l.* 14*s.* 6*d.* for repairing the Humber bank, and 116*l.* 19*s.* 1*d.* greater amount of duty. Some items in keeping up stock, as repair of engines, carriages, and waggons. The stock he estimated as more valuable than at the corresponding period, and 365*l.* should be set down on that account. The principal items of saving were coke and other fuel, and policemen.

Mr. WILSON asked whether the reduction in duty on passengers would not pay the Income Tax.

Mr. LOCKING replied, much more. The saving of duty to this Company would be about 1,000*l.* per annum; the Income Tax would be under 250*l.*

The resolution was then put and carried.

Mr. GRESHAM proposed the dividend of 10*s.* per share, and remarked that from the traffic returns he had fully anticipated 15*s* per share. The disappointment had led to serious injury, and it was found that by running two mails trains per day, at times which did not suit public convenience for passengers, there was an expense to the Company of 2,800*l.* to 2,900*l.* per annum, which could be saved if the Post-office hours could be altered to suit the passenger business of the town. He also offered a variety of other remarks on the Report, and showed the absolute necessity for increased capital to accommodate the increasing traffic.

Mr. ABBEY, as a mail contractor, gave his opinion that the evening mail, in conjunction with the north, south, and west mails, could not be delayed, but the morning mail, for which letters were written over night, might be altered by the Post-office, if the inhabitants requested it. It was no use contractors applying, as they were looked upon as interested parties.

Mr. HAMMOND (of Chester) seconded the motion.

The resolution being adopted, Mr. Craven moved, and Mr. C. Wilkinson seconded, a motion for the Directors to pay the income tax out of the profits instead of the dividends.

Mr. HENWOOD moved the resolution for an application to Parliament for power to raise 250,000*l.* more in shares, wherewith to pay off the debts of the Company, amounting to 183,000*l.* on debentures, and 48,000*l.* in other debts, and to leave a surplus for the efficient working of the concern.

J. R. PEASE, Esq. seconded this motion.

After a pretty full discussion of this subject, in the course of which it appeared, if shares were below par, proprietors would have the first offer of the new ones, and an amendment by Mr. Hunt, for the appointment of seven shareholders to investigate the concerns of the Company having been negatived (only four hands being held up for it) the motion was agreed to, and thanks having been voted to the Chairman, the meeting separated.

GLASGOW AND AYR RAILWAY.— On Friday the 12th of August, being the anniversary of the opening of this line from Glasgow to Ayr, between 30 and 40 of the officers and servants of the Railway Company sat down to supper in M'Kays Claremont Tavern, Trongate, Mr. George Knight in the chair. After partaking of a most excellent supper, and the cloth being removed, the following toasts were given in succession:—"The Glasgow and Ayr Railway," "The Chairman and Directors," "The Engineer, Mr. Miller," "The Secretary, Mr. Smith," "The Manager, Mr. Johnston," "The Glasgow and Greenock," and "Edinburgh and Glasgow Railways," which, with various other toasts and songs, enlivened the meeting. The company enjoyed themselves to an early hour, when the Chairman gave "Happy to meet, sorry to part, and happy to meet again;" and after making the "welkin ring," the meeting separated, highly pleased with the entertainment provided by Mr. M'Kay, whose arrangements were of the most complete description; the wines, &c., being of the best quality. The meeting decided on holding the anniversary in the same place next year.—*Glasgow Courier.*

LONDON AND CROYDON RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the London and Croydon Railway Company was held on Thursday last, at the London Tavern, Bishopsgate-street; WILLIAM ARTHUR WILKINSON, Esq., in the chair.

At first the attendance was so small that, at the suggestion of several proprietors, a few minutes' delay took place in commencing the proceedings. Ultimately there was a considerable number present.

The advertisement convening the meeting having been read,

It was unanimously resolved, that the seal of the Company be affixed to the register of proprietors; but which, however, was not (as usual) done in presence of the meeting.

The SECRETARY (R. S. Young, Esq.) then read the Report of the Directors as follows, printed copies having been placed in the hands of the proprietors on entering the room:—

REPORT.

Gentlemen,—The anticipation, which your Directors expressed in their last Report, of considerable improvement in the income of the Company during the past six months, they lament to say has not been realised.

The total revenue has been nearly stationary; and as the receipts which had accumulated at a time when repairs were slight, and the maintenance of way had not yet been charged to the traffic account, have been already distributed, and are therefore no longer available, the sum now standing at the credit of that account, after deducting those items, and the interest of the bonded debt, is not sufficiently large to warrant its division amongst the proprietors.

Several circumstances have contributed to this disappointment of a larger income. The tenacity of the Greenwich Company to a toll almost prohibitory of a short and cheap traffic, which, whilst it has diminished the revenue of that Company, has likewise effectually checked the receipts of the Croydon line; the slow development of the Brighton traffic during the early part of the year; and the high rate of fare maintained by that Company, which has had the effect of reducing the proportion which the toll should bear to its gross receipts, by diminishing the number of passengers from which such receipts have been obtained.

Your Directors are happy to say, that the South-Eastern Company has lately determined to pursue a different policy, and, by charging a very low rate of fare, to induce a large amount of traffic over its line. The adoption of this policy, however, by the South-Eastern Company, would have been impossible without a modification of the fixed toll per passenger payable to the Croydon Company, and application having been made to this effect, your Directors did not hesitate to enter into a toll agreement with the Directors of the South-Eastern Company, based upon precisely the same principle as that which your Directors have so repeatedly urged upon the acceptance of the Greenwich Company. The object of this agreement is a division between the two Companies of the fare charged by the South Eastern Company, (after deducting the expenses of conveyance,) in proportion to the length of line of each Company traversed by the passenger from whom such fare is received. The immediate advantage to this Company will be found in the circumstance, that the late charges of the South-Eastern Company were, like those of the Brighton Company, higher in proportion than the toll of 1s., to which the Croydon Company was limited by agreement, and that by the present arrangement, a very considerable reduction of these fares has necessarily taken place, without a corresponding reduction of the rate of toll. At present, however, in consequence of the refusal of the Greenwich Company to concur in this arrangement, so equitable to all parties, it has not been extended to passengers over the Greenwich line, for whom the South-Eastern Company will still pay the fixed toll of 1s. to the Croydon Company.

The arrangement which has been entered into with the South-Eastern Company for the amalgamation of the locomotive power of the two Companies works to the entire satisfaction of your Directors, and although it is yet too early to ascertain exactly the saving of expense which is likely to arise from this amalgamation, there can be no doubt that it must be productive of great economy.

Your Directors propose to make another arrangement with the South-Eastern Company, which was the subject of a communication to the proprietors at the late special meeting. The loss of the Bill then before Parliament, for a common road approach, and the subsequent alteration of the Standing Orders of the House of Commons regarding Railway Bills, have, in some measure, extended the views of the Directors of the two Companies relative to this matter; and it is now their united opinion, that the public convenience and the interests of both proprietaries would be better secured by making, not merely an approach to the Grange-road, but a railway to a station near the Bricklayers' Arms. The whole of the land necessary for this purpose is either purchased or under agreement, and your Directors anticipate no difficulty, therefore, in an Act being obtained in the next session of Parliament to carry this very desirable object into effect. To this intent it is proposed that a sum of money shall be raised upon the security of tolls derivable from the traffic over the new line—that the interest of this money be further guaranteed by the two Companies, in the proportion of two-thirds by the South-Eastern Company, and one-third by the Croydon Company, and the profits, after paying such interest, divided in like proportion. There is also an understanding that if the project be not carried out, the expenses hitherto incurred shall be borne equally by both Companies. Every probability, however, exists of its being speedily accomplished, and of our obtaining, by this means, at comparatively moderate cost, a most efficient west-end terminus and goods' station for all the southern lines, thereby removing all pretence for any other terminus independent of the Croydon Railway.

This meeting has been made special for the purpose of raising the further capital formerly contemplated for the completion of the undertaking, which has been necessarily increased in consequence of the great earthworks, caused by the land slips at New Cross and Forest Hill, during the last winter. Your Directors regret to say that these works have exceeded what they anticipated, when they gave notice of the expected demand upon the proprietors at the last general meeting, and that in addition to the expense thereby occasioned, it has become expedient, according to the advice of your Consulting Engineer, to purchase a considerable quantity of land for the purpose of securing the permanent safety of your railway, and preventing the possibility of the recurrence of such a catastrophe as that which lately happened: Mr. Cubitt has likewise recommended that the rails throughout the line should be gradually taken up and re-laid, in consequence of some defect, arising from original construction, which has recently manifested itself. The sum which your Directors consider requisite for these purposes amounts to about 65,000*l.*, and a resolution for raising the same will be submitted to the meeting.

Your Directors think it right to state that, although they have, more than once, felt it necessary to remind the proprietors of the probability that more capital would be required, yet up to this period no call has been made upon them since the present Board was constituted. When your Directors took office, in the autumn of 1839, there was a deficiency of capital, which was further increased in the spring of 1840. It was hoped that this difficulty had been surmounted by the timely sale of a part of the London Bridge station, but the great increase of this station subsequently become indispensable, to which the Croydon Company has to contribute its proportion, and the unfortunate occurrences of the past winter have swallowed up all the available assets thus created, and rendered necessary the present application.

WILLIAM ARTHUR WILKINSON, Chairman.

Statement of Capital expended in Constructing the Croydon Railway.

Examined and found correct—Sept. 3, 1842.

RD. STERRY, WM. BOLD. } Auditors.

The CHAIRMAN said, in rising to move that the Report of the Directors just read, with the annexed statement of accounts, signed by two of the Auditors, be received, adopted, and printed for circulation among the proprietors, he felt that they came before the meeting at that moment with every possible disadvantage under which a Board of Management could labour—inasmuch as on the one hand they wanted more money, while on the other there was no dividend to be declared. He trusted, however, that when the circumstances under which they were placed were taken into consideration, and more particularly the circumstances under which the last—and indeed their only—dividend was paid, the proprietors would be reasonable enough to acquit the Board of being able to obviate such a state of affairs. From statements made at previous meetings the proprietors must have been prepared for the necessity of raising further capital. He was sorry, however, that a larger amount was required than at first had been deemed necessary. With respect to the circumstances under which the vidend was paid, the fact that it consisted of an accumulation of funds arising from the Company's traffic at different periods would, perhaps, account for its not having gone on. The Directors certainly did anticipate that the state of the Company's affairs would have so far progressed during the last six months as to have afforded the means of paying to the proprietors a dividend on this occasion—at all events a small dividend. This, however, had not taken place to the extent expected; in fact, they had made scarcely any progress. He did not think, however, that there was any cause for despondency—for, in truth, there had been no retrogression, but only a postponement for a short period of that success which, he had no doubt, would sooner or later crown their efforts. The Report briefly adverted to some of the causes of this postponement, and he should be glad to explain them a little more fully, in case they should not be understood by the proprietors at large. When the Report alluded to the slow development of the Brighton traffic, it was meant that the returns on that line had got up slowly during the first three months of the present year, and it had only been lately that the Croydon Company had received what might be looked upon as a fair average of toll. In the first three months of the present year the Brighton toll had amounted to 600*l.*, 800*l.*, and 700*l.*; during the last three months it had risen to 1,300*l.*, 1,100*l.* and 1,300*l.* In the last month, namely August to September—although the return was not official—the paper which he held in his hand showed that the toll had been 2,500*l.*, thus exhibiting a progressive increase. He hoped, therefore, it was not an extravagant expectation that the average toll would hereafter amount to 1,300*l.* a month. It might be that it would reach 2,000*l.* a month, not perhaps at once, but eventually; but he would not hold this out as an immediate prospect. With respect to the proportion which the toll bore to the Brighton receipts, and which certainly was smaller than had been expected, it would seem as if the Brighton line were *sui generis*, and the traffic peculiar. In the first place the great majority of passengers were carried throughout the whole distance, and were first-class passengers, and thus the receipts were taken in larger sums than were usual on other lines; and as the Croydon toll was charged at so much per passenger, without respect to the class of carriage, the Croydon toll bore in the aggregate a smaller proportion to the Brighton receipts than under ordinary circumstances would have been the case. This very fact of the majority of the Brighton passengers being first-class passengers, a circumstance which he believed had happened on no other railway, gave him great hope of improvement in the traffic of that line, for there must necessarily be a large field unexplored; and when the Brighton Company made arrangements for carrying others than the aristocracy, namely, the humbler and poorer classes, who were ten times more numerous, he had no doubt a vast increase of trade would accrue, and consequently, in future years, the Croydon Company might look for a handsome average toll—an average throughout the year as large as that which was received during the last month. With respect to the Greenwich Company the subject had been so fully discussed, that he would not now dwell upon it, except to say, that the late raising of the Croydon fares, and the consequences resulting therefrom, must have shown most completely that it was quite impossible to conduct the traffic of such lines as the Croydon at a high rate of fare. The only mode of securing and extending such traffic was by a low rate of fare, which was quite inconsistent with a high rate of toll; for if the Croydon Company were even to revert to their former charges, the whole of the profit would pass into the hands of the Greenwich Company. The Northern and Eastern Company had recently concluded an arrangement with the Eastern Counties' Company on the principle of attracting large traffic by a low rate of fare and toll. The Northern and Eastern Company had lowered their fares for the short traffic, and instead of a toll of 4d. for 4 miles, the Eastern Counties' Company had agreed to take 3d., 2½d., and 2d., on the three classes of passengers respectively. This was an average of about 2½d. per passenger for the 4 miles, making little more than ¾d. per passenger per mile, as compared with the 4½d. for the 1¾ miles of the Greenwich. The arrangement with the South-Eastern Company was fully adverted to in the Report, but he should feel happy in giving any further information. The only difference between the existing arrangement with the South-Eastern and the proposed arrangement with the Greenwich was, that in consequence of the undeveloped state of the South-Eastern traffic they had agreed that, for four years, the expenses should be estimated at 30 per cent., but after that date the exact amount of the expenses would be deducted before the toll was divided. The next question referred to in the Report was the construction, in conjunction with the South-Eastern Company, of a line to within 200 yards of the Bricklayers' Arms. He had the honour at the last meeting of explaining what he thought of the policy of that step—a conclusion in which the meeting fully concurred. He thought this was the only thing wanted to secure the Croydon Company in their present position. It was, moreover, found indispensable to provide another terminus than that which at present existed, for the west-end traffic, which was now in the greatest confusion from the increase of traffic at the London Bridge station. True that station was not completed, but sure he was, that so great was the traffic which would pass over the Brighton and Dover lines, that some means must be devised for diverting a portion of it elsewhere. As regarded the West-end traffic, the Bricklayers' Arms would be found much more convenient than London Bridge; but that was not all. It was next to impracticable to carry on anything like an extended goods traffic at London Bridge. The Brighton Company were now attempting it, but Mr. Cubitt, the Engineer of the South-Eastern Company, who was present, would tell them how impossible it was to carry on the South-Eastern goods traffic at that spot, and that an additional station must be formed somewhere. No place seemed so convenient as the immediate vicinity of the Bricklayers' Arms, which had, moreover, the additional recommendation that it would take away all pretence for the formation of another line into London, distinct from the Croydon. With respect to the excess which had arisen in the earthworks generally, Mr. Cubitt had favoured the meeting with his company, and would explain how that excess had arisen. At the last meeting the Directors spoke of 50,000*l.* as sufficient to meet the exigencies of the case, but in that amount was included a sum of 15,000*l.* for making the Grange-road approach. The approach was now disposed of, but still it was found that a sum of 65,000*l.* or 66,000*l.* was wanted. [The hon. gentleman here read the items, which it was considered desirable

Digitized by Google

should not be published, as it might affect negociations with landowners and others.] As regarded the mode of raising this money, it was not necessary to say much. The proprietors would see that it was absolutely necessary to put the line in such a state that no complaints could be made respecting it, and that no recurrence should take place of the misfortunes which happened last winter, when if certain parties had been in a different position, they would have been glad to have seen the Croydon line closed altogether. To prevent the recurrence of a temporary stoppage, Mr. Cubitt had recommended that a considerable quantity of land should be taken at New Cross and Forest Hill, under the terms of the late Act for the Regulation of Railways, so as to render the line permanently safe and secure. There was always a difficulty in raising additional capital where shares were below par. If it were attempted to raise the new capital at a rate too much below the market-price, the whole stock of the Company would suffer depreciation; if, on the contrary, the new shares were issued at a price too near the market value, there was great risk that the money would not be raised at all. It was proposed, therefore, that on the present occasion there should be an issue of loan notes of the amount of 2*l.* each—namely, one for every share, being 33,000—which notes should bear interest at 5 per cent. for three years, and at the option of the holders might, at any period within two years, be converted into shares of 20*l.* each, in proportion to one share for every 15*l.* held in loan notes. The first instalment of 1*l.* to be payable on the 15th of October, and the remaining 1*l.* on the 15th of January of next year. The Directors did not suppose that the holders of one or two shares would apply for their proportion of the loan notes, and therefore power would be taken to appropriate among the other proprietors, or the public generally, any notes not taken up. This scheme was like the issue of a preference share at 5 per cent. interest for a short period—not a preference share always hanging over the concern. He did not think there was any other topic upon which he need trouble the meeting. He would state generally that, in his opinion, no alteration had taken place in the prospects of the Company. They were just in the same position as before, although the time had certainly been delayed at which they had hoped to realise a suitable return. When he saw the rapid manner in which the tolls of the two Companies were increasing—the Dover toll having, in the first month, been 108*l.*, in the second 340*l.*, and in the third 418*l.*—he thought there was no ground for despair. If the Brighton toll should average 1,300*l.* a month, and the Dover as much as 1,000*l.* or 900*l.*, there would be, after deducting the expenses of maintaining the road, about 17,000*l.* a year of profit to be realised almost immediately. He thought this was not an extravagant view of the state of affairs. He should now have much pleasure in answering any questions, or in giving any further elucidation.

Mr. Valentine Knight inquired if it were proposed to borrow this money for 2 years.

The Chairman said, the loan would be for 3 years, unless converted into shares before the expiration of 2 years.

Mr. Knight asked if the borrower could demand back the loan at the end of the 3 years.

The Chairman said—Yes, certainly, if not previously converted into shares; or the bonds might then, if desired, be renewed.

Mr. Knight referred to the terminus at the Bricklayers' Arms, and said, its great object seemed to be to enable the Croydon, Brighton, and Dover Companies to do without the Greenwich line.

The Chairman wished they could do without the Greenwich. They must either abandon the Croydon traffic altogether until the Greenwich Company would give them a chance of conducting it profitably, or they must devise some means of dispensing with the Greenwich line. The line to the Bricklayers' Arms would at least accommodate the West-end traffic. He could not suppose, however, that the Greenwich Company would always remain so blind to their own interests as they now were.

Mr. Knight hoped the Directors saw their way clearly as regarded this line to the Bricklayers' Arms. Might it not be advantageously extended to St. George's church?

The Chairman said it might, but the expense would be great. Most fortunately there were no buildings up to the Bricklayers' Arms—in fact, the place was, as Mr. Levy had described it at a recent meeting, a complete desert, and therefore the more suitable for the purposes of the Company, both as regarded the making of a railway and a commodious and extensive station; but no sooner did they go 100 yards beyond the point at which it was proposed to stop, than they came upon a dense mass of brick and mortar, which would entail upon the Company greater expense perhaps than the whole of the line to the Bricklayers' Arms. For practical purposes, and as regarded the West-end traffic from the long lines, he apprehended that the Bricklayers' Arms would be as convenient as St. George's church. The meeting would be surprised to learn how much of the South-Eastern traffic now went off at New Cross.

Mr. Knight thought it high time that some settlement should be come to with the Greenwich Company. (Hear, hear.) The Croydon traffic had been injured while this dispute was going forward. If the Greenwich Company would not agree to fair and equitable terms, means ought to be taken to do without the Greenwich line altogether. (Hear, hear.)

The Chairman said, the steady diminution which had taken place in the Greenwich toll ought to have convinced that Company of the impolicy of their present course. In the first year the toll paid by the Croydon Company amounted to 5,057*l.*, in the second year it had fallen to 5,087*l.*, and in the third year to 3,921*l.* Comparing three months of last year, when the Greenwich toll was 3d. per passenger, with the corresponding three months of the present year, when the toll had been 4½d., it appeared that in May, 1841, the amount of toll was 569*l.*; in May, 1842, 447*l.* In June, 1841, 435*l.*; in June, 1842, 395*l.* In July, 1841, 445*l.*; in July, 1842, 355*l.* It was true the Brighton Company had in the present year taken some of the Croydon passengers, but the result was not such as to give the Greenwich Company any benefit from the raising of the toll.

Mr. Liddiard inquired whether the Croydon Company had not suffered as much as the Greenwich.

The Chairman said, they had suffered more, but what inducement had they to go back to their old rate of fare? If they were to reduce their fares one-third, and thus double the number of passengers, it would only be to put money into the pockets of the Greenwich Company—for the 4½d. toll would swallow up all the increase, while the Croydon Company would have all the trouble and all the expense, and all the risk. [The honourable gentleman entered into some calculations to establish this point.] He thought it had been distinctly proved that, taking into account the intermediate stations, the average fare on the Croydon line ought not to exceed 9d.—it was at present 1s. 1½d.—but were they to adopt such a scale of fares under present circumstances, allowing 50 per cent. for the expense of working, the Greenwich toll of 4½d. would literally swallow up the whole of the receipts. (Hear, hear.) Was it to be supposed that they would consent to work the line on such terms? (Hear, hear, hear.) An honourable proprietor had sent the Directors a series of questions, with a view to show that the Croydon Company ought to cease entirely from being carriers. He should think so too, did he not believe that the present state of things could not last. They were not losing, however, by being carriers, for after separating as carefully as possible the expenses of maintaining the road from other expenses—and the road must under any circumstances be kept up, in order to earn the tolls—it appeared that the profit for the last six months on the traffic of the Croydon line, had amounted to 1,800*l.* This certainly was not much, but surely it was well that they should go on thus, and keep the traffic together in the hope of better times—either until the Greenwich Company should come to their senses, or until some other outlet, such as this Bricklayers' Arms terminus, were provided. It was not now as it once was, when they would have been obliged to keep up a vast establishment of engines, &c., whether the traffic were large or small. By the arrangement with the South-Eastern Company as to locomotive power, they had now to pay only for what they used, whether for 2 or 12 trains per day.

Mr. Liddiard said, the Company were being injured in public estimation from a continuance of these differences. Could not some mode of reconciling them be adopted? Had any steps recently been taken with this view?

The Chairman said, that when the late arrangement was made with the South-Eastern Company, with respect to the toll, the Croydon Directors had written a letter to the Greenwich, stating that they could give no better proof of the sincerity of their past professions than the fact that they had offered similar terms to the South-Eastern Company, which offer had been accepted. Perhaps it would be as well that the letter in question should be read. (Hear, hear).

Mr. Liddiard had reason to believe, from what he had heard from some of the Greenwich Directors, that the feeling between the two Boards was such as to render any favourable issue of the dispute hopeless. Might not some deputation be appointed to confer with a deputation from the Greenwich Board? Perhaps the statements made on the other side might have convinced the Greenwich Directors, but still they might not like to be coerced into a particular course of action—and this frequent bringing of them before the public, and imputing all the blame to them, was a species of coercion. ("Hear, hear," and "No, no.")

The Chairman would assure the honourable proprietor that there had been no want of conciliation on the part of the Croydon Board. So far from taunting the Greenwich Directors, they had used every means to get the matter amicably arranged. He was satisfied that it might be settled in an hour, and that it was for the interests of both Companies that it should be settled. Some of the Greenwich Directors, as he had been told by themselves, were anxious for an arrangement of the question, although there might be others who were so pledged to the 4½d. toll, that they would not yield. Within the last few days he (the Chairman) had individually, and apart from his connection with the Board, been using every effort to bring about a satisfactory arrangement. There was no bad feeling between the two Boards, and the Directors would be obliged to any proprietor who would point out any feasible means of attaining the object sought for. So convinced was he of the advantage that would result to the Greenwich Company from a modification of the toll, that he had qualified himself, by the purchase of shares, to attend as a proprietor the late Greenwich meeting. On that occasion he had proved that, if the Croydon Company were to secure the amount of traffic which they looked for from a reduction of fares, they would be earning 27,000*l.* out of which they would have to pay the Greenwich 28,000*l.* as toll, and what did the meeting think was the answer of the Deputy-Chairman of the Greenwich Company? "Why," he said, "make this 27,000*l.*, and then come to us, and we will take the case into consideration." (Laughter.) So unbusiness-like a

Digitized by Google

view of the question at issue left little hope of any impression being made upon members of the Greenwich Board who agreed in the sentiments of the Deputy-Chairman. No doubt others of the Greenwich Directors thought differently. The South-Eastern Company had made a similar proposal to the Greenwich as to the Croydon, as regarded the toll, but had met with an absolute refusal. The consequence was, that a great deal of the South-Eastern traffic was diverted at New Cross, an arrangement which, though it might not answer with the short traffic on the Croydon line, could not fail to suit the Dover traffic. The proprietors would accordingly be surprised to see the large number of omnibuses, flys, and carriages which now met the Dover traffic at New Cross. The Greenwich Company were thus losing money every day, but still they did not see, at least they would not acknowledge, their error.

Mr. POLLARD said, the proprietors of the Greenwich Company seemed to participate in the sentiments of their Directors, and thought, that as the Croydon Company were losing money they would soon get tired.

The CHAIRMAN said, this was not like a dispute between rival coach proprietors. The Croydon Company could gain nothing by giving way and returning to their old fares, as he had already shown. The Greenwich Company, no doubt, hoped that the Croydon Company would retire altogether, and that then the traffic would be taken by the Brighton Company. To show the fallacy of this, it was only necessary to state, that the total number of passengers carried by the Brighton Company last year was 120,000; whereas the second-class passengers only, on the Croydon line, had been 120,000, even in their most depressed condition. The Brighton trains were even now very respectably filled, so that to accommodate the same number of Croydon passengers as now they must put on extra trains, and keep up the present stations—in fact, do just as the Croydon Company were now doing; and as they had to pay a toll of 1s. per passenger, how could they afford to carry at a fare of 9d? (Hear, hear, hear.)

Mr. POLLARD inquired if the Brighton Company were not at present taking Croydon passengers.

The CHAIRMAN—Yes; and losing money by every one of them.

Mr. LIDDIARD—And the Croydon Company are losing their character. (Loud laughter.) [A VOICE—"They never had much to lose."]

After some further conversation, the Secretary read the letter to which the Chairman had alluded, as follows:—

(COPY.)

London and Croydon Railway Company,
205, Tooley street, August 12, 1842.

Sir,—I am desired to communicate to you, for the information of your Board, that an agreement has been entered into between this Company and the South Eastern Railway Company, for the commutation of the tolls payable by the latter to the former Company, upon a principle similar to that which the Directors of this Company had the honour to propose to the Directors of the Greenwich Company, in my letter of the 6th October, 1840.

The Board of Directors of the Croydon Company venture to appeal to this arrangement, as the strongest proof which can be afforded to the Directors of the Greenwich Company of the sincerity with which they then uttered their conviction that the plan proposed was calculated to be equally beneficial to a toll-receiving, as to a toll-paying, Company, and that their experience since that period has tended to confirm those convictions.

I am instructed, likewise, to express the regret of this Board, that the two Companies, parties to the agreement alluded to, should have felt themselves precluded from comprehending in its application that portion of the South-Eastern traffic which is intended to pass over the Greenwich Railway, until some satisfactory arrangement shall be made between the Greenwich Company and the Croydon and South-Eastern Companies, with respect to that traffic: but the Directors do hope that means may yet be devised for extending to the Greenwich Railway Company the advantages of the large increase of traffic which is to be expected from the low rate of fares proposed to be charged by the Croydon and South Eastern Companies.

I am, Sir, your very obedient servant,

(Signed) R. S. YOUNG, Secretary.

J. Y. Akerman, Esq., Secretary,
London and Greenwich Railway Company.

It was stated, that no answer had been returned to this letter.

Mr. MAJOR said, after having given great consideration to the Report of the Directors, he was compelled to oppose its adoption. They seemed to meet here, from time to time, not for the purpose of congratulation, but of condolence. He had induced several parties to lay out their money in the Company, and he had done so because he considered the revenue as almost certain. Their revenue might be classed under two heads—that which they derived from being carriers, and that which they received as tollage. After a great deal of trouble, which might have been avoided if the Directors had answered the questions which he had put to them, he had made calculations which showed that the Company were losing money by being carriers. [The honourable proprietor here entered into a long statement of figures, which, from his position in the room and indistinct utterance, it was wholly impossible to catch. The inference which he drew from them was, that the Company were losing by carrying passengers, and that this loss was constantly increasing.] Even now the Brighton and South-Eastern Companies, because they had a better station at Croydon, took a large proportion of the passengers. (Cries of "No, no.") Moreover, the novelty of railway travelling had passed off, and pleasure-seekers went elsewhere; in fact, they could now go to Gravesend and back for 1s. He looked upon lowness of fare as a relative term, and depending on the locality. If they had a large mass of population at the termini of the line, or at intermediate points, or if there was any attraction at Croydon, such as Richmond could offer, lowness of fare might be productive of profit. It would appear, however, that the traffic on the Croydon line was almost wholly a business traffic—(hear, hear,)—and as to creating pleasure traffic, the idea was ridiculous, for such traffic was, in their case, a losing traffic. It was useless to descant upon this subject. One fact was enough; the Croydon proprietors were being ruined, while the Directors were working out a principle which, no doubt, they thought a good and sound principle. (Hear, hear, hear.) If they were to cease being carriers, they would only have to provide for maintenance of way, which he would set down at 300*l.* a mile, although in some Companies the cost did not exceed 200*l.*

The CHAIRMAN—There would also be police and rates.

Mr. MAJOR would put down these items at 1,000*l.* altogether, per annum. Now, if they were to let the line at a penny mileage, it would produce about 15,000*l.* a-year, which would meet the interest on bonds. They would then start fair, and allowing the toll from the Brighton and Dover lines to average jointly 500*l.* a week, they would have enough, after deducting maintenance of way and other expenses, to pay a dividend of about 15s. a share to the proprietors. In that case, all the schemes for new lines and termini might be abandoned. Without entering further into the subject he would move:—

"That the meeting consider, after a careful review of the receipts and expenditure of the carrying trade by this Company, it would be more conducive to the interests of the shareholders that the Company cease forthwith to be carriers of passengers and merchandise, and that this meeting hereby authorise and request the Directors to advertise to be let on lease, for a term not exceeding 7 years, the Croydon line, at a tollage per mile, guarantees being taken for the accommodation of the public, and development of the capabilities of the line."

A good deal of discussion ensued as to whether Mr. Major's proposition should be put as an amendment to the motion for the adoption of the Report (which Mr. Knight had in the meantime seconded), or whether the motion should first be disposed of, and Mr. Major's afterwards taken into consideration.

Mr. MAJOR said, he had no objection to the passing of the accounts, but there was so much scheming comprised in the Report that he could not consent to its adoption.

Mr. KNIGHT thought, unless they could prove a dereliction of duty, it would be but a poor compliment to the Directors not to receive and adopt the Report. (Hear, hear.) The question raised by Mr. Major was a very proper one to be discussed, but he thought the Report ought first to be received.

Ultimately it was agreed that Mr. Major's proposition should be taken as an amendment.

Mr. STERRY thought it would be desirable before the Report were put for adoption, that the meeting should know something from Mr. Cubitt as to the necessity for another station besides that at London Bridge.

Mr. CUBITT said, the necessity for another station arose from the want of sufficient space at London Bridge for the traffic of the three Companies. Moreover that station was not at all suitable for a goods' station, although exceedingly proper as a passenger station. The same reason existed for a station at the Bricklayers' Arms as for the recently contemplated station at the Grange-road. In attempting to carry out that latter scheme it had been found that land in every respect suitable could be obtained at the back of the Bricklayers' Arms, and that not only could plenty of room be there secured, but that a railway might be made economically to that point. If something were not done—and he had stated this before more than one Committee of the House of Commons—he was satisfied that a great part of the traffic of the longer lines would go in another direction, and not touch the Croydon Railway at all. ("Hear, hear." and cries of "Nonsense.") If what were called the "schemes" referred to in the Report were to be scouted, the loss would fall upon the Croydon Company. ("Hear, hear," and marks of dissent.) There would still be ample work for the station at London Bridge. He was satisfied that the Croydon Company would run no risk in the scheme, but at all events the matter was one which deserved consideration. (Hear, hear.) He should be glad to give any further explanation that might be required.

Mr. LAMERT inquired what would be the expense attending the slips on the Croydon line beyond the estimates given at the last meeting.

Mr. CUBITT said, the slips had been getting worse while the Company were waiting for powers to take the requisite land. Altogether the expense from New Cross to the Dartmouth Arms would be from 10,000*l.* to 11,000*l.* beyond what had already been expended. There was also considerable land to purchase. The Inspector-General of Railways had examined the line, and that gentleman recommended that even more land should be secured than the Directors had in contemplation. He (Mr. Cubitt) proposed slopes of 3 to 1, whereas the Inspector-General recommended slopes of 4 to 1, which undoubtedly would render the works more secure. There was likewise a considerable deal to do at Forest Hill, and it was moreover intended to improve the slopes along the whole line, so as to render it perfectly safe, and gentlemen passing along it would see the improvements marked out. The soil at Forest Hill was so bad that no plan could be devised for preventing further slips but one which had proved very successful, namely, to place at the foot of the slope materials so heavy as to resist the pressure of the earth behind. This plan had answered so well, that the clay at the back had risen up over the heavy materials like a sort of pan-cake, while the water found an escape at the bottom. The whole of the slips had been contracted for—none of them at more than 1s. a yard, and most of them at 9d., so that no exception could be taken to the cost now being incurred. He had no doubt that while the line was temporarily stopped, the expense was 5s. a yard, but this could not be avoided. He did not believe that even then any money had been wasted, but the expense of omnibuses, watching, &c., being then charged to the earthwork, the cost of removal might appear large.

Mr. LIDDIARD saw in the Report a reference to an alleged defect in the rails, "arising from original construction." As one of the Directors at the

Digitized by Google

time when these rails were laid down, he should be glad to have some further explanation.

Mr. CUBITT said, it had been thought, during the early experience of railways, that it would be advantageous to lay the rails upon some soft substance intermediate between them and the wooden bearers; and this plan had been followed, not only on the Croydon, but on other railways, by the interposition of a layer of felt. After two or three years' operations, however, it had been discovered that the felt worked out from beneath the rails, so as to give the rails a hollow bearing, and thus to loosen the screws, and bend the rails themselves, by the passing and repassing of the trains. What he had recommended was, that the rails should be taken up and straightened, and, the felt having been removed, that the rails should then be laid on the bare wood. This plan was now being carried out, and would be completed in the course of the year, at an expense of about 4,000*l.*

Mr. LIDDIARD had referred to the matter only because he thought the expressions in the Report conveyed some slur on the reputation of the late Engineer, Mr. Gibbs. ("No, no," from the Chairman.)

Mr. CUBITT said, nothing could be further from his intention than to throw any slur on Mr. Gibbs. He himself had been a party to the laying of the felt, and on other railways had used similar processes, such as running lead under the rails to keep them flat. He now knew better, but was quite willing to bear his part in the error which had been fallen into, not only on this line and by Mr. Gibbs, but on other lines, and by other Engineers. (Hear, hear, hear.)

Mr. STERRY observed that Mr. Cubitt has said nothing as to the cost of the land required.

Mr. CUBITT said, he had marked out the quantity of land required, but was not acquainted with its value.

The CHAIRMAN said, the land had been estimated by the Directors at from 9,000*l.* to 10,000*l.* It would be injurious to give particulars as to quantity and estimated cost per acre, but either could be had.

Mr. LIDDIARD inquired as to the feeling of the owners of the land.

The CHAIRMAN said, the Company were proceeding under the power of the new Railways' Regulation Act, which enabled them to take possession of the land and settle for it afterwards. Notices, in compliance with the terms of that Act, had been sent to every landowner.

Mr. STERRY wished to know the total cost of the London Bridge station.

Mr. CUBITT said, it would be 240,000*l.* This would be amply sufficient. He did not know what proportion of that sum would fall upon the Croydon Company.

Mr. LAMERT inquired if the Directors anticipated a return of 5 or even 4 per cent. from the Brighton and Dover tolls. The Chairman had on a former occasion expressed an opinion to that effect.

The CHAIRMAN was of the same opinion still, but he could not pretend to say when that result would be attained. It might not be this year, nor next year, but he was convinced that eventually it must come. If, as he had already said, the Brighton traffic should so improve as to make last month's toll the average of the year, the receipts from that source alone would be 24,000*l.* a year, and perhaps the Dover traffic might produce as much.

A PROPRIETOR put a question as to the necessity of having a terminus at the Bricklayers' Arms.

The CHAIRMAN said, Mr. Cubitt, as Engineer of the South-Eastern Company, knew the requirements of that Company's traffic, and that gentleman deemed such a station most important. He (the Chairman) had always been of opinion that the only thing the Croydon Company had to dread was the construction of a new line from Croydon. It had been the unceasing endeavour of his colleagues and himself to avert that misfortune, and hence they had done everything in their power to attract to their line and foster the traffic of the other Companies, instead of acting on the Greenwich principle and repelling it. One of these means was the providing of a convenient and commodious terminus. On this subject many things came to the knowledge of the Directors with which the proprietors could not possibly be acquainted, and he therefore trusted that the confidence with which hitherto they had been pleased to honour the Board would be continued, and that the Directors would have credit for studying in this matter the best interests of the Croydon Company. (Hear, hear, hear.) They had had the benefit of frequent conversations on this point with the Chairman of the South-Eastern Company, Mr. Baxendale, than whom no man in the kingdom was better acquainted with the management of a goods traffic, himself being at the head of, perhaps, the largest carrying establishment in the world. That gentleman would tell them that it was quite impossible to accommodate properly, at London Bridge, the traffic of the South-Eastern line. Such being the case, it would be for the interest of the Croydon Company, even if the whole risk devolved upon them, to secure another adit for that traffic—how much more so when the risk, if there were any risk, which he did not think there was, was shared by another Company in so large a proportion, and when, moreover, the only cause of future dread to the Croydon Company was thereby removed! The passenger traffic might, although with inconvenience, be conducted at London Bridge; but the goods traffic could *not*. Other Companies had found the necessity of securing commodious goods' stations. Thus the Birmingham Company had an area of 37 acres at Camden Town, and the Great Western 24 or 25 acres at Paddington; whereas, at London Bridge, not 7 acres nor even 1 acre could be had. (Hear, hear.) Were the Croydon Company to sit still, and lose the chance of securing so many advantages? (Hear, hear.)

A PROPRIETOR inquired the probable expense of the line to the Bricklayers' Arms, and the station there.

Mr. CUBITT said the expense, including the station, would be 150,000*l.* The cost of the station would be greatly reduced as compared with the London Bridge station, as it would be on a level.

In answer to a question, it was stated that the new line would join the Croydon Railway at Corbett's-lane, and would be a mile and a half in length.

Mr. M. RICARDO inquired whether the Directors did not anticipate that the Brighton Company would use the new line.

The CHAIRMAN could see no reason why not only the Brighton but even the Greenwich Company should not use it—the former for their goods, and both for West-end passengers.

Mr. JONES thought the alternative should be offered to the Greenwich of modifying the toll, previous to proceeding with this new line.

The CHAIRMAN said, even if the toll question were settled to-morrow, the line to the Bricklayers' Arms would still be necessary for the accommodation of the goods' traffic. This new line would be advantageous to the Greenwich as well as to the Croydon Company in another respect, as it would secure the future use by the Brighton and South-Eastern Companies of the Greenwich Railway for the City traffic, which, in the event of an independent line from Croydon being formed, the Greenwich Company would lose altogether.

Mr. MAJOR said, an Act of Parliament would be necessary to carry out this line, and he was sure the Company would never get it. Let them first try what could be done with their present means of accommodation before rushing into further expense. (Hear, hear, hear.)

Mr. M. RICARDO said, in such cases they were compelled to trust to the judgment of a properly qualified person; and as Mr. Cubitt had given it as his opinion that another station was wanted, they ought not to oppose it. (Marks of disapprobation.)

Mr. CUBITT said, this question was not a new one. Before the Select Committee who decided that the Greenwich line should be widened it had distinctly been given in evidence that the widening of that line would not obviate the necessity for another terminus. At that period he had surveyed two lines, one of them using the Croydon line in part, the other not at all; and he must say that, in his opinion, the Croydon Company would be perilled beyond measure if either the Brighton or Dover Company, or both united, should construct another line into London. (Hear, hear, hear.) An opportunity of avoiding this was now presented, and it was for the Company to say whether they would embrace it. (Hear, hear, hear.)

Mr. KNIGHT inquired what the cost to the Croydon Company would be of this new line.

The CHAIRMAN said, they would merely have to guarantee the interest on one-third of the capital of 150,000*l.* If the toll produced nothing at all, the utmost the Croydon Company would be liable for would be an yearly interest of 2,500*l.*

Mr. Alderman WILSON inquired if Mr. Cubitt's estimate of 66,000*l.* would provide for the completion of the station at London Bridge, the repairing of the slips, and the purchase of the requisite land.

The CHAIRMAN said, so far as the land was concerned, the estimate was not Mr. Cubitt's, but that of the Directors.

Mr. MAJOR, at considerable length, urged the propriety of laying before the shareholders detailed estimates. He dwelt upon the folly of placing a blind confidence in Directors or Engineers, and used some hard words as applicable to both. The honourable proprietor was interrupted by cries of "question."

The CHAIRMAN made a very spirited reply, evidently under the impression that Mr. Major's denunciations, instead of being (as was afterwards explained) of a general tendency, applied to this particular case. The honourable gentlemen alluded to the labour and attention which the present Board of Directors had bestowed on the affairs of the Company, and very clearly carried the sympathies of the meeting with him. It is needless, however, to notice this part of the proceedings at length. The Chairman then referred to Mr. Major's proposition, which he characterised as not undeserving of attention. He then reiterated his former statements, as to the Croydon traffic not being carried on at a loss.

After some desultory talk, the Chairman asked who seconded Mr. Major's amendment.

Mr. JONES said, he would second it conditionally. The honourable proprietor then inquired if the Croydon Company's traffic was conducted at a loss.

The CHAIRMAN assured him it was not.

Mr. MAJOR asserted that it was.

Mr. JONES, however, declined to second the amendment, and no one else having done so, it fell to the ground.

The motion for the adoption of the Report was then put and carried, only 10 hands being raised against it.

The CHAIRMAN then brought forward the next motion, as follows:—

"Resolved,—That a sum, not exceeding in the whole £6,000*l.*, shall be raised for the purposes of the undertaking, on the following terms:—

"That notes under the Company's seal shall be issued, bearing interest at 5 per cent. per annum, for three years, with an option, until the 30th September, 1844, to the holders, of converting the same into shares of 20*l.* each, in proportion of one share for every 15*l.* so held in notes.

"That the interest on the notes so converted shall cease on the 30th September, 1844.

"That the subscribers for such notes shall pay, on or before the 15th October, 1842, one moiety of the sum subscribed for, and on the 15th January, 1843, the other moiety of the sum subscribed for.

"That every registered proprietor shall have the option, until the 30th September instant, of subscribing for such notes, in the proportion of 2*l.* for every share held, and then by him duly registered.

"That any notes not subscribed for under the

Digitized by Google

preceding option, shall be apportioned amongst the other proprietors, or other persons applying for the same."

Mr. KNIGHT seconded the motion.

Mr. STERRY inquired if the holder of a loan note could at the end of the 3 years reclaim his principal.

The CHAIRMAN said, he might.

Mr. STERRY said, he asked the question because in another Company, when he had expected to receive back his money, he had been obliged to take new bonds.

Some conversation followed on this point, but it was clearly understood that the principal was reclaimable at the end of the 3 years.

Mr. Alderman WILSON dilated on the probability of a still further decrease in the revenue, in which case he said the Company would not be able to pay the interest on this new capital.

The CHAIRMAN said, the probabilities were all the other way, but at any rate *that* was a point for the lenders of the money to consider.

[Mr. Ald. Wilson had designated the scheme for raising this money "dishonest," but on being called to account by the Chairman, said he did not impute dishonesty to the Directors. He also complained of the raising of the fares, and some merriment was occasioned when a proprietor asked if the worthy Alderman lived on the line, and it was answered that he did, and that he held one share, and was the brother of the Deputy-Chairman of the Greenwich, to whom reference had been made.]

The resolution was then carried unanimously.

Mr. LAMERT wished to bring forward a motion for the circulation of the Directors' Report a few days previous to the meeting.

In the course of a conversation which ensued the Chairman said, there were difficulties in the way, but the Directors would endeavour to meet the wishes of the proprietors.

It was understood that the balance-sheet at least would be sent to the proprietors previous to the meetings, and accordingly Mr. Lamert's motion was not pressed.

On the motion of Mr. Sterry, a vote of thanks to the Chairman and Directors was carried by acclamation.

The CHAIRMAN, in acknowledging the vote, referred to the disadvantages under which the Directors now appeared, and which had a natural tendency to excite dissatisfaction, and expressed a hope that hereafter the result would prove more agreeable.

The meeting then separated.

DUBLIN AND DROGHEDA RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of this Company was held on Thursday, September 1, for the purpose of receiving from the Directors a Report and statement of accounts for the half-year ended 30th June last, and of confirming the forfeiture of certain shares in the capital stock of the Company, these shares having previously been declared forfeited by the Directors, in conformity with the provisions of the Acts of Parliament; at 1 o'clock precisely GEORGE A. HAMILTON, Esq., took the chair, but being called away on business, Mr. HODGES took his place.

The Directors' and Engineer's Reports were then read, for which see our advertising columns.

An abstract of the receipts and expenditure was next read, by which it appeared that the receipts for the half-year ending the 30th of June last amounted to 39,276*l.*, and the expenditure to 33,874*l.* 9s. 8d.

Mr. JOSEPH SCOTT, in moving that the Reports and the abstract of the accounts read be received and adopted, congratulated the Directors on the position in which they then stood. He recollected the innumerable difficulties which presented themselves in their progress, which he for one thought were insurmountable. A change had, however, taken place in the Direction, and owing to the great exertions made by their Chairman, and by Mr. Eckersley, the Managing-Director, the works were proceeding in the most prosperous manner. (Hear, hear.) As one of the Auditors of the accounts, he was able to bear testimony to the strict economy which was observed in every item—indeed, so much so, that it appeared to him they had come down to cheese-paring. With regard to the accounts themselves, those who investigated them would at once see that a better set of books were not kept in the city of Dublin.

Mr. EVANS, of Manchester, as one of the English proprietors, had great pleasure in seconding the resolution, and in observing the prospects which were opening on the Company, as appeared by the Report read, and the general prospects of the undertaking. Whatever were the motives of other men in becoming proprietors, his was a simple one, because he considered it as a profitable undertaking, and as such, he recommended it most warmly to his friends. On looking over the whole railway speculations which had taken place in England, and which cost 50 millions of money, he was obliged to confess that many of them had been extremely unsuccessful. Perhaps, on the whole 50 millions thus expended there was a return of 6 per cent., and one conclusion he had come to was, that the great element in the success of railways was the cheapness of the production; and taking into account the peculiarity of the works on the Dublin and Drogheda Railway, the solidity of their construction, and the road through which it passed, he should say it would be the cheapest railway, not only in England, but the cheapest that was ever known. He had been on all the continental railways, but particularly those constructed in Belgium, and on careful investigation he found that that undertaking was cheaper than any on the continent of Europe. Even if they went across the Atlantic, taking into account the permanency and solidity of construction of the works of the Dublin and Drogheda Railway, and examining those railways which connected the great lakes of America with the Gulf of Florida and Mississippi, they would find none constructed in a cheaper or better manner than the Dublin and Drogheda Railway. There was a great deal in the difference which existed as to the cost of iron. It seemed that the estimate given by the Engineer for iron was 12*l.* per ton, whereas a contract was made for 7*l.*

Mr. ECKERSLEY said, it was less than 7*l.*

Mr. EVANS continued—That at least would make a difference of 40 or 50 thousand pounds on the whole. That railway was made in a different manner from those, the works of which were pushed on in all weathers, and in which great slips were made, such as the falling of arches or bridges, by reason of the rapidity, and very often the carelessness, in their execution; but ample time was given in that undertaking, and the works would therefore bear a comparison with any railway in the world. The expense of constructing the London and Birmingham Railway was 50,000*l.* a mile, the Leeds and Manchester considerably more, the North Midland 45,000*l.* a mile, the Liverpool and Manchester about 40,000*l.*, the Great Western 50,000*l.*; and it was well known that railways paid best which were constructed cheapest. The cheapest railway in England was that between Newcastle and Carlisle, and it paid the best. There was no reason to doubt but that the railway would be made for the sum alluded to in the Report they had just heard read; and, taking every investment which was made in England, there was, he would say, none so secure or that would pay so well as the Dublin and Drogheda, and it was for that reason he would strongly recommend his friends to invest their money. There was no tunnel on the whole line—nothing to alarm the shareholders, and he believed the traffic would be fully justified by the result, not only as regarded passengers, but in every other respect. When he considered that its terminus was in the metropolis—when he considered that Ireland was advancing in prosperity while his own country was standing still—that her people were presenting a better appearance, and the general aspect of the country was improving—under all these circumstances, he believed it was the best investment which could be made, and he would endeavour to induce his friends to follow his example.

Mr. MOONEY moved the next resolution, declaring that the present registry of proprietors be received and adopted. He was exceedingly gratified that the condition of the proprietors was very much improved. It was a commercial undertaking, and nothing was of so much importance as to have good, respectable, and substantial partners.

Mr. BALL seconded the resolution, and it passed.

Mr. P. MAHONY next proposed the thanks of the Company to Messrs. Stock, Mooney, and Francis Purcell, for acting as Auditors during the last year.

Mr. MURRISON had great pleasure in seconding the motion, and it also passed unanimously.

Major COTTINGHAM, in proposing a vote of thanks to Mr. M'Neill, the Engineer, suggested that it would be a most beneficial arrangement if the forfeited shares could be divided, and given to the local tenantry along the line. Such a course would give them a zest for acquiring property, and enlist them as police along the railway, because they would feel an interest in the undertaking.

Mr. HAYES seconded the resolution, and with reference to what had been suggested by Major Cottingham, he would direct the especial notice of the Directors to the subject.

The resolution of thanks then passed.

Mr. MOONEY proposed the warmest thanks of the Company to George Alexander Hamilton, Esq., their worthy and excellent Chairman. It gave him great pleasure to be able to say that, in addition to all the other good qualities which Mr. Hamilton possessed, he was the best man of business he ever met. It was a great advantage to have, not only a man of business, but a man of honour and of great application, to attend to their interests.

Messrs. Alexander Findlater, Joseph Scott, and George Scott, were appointed Auditors for the ensuing year.

Mr. MORRISON asked what amount of shares would be necessary to complete the undertaking?

Mr. ECKERSLEY replied, about 50*l.* to 60*l.* on each share.

Votes of thanks were next passed to the Managing-Director and the Secretary, for the manner in which each had discharged his duty, after which Mr. Hodges was called to the chair, and the usual vote to the prior Chairman being passed, the meeting separated.—*Dublin Monitor.*

BRANDLING JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of this Company took place on the 26th of August, at their office, in Oakwellgate, Gateshead, but owing to an understanding that the meeting would be adjourned, to enable the Committee of Investigation appointed by the shareholders to prepare a Report, the attendance was very limited.

J. W. WILLIAMSON, Esq., took the chair, and stated, that the Directors had not prepared any Report to lay before the present meeting, as they were of opinion that it would be advisable to defer their Report until that of the Committee was presented, so that any suggestion which they might think proper to throw out for the future management of the railway, might be adopted, if approved of by the Directors.

Mr. GRAY, one of the Committee, in answer to an inquiry from the Chairman as to when their Report would probably be ready, stated that they did not wish to be confined to any specific period; but, as soon as their Report was prepared, a meeting might be called for the purpose of taking it into consideration.

Much conversation followed, and a resolution was ultimately proposed to that effect, and so modified as that general business might also be introduced. The motion was unanimously carried.

In the course of his remarks Mr. GRAY said, that the Committee were much pleased with the very clear and satisfactory manner in which the accounts of the Company were kept.

After further conversation the meeting separated, having first passed a resolution thanking the Chairman for his services.—*Gateshead Observer.*

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 00*l.* 0s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,826*l.*, and there was a balance from the previous half-year of 12,478*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

23. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

26. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,773*l.* 16s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 24*l.* 7s. 6d.; carriages, 6*l.* 6s. 6d.; dogs, 7*l.* 10s. 0d.; parcels, 224*l.* 7s. 0d.; cattle, 161*l.* 8s. 6d.; corn, 7*l.* 19s. 0d.; heavy goods, 475*l.* 10s. 6d.; coal and lime, 186*l.* 8s. 9d. rents' account, 150*l.*—Total, 1,152*l.* 17s. 3d.

31. The 3,850,000*l.* is the *nominal* capital on which dividends have to be paid; the amount actually raised is 3,000,000*l.* The details of the receipts are as follows—Passengers, 2,670*l.* 0s. 4d.; carriages and horses, 160*l.* 15s. 10d.; parcels, 219*l.* 12s. 5d.; mails, 50*l.* 5s. 9d.; merchandise, 986*l.* 4s. 8d.; minerals, 374*l.* 13s. 5d.; cattle, 23*l.* 15s. 0d. — Total, 4,485*l.* 7s. 5d.; including North Midland proportion of Manchester and Leeds traffic, and amount received from Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

C. S. C.—*We feel obliged to our correspondent, but had touched upon the subject previous to the receipt of his letter.*

Sabbatarian *will be pleased to accept our best thanks.*

Investor *(Darlington).—We would not take upon ourselves to offer an opinion on so large a question. Let our correspondent select two or three lines (recollecting in what order he names them), and we shall have much pleasure in stating which of them we deem the best. Our correspondent, however, will find ample data in our pages whereupon to form a judgment for himself.*

Birmingham and Gloucester Railway.—*Does* A Shareholder, *alias* James Henry Eglinton, *imagine that his impertinence will lead us to insert a letter previously rejected from its worthlessness?*

North Midland Railway.—Scrutiny *says nothing that has not been better said a hundred times already. When he writes again, will he have the goodness to pre-pay his letter? In individual instances this may seem a matter of little moment, but were we called upon to pay the postage of half the letters we receive, it would be no trifling disbursement.*

Railways in Russia.—A Constant Reader *wishes to obtain "some information about the Russian railway from St. Petersburgh to Moscow—if the Engineers are Englishmen, or if there is any chance for an Englishman to get the situation of coachmaker on the line, to instruct the natives in that necessary branch of railway work, and if a chance, the way to go about securing it."*

Great Western Railway—Swindon Station.—*With all respect for a* Subscriber, *we must say, that the letter signed* Isaac Smith *(which he has cut from the* Times*) does not meet the complaint of our correspondent—which was not that the price of refreshments was too high, but that a paltry system of forcing upon passengers refreshments not wanted in lieu of "change" was adopted. Surely our correspondent must be joking, when he brings forward "the extreme splendour of the rooms," which he says have cost 20,000l., as a justification of high charges.*

X. X. *has very considerably over-rated the resources of the line, as he will find on reference to the official document given in another page.*

Dublo.—*By no means; keep your money in your pocket. Those who do otherwise will have cause hereafter bitterly to curse the speculation.*

In our report of Mr. Pearson's observations at the Blackwall Railway meeting, the law and Parliamentary expenses of the Edinburgh and Glasgow Railway (as against the 58,000l. of the Blackwall) were by a typographical error set down at 8,300l. instead of 3,300l.

We have received a circular addressed to the English shareholders in the salvage of Le Telemaque. *The subject does not fall within our province to discuss, but we very cordially wish success to the enterprise, which could scarcely be in better hands than those of Mr. F. R. Conder, the Engineer.*

?.—*Our correspondent expects more from us than we could possibly supply, unless we belonged to the Board of Direction. We believe, however, that no more capital will be required. We have great confidence in the ability, and, what is still better, the honesty of the Board.*

Chemin de Fer.—*The Brighton Company do not pay any toll whatever to the South-Eastern Company. Each passes over the other's portion of the line free.*

Mr. Adams's *remarks on Mr. Rankine's "Cylindrical Wheels" shall appear next week.*

Midland Counties' Railway.—*Several letters on the subject of this railway have been received. They shall have attention next week.*

Paris and Rouen Railway.—*We have received a copy of the Directors and Engineers' Reports, but their great length renders it impossible to give them, in this number at least.*

One or two Editorial articles are necessarily postponed, and among others the parallel between the South-Western and South Eastern Railways, which we promised several weeks ago.

We have now pretty nearly got rid of the autumn meetings, and we hope next week to be able to insert a considerable number of letters from our correspondents (many of them already in type), who we trust will for the present excuse a more specific notice of their communications.

THE RAILWAY JOURNALS.

The Stamp Returns for the nine months ending the 31st of March last (published by order of the House of Commons), show the following results:—

RAILWAY TIMES.....	113,374
Railway Magazine	50 500

The total number of Supplement stamps (for Double Numbers) used by the *Railway Times*, during the above period, was 10,874, thus showing the ordinary circulation of the *Railway Times* to be more than double that of its contemporary.

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 10, 1842.

THE Report of Mr. LOCKE to the "Promoters of the proposed Caledonian Railway from Lancaster to Edinburgh and Glasgow" will, without doubt, hasten forward the formal establishment of a Company for carrying out that most important work, by proving that it is by no means of that difficult and almost impracticable character which certain parties have studiously endeavoured to make railway capitalists believe. Mr. LOCKE's Report we shall take an early opportunity of laying before our readers in full (although without the carefully prepared plans and sections which accompany it, the information so conveyed will of necessity be imperfect), but in the meantime a brief sketch of its contents may not be uninteresting.

Mr. LOCKE commences by stating, that the Parliamentary plans for the portion of the line between Lancaster and Carlisle were deposited by the 1st of March last, and from Carlisle to Glasgow by the 1st of April—the care and attention bestowed on the surveys, and the inadequacy of funds, rendering it impossible to lodge the entire plans previous to that date, or even since, although now the whole line has been examined. Mr. LOCKE's acquaintance with this part of the country dates so far back as 1836, in which year, he states, he made a cursory inspection between Lancaster and Glasgow, with a view, however, to ascertain whether *any* railway were practicable, rather than to investigate into merits of a particular route. The ultimate result of Mr LOCKE's inquiries was the appointment of the Parliamentary Commission, whose labours have so frequently been noticed in our columns, and of whose Report Mr. LOCKE speaks more than once in terms of high praise.

The Caledonian Railway Mr. LOCKE treats of in two Parts—Part I. comprehending the proposed line from Lancaster to Carlisle, and Part II. that from Carlisle to Glasgow and Edinburgh. With respect to the former, the two principal routes described are those known respectively by the names of the "Lune" and the "Kendal" lines. From the tables of distances and gradients it appears, that the Lune line is one mile and a quarter shorter than that by Kendal, and that it has no gradient steeper than 1 in 147, whereas the Kendal line has one gradient of 1 in 110. The Lune line is 31 miles and 27 chains in length, and the estimated cost for excavating, embankments, rails, &c., but without including land, is 366,600*l.*; the Kendal line is 32 miles 50 chains in length, and estimated to cost 403,000*l*, thus giving a difference in favour of the Lune line of 36,400*l.* It would seem that, although Mr. LOCKE is of opinion that in an engineering point of view the Lune line is the better, he

Digitized by Google

rather leans to the Kendal, from the fact that the town of Kendal has a large population and extensive manufactories, thus offering a prospect of larger revenue, and because the landowners and others on that line are as favourable to the scheme as the parties on the other route are opposed to theirs. From Burrow Bridge, where the Lune and Kendal lines join, two lines have been surveyed, namely, the "Lowther" and the "Orton." The Lowther line is 18 miles and 6 chains in length, and is estimated to cost 350,380*l.*; the Orton is 19 miles 32 chains in length, and would cost 491,666*l.* (land being excluded from both)—the difference being, therefore, in favour of the former 1 mile and 26 chains in length, and 141,286*l.* in cost. The difference in cost arises from the amount of earthwork, and the magnitude of the tunnel at Orton, as compared with similar works on the Lowther. The only objection to the Lowther line is its passing so near the castle at Lowther, but this objection might, Mr. LOCKE thinks, be greatly lessened by incurring some extra expense in tunnelling. The remainder of the line to Carlisle presents no work of difficulty.

Mr. LOCKE sums up this part of his Report by estimating the probable cost of the line by the Vale of the Lune, Shap, Lowther, and Penrith, to Carlisle—a distance of 69 miles—at 1,107,567*l.*, including 91,000*l.* for land, and 92,415*l.* for contingencies. To this would have to be added a further sum for stations and engines which cannot at present be estimated, although Mr. LOCKE thinks that, with due economy, a capital of 1,200,000*l.* would suffice. If the line by Kendal, for which plans have already been deposited, were adopted, an additional sum of 40,000*l.* would be required, but it is believed that with fresh plans, including certain deviations, this increase might almost wholly be avoided. The line by Orton, if selected in preference to that by Lowther, would involve an additional expenditure of about 150,000*l.*

The engineering works between Lancaster and Carlisle are described by Mr. LOCKE as of a much less serious character than they have usually been represented. The tunnel at Shap, of which so much has been said, "is now so much reduced in length as to give it the character of an ordinary work." Mr. LOCKE gives the best possible proof of his confidence in the sufficiency of his calculations, when he says, "*it is my intention in reference to engineering estimates, whenever you are in a condition to proceed, either to provide substantial contractors who will undertake the work for the estimate I have made, or to give up my position as your adviser.*" An arrangement like that suggested by Mr. LOCKE, carried out fully and in good faith, would do more to inspire confidence, and secure subscribers to the Caledonian Railway, than any twenty other precautions that could be devised. The public are becoming more and more disgusted with, and indignant at, the fallacy of engineering guesses (for to designate the so-called estimates by any other name would be absurd), and if so salutary a check as personal and pecuniary responsibility could be introduced, we should, notwithstanding the present depression of existing undertakings, speedily see a most gratifying progress in the work of railway extension.

Part II. of the Caledonian Railway, namely, from Carlisle to Glasgow and Edinburgh, is described as being almost identical with that recommended by the Commissioners, Sir FREDERIC SMITH and Professor BARLOW, in their Parliamentary Report. Deviations, to avoid certain localities and to reduce the work, have been made, but the direction of the line is the same. "The objection to the former line passing through the grounds at Corehouse has been mitigated. The crossing of the Nethan Valley has been improved; in short, many material alterations have been made, by which the apparent difficulties in the former line have been reduced." An alteration *via* Wishaw has been surveyed, to obviate some objections entertained by his Grace the Duke of HAMILTON to the line on the south side of the Clyde. To carry the line from Carlisle to Glasgow it is estimated that a capital of 1,661,840*l.* will be required, subject to a reduction to the extent of about 661,840*l.*, if certain existing lines be brought into use. "The earthworks are not in any cases heavy." The "crossing of the Nethan, since the Commissioners' Report was made, has been much improved, and the cost reduced from 50,000*l.* to 30,000*l.* Other improvements throughout the line have been effected, and the earthwork has been reduced very nearly one million cubic yards." The line has also been shortened upwards of two miles.

The line to Edinburgh has not been so minutely surveyed as the other lines, "simply because it was deemed more essential to fix the precise route to Glasgow before the line to Edinburgh was determined; sufficient, however, has been done [says Mr. LOCKE] to satisfy me that a most excellent line can be obtained from the line near Lanark to the metropolis of Scotland." With the exception of a tunnel three-quarters of a mile in length, and the crossing of the Leith Water, where a viaduct 80 feet high will be requisite, the works are stated to be remarkably light. The total distance from Carlisle to Edinburgh is 101½ miles, which is two miles shorter than the line approved of by the Commissioners. "The great feature of this scheme is, that for 70 miles out of 100 one continued line affords, both to Edinburgh and Glasgow, the advantage of a direct communication with England; and this object, so strongly dwelt upon by the Commissioners, is now, beyond all question, most fully secured."

Mr. LOCKE expresses a hope that, before November next, means will be taken to lodge plans for the northern portions, so as to enable the promoters to make a simultaneous application for the entire line. The alterations made in the late session in the Standing Orders of Parliament will considerably facilitate the attainment of this object.

To recapitulate the estimates, it appears that for

Section No. 1, (from Lancaster to Carlisle) the capital required will be.....	£1,107,565
Section No. 2, (from Carlisle to Glasgow)....	1,661,840
Ditto (to Edinburgh)	500,000
	£3,269,405
Add for stations and stock (say).....	300,000
Making a total capital of.....	£3,569,405
with a probable contingency on the Edinburgh line of	60,000

"There are [says Mr. LOCKE] many reasons why the Government should aid in effecting a communication which would give such facility to the important districts which it is destined to unite." We trust that neither Government nor the Houses of Parliament will be backward in rendering such aid as is in their power. First of all we hope that every means will be adopted to keep down the cost of obtaining an Act of Incorporation. In such a case as this economy in preliminary expenditure is very requisite. The promise of a considerable loan by Government, at a small interest, so soon as sufficient share-capital was paid up to show the *bona fide* intentions of the promoters, would also tend much to expedite the filling up of the share-list, and the commencement of active operations. In many other modes might public assistance be rendered, and where the object to be attained is one of so much importance, it is to be hoped that such assistance will not be dealt out with a niggard hand. We have from the first taken a deep interest in an Anglo-Scottish line of railway, and are glad to find that another step has now been taken towards the attainment of this great desideratum. It will give us much pleasure to record the future proceedings of those to whom Mr. LOCKE's very explicit Report is specially addressed.

AT a special meeting of the Northern and Eastern Railway Company held on Wednesday last, and fully reported in another part of this journal, the proposal alluded to at the recent general meeting relative to the letting of that line on lease was referred to a Committee. Whether the Committee are merely to examine and report, or whether they are absolutely and finally to conclude a bargain with the intending lessees, does not very clearly appear. The question of the lease would seem not to have excited much interest, if we may judge from the small number of shareholders present at the meeting.

It will be seen that the names of the parties who are described as offering terms for the line are not yet known, even to the Directors! Wherefore this absurd mystery? If the parties mean fairly, and are men of responsibility and character, why thus keep in the back-ground? Is there anything discreditable in seeking to enter upon a lease of the Northern and Eastern Railway? Would the mere offer affect their reputation for sanity or solvency? We can assure the Directors that this secrecy, from whatever cause arising, has strongly strengthened a rumour which is rapidly gaining ground, that the entire affair—the formal offer, the coy refusal, the coming negociation—is a piece of moonshine—a device to get the shares up in the market so as to enable certain parties quietly to back out—and that when matters have proceeded to a particular point the Great Unknown will politely decline all connection with the concern. We confess that the high professional standing of the go-between (Mr. CHARLES PARKER) is the principal ground upon which we feel disinclined to attach much weight to the report referred to, but perhaps that gentleman is himself as much in the dark as to the *real* movers as the proprietors certainly are, and as the Directors profess to be.

Taking it for granted, however, that the offer made through Mr. PARKER is a *bona fide* one, we would guard the proprietors against indulging in expectations which are certain to be disappointed. The chance of any divisible surplus beyond the 5 per cent. is out of the question. Even should the railway produce it, the lessees would be very simple indeed, and the Directors equally vigilant, if the one party failed to devise, or the other succeeded in defeating, a variety of schemes for keeping every shilling of the surplus from the owners of the line. No; the shareholders must make up their minds to the 5 per cent.—not 5 per cent. net, but 5 per cent. burdened with salaries of Engineer, Secretary, Directors, &c. &c., *and with the interest of any excess over the estimates in the construction of the Ware branch;* and if

Digitized by Google

these deductions do not bring the 5 per cent. very considerably under 4 per cent. of clear dividend, then have we no acquaintance with Managerial or Engineering practices and professions.

Whether the shareholders would be content with some such return as 4 per cent. on the capital invested, it is for themselves to determine. Assuredly the statements of Mr. ROSKELL, who presided over Wednesday's meeting, and who knows something of railway matters, do not hold out very high hopes of a favourable result as matters now stand. It is not for us to reconcile these desponding statements of the present Deputy-Chairman with the reiterated and very recent eulogiums of the late Chairman on the unequalled resources of the Northern and Eastern Railway, but the contrast is sufficiently striking to attract notice. We shall probably take an early opportunity of supplying a few facts, from which the shareholders at large will be enabled to judge for themselves *which* of the gentlemen is right. Meantime we recommend them to keep an eye on the leasing scheme, and if possible try to get a peep behind the curtain.

We have heard it hinted that the offer to rent the line emanates from certain of the Directors—but a proceeding like this would be so glaringly indecorous, nay, so grossly flagitious, that we cannot for a moment give credence to the assertion.

WE alluded last week to the probable retirement of Mr. JOHN LEADBETTER from the Chairmanship of the Edinburgh and Glasgow Railway Company, in consequence of his views on the subject of Sunday travelling.

We have since learned that on Thursday week Mr. LEADBETTER was requested to attend the first meeting of the Board after the general meeting, it being imperative under the new Act then to elect all the officers of the Company. Before proceeding to the business of the day, Mr. LEADBETTER required a pledge from the Board that the question of Sunday travelling should be considered an open question, and with this pledge he would act as Director, or as their Chairman, if elected. The question having been decided by so large a majority in February, even of resident Scotch proprietors, and in August without a division, no such pledge could be given, nor even that the question would ever again be entertained, on which Mr. LEADBETTER resigned his office, and retired from the Board. Mr. JOHN LEARMONTH, of Edinburgh, was then elected Chairman, and Mr. JOHN GEORGE HAMILTON Deputy-Chairman, and an influential individual is to be proposed at the next meeting (a resident of Glasgow) to fill up the vacancy.

We are glad to find that the majority of the Directors have been so firm in a matter where any symptom of yielding would have been turned to the account of the Agnewites. Notwithstanding Mr. CADELL'S intimation that he will bring forward the question at the next meeting, the anti-Sunday travelling agitation may be looked upon as at an end. It is high time that it were.

THE opinion which we incidentally expressed last week, on the different modes adopted by the Great Western and South-Western Railway Companies in the payment of the Income Tax, has called forth a note from a Manchester correspondent, upon which we wish to say a very few words. In order, however, that our correspondent's communication may be better understood, we re-print, from our last week's article, the passage upon which he comments. It ran thus:—

"Every proprietor whose net income does not amount to 150*l.* per annum is, it was mentioned at the [South-Western Railway] meeting, entitled, on application to the assessor of his district, to receive back the amount of tax calculated on his proportion of the dividend. Now, suppose A to hold 100, and B 99, shares in the South-Western Railway, and neither to have any other means of living. The dividend of 30s. a share will produce to A 150*l.*, and to B 148*l.* 10s. A immediately becomes liable to the Income Tax. B is exempt, and, having gone through the requisite forms before the Tax Commissioners, is entitled to receive back 10½d. per share, or about 4*l.* 6s. Thus, from his 99 shares, B gets from the Railway Company 148*l.* 10s., and 4*l.* 6s. from the Tax Commissioners—making his total dividend about 152*l.* 16s.; while A, from 100 shares, has only 150*l.* This is an extreme case, but it shows how the plan usually adopted will operate in practice, and must ever operate, while the tax is paid out of any surplus fund, or in any way except by making the proper statutory deduction on every separate dividend warrant."

Our correspondent hereupon remarks as follows:—

SIR,—I observe in your last number that you express your approval of the manner in which the Income Tax is deducted upon the dividend warrants of the Great Western Railway Company, and that you show the apparently unjust effects of the other system, which pays the tax on the gross profits out of a surplus fund. It appears to me that you charge this effect to a wrong cause, as the ultimate effect of any system, under the present Act, is to place the man entitled to a dividend of only 149*l.* per annum (supposing him, of course, to possess no other income) in a better position, by 3*l.* 7s. 6d., than a man entitled to a dividend of 150*l.* per annum.

This injustice, if it be one, can only be remedied, I believe, by exempting the first 150*l.* of every man's income alike—a scheme which has often been suggested. Moreover, as the tax must always be paid by the Company in some shape, and if recoverable at all must be claimed by the person entitled to the exemption, I confess I do not see the superiority of the Great Western system. The only difference appears to be, that on the other system the dividend may be considered as augmented by the amount of the tax. In fact, taking the case as you have put it, I doubt whether B could recover at all, as his income would be taken at the amount of his dividend, *plus the tax*, in the same way as that of a fundholder. I apprehend that this tax ought not to be deducted in ascertaining the net income, any more than a man whose income is 1,000*l.*, and who pays 50*l.* per annum in assessed taxes, should be allowed to pay the Income Tax on 950*l.* only. With this, however, I have nothing to do; but as I am concerned in a Railway Company which has adopted the system of paying the tax in gross, I should be glad to hear your opinion on reconsideration of the matter.

I am, Sir, yours, &c., ——

September 5, 1842.

Our correspondent appears to think that, in the case supposed by us, B would not be in a position to recover back his proportion of the tax, as his income would be taken at the amount of his dividend, *plus the tax*. This may be true, and of course would operate against the holder of 99 shares in the South-Western Railway; but let us take the instance of a holder of 97 shares. His dividend, at 30s. per cent., would amount to 145*l.* 10s., and even with the addition of the tax would fall short of 150*l.* But being now in a position to recover back the proportion paid on the 145*l.* 10s., he gets from the assessor about 4*l.* 4s. 10d., making the total amount received by him, in virtue of his 97 shares, 149*l.* 14s. 10d.; while A, from his 100 shares, gets only 145*l.* 13s.

Nevertheless, we frankly admit that this result is not fairly chargeable upon any particular mode of paying the tax, and that in point of fact our correspondent is right when he says, that "the ultimate effect of *any* system under the present Act is to place the man entitled to a dividend of only 149*l.* per annum (supposing him, of course, to possess no other income) in a better position by 3*l.* 7s. 6d. than a man entitled to a dividend of 150*l.*" The mistake into which we fell last week arose from overlooking the fact, that Railway Companies are by law compelled to deduct 7d in the pound from every pound of profit, whether that profit be afterwards distributed among the shareholders in sums of 50*l.* or 150*l.*, or in any different amounts, whether greater or less. The man whose share of the profit rises in the aggregate no higher than 5*l.* must submit to have 5 sevenpences deducted from that amount before it can pass from the hands of the Railway Executive to his own. In what mode this may be done matters not. The result is in both cases the same. Let us suppose a case by way of illustration. A Railway Company, whose stock consists of 1,000 shares, have a balance in hand of 1,000*l.*, neither more nor less, and the whole is to be divided. On the Great Western principle a dividend of 1*l.* per share would be *declared*, but the holder of one share would not *receive* more than 19s. 3d., the other 7d. being kept back for the Tax Commissioners. On the South-Western principle the dividend *declared* would be only 19s. 3d., but the proprietor would *receive* the whole of that amount, the 7d. having previously been paid. Nor would the proprietor's position with respect to recovering back the amount of the tax be at all altered. The 7d. which the Great Western Directors had kept back would be handed over to him by the district assessor, making the actual amount *received* from the one share 1*l.*, while to the 19s. 3d. distributed on the South-Western scheme would be added the 7d. paid as tax previous to such distribution, making the total amount *received* 1*l.* as before.

It thus appears, that the two schemes are virtually the same, and we are glad that our correspondent's note has led us to re-consider the matter—for we may presume, from what transpired at the South-Western meeting, that generally it is not properly understood. The practical effect of the present Act is to give every person whose total income falls short of 150*l.* sevenpence in the pound more dividend than those receive whose incomes reach that sum; but just so is it with respect to money derived from any other source. The man whose wages amount to 149*l.* a year will have, while the present Act remains in force, 149 sevenpences to spend on himself more than the richer man, out of the FIRST 149*l.* of *his* income. The only remedy for this state of things is that alluded to by our correspondent, namely, to exempt altogether from the operation of the tax the first 150*l.* of every man's income; but this is a point upon which we need not dwell.

The South-Western plan (namely, that which is generally adopted) is more simple than the Great Western, but the latter has the advantage of placing before the poorer proprietor more prominently the course which it is his interest to take in claiming to recover back his proper proportion of the tax. Thus, if he be told that his dividend amounts to 100*l.* but that

Digitized by Google

for the present he can only receive 97*l.* 1s. 6d.—the balance of 2*l.* 18s. 6d. being deposited in the hands of the Tax Commissioners—he is more likely to adopt means to recover that balance, than if he were told that his dividend amounted to 97*l.* 1s. 6d., but that the Company had, previous to declaring the dividend, paid the tax on their gross profits, his own proportion of which tax he was at liberty to reclaim.

THERE is so little novelty in the aspect of the Croydon Company's affairs, as exhibited at the meeting of Thursday last, that we need only refer to the very full report of the proceedings which we give elsewhere. The Greenwich Company (for it seems as if Directors and proprietors were equally blind to their own interests) still pursue their suicidal course. If the further facts elicited at the meeting, and in an article which appears elsewhere, do not convince them of the policy of a different mode of proceeding, they are incurable, and must be left to reap as they have sowed.

As regards the results of the Croydon line, *per se*, they are far from encouraging. We believe, however, that the worst is now past; and looking to the future operations of the Brighton and South-Eastern Companies, we have no doubt that, in a short time, the Croydon shareholders will receive a very fair dividend. There can no be question, we think, that the Board of Directors are most zealous in their efforts to promote the prosperity of the line, and whether as regards their attempts to overcome the obstinacy of the Greenwich Directors, or to establish a terminus nearer the west-end of the metropolis, we very sincerely wish them success. We trust *both* feats will be achieved; they are not by any means inconsistent.

WE are glad to see that there is still a hope of the resuscitation of the West London scheme. The proceedings of yesterday's meeting were of a more business-like character than has been exhibited for some time in connection with this unfortunate concern. We trust that a vigorous effort will be made by the London and Manchester proprietors alike, to carry out the proposition now before them. There is really, we should conceive, no risk whatever attending it, and it would be lamentable indeed if, from apathy or any other cause, so much money as has already been expended should be utterly thrown away.

THE low-fare experiment now on trial on the London and Dover Railway is one of such magnitude and interest, and so pregnant with mighty effects on the future policy of every railway, existing and to come, that we make no apology to our readers for taking this prominent notice of the first week's result. The question is too momentous in its consequences to risk an inaccuracy by publishing any statement as correct, other than that we could pin our faith upon. In order, therefore, that there might not be the shadow of a doubt, we applied to, and obtained from, the Company's office the return we now give, and for the ready manner in which our request was met, we tender our best thanks.

The following is a statement of the gross traffic for the weeks precedent and subsequent to the reduction of fares. For distinction's sake we will call each after its own proper title:—

HIGH FARES WEEK.

	First-Class.	Second-Class.	Total.	£	s.	d
August 24	116	283½	399½	112	4	9
,, 25.....	141	250	391½	115	17	0
,, 26.....	146½	299	445½	129	7	3

	1,179½	2,940½	1,671	5,791	£1,053	5	9
Merchandise, parcels, horses, carriages, &c.					104	7	6
					£1,157	13	3

In looking at this result, we confess we are agreeably disappointed. We had expected a present reduction in the amount received, even with the extension to Headcorn, as compared with that taken at Tunbridge; for, independent of the great reduction in fare (from 25 to 30 per cent.) which we thought would more than counterbalance the gain from the 15 miles' extension, we knew that the Maidstone traffic would take some time to develope itself, and that little of the Dover could be directly expected. If the difference in the rates of fare be taken from the high fares' week, the enormous addition of about 80 per cent. will be seen, in the seven days during which the experiment has been on trial, to have resulted. Golden opinions will be gained to the Managers of this line, for the bold and honourable policy they have had the courage, foresight, and prudence to pursue, and golden results to the proprietors will be the effect of the measures adopted.

One stubborn fact for our Greenwich friends, and we have done. If they doubt our figures, let them send persons to make note on the spot, and we will undertake to publish their return of next week, if they will do as we suggest. The following shows the number of passengers booked to and at New Cross during the periods to which the former statement refers:—

HIGH FARES WEEK.

	1st Class.	2nd Class.	Total.
Booked at.....	15	46	60
Ditto to	11	49½	60½
Total	.....	.....	120½

LOW FARES WEEK.

	1st Class.	2nd Class.	3rd Class.	Total.
Booked at..	48	125	165	338
Ditto to....	55	141	284½	480½
Total	.....	.....	.....	818½

being about one-seventh of the whole number of passengers carried (5,791), the great majority of whom, but for the obstinate perseverance of the Greenwich Directors in their prohibitive toll, would have passed over the Greenwich line. Such facts as these must surely bring conviction. The Greenwich Board laughed to scorn the efforts of the Croydon Company to stop the traffic at New Cross; what say they now to the Dover Company?

THE *Worcester Chronicle*, in quoting our remarks of last week on the proposed railway to that town (which remarks are described as embodying "the opinion of dispassionate observers"), says, "We have heard with much pleasure that the respectable tradesmen of this city are determined to take some measure with a view to show that the decision of the late meeting relative to the proposed branch railway is *not* the decision of the trading classes. By our Town Council Report it will be seen that Mr. Pierpoint has given notice of a motion to take the subject into consideration at the next Council meeting, when we hope that legal sophistry and passionate argumentation will be avoided."

—o—

WE find from the *Glasgow Chronicle* that not the least remarkable effect of her Majesty's visit to the metropolis of the North, was the extraordinary run of passengers upon the Edinburgh and Glasgow Railway. "The receipts, so far as can be estimated in the meantime, quadrupled those of the week previous, and the number of passengers was, consequently, great in proportion. The amount of money drawn was about 6,500*l.*; this, contrasted with the week previous, gives a rise of 4,882*l.*, the sum drawn that week for passengers being only 1,618*l.* 2s. 6d. The passengers for the same week (we mean the week ending the 27th of August) amounted to 12,345. For the week just past they may, therefore, be set down at not less than 50,000. Add to these the numbers who came and went by other conveyances, and it is not improper, we think, to say that upwards of 100,000 persons from Glasgow and neighbourhood traversed Auld Reekie upon this eventful occasion."

RAILWAY OFFENCES AND OFFENDERS.

ON Monday a person named Howell, described as "a gentleman," was fined 10*l.* by Mr. Rawlinson, of the Marylebone Police-court, for having thrown, from one of the bridges crossing the London and Birmingham Railway near Euston-square, several pieces of wood, upon the rails beneath. The fellow was detected in this most wanton act of mischief, and at once taken into custody. We are glad that the magistrate imposed the maximum fine; but if, instead of a pecuniary infliction, he had sent the "gentleman" for a month to the treadmill, no one would have thought the sentence unduly severe.

Last week, at Wakefield, Matthew [illegible], who had been employed as a guard on the [illegible] and Leeds Railway, was committed for [illegible] charge of embezzling 7s. belonging to his [illegible]. The money had been paid to the [illegible] Miss Freckingham, as her fare from [illegible] Normanton.

DUBLIN AND KINGSTOWN [illegible] COMPANY—SPECIAL [illegible]

A SPECIAL general meeting of the [illegible] was held on Monday, at the establish[illegible] land-row; JAMES PIM[illegible], Esq., [illegible] result of the meeting was, that [illegible] ceived authority to affix the [illegible] Company to a mortgage to the Board of [illegible] a loan of 25,000*l.*, for the extension of the railway to Dalkey.—*Dublin Monitor.*

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the Northern and Eastern Railway Company was held on Wednesday, at the London Tavern, Bishopsgate-street, for the purpose, as stated in the advertisement, of taking into consideration the two following subjects:—1st, a scheme for the sale of 3,186 forfeited shares; and 2nd, a letter from Mr. Charles Parker, offering terms for leasing the railway. JOHN ROSKELL, Esq., Deputy-Chairman of the Board of Directors, presided. There were about 50 proprietors present.

The advertisement convening the meeting having been read,

The CHAIRMAN said, it would perhaps be desirable to reverse the order of the subjects set out in the advertisement, and to consider the question of leasing the line first. With respect to the latter point, the meeting would perhaps be surprised to hear that the Directors were not up to that moment in possession of the names of the parties who, through Mr. Parker, proposed to take a lease of the line. The condition upon which alone Mr. Parker would make the names known was, that the Directors should come to a resolution to recommend to the proprietors the leasing of the railway. As the Directors declined coming to such resolution, preferring to stand aloof and to leave the matter solely to the present meeting, the names had not been disclosed, although Mr. Parker had assured the Board that when made known they would b found wholly unobjectionable and amply sufficient.

Mr. L. LEVY thought no one could expect that they would enter into a lease of the railway without knowing who the parties were to whom the lease was to be granted. (Hear, hear, hear.)

The CHAIRMAN said, the whole subject would be left to the decision of the meeting, who would presently have laid before them the resolution to which the Directors had come. There could be no doubt that if a lease were determined on, there would be many difficulties in the way of carrying out the details satisfactorily. For example, as it was proposed that the lessees should take the present working stock or plant of the railway at a valuation, and sell to the Company at a valuation the stock which might be in existence when the term of the lease should expire, it would be necessary for the Company, or the Directors acting for them, to protect themselves from being burdened with a needless quantity of carriages, engines, and other implements. They would also require conditions to secure, on equitable terms, the working of the line to Cambridge, should it be the decision of the proprietors to proceed with the extension of the railway during the continuance of the lease.

A PROPRIETOR inquired for what term the lease would be arranged.

The CHAIRMAN said, no term had been defined. The Act of Parliament did not allow of a longer lease than three years, but when Mr. Parker's attention was called to this point, that gentleman had stated that the proposed lessees had no expectation of carrying out their objects without an Act of Parliament, or a clause in any Act of Parliament the Company might have in contemplation. If the meeting should resolve to lease the line, the Directors would recommend that a Committee composed of the Chairman, of Mr. Routh, and another Director, with two proprietors, be nominated to carry the scheme into effect. The Directors proposed to abstain altogether from voting on the question, so that the whole responsibility—whether to lease or not to lease—would devolve upon the proprietors themselves. The Secretary would now read the resolution to which the Directors had come.

The SECRETARY (William Bourne, Esq.) accordingly read the following resolution, which he said had been passed at a Board meeting held on the previous day:—

"That although, in the present state of railway property, the Directors would have been disposed to recommend the adoption of the proposal made by Mr. Parker, without reference to their individual opinions as to the future prospects of the line, could they have been assured that a net 5 per cent. upon the capital outlaid, with a prospect of further advantage, would have been secured to the proprietors, they will not take upon themselves to recommend it, because they do not think it probable that the details of the arrangements could be agreed upon on terms satisfactory to both parties, so as to secure that result; and they are of opinion that the negociation would therefore ultimately fail."

The reading of the resolution was followed by applause.

The CHAIRMAN said, the question now before the meeting was—would they lease the line or not?

Mr. BARCLAY said, it would appear to be useless that the meeting should give any opinion on the matter, as from the resolution just read the opinion of the Board seemed to be that such an arrangement was impracticable.

The CHAIRMAN said, it was feared that difficulties would arise to render the lease impracticable. Nevertheless, if the meeting were of opinion that it was expedient to effect such an arrangement, the Directors would make the attempt.

Mr. H. SMALE begged to inquire if it were the *unanimous* opinion of the Directors that the difficulties were such as to render the arrangement impracticable.

Captain DOLPHIN thought the Directors had no occasion to answer such a question.

Mr. LEVY wished to know of what use was the parade at the last meeting as to the proposed leasing of the line, when even now they could not get at the names of the proposed lessees. It was a waste of time to discuss the matter if further information were not supplied. He was quite sure that the Company could let the line on terms which would be ultimately advantageous to themselves, while, from the superior attention given by individuals to the management of business, it would be beneficial to the lessees. (Hear, hear.) His opinions on this subject had somewhat changed since the last meeting. He meant no offence to the Directors, but it seemed, from the opposition which they offered to the lease, as if they feared to lose the patronage they now enjoyed. (Hear, hear.) Why should not the line be let? He was engaged in much more extensive undertakings, and he was sure the railway could be leased if the Directors chose. (Hear, hear.) But then came the question—to whom was it to be leased? He had hoped that the Directors would have made inquiries into the solvency and respectability of the proposed lessees, and have become responsible for them, the more especially as he understood that within the last few days the Board had voted 1,500*l.* a-year to themselves for their official services. (Hear, hear.) He should be glad to know if the report which was prevalent on that point were true; and if so, for *what* the money had been voted. He should like to know also why the Directors had sought to nip in the bud the project for leasing. He supposed they leaned to the opinions of the legal gentlemen. [Mr. MAYNARD, the Company's Solicitor—No.] For his own part he did not always do so, for these gentlemen were expert in finding meanings that were never meant. ("Hear, hear," and a laugh.) He was satisfied that the letting of the line would prove beneficial to all parties, and he hoped the consideration of the subject would not be broken off abruptly. He had consulted the Act, and knew something of these matters, and did not believe that there was any obstacle in the way, except the Directors' dread of losing their present patronage and emoluments. (Hear, hear.)

Mr. C. BELL did not call in question Mr. Levy's qualifications to give an opinion on the expediency of leasing the line, but if Mr. Levy had favoured the meeting with the grounds upon which his opinions rested they would have been better able to judge for themselves. The leasing of the line might be impracticable or not, but it was not fair to charge the Directors with being opposed to the arrangement, because if they had pleased they might have passed the matter by altogether. His only desire was to have the question argued fully and dispassionately. He knew there were legal difficulties in the way, but he professed himself wholly ignorant of the details of railway management. Mr. Levy had told them that he had changed his opinion since the last meeting. Why might not others have done the same? For his own part, he was in doubt, and should like to know what other difficulties, apart from legal difficulties, stood in the way of the lease.

Mr. LEVY said, if he had altered his opinion, so also had the honourable proprietor, who, at the last meeting, had objected to a vote of thanks to Mr. Crawshay, and who, in fact, had intimated that the Directors were "rogues all." (Laughter.) The only change which had taken place in his (Mr. Levy's) opinion, as regarded the leasing of the line, was, that formerly he had been in favour of public competition, whereas now he thought a private arrangement would better answer the purpose. If the Directors could get the offer which had been mentioned at the last meeting, he thought they ought to secure it. (Hear, hear.)

The CHAIRMAN said, if the meeting were of Mr. Levy's opinion, that the line ought to be leased, the Directors would carry out the arrangement with all their hearts. ("Hear, hear," from the Directors.) As to not having ascertained the names of the proposed lessees, they had requested Mr. Parker to meet the Board, and that gentleman had told them that when the Directors were resolved to recommend the lease—[Capt. MANGLES (a Director), unanimously resolved]—then he would disclose the names, which would be found fully sufficient. It was the opinion of the Board, collectively, that there would be many difficulties in arranging the clauses which, no doubt, would be sought for by both—in fact, innumerable difficulties. The Directors were, nevertheless, willing to give all the aid in their power.

Mr. EBEL inquired what opinion the Directors entertained as to the propriety of leasing the line apart from legal and other difficulties, which, on a closer examination, might have no existence.

Mr. KENNARD (a Director) thought the Board were not called upon to give an opinion on that point.

The CHAIRMAN said, the Directors did not assume that the profit, under their management, would equal the return offered by the lessees—

Mr. BELL (interrupting) did not think that the press ought to be present while such details were being brought forward. (Loud cries of "Oh! oh!" and laughter.) How could they possibly bargain with parties under such circumstances? (Renewed marks of disapprobation.)

The CHAIRMAN said, the Directors had no wish to make the proprietors believe that the lease would not be better for the Company if it could be carried out. (Hear, hear.)

Mr. SMALE did not mean to charge the Directors with neglect, but he believed that much more might be attained from the railway than had yet been attained. (Hear, hear.) If the lease could not be carried out legally, of course no one would wish to force it forward, but there could be no harm in appointing a Committee to inquire. (Hear, hear, hear.) He had seen great blunders committed in the management of the Northern and Eastern Railway. These he need not enter upon, further than to mention, as one example, the stopping of trains at inconvenient places at unnecessary times. Under these circumstances, he would move for the appointment of a Committee.

Mr. LEVY seconded the motion.

A PROPRIETOR (who would not give his name) wished to know if the meeting were to understand from the resolution read by the Secretary, that if it were not for the difficulties in the way the Directors would approve of the lease. Were these difficulties insurmountable? The Directors had not specified them, and perhaps they might disappear

Digitized by Google

on a nearer approach. There was another point worthy of notice. They were about to reissue a large number of forfeited shares on terms which he could not but deem objectionable; and if they were to lease the line, perhaps they might introduce some of these shares into other hands. He believed that this proposition for leasing the Northern and Eastern Railway emanated from the London and Birmingham Company, and the Birmingham Railway was so well conducted that the Northern and Eastern could not be in better hands.

Mr. JAMES COOKE said, as the Directors appeared to be indisposed to lease the line, he hoped care would be taken that in nominating a Committee the Board should not have an undue preponderance. His own opinion was decidedly in favour of the lease. The shares were now at about 7 discount, but if this lease were decided upon, he had no doubt they would soon reach and remain at par. (Hear, hear.) He thought the choice of the Committee was a most important matter.

Mr. RICHARD L. JONES wished to know distinctly whether, supposing there were no difficulty in carrying out the arrangement, the Directors would favour the proposal to lease the line.

The CHAIRMAN said, the resolution of the Board which had been read was in favour of leasing the line, provided they could secure a net 5 per cent.

Mr. COOKE had gathered from the resolution, and from the Chairman's remarks, that in their opinion there were so many difficulties as to render the carrying out of the lease all but impossible.

Mr. LEVY said, it would be useless to go on with the proposal, if the Directors were opposed to it.

The CHAIRMAN said, the Directors were *not* opposed to it, but they thought the Company ought to secure 5 per cent. net. Now, they must have an Engineer to superintend the construction of the branch line to Ware and Hertford, and they could not dispense with a Board of Management, or with certain officers. The lessees would have the power of increasing the stock of engines, carriages, and other things, and as the Company would have to purchase the machinery at the termination of the lease, there must be a Board of Direction to see that nothing was added unnecessarily, or without their consent. The Board would have to sit about once a month, and therefore would require little remuneration—speaking for himself, he should say, no remuneration—but the staff altogether could not cost much less than 1,000*l.* a year, which would have to be deducted from the 5 per cent., whereas they wished to secure 5 per cent. net.

Mr. COOKE said, it had been stated by Mr. Levy that the Directors had voted themselves 1,500*l.* a-year. For his own part he thought Directors ought to be remunerated for their services, but allowing the staff under the lease to cost 1,000*l.* a-year, 500*l.* would thus be saved in the item of Direction.

Mr. LEVY said, *that* was one reason why the Directors were opposed to the lease.

The CHAIRMAN said, nothing had yet been divided among the Directors for their services, but it had been proposed to set apart 800*l.* a-year as the maximum for such purpose.

Mr. LEVY said, no man in the world was better acquainted than was Mr. Lambert Jones with the cost which would be incurred if the line were under lease. That gentleman was one of the Commissioners of Metropolitan Roads, and would agree with him that such a sum as 1,000*l.* a-year was preposterous. One quarter of that amount would be amply sufficient. (Hear, hear, hear.)

The CHAIRMAN said, if a Committee were appointed, and they were to go and ask Mr. Parker for the names of the intending lessees, they would get the same answer as the Board had received, namely, that the parties would not be made known until the proprietors and Directors had resolved to agree to a lease. The first step, therefore, ought to be to resolve that the lease be accepted. (Cries of "No, no.") A Committee might then be appointed to carry it into effect. ("Hear, hear," and "No, no.")

Mr. BELL thought the duty of the Committee should, in the first instance, be merely to inquire and report. If the Birmingham Company were the parties making the offer, he was sure this Company could not accept it. [Mr. LEVY—why not?] Why, the Birmingham Company could afford to take the Northern and Eastern line and ruin it. ("Hear, hear," and "No, no.") It should not be forgotten that the Northern and Eastern was originally established as a rival to the Birmingham. ("Hear, hear," and "No, no.")

The CHAIRMAN said, the question had been put to Mr. Parker whether the Birmingham Company were the parties making the offer, and he had emphatically said "No." (Hear, hear.)

Mr. JONES said, no answer had yet been given to the question as to whether the Directors were favourable or not to the lease, supposing all difficulties to be got rid of. If a majority of the Directors were unfavourable, it would be a waste of time to proceed. So satisfied did the proposed lessees appear to be of this, that they would not allow their names to be disclosed unless the Board should recommend the lease. He would ask again, therefore, if the Directors were favourable. (Hear, hear, hear.)

Mr. W. ROUTH (a Director) thought if his friend Mr. Jones had attended to the resolution of the Board which had been read, he would have found an answer to his question. It was there stated, that whatever might be the individual opinions of members of the Board, the Directors thought that in the present state of railway property the line ought to be leased if 5 per cent. net could be secured. (Hear, hear, hear.) He believed he might say that this was the unanimous opinion of the Board—(hear, hear)—although the Directors might have seen difficulties in the way of accomplishing the object which had not occurred to the proprietors generally. No doubt the proprietors were looking to something beyond the 5 per cent., and in that case the Directors would require to have a control over the salaries and appointments of the lessees, otherwise the surplus, if any, might be swallowed up. It was the anxious wish of the Directors that a Committee should be appointed, and they cared not if they themselves were not included in it. (Hear, hear, hear.) There might, as he said before, be difficulties which the proprietors did not perceive.

Mr. COOKE thought nothing could be more satisfactory than the statement made by Mr. Routh. (Hear, hear.) The only point now to be considered was the appointment of a Committee, and what proportion the proprietors should bear to the Directors.

Several persons proposed 5 proprietors to 3 Directors, and others 3 to 3.

The CHAIRMAN said, the Directors had no objection to a Committee of 3 and 3. In fact, their object in proposing 2 proprietors was not to keep the decision in their own hands, but to enable the shareholders generally to become fully acquainted with whatever might transpire. He thought a larger number than 6 would impede rather than forward the business. As he had already said, however, there would be no probability of getting at the names of the intending lessees unless there were first a moral certainty that a lease would be agreed to.

After some conversation upon this point,

Mr. STOBART said, in order to get rid of the difficulty, he would move, as a preliminary resolution—that, in the opinion of this meeting, it would be expedient to lease the line.

The motion having been seconded,

Mr. JOHN WILLIAMS spoke at some length in opposition to a lease. He said the average receipts per week since the opening of the line had been 1,556*l.*, and he understood that with a weekly receipt throughout the year of 1,500*l.*, a dividend of 5 per cent. would be secured. As yet they had carried no goods or cattle, and had but just entered upon a very favourable arrangement with the Eastern Counties' Company. They might look forward also to the construction of railways to Ware, Hertford, Ely, and Loughborough, and with these prospects he thought it would be detrimental and dangerous to give up possession of the line to others, especially at 5 per cent., until these and other sources of revenue were more fully developed. (Hear, hear.)

Mr. BARCLAY thought the best answer to Mr. Williams was the fact, that while these resources were being developed, they would under the lease be getting 5 per cent. (Hear, hear.)

The PROPRIETOR (already referred to) said, there was a better answer still, namely, that the Directors had confessed that they could not hope, under their own management, to secure 5 per cent. net. ("No, no," from Mr. Routh.)

Mr. MERCIER inquired whether 1,500*l.* a week, which, by the way, was from the best months of the year, would secure 5 per cent. when the capital account came to be closed.

The CHAIRMAN said it would, upon a capital of 870,000*l.*

Mr. BELL inquired the average amount of the weekly receipts.

Mr. WILLIAMS said, they would find, from the returns published weekly in the *Railway Times*, that in the 16 weeks during which the line had been opened throughout, the receipts had amounted to 24,347*l.* 16s., which was at the rate of 1,523*l.* a week. During the last 10 weeks, however, the receipts had averaged 1,566*l.* 17s. 4d. per week.

Mr. BELL inquired if the 1,500*l.* a week might be taken as the average throughout the year.

The CHAIRMAN said, no; for the year the average would be less than 1,200*l.* a week.

Mr. BELL said, even taking the receipts at 1,200*l.* a week, he did not see why they should give up the line without further inquiry, more especially as they had not yet carried an ounce of goods, and had not felt the benefit of the arrangement entered into with the Eastern Counties' Company. Another Act of Parliament would probably cost, with all its annoyances and opposition, 20,000*l.* Why, then, should they lease the line?

Mr. COOKE would tell the honourable proprietor *why*. Because such an arrangement would increase the value of the property 10 per cent. in the market.

Mr. BELL said, this might be a very good reason for parties connected with the Stock-Exchange, who wished to sell their shares next week—("hear, hear," and a laugh)—but, as an investor, he looked to the permanent value of the property, and saw no reason why future advantages should be transferred to the hands of others. (Hear, hear, hear.)

Mr. COOKE said, he was not connected with the Stock-Exchange, although he should not have deemed an association with gentlemen so honourable as were the members of that body derogatory to him. He held, and might continue to hold, 200 shares; but he had made a calculation, and found that the value of his property would be enhanced by a lease of the line. Looking at the depreciation of the shares in so excellent an undertaking, he could not but think—although he did not know where the blame rested—that there must be something wrong somewhere.

Mr. BELL would propose that a Committee be appointed to inquire and report to a future meeting. All the requisite figures and details which could not properly be discussed in a public assembly might then be laid before such Committee, who would merely have to report the bare result.

Mr. Stobart's motion was here altered so as simply to express an opinion that it was desirable to negociate for the lease of the line.

Mr. BELL said, he would second this proposition.

Mr. GILBERTSON (of Hertford) had no doubt that these discussions would have a tendency to depress the shares still further. He found that already they were realising nearly 5 per cent., and for his own part he would be content with 4 or 3½ for the present, rather than throw into the hands of others their future expectations. The Chairman had very properly reminded the meeting that at the end of the lease the Company might have a large stock of useless machinery thrown on their hands.

Digitized by Google

It appeared to him that if the line got into the hands of the Birmingham Company—(cries of "It's not the Birmingham,")—if it got out of their own hands, they could not tell under whose control it might come, and then where would be the prospect of an extension of the line? He was for keeping the railway in their own hands, just as a tradesman would keep his business under his own control. (Hear, hear.) It was always found that when property was let on lease it was so much depreciated in value before the expiration of the term that it required the expenditure of two or three years' rent to set it right again. The honourable proprietor was proceeding to remark upon the payment of the Directors—stating that, had he not been anticipated, he intended to propose such a vote himself—when the meeting became impatient, and, amid cries of "question," Mr. Gilbertson sat down.

Mr. Stobart's motion, as amended, was then put, and carried by about 3 to 1.

A PROPRIETOR alluded to the leasing of the Leeds and Selby line to the York and North Midland Company, which he said had been accomplished at a cost under 1,000*l.*, and had contributed to raise the stock of the Selby line very materially.

MR. SMALE then moved (after some desultory conversation) that a Committee, composed partly of Directors and partly of proprietors, be appointed to carry out the negociation with Mr. Parker.

MR. COOKE seconded the motion, and it was carried with but one dissentient.

A conversation followed as to the number of the Committee. At last it was arranged that it should consist of three Directors and four proprietors. The selection of the former was left to the Board; and, after considerable delay, the following proprietors were chosen—Mr. Richard Pattison, Mr. L. Levy, Mr. C. Bell, and Mr. Stobart.

Mr. L. Jones, Mr. Cooke, Mr. Barclay, Mr. Smale, Mr. Bidder, and Mr. Mercier, were proposed, but, for various reasons, each declined. Mr. Bell at first refused, on the ground that he was not acquainted with the subject, but finding that it was difficult to form the Committee, he ultimately consented to serve.

MR. BELL wished to propose a motion to the effect, that the Committee should Report to a future meeting.

The CHAIRMAN thought this would clash with the resolution, which empowered the Committee to "carry out" the negociation.

MR. BELL did not view this phrase as implying that the Committee could conclude the terms for the lease.

MR. JONES and others took it for granted, that whatever arrangements were entered into by the Committee must be confirmed by a general meeting.

Some further desultory discussion followed, but Mr. Bell did not press his motion. It appeared to be understood that the Committee would make a Report previous to a final decision on the matter.

The CHAIRMAN said, the question of the lease having been disposed of, the other business named in the advertisement had reference to the forfeited shares.

MR. BARCLAY suggested that this subject should stand over until it should be seen how the negociation for the lease terminated.

The CHAIRMAN said, he himself was about to offer such a suggestion. If the lease were concluded, the lessees would, as proposed, take 1,200 of these shares.

MR. COOKE then moved that the best thanks of the meeting be given to the Chairman for his impartial conduct in the chair, and to the Board generally for the very full, candid, and satisfactory explanations which they had that day given.

MR. SMALE seconded the motion, which was carried by acclamation, amid applause.

The CHAIRMAN made a suitable acknowledgment, and the meeting broke up.

WEST LONDON RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the West London (late the Birmingham, Bristol, and Thames Junction) Railway Company was held yesterday, at the Company's offices, Abchurch-lane, City.

Considerable delay took place in consequence of the non-attendance of a sufficient number of proprietors to constitute a legal meeting. At length the requisite number having been got together, ROBERT GUNTER, Esq. (a Director) was, on the motion of Mr. Roy, seconded by Mr. Craufurd, unanimously called to the chair, and opened the business of the day by expressing his regret at the unavoidable absence of the Deputy-Chairman, but hoped that, with the assistance of the Secretary, who was so well acquainted with the affairs of the Company, he should be able to give any explanation that might be required.

The SECRETARY (John Thompson, Esq.) having first read the advertisement calling the meeting, proceeded to read the following Report:—

REPORT.

In meeting the proprietors on the present occasion, the Directors have to announce that since the last adjourned half-yearly general meeting, they have been occupied in endeavouring to effect an arrangement with the creditors of the Company.

This they have had considerable difficulty in accomplishing, as although the creditors were willing to accede to the principle of taking shares in satisfaction of their respective claims, several of them objected to take shares upon the terms proposed by the Directors, and adhered to the resolution they had come to previously to the last general meeting.

The Directors, therefore, felt it necessary to re-consider their plan, and finding there would be no chance of prevailing upon the proprietors to take the new shares, if they were issued to the creditors on the same terms, determined to abide by their original scheme, and they have the satisfaction of stating that they have at length succeeded in effecting the desired arrangement with the creditors, all but one of those whose names are included in the second schedule attached to the scheme submitted to the proprietors at the last general meeting; and the Directors have no doubt that this party will concur in the arrangement on his return to town.

[The scheme was here read. It will be found in the *Railway Times* of the 9th April last.]

Memorandum signed by the creditors—

"*To the Secretary of the West London Railway Company.*

"Sir,—We, the undersigned creditors of the West London Railway Company, having had submitted to us by the Directors of that Company, a scheme for the completion of the undertaking, and which for the purpose of identification, has been signed by us, do give our consent to such scheme, and agree to take the respective amounts of our claims in the new shares proposed by the said scheme, to be created as of the second class, provided that three-fourths of the whole number of shares proposed to be created as of the first class are subscribed for on or before the 1st of October next, and provided also that four-fifths in number of the creditors in the annexed schedule, No. 2, do agree and sign this letter. And we authorise you to inform the proprietors of the Company of this our consent at any meeting of the proprietors, which, for the purpose of creating or sanctioning the creation of the said shares of the classes No. 1 and No. 2, and each of them respectively, shall be held within three calendar months from this day. Dated this 18th day of June, 1842.

"We are, Sir, your obedient servants,"

The proprietors will observe that this arrangement is conditional upon three-fourths of the shares of the first class being subscribed for on or before the 1st of October next, no time is therefore to be lost, and the Directors trust the proprietors will at once come forward and take their rateable proportion of the new shares, to save from total loss the large sum of money which has been already expended on the undertaking.

The following is a statement of the receipts and expenditure of the Company to the 30th June last, as required by the Act, viz:—

RECEIPTS.

Receipts to 31st December, 1841, as per statement submitted to the last half-yearly general meeting		£141,106	5 2½
To 30th June, 1842—			
Calls on shares and interest	£604 1 4		
Rents	£70 16 6		
Less expenses, repairs, &c.	10 16 6		
	60 0 0		
Kensington Canal	278 13 19		
Less expenses, repairs, &c.	56 18 9		
	221 15 1		
		885 16 5	
Total		£141,992	1 7½

DISBURSEMENTS.

Disbursements to 31st Dec. 1841		£140 885	18 7
To 30th June, 1842.			
Land and compensation	560 0 0		
Works	47 11 1		
Legal expenses	40 2 1		
Surveying	1 11 6		
Salaries	122 19 0		
Office expenses including rent	90 12 4½		
Printing and stationery	3 4 1		
Advertisements	2 0 0		
Office furniture	4 0 0		
		872 11	1½
Balance		238 11	11
Total		£141,992	1 7½

(Signed) WILLIAM MORGAN,
11, Abchurch lane, Sept. 9, 1842.

It was explained that all the simple contract creditors above 100*l.* had signed an agreement to take shares to the amount of their several claims, with the exception of one (Mr. Cubitt, the Engineer), who had not been able to attend the meeting of creditors, but who, it was not doubted, would conform to the arrangement. His debt was said to be 116*l.* 11s.

MR. CRAUFURD did not observe in the accounts any charge for Direction.

The SECRETARY said, no charge was made for the last half-year. In fact, for the last 2½ years the Directors had not received any money, their allowance being set off against calls on shares.

MR. CRAUFURD said, this amounted to the same thing. The honourable proprietor then went on to argue, that as the sum of 1,300*l.* a year had been voted to the Directors when there was a full Board, the present Directors, who were considerably reduced in number, ought not to appropriate the whole of that amount, but only to take a fair proportion of it—the more especially as it appeared they could not forward the undertaking. Some of the Directors had refused to appear as creditors against the Company, and he hoped this good example would be followed by their colleagues. The Company would willingly pay when they had it in their power.

MR. GARLAND followed in the same strain, and instanced the Blackwall Railway, where, on account of the depressed state of the Company, the Directors had resolved not to accept any remuneration. At any rate, if the Directors were to be paid, it should be at a lower rate.

The CHAIRMAN had very reluctantly signed the claim on the Company. For his own part, he would gladly forego all remuneration if he could do any good. (Hear, hear, hear.)

MR. ALEXANDER (the only other Director present) expressed himself to the same effect, but reminded the meeting that the Directors had expenses to incur in attending Board meetings. He himself last year frequently came to town from Brighton with that sole object.

Lord KENSINGTON had no doubt that what had transpired would have an effect on the other members of the Board.

Mr. Garland then moved, and Mr. W. Wilkinson seconded, that the Report be received and adopted, which was carried unanimously.

MR. GARLAND suggested that the Secretary should proceed to Manchester, accompanied by one or more of the Directors or proprietors, and endeavour to induce the shareholders there to take up their proportion of the new shares.

Lord KENSINGTON was afraid that little good would be done at Manchester unless the London proprietors first subscribed. For his own part, he was prepared to subscribe very liberally if others would join him. (Applause.)

The SECRETARY (in answer to questions) explained that the number of existing shares was 2,300, and that the new shares would be in the proportion of two new to three old. The largest creditor (Mr. Stephen Bird) had consented to invest 2,000*l.* in new shares over and above the amount of his debt. (Hear, hear, hear.)

Lord KENSINGTON said, he himself would put down his name for 200 new shares. (Applause.)

The CHAIRMAN said, he held 150 old shares, and

Digitized by Google

was prepared to take his proportion of the new. (Hear, hear, hear.)

Mr. ALEXANDER said, he would do the same.

The CHAIRMAN expressed a hope that so influential a gentleman as Mr. Stephen Bird would consent to become a Director. (Hear, hear, hear.) Active Directors were almost as much required as money.

Mr. RAMSAY intimated the willingness of Mr. George Burge (at present absent from England) to become a Director, or to forward the undertaking in any way. (Hear, hear, hear.)

It was explained that there were at present nine Directors and three vacancies.

Lord KENSINGTON hoped Mr. Wilkinson would consent to be nominated.

Mr. WILKINSON, amid applause, expressed his willingness.

It appeared that the filling up of vacancies caused by resignation rested with the Directors, and not with a general meeting, but the Chairman said he had no doubt the wishes of the meeting would be carried out in the election of Mr. S. Bird, Mr. G. Burge, and Mr W. Wilkinson.

The SECRETARY then drew up and read the following resolutions, which were severally moved by Mr. G. Godwin, jun., Mr. Whittaker and Mr. Craufurd; seconded by Mr. Wilkinson, Lord Kensington, and Mr. Millbank, and carried unanimously.

1. "That a further sum of 32,000*l.* be raised in 3,200 shares of 20*l.* each, by this Company, under the provisions of the amended Act, and this meeting do create and direct the same to be issued, at the price of 10*l.* per share—such shares to form the first class mentioned in the Report of the Directors.

2. "That a further sum of 15,200*l.* be raised by this Company in shares of 20*l.* each, also under the provisions of the amended Act, such shares to form the second class of shares mentioned in the said Report; and that this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of 20*l.* per share.

3. "That the calls upon the shares of the first-class, which have been created by this meeting, be made by the Directors, payable at the periods mentioned in the said Report."

Mr. GODWIN expressed a hope that in circulating the resolutions among the proprietors it would be strongly pointed out to them that, whatever advantages the line was originally supposed to possess were greatly enhanced by the opening of the large lines with which it was in connection, and of the South-Western, with which the river steamers afforded an easy means of communication; especially now the shareholders could obtain a 20*l.* share for 10*l.*, after 140,000*l.* had been expended in clearing the way, purchasing land, and constructing a portion of the works.

The suggestion was much approved of; and, at the request of the Chairman, Mr. Godwin said he would communicate with the Secretary on the subject.

With reference to one of the resolutions,

Mr. CRAUFURD objected to the Directors being included among the Company's creditors.

Mr. ROY (Solicitor) explained, that any interference with the scheme as signed by the creditors might defeat the whole plan. The Directors need not accept the shares unless they liked.

Mr. CRAUFURD would, therefore, leave it to their own consciences. ("Hear, hear," and a laugh.) The proprietors would think the better of those who did not press their claim. (Hear, hear, hear.)

The CHAIRMAN said, the Directors did not get much from the Company, as they had individually been subjected lately to a debt incurred on the Company's behalf. He saw he was entered as a creditor for about 43*l.*, and recently he had paid out of his own pocket 31*l.* 9*s.*

It was explained by the Secretary, that some time since one of the Directors paid an urgent debt due by the Company, to the amount of 350*l.*, the other Directors personally guaranteeing that sum, and that recently the Director referred to had reclaimed the money, so that each member of the Board had to pay 31*l.* 9*s.*

On the motion of Mr. CRAUFURD, seconded by Mr. GODWIN, it was unanimously resolved, after a good deal of conversation, that the Secretary, after getting as many subscribers in London as he could, should proceed to Manchester, accompanied by an influential proprietor, to lay the plan before the shareholders there and solicit their support. In the course of the conversation, the Chairman, Lord Kensington, Mr. Roy, and others, spoke in high terms of the zeal and ability of the Secretary, and of his qualifications for such a mission.

On the motion of Lord Kensington the meeting was adjourned to Thursday, the 29th inst., at 2 o'clock in the afternoon. It was originally intended to adjourn to Friday, the 30th, but Mr. Craufurd very handsomely suggested that so late a period of the week would be inconvenient to the gentlemen of the press, to whom railway proprietors were so deeply indebted. The shareholders, therefore, altered the day of meeting.

Lord KENSINGTON moved the best thanks of the meeting to the Chairman, which was seconded by Mr. Wilkinson, who eulogized the character and conduct of Mr. Gunter.

The motion was carried unanimously, and having been duly acknowledged, the meeting adjourned.

Previous to the close of the proceedings a memorandum was drawn up with reference to the new shares. Lord Kensington put down his name for 200 shares; Mr. Gunter for 100; Mr. Wilkinson for 20; and Mr. Craufurd, Mr. Roy, Mr. Whittaker, and others, for their several proportions.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

THE general half-yearly meeting of the shareholders in this Company was held on Friday, September 2, at the New Station, London-road, Manchester; THOMAS ASHTON, Esq., of Hyde, the Chairman of the Board of Directors, presided. About 70 or 80 proprietors were present.

The seal being affixed to the register of proprietors,

Captain CLEATHER, the Manager, read the following

DIRECTORS' REPORT.

OPENING OF THE LINE.

The Directors having announced in their last half-yearly Report, that the railway would be opened to Crewe in April, it is perhaps necessary to state that the line was then completed, and that unforeseen obstacles alone prevented their expectations being realised. The causes of the delay are so generally known, that the Directors consider it unnecessary further to allude to them; they would rather now congratulate the proprietors on the termination of differences, and on the opening of the line throughout, which took place on the 10th of last month—an arrangement having been previously made with the Grand Junction Company, under which that Company agreed to provide locomotive power, and all other conveniences, for working the traffic between Crewe and Birmingham—to pay all taxes and duties upon passengers or otherwise—and to do everything that has to be done in respect of the collection, transmission, delivery, and management of the traffic of the Manchester and Birmingham Company at and south of Crewe, on terms which, under all the circumstances, are considered satisfactory; and your Directors feel assured that by cultivating a friendly intercourse between the two Boards, and by affording encouragement and facilities to the public, a very large increase on the existing Manchester traffic may be effected with great benefit to both Companies.

COST OF LINE.

At the first meeting after the opening of the line the proprietors will naturally look for full and accurate information as to the amount of capital required for the completion and furnishing of the railway between Manchester and Crewe; the Directors have, therefore, prepared an estimate of the total cost of the undertaking, which they feel quite confident will not be exceeded.

The total amount expended to July 31, 1842, was	£1,754	843	1 7
Paid since	8	088	8 2
	£1,762	931	9 9
Further capital required—			
For land, works, &c.	104	714	1 8
For engines, carriages, waggons, tools, &c.	16	952	17 6
For contingencies—say	5	401	11 1
Total outlay	£1,890	000	0 0

But this amount includes about 50,000*l.* expended on that portion of the Manchester station to be occupied by the Sheffield Company, and for which an adequate return in rent will be obtained, and about 40,000*l.*—the estimated value of land and materials to be sold.

PROPOSED JUNCTION WITH THE MANCHESTER AND LEEDS LINE.

The attention of the Board has been anxiously directed to the most advisable mode of connecting the Manchester and Birmingham Railway with such other existing railways around Manchester as were likely to extend the appropriate and legitimate traffic of this Company; and, after giving the subject the best consideration in their power, the Directors concluded that the proposed junction with the Manchester and Leeds Railway at Hunt's Bank offered the greatest practical advantages to this Company, by insuring to it a valuable communication with all the railways terminating in Manchester. The Directors, as was communicated to the proprietors at the last half-yearly meeting, therefore caused the requisite plans to be lodged, and notices to be given, in the months of February and March last, for an application to Parliament, in the next session, to authorise the construction of a tunnel line to form this junction, should it be sanctioned by the proprietors; and they have now obtained the necessary estimates of the expense of the proposed works, which amount to 66,500*l.* In connection with the contemplated junction with the Manchester and Leeds Railway, the Directors have made an arrangement with the Directors of that Company, under which, should the proprietors sanction the proposed junction at Hunt's Bank, the Manchester and Leeds Railway Company consent to withdraw all competition with the Manchester and Birmingham Company in the Manchester and London traffic, on terms satisfactory to your Directors.

The Directors are anxious, however, to give those proprietors who have expressed doubts as to the policy of the measure, ample opportunity of inquiring into the bearings of this question as regards the interests of this Company; but as the subject involves many considerations which necessarily affect this Company, not only as proprietors of a railway, but as parties engaged in the business of carriers, your Directors conceive that it cannot be beneficially discussed at a general meeting, they therefore wish this meeting to select a Committee, mainly composed of proprietors who have intimated objections to the proposed junction, with whom the Directors will confer without reserve as to the proposed arrangements with the Manchester and Leeds Railway Company. The Directors would further suggest, that a special meeting be held on as early a day as practicable, for the purpose of receiving a Report from the Committee, and deciding upon the future policy of the Company in reference to this subject.

THE BOARD OF DIRECTORS.

A vacancy at the Board, occasioned by the resignation of Mr. Mathew Lyon, has been supplied by the election of Mr. Richard Birley. The five following Directors now retire from office, in compliance with the provisions of the Act of Parliament:—Mr. Richard Birley, Mr. G. R. Chappell, Mr. James Durham, Mr. Henry Newbery, and Mr. George Saunders—but are eligible for re-election.

The accounts were not read, a copy being in the hands of each shareholder.

Mr. Alderman Burd moved, and Mr. William Rawson seconded, the adoption and printing of the Report, with a statement of accounts.

Mr. DAVID PRICE asked, in reference to the first paragraph of the Report, what were the terms of the agreement with the Grand Junction Company for the traffic between Crewe and Birmingham.

Mr. H. NEWBERY (the Deputy-Chairman of the Board of Directors) stated that the Grand Junction Company were to receive 70 per cent. of the Crewe to Birmingham traffic, they taking upon themselves the whole of the trouble and expense of conducting that traffic—that in fact, the Manchester and Birmingham Company were to receive 30 per cent. net profit upon the traffic for the 54 miles between Crewe and Birmingham. This per-centage was to be calculated upon the Grand Junction rate of fares, this Company having the option of having it calculated upon either the fare from Liverpool to Crewe, or from Crewe to Birmingham, as they might deem most favourable. The agreement to this effect between the Companies had been entered into for three years, at the end of which period this Company would have the option of continuing it or making some fresh arrangement.

Mr. PRICE expressed his satisfaction with this arrangement, as did several other proprietors.

The next subject of discussion was the proposal for connecting this line with the station of the Leeds line at Hunt's Bank, by means of a tunnel under the town; and upon this subject a very long and desultory debate ensued, which we can but briefly notice for want of space. It was incidentally mentioned in this discussion that the Leeds line had recently taken from this Company a large portion of their London goods traffic by charging a lower rate of carriage, and Mr. T. Greig, and several other shareholders, expressed themselves very warmly on the conduct of the Leeds Directors in this matter, charging them with a breach of faith and dishonourable conduct.

Mr. Newbery and Mr. George Saunders assured the meeting that there had been no breach of faith on the part of the Directors of the Leeds Company, and

Digitized by Google

stated that it was probable an arrangement would be come to with them relative to this traffic.

Mr. R. H. WILSON complained of the Directors not affording the shareholders more information with reference to the tunnel, and asked why they had not fulfilled the promise made in their last Report, of calling a special meeting, and laying the matter fully before the proprietors.

Mr. G. R. CHAPPELL (a Director), stated that they had only observed the specifications for the tunnel three weeks ago, and charged Mr. Wilson with making a long speech on a subject he knew nothing about, and indulging in rhodomontade.

Mr. WILSON warmly retorted, but afterwards mutual explanations were given.

Ultimately Mr. R. Barlow moved the appointment of a Committee, for the purpose suggested in the Report, consisting of the following gentlemen:—Messrs. T. Wheeler, David Price, Wm. Rawson, R. Barbour, D. Waddington, Windsor, Ellory, J. Hitchcock, Pearcehouse, T. Greig, R. Wilson, J. Burd, J. Brook of Huddersfield, and G. Hudson of York. The motion was seconded, and after some further discussion, put and unanimously agreed to.

The only other business was the re-appointment of the retiring Directors (named in the Report), which was moved by Mr. Hudson, and after some discussion agreed to. Thanks were voted to the Chairman and Directors.—*Manchester Courier.*

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—In consequence of the letter of Mr. Smith Fowler, bearing testimony to the fidelity of the report of the proceedings at the late general meeting in the provincial paper from which your own was copied, I beg leave to observe, without intending the slightest imputation upon Mr. Fowler, that that gentleman was, during the whole time, in such a state of rabid excitability of temper, that I do not think he is quite competent to judge of the correctness or incorrectness of the report. I was a cool and attentive observer; and I repeat, that the report in question gives anything but a correct notion of the real tone and tenor of the proceedings, whether as regards the boisterous clamour and unreasonable attacks made by a small section of the shareholders, who appeared to have come determined to abuse everything and everybody connected with the establishment—or the calm, affable, and conciliatory manner in which they were met by the Directors. The moment I saw the report I was struck with its unfairness, and the same observation has been made to me by several others; and I am happy to see that I am corroborated by your correspondent "R," who writes from St. Helen's.

A MIDLAND COUNTIES' SHAREHOLDER.

Leicester, Sept. 7, 1842.

P.S. I should have had a word to say about Mr. Samuel Hall and his Smoke-consuming Apparatus, as connected with this railway, but the *smashing* you have given him in a leading article, as well as the correspondence published by Mr. Bell, have saved me the trouble. I would merely observe, that Mr. Hall's *contradiction* of Mr. Kearsley is pretty much upon a par with the celebrated case of flat denial which occured in a debate not long since, but which was afterwards qualified by "We don't *call* them *mills*—we call them *print works*!" Mr. Hall's invention has *not* been *abandoned*—it has *only* been proved to be a dead *failure!*

TO COAL PROPRIETORS, CONTRACTORS, BUILDERS, and Others.—ALWOODLEY, NEAR LEEDS.—Important Sale of Steam-Engines, Pumps, Pumping Gear, Timber, Planks, Iron, Stone, Bricks, and Building Materials.—Messrs. T. & W. HARDWICK beg to announce that they have received instructions to Sell by AUCTION, at Alwoodley, near Leeds, on Wednesday and Thursday, the 14th and 15th days of September, the whole of the Engines, Pumps, and other temporary Materials, the property of the Leeds Waterworks Company, lately used for driving the Drift or Tunnel through Alwoodley Ridge, comprising—

One high pressure Steam-Engine, with fly-wheel, boiler, &c. complete, 20 horses' power.

One ditto, ditto, 12 horses' power.

One ditto, ditto, 8 horses' power.

33 yards of 18 inch pumps, with 17½ inch working barrel, rings, bolts, bucket door piece, 2 buckets, clack, clack piece, spears, &c.

33 yards of 15 inch pumps, with 14 inch working barrel, rings, bolts, bucket door piece, 2 buckets, clack, clack piece, spears, &c.

64 yards of 13 inch pumps, with two 12 inch working barrels, 2 bucket door pieces, 2 clack pieces, joint rings, bolts, 4 buckets, clacks, spears, &c.

32 yards of 11 inch pumps, with 10 inch working barrel, oint rings, bucket door piece, 2 buckets, clack, clack piece, pears, &c,

62 yards of 10 inch pumps, with two 9 inch working barrels, 2 bucket door pieces, 2 clacks, clack pieces, joint rings, bolts, 4 buckets, spears, &c.

42 yards of 8 inch pumps, with 8 inch working barrel, clack, clack piece, bucket door piece, 2 buckets, spears, &c.

26 yards of 6½ inch pumps, with 6 inch working barrel, joint rings, bolts, clack, clack piece, bucket door piece, 2 buckets, spears, &c.

30 yards of 6 inch pumps, with 5½ inch working barrel, joint rings, bolts, bucket door piece, 2 buckets, clack, clack piece, spears, &c.

One pit gin, 14 feet diameter, with head gear and pulleys, carriage for pit top, &c.

One 13 inch capstan, with sheer legs, pulleys, &c., complete.

One 12 inch, ditto, ditto.

Two 9 inch, ditto, ditto.

Pumping frame, pump stays, cisterns, &c., spur wheels, pinions, cranks, beams and connecting rods, pump gear, plummer blocks, brasses, &c.

A quantity of ropes, varying from 1¼ to 2¼ inches in diameter.

Two pairs of blocks.

A quantity of old metal.

Two pairs of blacksmith's bellows, 2 anvils, 1 pair of vice, &c.

A quantity of timber and planks, stone, bricks, flags, &c. Nearly 20,000 superficial feet of inch and 1¼ inch boarding, in good condition, suitable for flooring and many other purposes.

Also a quantity of 2 inch boarding.

The Sale to commence each day at Eleven o'Clock.

The property will be put up in Lots to suit purchasers.

Catalogues, with Conditions of Sale, may be had of the Auctioneers, at their Offices, in Trinity-street, one week before the Sale.

Further information will be afforded, and permission to view and examine the property, will be given to respectable parties, from and after this date, on application at the Office of the Leeds Waterworks' Company in Victoria-road, or of Messrs. George Leather and Son, Civil Engineers, Leeds.

Leeds, August 24, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY. NOTICE—Scrip-Holders are reminded that the Third Instalment of £5 per Share on the new Shares created in pursuance of the resolutions passed at a special meeting of the Proprietors of this Company held on the 28th of April last, will Fall Due on Wednesday, the 21st instant, and that unless the same be paid on that day, or with interest within 14 days afterwards, to any of the undermentioned Bankers, forfeiture of every share which shall after such latter period be in default will ensue:—

London—Messrs. Glyn and Co., 67, Lombard-street.
Liverpool—Messrs. Moss and Co.; Messrs. Barned and Co.
Manchester—Messrs. Jones, Loyd, and Co.
Leeds—Messrs. Beckett and Co.
York—The Union Banking Company.
Dover—Messrs. Latham and Co.; the National Provincial Bank of England.
Ashford—Messrs. Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs. Beeching & Son.
The Country Branches of the London and County Banking Company.

By order, JOHN WHITEHEAD, Secretary.
10, Coleman-street, September, 8, 1842.

LONDON AND DOVER RAILWAY.—EXTENSION TO HEADCORN.—Dover in 6¼ hours, Maidstone in 3¼ hours.

Trains leave the London Station at

1	2	3	4	5	6
a. m.	a. m.	a. m.	p. m.	p. m.	p. m.
30 past 7	30 past 9	30 past 10	30 past 1	4	¼ past 6

Coaches run to Dover in connection with the trains numbered 3 and 4, to Maidstone 1, 3, 4, and 6. The journey to Dover, through Ashford, Hythe, Sandgate, and Folkestone, will be completed in 6¼ hours (at reduced fares), and to Maidstone in 3¼ hours at fares, exclusive of the Railway charge, of 1s. outside, and 2s. inside. Places and parcels for Dover must be booked at the Golden Cross, Charing Cross; Spread Eagle, Gracechurch street; or at any of Messrs. Horne and Chaplin's booking offices. Parcels may also be booked at the London and New Cross stations.

Post horses can be obtained at Headcorn, or any of the Company's stations, by notice being given the previous day of the hour they will be required.

Trains leave the Headcorn Station for London at

1	3	4	5	6
a. m.	a. m.	p. m.	p. m.	p. m.
5 past 7	20 bef. 9	5 past 2	25 past 4	40 past 6

Coaches will leave Dover to meet the trains numbered 4 and 6, and Maidstone to meet the trains numbered 1, 3, 4 and 6.

Time-tables, with full particulars of the Trains, altered Times, and reduced Fares, may be had on application at the various Stations on the line; at the London Bridge Station; at the booking offices; and at the Company's office.

The Fares to and from London and New Cross to the following places, will be as follows:—

	From London.		From New Cross.		
	First-Class.	Second-Class.	First-Class.	Second-Class.	Third Class.
	s. d.	s. d.	s. d.	s. d.	s. d.
Headcorn	10 0	7 0	8 6	6 0	3 8
Staplehurst	9 0	6 0	7 6	5 0	3 4
Marden	8 0	5 6	6 6	4 6	2 9
Maidstone road	7 6	5 0	6 0	4 0	2 6
Tunbridge	7 6	5 0	6 0	4 0	2 6
Penshurst	6 6	4 6	5 6	3 8	2 0
Edenbridge	5 6	4 0	4 8	3 4	1 10
Godstone	5 4	3 8	4 6	3 0	1 8
Teigate	4 8	3 4	4 0	2 6	1 6
Croydon	2 3	1 9	1 6	1 2	1 0

Post-horses are in readiness at the New Cross Station on the arrival of every train to convey carriages to and from all parts of London, at 10s. 6d. each, including the driver; also at the London Bridge Station.

Omnibuses meet every train at New Cross for Charing Cross, Gracechurch-street, &c.

By order, JONN WHITEHEAD, Secretary.
London, 10, Coleman-street, September 3, 1842

BRIGHTON, CROYDON, AND DOVER RAILWAYS—New Cross Station, Kent-road.—Passengers by the above Railways, to and from the West end of the Metropolis, will find every accommodation for Carriages, Horses, &c., at the New Cross Station.

Post horses, Flys, and Omnibuses to all parts of London, at all hours.

MANCHESTER AND LEEDS RAILWAY—TO ENGINEERS, MILLWRIGTS, &c.—The Directors of the Manchester and Leeds Railway will MEET at their Offices, Hunt's Bank, Manchester, on Monday, the 3rd day of October next, to receive Tenders for the supply of One Pair of High-pressure Steam-Engines, constructed on the marine principle; Cylinders, 83 inches diameter and 5-feet stroke, with three boilers, capable of working at a pressure of 50lb. per square inch; also the Rope Geering required for working the Extension Line to Hunt's Bank, consisting of rope wheels, pullies, balance frame and weight, with shafting, pedestals, wall-boxes, &c., fixed complete.

The specification and drawings, showing the details of the rope geering and general arrangement of the engines, will be ready for inspection at the Engineer's office (Mr. Gooch's), Palatine Buildings, Hunt's Bank, Manchester; on and after Monday, the 19th day of September next. The Tenders must be delivered at the Secretary's office, on Monday, the 3rd day of October, 1842, not later than ten o'clock in the forenoon; and parties tendering will be required to be in attendance at three o'clock in the afternoon of the same day.

Manchester, August 31, 1842.

BOLTON AND PRESTON RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £200, and for terms of 3, 5, 7, or 10 years, and to grant Mortgages of the said undertaking, and of the Rates, Tolls, or monies arising therefrom, as securities for such Loans, bearing interest at the rate of £5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan shall be made, will be delivered to the Lenders along with the Mortgages, and be made payable half-yearly, at the Company's Bankers in London, or Bolton as may be preferred.

The Tenders are to express the sums, and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 24th May, 1842.

EDINBURGH AND GLASGOW RAILWAY.—New Stock—Quarter Shares.—The Second Call, being £2 per Share, falls due, in terms of the Resolutions of the Shareholders, on Friday, the 2nd September. Interest at the rate of 5 per cent. will be charged from the above date on the amount of the Call unpaid; and Interest will be allowed by the Company, at the same rate, on all Calls paid in advance.

The Proprietors will please observe, that the receipt for the second and subsequent calls must be given by the Bankers on the scrip, no other evidence of payment being admissible. H. G. WRIGHT, Secretary.

Edinburgh and Glasgow Railway Office,
Glasgow, 27th August, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

IRON PIER, GRAVESEND.—The Commissioners appointed by Act of Parliament 5th Victoria, 1842, for Erecting a Pier at the Royal Terrace-Gardens, Milton next Gravesend, Kent, are prepared to receive Tenders for the immediate execution of the Works. Plans, specifications, and conditions of the contract, may be seen at the Office of the Engineer, Mr. I. B. Redman, 48, Lime-street, City, and at our Offices, Gravesend, on and after Monday, the 12th instant, between the hours of ten and five o'clock. Parties desirous of contracting for the Works, are to deliver in their Tenders according to the prescribed form, on or before Twelve o'Clock at noon, on Monday, 10th of October next, sealed and indorsed "Tender for Terrace Pier," and addressed to the Clerks to the Commissioners of the Royal Terrace Pier, Gravesend.

By order of the Commissioners,
MATTHEWS and HILDER, Clerks.

Gravesend, 6th September, 1842.

TO CIVIL ENGINEERS, &c.—The Advertiser who has had considerable experience, is perfectly acquainted with the profession, and a superior draftsman, wishes to meet with an engagement in the country. Address, post free, to A.B., Mr. G. H. Street, 1, Serle-street, Lincoln's Inn.

LONDON AND CROYDON RAILWAY.—The following Resolutions having been past at the Half-yearly General Meeting of Proprietors, held at the London Tavern on Thursday the 8th September instant. The holders of Scrip will perceive the importance of registering the same immediately, in order that they may be entitled to their full participation in the proposed Loan:—

1. That a Sum not exceeding in the whole £66,000, shall be raised for the purposes of the Undertaking, on the following Terms:—

2. That Notes under the Company's Seal shall be issued, bearing interest at 5 per cent. per annum, for Three Years, with an option until the 30th September, 1844, to the holders, of converting the same into Shares of £20 each, in the proportion of one Share for every £15 so held in Notes.

3. That the interest on the Notes so converted shall cease on the 30th September, 1844

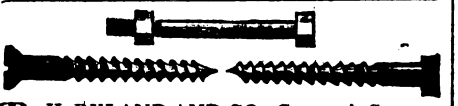
4. That the Subscribers for such Notes shall pay on or before the 15th October, 1842, one moiety of the sum subscribed for, and on the 15th January, 1843, the other moiety of the sum subscribed for.

5. That every registered Proprietor shall have the option, until the 30th September instant, of subscribing for such Notes, in the proportion of £2 for every share held by him, and then duly registered.

6. That any Notes not subscribed for under the preceding option, shall be apportioned among the other Proprietors, or other persons applying for the same.

R. S. YOUNG, Secretary.

205, Tooley-street, 9th September, 1842.



AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by ARTHUR FREELING.

"A work in which the elegant and the useful are eminently combined."

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws, Screw Bolts, Spikes, &c. for Railway and other purposes, also Boiler Rivets, &c.

ELIGIBLE LANDED INVESTMENT.—TO CAPITALISTS AND CONTRACTORS.—The Proprietor of several Tracts of very fine Alluvial Land, comprising several thousand acres, situate in one of the most prosperous and rising Counties in the North of Ireland, now subject to be overflowed by the tide waters, but which could be embanked out at a moderate expense, would sell the largest sites for the purpose of reclamation on extremely advantageous terms; Or he would grant a redeemable rent-charge on the entire property for the capital required for the performance of the work. Principals of known respectability only will be treated with.

Full particulars may be had by addressing by letter (pre-paid), "Landowner," care of Frederick Norman, Esq., Estate Agent, Grafton-street, Dublin.

WARKWORTH COQUET HABROUR.—TO ENGINEERS, CONTRACTORS, AND BUILDERS.—Persons willing to contract for the finishing the North and South Breakwaters Piers, or either of them, now in course of erection at the mouth of the River Coquet, near Warkworth, in the County of Northumberland, are requested to apply by letter, or in person, at the Office of the Commissioners of Warkworth Harbour, at Amble, in Warkworth aforesaid, or to Messrs. Western and Son, No. 7, Great James-street, Bedford Row, London, where Plans and Specifications of the works remaining to be done may be seen, and particulars obtained, and where Tenders will be received.

Amble, 20th August, 1842.

DUBLIN AND DROGHEDA RAILWAY.—At the Half-yearly General Meeting of the Dublin and Drogheda Railway Company, held at No. 22, Marlborough-street, on the 1st day of September, 1842, the Reports from the Directors, Auditors, and the Engineer, having been read, it was

Proposed by Joseph Scott, Esq., seconded by William Evans, Esq., of Manchester—

Resolved—That the Reports now read be received and printed; that the half-yearly Statements of the Accounts, as audited, and the Engineer's Reports, be appended there to, and circulated, for the information of the Share holders.

Proposed by Thomas Mooney, Esq.; seconded by Andrew S. Ball, Esq.—

Resolved—That the Registry of the Proprietors of this Company, as now prepared, be sealed in the presence of this meeting, and be adopted as the Registry of this Company.

Proposed by Peter Eckersley, Esq.; seconded by Wm. Henry, Esq.—

Resolved—That the declaration of Forfeiture made by the Directors of this Company on the 17th of May, 1837, and on the 19th day of November, 1841; of the shares in the capital stock of the said Company, numbered

all inclusive be, and the same are hereby, confirmed. Ordered that the Directors of this Company be, and they are hereby, directed to dispose of the shares so forfeited, in manner directed by the Company's Acts.

Proposed by Francis Purcell, Esq.; seconded by Benjamin Johnston, Esq.—

Resolved—That Messrs. Alexander Findlater, Sackville-street, Joseph Scott, Castle-street, and George Scott, Abbey-street, be requested to audit the Accounts of the Company for the next half year.

Proposed by Peirce Mahony, Esq.; seconded by Hugh Morrisson, Esq.—

Resolved—That the thanks of this Meeting be presented to Messrs. Joseph Scott, Henry Mooney, and Francis Purcell, for their important services in auditing the last half-yearly Accounts of this Company.

Proposed by Thomas Mooney, Esq.; seconded by Charles Hayes, Esq.—

Resolved—That the warmest thanks of this Meeting be given to George A. Hamilton, Esq., for the uniform attention and great services which he has rendered to this Company, in his office as a Director and Chairman of this Company.

Proposed by Major Cottingham; seconded by Andrew S. Ball, Esq.—

Resolved—That the thanks of the Shareholders are preeminently due, and are hereby given, to Mr. Macneill, the Engineer-in-Chief to this Company, for the untiring care and attention he has, from the first moment he became attached to it, devoted to its interests, and attended to the various branches connected with his departments; all which are more fully shown in the Reports of the Board of Directors, as also in the Reports just now read by Mr. Macneill himself.

Proposed by Peirce Mahony, Esq.; seconded by General Luscombe—

Resolved—That the special thanks of this Meeting are due, and are hereby given, to our Managing-Director, Peter Eckersley, Esq., for the zeal and attention with which he has devoted himself to the interests of this Company.

Proposed by Francis Purcell, Esq.; seconded by Joseph Scott, Esq.—

Resolved—That the thanks of the Company are due, and are hereby given, to John Kidd, Esq., the Secretary, for the very satisfactory manner in which he conducts the business of his departments.

William Hodges, Esq., having vacated the Chair, and Matthew Fortescue, Esq., having been called thereto:

Proposed by Peter Eckersley, Esq.; seconded by R. D. Kane, Esq.—

Resolved—That the cordial thanks of the Meeting be given to William Hodges, Esq., for his able and impartial conduct as Chairman this day.

DIRECTORS' REPORT.

The Directors have much pleasure in reporting to the proprietors that the works have proceeded in a very satisfactory manner during the last half-year, the fine weather during the spring and summer having afforded a most favourable opportunity, not only for their rapid progress, but also for their economical execution.

The Report of the Engineer-in-Chief, which contains a very detailed account of the state of the works, will be found extremely satisfactory.

Since the last half-yearly meeting the remainder of the land requisite for the line and stations has been purchased, and for a distance of 13 miles on the Drogheda division of the line friendly arrangements were made in every case except three, and those only of minor importance. The portion, however, between the Clontarf estuary and the Dublin terminus, in which a great variety of interests were involved, and the value of which it was difficult to adjust

Digitized by Google

was strongly contested at the inquisition; and although considerable expense was in consequence unavoidably incurred, the result of the contest proved its necessity, the final award of the jury amounting to 11,735*l.*, while no less a sum than 48,500*l.* was claimed by the several parties interested.

The total cost of the land required for the whole of the line is 48,000*l.*, or 1,511*l.* 16s. 2d. per mile. This amount, considering that a large quantity of land is purchased within and contiguous to the city of Dublin and town of Drogheda, the Directors regard as a very moderate sum, especially when contrasted with the ordinary cost incurred for land by English Railway Companies.

The contracts for the remainder of the entire line have just been completed. The total amount of the whole of the contracts for the construction of the works from the Dublin terminus to that at Drogheda is 209,035*l.*

Contracts have also been made on peculiarly favourable terms for nearly the whole of the rails which will be required for the permanent way; the amount of these contracts is computed at 55,412*l.*

The Directors have therefore, on the present occasion, the satisfaction of congratulating the shareholders that they have now good grounds for assuming, as may be perceived from the following summary, that the line will be completed and in a state ready for the locomotives to work upon it, for a sum not exceeding 14,000*l.* a mile, as the Directors originally contemplated and held out to the shareholders.

SUMMARY.

1. Land for line and stations	£48,000	0	0
2. Contracts made for works to complete the line ready for laying the permanent way ..	209.035	0	0
3. Contracts for rails	55,412	9	6
4. Estimated cost of sleepers, fastenings, laying the permanent way, &c. &c.	48,624	0	0
5. Amount already expended in procuring Acts of Parliament, law charges, engineering, surveying, and all other incidental expenses	54,461	18	0
Total	£415,533	7	6

It is also important to state that this summary includes a double line the whole distance, with rails of 75lbs. to the yard, while the original estimate was made on the assumption that a portion of the way would be laid with a single line, and that rails of 56lbs to the yard would be used.

It is, therefore, extremely satisfactory that the Company will derive these substantial advantages from the unavoidable delays which have occurred in the prosecution of the works, and which the proprietors have been accustomed to consider as peculiarly injurious to the undertaking, while by the favourable occurrence of circumstances it now appears that any loss which they have incurred on account of the railway not having been completed at an earlier period, is far more than compensated by the great advantages which have thereby accrued.

The entire length of the line being 31¼ miles, at the estimate of 14,000*l.* per mile, would cost 444,500*l.*, and from the total amount of the summary it will therefore be observed that 28,966*l.* 12s. 6d. is left for any expenditure which may be necessary on account of extras, engineering, law charges, and other incidental expenses, a sum which the Directors are of opinion, judging from their past experience, is more than adequate for any outlay which will have to be incurred for these purposes, and a portion of which they feel satisfied will be available towards the purpose of locomotives and general stock, and for the erection of stations. As respects this last item of expenditure, the Directors intend to exercise the most rigid economy consistent with neatness and utility; and, as regards the general stock, it is obvious that the greater the extent required by the actual traffic, the more beneficial it will be to the shareholders. It will, however, be the object of the Directors to purchase such quantity only as the business of the Company will from time to time be found absolutely to require.

In reference to the pecuniary affairs of the Company, the Directors have great satisfaction in calling the attention of the proprietors to the promptness with which the calls are now paid, and to the general state of the finances.

At the last half-yearly meeting the forfeiture of certain shares, which the Directors had declared forfeited for non-payment of calls, was confirmed, and the Directors recommend the confirmation, by the present meeting, of the forfeiture of certain other shares, which they have duly declared forfeited some time ago. In reference to those shares, the Directors, after the fullest consideration, came to the resolution (of which the proprietors were fully acquainted by circular) of distributing them upon advantageous terms among the shareholders whose calls had all been paid up on a specified day; and the Directors are happy to state, as indicative of the confidence which is felt in the undertaking, that a much greater quantity were applied for than the Directors had to distribute, and that the consequence of this distribution has been to increase the revenue derivable from calls, and to give a character of great respectability to the share-list.

In the last half-yearly Report the Directors stated that they had been in communication with Government on the subject of a loan in aid of their undertaking, and the discussion which took place in the last session of Parliament, on the question of the Irish railways, induced them to make a special application for a loan of 150,000*l.* in aid of the completion of the works from Dublin to Drogheda, and the Directors have great pleasure in congratulating the proprietors on the very favourable manner in which that application was received by Sir Robert Peel.

The loan having to be advanced by the Exchequer Loan Commissioners, a formal application was at once made to them, and certain queries were shortly afterwards propounded by the Commissioners respecting the state of the works, the prospects of the undertaking, &c., to which the Directors had to give a detailed reply. Some delay arose in preparing the replies in due form; but they are now satisfactorily arranged, and the Directors expect to receive the first portion of the loan in a few weeks, the loan having to be advanced by quarterly instalments.

ENGINEER'S REPORT.

My Lord and Gentlemen,—It gives me great satisfaction, to be enabled to state that, since I last had the honour to lay a Report before you, six months ago, the various works on the line have been carried on with regularity and vigour, without the slightest hindrance or interruption.

The unprecedentedly fine weather during that period has been most favourable to the undertaking, and has enabled the contractors to carry on their operations with economy to themselves and advantage to the Company, as nothing tends more to the stability and permanency of undertakings of this description than their being executed in dry weather; and it is but justice to the contractors to state, that they have evinced every desire to take advantage of it, and forward their works with as much expedition as possible by working both night and day without intermission; and the consequence of which has been that more work than could have been expected under ordinary circumstances has been executed within that time, as will be seen from the following statement:—

On the first contract, from the terminus in Dublin to the Royal Canal, the contractor, Mr. M'Cormick, who only got possession of the land ten days ago, has already laid the foundation of eight piers for the arches, carried up six to the level of the inverts, and has carted upwards of a million of bricks on the ground, with a proportionate quantity of lime and sand, which will enable him to proceed with great expedition in this portion of the work.

On the second contract, the Messrs. Jeffs have been unremitting in their attention to the work under their management; they have carried out the embankments from the Clontarf shore, 450 yards, into the estuary, the outer slope of which has been partly faced with stone in a permanent and workmanlike manner. They have also built four bridges, one of forty feet span, in the Clontarf channel; one at Raheny-road, and two occupation bridges. They have laid a cast-iron syphon, three feet in diameter, to carry the Rose Vale stream under the railway; and have also commenced two other bridges, and will probably complete the whole of their masonry this Autumn. The quantity of earthwork which they have removed into the embankments during the summer, from one face alone, and to an average distance of nearly two miles, is upwards of 100 000 cube yards. During this period, they have given 43,095 days' work to labourers, 3,744 to masons, 1,296 to bricklayers, 1,152 to carpenters, 576 to enginemen, 576 to stokers, and 3,024 to horses, and two locomotive engines have been constantly in operation.

On the third contract, Mr. M'Cormick has carried out the embankments 700 yards across the Malahide estuary, both slopes of which are pitched with stone. He has also laid the foundations of the abutments and piers of the bridge over the Malahide channel, and nearly completed the erection of the timber arches. He has also built four bridges: one at Kilbarrack-lane; one at Baldoyle road; one at the Maine road; occupation bridges at Drumnigh, Portmarnock, and Hazlebrook: and also finished the Strand bridge, and nearly completed the bridge over the Malahide road. All these bridges are well executed, the one over the Malahide road being a specimen of excellent workmanship; there now remains only one bridge to be completed on this division of the line. The quantity of excavation executed by Mr. M'Cormick in the last six months amounts to 113 703 cube yards of earth and rock. The number of days' work he has given during the same period has been to labourers 81,900, to smiths 1,450, to carpenters 6,916, to masons 4,550, to brickmakers 9,100, and to horses 7,644.

On the fourth contract, which was only commenced by Mr. Dargan in March last, four bridges have been built—one at Donebate, one at Rogerstown, one at Hacketstown, and one at Skerries; besides laying the foundations and building the abutments and wings of four others up to the springing, one of which will be completed this week, and preparations have been made for the remaining three, which will probably be finished this autumn. He has also built 15 culverts, and made 20,176 yards of fencing. The quantity of earth which has been removed from nine faces has been 176,700 cube yards; the embankment at Corballis strand has been carried 130 yards into the estuary, and at Rogerstown 250 yards. The masonry on this contract is of a very superior description, which does great credit both to the Contractor and to the Resident Engineer, Mr. Bournes, who has been most attentive to this important portion of the work. The number of days' labour given on this contract, during the half-year, amounts to 79,776—viz., 72,000 to labourers, 1,152 to carpenters, 576 to blacksmiths, 6,048 to masons and stone-cutters, and 8,064 to horses.

From the increased experience we have now had of the different strata through which the line passes, I am confirmed in my former opinion as to its favourable character for railway works, both as to facility of construction, and economy in the future repairs and maintenance of the line. This favourable circumstance, combined with the low contract which has been made for the purchase of the rails, and a considerable saving which I hope to effect in laying the permanent way, has enabled me to adopt a more substantial plan in the construction of the bridges and viaducts than I had at first contemplated, and to substitute stone and cast metal instead of timber in all the principal works of this description, except over the Malahide channel, where timber has been used, as I have considered it both safer and more suitable in that situation than either stone or metal would have been, and very much cheaper—probably one-fourth the price of stone.

The recent letting of the remaining works on the line to Drogheda, under my original estimate, to respectable contractors, and the purchase of all the land at a very moderate sum, justifies my former opinion that the whole of the work will be executed for 14,000*l.* per mile, which will include every expense except that of the stations and carrying department, which will in a great measure depend upon the extent of traffic over the line.

In the contracts which have just been made, the masonry forms a very considerable item. This partly arises from the viaduct at Balbriggan, and an expensive bridge over the river Nanny, where the foundation is exceedingly bad; but, more especially, from the numerous occupation bridges, which are very expensive in the first instance, but the proposed formation of which, no doubt, had the effect, not only of lessening the purchase of land and diminishing the claims for severance, but the erection of which will ultimately tend to a very great saving in the wages of police and watchmen, as there will be very few crossings on the level throughout the whole length of the railway. This circumstance will not only produce a saving in the annual expenditure, but will tend very considerably to the safety of the public, and facilitate the working of the line.

In conclusion, I may state that the contractors have individually evinced the greatest desire to execute their respective portions of the works in a permanent and efficient manner, that they express themselves fully satisfied with the prices they receive, and the manner in which the superintendence of the works is carried on; and that there is no claim or demand by them of any kind remaining unsettled up to the present time.

I have the honour to be, my Lord and Gentlemen, your most obedient servant.

JOHN MACNEILL.

Dublin, 31st August, 1842.

The Directors in Account with the Dublin and Drogheda Railway Company, for Half-year to 30th June, 1842.

BRISTOL AND EXETER RAILWAY.—Notice is hereby given, That in pursuance of a Resolution of the last General Meeting of Proprietors, the Directors of this Company are ready to receive Tenders of Loans of Money, in sums of not less than £200, and for terms of not less than three, nor more than seven years, on security of Loan Notes, under the Corporate Seal of the Company, bearing interest at the rate of 4½ per cent. per annum, payable half-yearly.

Tenders, expressing the sum, the term of years, and the residence of the Lender, to be addressed to the Secretary.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Bristol Office, 30, Broad street,
Septen ber 2, 1842.

Interest-Warrants will accompany the Loan Notes.

TO RAILWAY COMPANIES, MANUFACTURERS, COALOWNERS, CONTRACTORS, and OTHERS.—Valuable Machinery and Steam-Engines, at Middlesbrough-on-Tees, to be Disposed of by Private Contract.

The Directors of the Stockton and Darlington Railway are desirous of selling the whole of the Machinery, Steam-Engines and Boilers, and Fire Extinguishing Apparatus, situate at the terminus of their line at Middlesbrough-on-Tees, and which were used for the purpose of shipping coals prior to the opening of the Middlesbrough Dock. The Engines, Boilers, and Machinery generally, are in excellent working order, and will be found particularly worthy of attention. There are two High-Pressure Steam-Engines, with two Cylindrical Boilers attached to each, the cylinder of one engine being 18 inches diameter, and working with a 5 feet stroke, the other 19 inches diameter and a 4-feet stroke, and both work with a beam and vibrating pillar. The boilers of one are about 18 feet 9 inches long, and 5 feet 6 inches diameter, the other 26½ feet long and 5 feet diameter. The whole of the valves and pipes attached are perfect, and one set of boilers is fitted up with Scott's Patent Collectors. Both of the Engines are in good working order.

The Machinery consists of the apparatus necessary for raising the coals to an elevation of 19 feet 6 inches above the level of the railway, and thence lowering them into the ships' holds by 8 drops erected after the approved plan first adopted by W. Chapman, Esq., Civil Engineer, of Newcastle-upon-Tyne. The spur gearing, fly wheels, shafting, sheaves, and chains, gearing for working the force pumps of the Fire Extinguishing Apparatus, and all the sheaves, shafting, brake wheels, suspending frames, and the much admired machinery for lowering the empty waggons, are in good working order, and could be readily removed to any part of the United Kingdom by water or railway conveyance.

The whole of the above Machinery, Steam-Engines, &c., may be inspected by intending purchasers at any time, and further details obtained on application to John Harris, Engineer, Darlington. The whole will be disposed of in one Lot, or the Steam-Engines and Machinery separately, as may be hereafter agreed upon.

Stockton and Darlington Railway Office,
August 22, 1842.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Winans, Esq.
G. Palmer, Esq.	

Standing Counsel—*R.* Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be [illegible]

Also to Agents, Travellers, Clerks holding, or being desirous of holding, Confidential and Responsible Situations, the Guarantee Society presents immediate Facilities, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

NORTH MIDLAND RAILWAY.—At the Twelfth Half-yearly Meeting of the North Midland Railway Company, held at Derby, in pursuance of the provisions of the Act of Incorporation, 25th August, 1842,

WILLIAM LEAPER NEWTON, Esq. in the Chair,

The Advertisement calling the Meeting having been read, it was unanimously resolved—

"That the Seal of the Company be affixed to the several registers of shares," which was done accordingly, in the presence of the meeting. The Secretary then read the Report, and it was resolved—

"That the Report now presented to the Meeting be adopted and printed, together with the Report of the Auditors, for circulation among the Proprietors; and that a Dividend out of the net profits of the Company's revenue, up to the 30th of June last, be declared of 20s. per share upon every £100 share, 10s. upon those of £50, and 6s 8d. upon those of £33 6s. 8d., each free from Income Tax, and payable on the 15th September next."

NORTHERN AND EASTERN, BRIGHTON, CROYDON, DOVER AND SOUTH-EASTERN RAILWAYS.—Messrs. HORNE and CHAPLIN having effected the necessary arrangements for the conveyance of passengers and parcels by railway, and thence by coaches to the following places, beg to state, that places can be secured, and parcels booked at and forwarded from their several offices, where every information may be obtained as to the Hours of Departure, Rates of Fares, &c. &c., to

Norwich	St. Ives
Cambridge	Huntingdon
Wells	St. Neots
Holt	Biggleswade

Lord Wenlock	Robert Cracroft, Esq.
Lord Worsley, M. P.	Robert Denison, Esq.
Hon. E. R. Petre	P. Saltmarshe, Esq.
	Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

FIRE INSURANCES are also effected by this Company, on the most moderate terms.

FARMING STOCK Insured without the Average Clause.

Prospectuses, with the Rates of Premium, and every information, may be had at the Head Office in York, or of any of the Agents.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Cranes for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases. &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

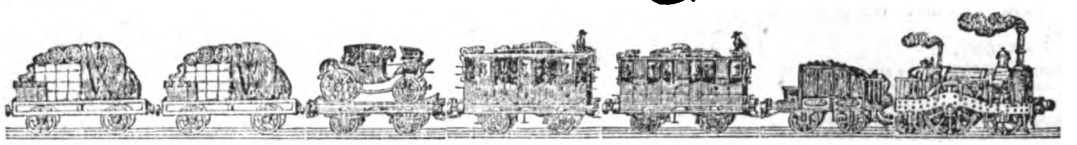
TENTH EDITION—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition* of which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun* evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury.*

"Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it render it invaluable."—*Magnet.*



Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, September 10, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 246. Vol. V.—No. 38.] SATURDAY, SEPTEMBER 17, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY COMPANY.—Notice is hereby given, That in pursuance of the provisions of the Acts of Parliament, the Half-yearly General Meeting of the Shareholders in this undertaking (including Shareholders in the Line from Bristol to Coalpit Heath, as well as Shareholders in the Extension Line), will be held at the White Lion Inn, situated in Broad-street, in the City of Bristol, on Thursday, the 29th day of September instant, at One o'Clock in the afternoon.

By order of the Committee of Management,
GEORGE JONES, Chairman.
ROBERT FLETCHER, Secretary.

Bristol, 5th September, 1842.

The Chair will be taken at One o'Clock precisely.

The Transfer Books will be Closed on Saturday, the 24th day of September instant, and not re-opened until after the said General Meeting on the 29th of the said month.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London.

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—EXTENSION LINE.—CALL of £10. per Cent., being £5 per Share.—The Committee of Management of this undertaking having resolved, at a Meeting held in Bristol this day, to call, under the provisions of the Acts of Parliament relative to the said undertaking, for an Instalment of £5 per Share, Notice is hereby given, That the Subscribers to the said undertaking, and Proprietors of Shares therein, are required to pay, on or before the 24th day of September instant, to any one of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.,—

London—Messrs. Barnett, Hoare, and Co,
Bristol—Messrs. Miles, Harford, and Co.; Messrs. Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; The West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Company.
Manchester—Messrs. Jones, Loyd, and Co.

By order of the Committee of Management.
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who remain in arrear for this Call after the above-named 24th day of September.

5th September, 1842,
Office, Exchange-buildings, Bristol.

MR. SAMUEL HALL'S PATENT SMOKE-CONSUMING APPARATUS.—The following papers may be had gratuitously, on application by letter to Messrs. H. and W. Good, No. 60, Moorgate-street; or of Mr. Hall, No. 18, King's Arms Yard, London,

Refutation of Mr. Josiah Kearsley's Incorrect Report to the Directors of the Midland Counties' Railway respecting the above Apparatus.

Remarks on Mr. John Fox Bell's Defence (if Defence it may be called) of Mr. Josiah Kearsley's misstatements, as advertised by Mr. Bell in the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*, of the 3rd instant. Also,

An Exposé of the pretended claims and overweening vanity of Mr. Charles Wye (*alias* Counsellor) Williams, as displayed in his paper published last week in the *Mechanics' Magazine* and the *Mining Journal*.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle-street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

BRIGHTON, CROYDON, AND DOVER RAILWAYS—New Cross Station, Kent-road.—Passengers by the above Railways, to and from the West end of the Metropolis, will find every accommodation for Carriages, Horses, &c., at the New Cross Station.

Post-horses, Flys, and Omnibuses to all parts of London, at all hours.

It is particularly requested that when practicable a day's notice should be given at the station of all carriages and horses intended for conveyance on the line, and that they should be on the spot at least 20 minutes before the time advertised for the starting of the trains, tables of which may be procured at all the stations.

MANCHESTER AND BIRMINGHAM RAILWAY—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are prepared to GRANT MORTGAGES (under the powers of their Act of Parliament) of the TOLLS and WORKS of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of three, four, and five years, from December 25, 1841, at the option of the Lender. Interest warrants, calculated at the rate of £4 10s. per cent. per annum, and payable at the Company's Bankers in London or Manchester, on the half-yearly days on which the Interest will become due during the whole period of the Loan, will be delivered to the Lender with the Mortgages.—Particulars, explaining the peculiar eligibility of this Security, may be obtained at the Company's offices, No. 43, Piccadilly, Manchester; or at the office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 17th Feb 1842.

AN ELEGANT AND USEFUL PRESENT.

Just Published, in One Volume, price 5s. 6d., handsomely bound, with gilt leaves, sides, and back, and illustrated by FOUR HUNDRED ENGRAVINGS,

PICTURESQUE EXCURSIONS; forming, by means of its engravings and descriptive letter-press, a complete Guide to, and Remembrancer of, all scenes of interest connected with the following places and their neighbourhoods:—Richmond, Hampton Court, the river Thames from Kingston to the Nore, Margate, Ramsgate, Dover, Hastings, St. Leonard's, Brighton, Shoreham and its Railway, Worthing, Bognor, Southampton, Netley Abbey, Lymington, and the Isle of Wight. Edited by Arthur Freeling.

"A work in which the elegant and the useful are eminently combined."

London: Ackerman, Strand; *Railway Times* Office, Tilt & Bogue, and Bell & Wood, Fleet-St.; and all Booksellers.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carne and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

PARISIAN BITUMEN COMPANY.—The Directors of the PARISIAN BITUMEN COMPANY beg to call the attention of Engineers, Architects, Surveyors, Builders, and the Public, to the price at which they will undertake to lay down their Bitumen, and to its applicability for pavements, roofs, lining tanks, &c.—also to the successful use of it as a cement in the Weirs on the Upper Medway, whereby great economy in the primary construction and future repairs are attained. The prices are as follows:—

Bitumen prepared for cement, per ton	£3	0	0
Covering viaducts or arches of bridges, catacombs, vaults, terraces, &c., to exclude damp, 1¼ inch thick, per superficial yard	0	4	6
Paving pathways, granaries, warehouses, &c., 1½ inch thick, per square yard	0	4	6
Paving barns, court yards, tun rooms, wharfs, stables, &c., 2 inches thick, per ditto	0	5	6

The above charges do not include the cost of carriage, which must be borne by the parties by whom the work is required.

Mill Wall, Poplar, April, 1842.

ULSTER RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly meeting of the Ulster Railway Company was held on Thursday, September 8, in one of the rooms of the railway station, Ulster; JAS. GODDARD, Esq., was called to the chair. He proceeded to read the following

REPORT.

The Directors beg leave to submit to the shareholders the following Report, for the half-year ending on the 31st of Aug. last. While they cannot but congraulate the Company upon the perfect regularity and safety with which their business has been conducted, and upon the efficient order in which the works continue, they must at the same time express their regret that the results of the half year's working of the line are not so satisfactory as might be desired. The following is a statement of the account of traffic from the 1st March till 31st August, both inclusive:—

First-class passengers.....	14,907	£1,166	10 10
Second-class ditto.....	79,203	3,282	13 0
Third-class ditto.....	154,673	4,180	0 2
Total.....	248 783	£8,579	4 0
Received for carriage of goods and parcels....		1,765	15 5
Total receipts from traffic		£10,344	19 5
Received for register fees		3	10 0
		£10,348	9 5
From which deduct the expense of working the line, as per Account No. II.....		5,631	6 10
And there remains a balance of		£4,817	2 7

Net profits during the half-year. Out of this sum, the Directors would recommend, that a dividend of 9s. per share be now declared, which will leave 88l. 10s. 7d. to be added to the reserved fund.

The universal depression which has pervaded all branches of trade appears to the Directors to be a main cause of the deficiency in the Company's receipts. The carrier cannot expect his trade alone to flourish, when every other department has reached so low an ebb as we have witnessed, during the last summer. The Directors would, however, fain indulge the hope, that as trade in general shows some symptoms of revival, the business of the Company may soon experience a similar change. They anticipate that the advantages of a cheap and speedy transit for produce, to a good market, which they offer to the public, and which will be in complete operation immediately, will lead to a considerable increase in the goods' traffic.

During the last half-year the Directors have not been unmindful of the necessity of pursuing strict economy in every department of the works. With a view to reduce the current expenses as far as possible, consistent with the safety of the public, and the security of the Company, they have, from time to time, diminished the number of persons in their employment.

The providing fuel for the engines—necessarily an important item in the ordinary expenditure—has also occupied their attention. As the consumption of coke depends much upon its quality, it is of the first importance that the Company should be supplied with the best article on the lowest terms. To effect this object, the Directors have determined to become the manufacturers of their own coke; and they look forward with confidence to the results, as proofs that in this matter they have exercised a sound discretion. The ovens are now almost completed, and it is expected that they will produce coke fit for use very soon after the time fixed upon for running the trains through to the new station at Portadown.

The Directors have also deemed it advisable to undertake the building not only of the waggons for the goods' department, but also of the first and second-class carriages; by which means, while they produce vehicles more substantial, and equally well-finished, they are able to effect a considerable saving in their cost. There have been made on the Company's premises, and are now nearly ready for use, four second-class carriages, and two others, each of which has two compartments fitted up for first-class passengers, and the other two for second-class. Besides these, there are some others in progress; and there have also been built 48 waggons of different descriptions for the conveyance of goods.

Before leaving the subject of the ordinary traffic, there is another topic to which the Directors would call the particular attention of the Company. In the Report presented to the general meeting, in September last, it was stated, that, in compliance with the expressed wishes of a large and influential body of the shareholders, preparations were then in progress for adding a third-class carriage to the train; and, in the last half-yearly Report, it was mentioned, that that charge had been carried into effect. It is now universally acknowledged, that the anticipations of the advocates of the third-class have not been realised; and it has become a subject of serious deliberation with the Board, what change is required in reference to that matter. The subject has been pressed upon their attention, by a letter signed by some large shareholders; but, as frequent changes are inexpedient, and extremely prejudicial, and as the plan of third-class carriages originated with bodies of shareholders outside the Board of Directors, the latter were unwilling to make any alteration in that particular, without having the opinion of the body of the shareholders upon the point, especially as the opportunity of obtaining the expression of that opinion, at a general meeting, was close at hand. Besides, the completion of the line to the Portadown terminus affords a convenient opportunity for introducing such changes as may be deemed expedient, in this or any other particular; but the Directors would strongly urge upon the proprietors the absolute necessity there is, for the well-being of the concern, that any alterations that may be agreed upon be of a permanent character; and that they should not become the subject of agitation, almost the very moment they are carried into effect. With a view to prevent what cannot be too much deprecated as an evil, the introduction of repeated changes, the Directors have postponed, but without any prejudice to the interest of the Company, the running of the trains to the Portadown terminus, until after the present meeting; the station and offices at that place will, however, be opened to the public, on and after Monday, the 12th instant.

But, whilst the Directors are most desirous to have the opinion of the Company at large, respecting the third-class carriages, they have now left the subject unconsidered. They, after much deliberation, have come to the conclusion, that, while the third class should not be entirely abolished, the most effective mode of working it will be that which is adopted on most English lines, viz.:—To make the ordinary passenger trains consist of first and second class carriages only, and to attach the third-class carriages to a goods' train, to travel at a slower rate, which the Directors are of opinion, it will be necessary to run from the time of the extension to Portadown. By thus detaching the third-class carriages and the goods' waggons from the regular passenger trains, the time occupied by the latter will be considerably reduced, and the delays at present necessarily incurred at the intermediate stations prevented.

With regard to fares, the Directors are of opinion that, in the event of the above-mentioned change with regard to the third-class carriages, being made, there should be no alteration in the fares for that class; that the second-class fares should also remain unchanged; but that those of the first class should be increased as follows, viz., by charging to Lisburn, 1s.; to Moira, 1s. 9d.; and to Lurgan, 2s. 6d.; leaving the Portadown rate 3s. as at present.

The Directors are happy to state, that the works for which Mr. Dargan had contracted are now almost completed, and so far as they have proceeded, they have been executed in a substantial, satisfactory, and workmanlike manner. The time occupied has been somewhat greater than was originally contemplated; but in such undertakings difficulties which no human prudence can foresee, will frequently arise to retard the progress of the work. The Board, however, feel bound to express the satisfaction they have uniformly had in their intercourse with Mr. Dargan, under all circumstances.

Owing to a delay caused by the ill health of the contractor for the buildings at the Portadown station, about the end of June last, the Directors found it necessary to put a superintendent, employed by themselves, in charge of the works. Since that step was taken the work has proceeded with steadiness; the buildings which will be required in the first instance are now completed, and will be found to be extremely convenient.

The total amount already expended in the Company's works, and in providing the working stock, is 314,302l. 11s. 9d. This sum is composed of the following items, viz.:—

Received for calls	£261,564	0 0
Interest, balance received by the Company..	4,430	19 8
Wear and tear and reserved fund	4,021	4 2
Due to Woodville, Williams, and Hugh Wallace.....	51	5 0
Unpaid dividends	452	13 9
Board of Works	20,000	0 0
Northern Banking Company	19,868	1 0
Traffic, after deducting cost of working the line, as per last two items of balance sheet	4,219	8 11
Total.....	£314,302	11 9

The interest on all loans made to the Company will, of course, be charged to the "Interest Account," until that account be balanced; after which it will necessarily become one of the regular charges to the account of traffic, until the debts be liquidated.

To meet the further demands upon them, in order to complete the works, the Directors will require an additional sum of at least 50,000l.; and they are most anxious to raise the amount necessary for the undertaking in the manner that will prove least burdensome to the shareholders. There still remains a small balance due upon the existing shares in the Company, part of which the Directors hope to make available; and there are 1,492 shares which have been bought up by the Company, after forfeiture for non-payment of calls.

It has been deemed expedient to revise carefully the bye-laws of the Company. An amended code of regulations is, accordingly, now presented to the proprietors for their approval, which, after having been submitted to and approved by the Railway Department of the Board of Trade, and received the common seal of this Company, will have the force and effect of bye-laws.

The Board have given much attention to the form of the accounts annexed to this Report, in order that they may be made out with such particularity as to be satisfactory, without encumbering them with so much minuteness as would only prove perplexing. They feel that it is of the greatest importance that the form in which the accounts are presented to the shareholders should be uniform, in order to afford a convenient means of comparing the receipts and expenditures of different periods.

The following gentlemen now vacate their seats at the Board, in rotation, agreeably to the Act of Incorporation, viz.:—James Goddard, John Thompson, Andrew Malholland, W. J. Campbell Allen, Jonathan Richardson, John Hardy, and Alexander Hunter, Esqs. The last-named gentleman had been elected by the Board, agreeably to the provisions of the Act of Incorporation, to fill up the vacancy created by the retirement of Mr. Curell.

(Signed) JAMES GODDARD,
Chairman of the Board of Directors.

Board Room, Sept. 1, 1842.

ENGINEER'S REPORT.

In compliance with the resolution of the Company, requiring a Report from me on the "state of the works," I am happy to say, that all the works connected with the line of railway are in excellent order; and it is with no small degree of satisfaction that I refer to the perfect safety and regularity with which the traffic has been carried on since the first opening, notwithstanding the difficulties necessarily arising from opening the line in sections, and with unfinished arrangements. The slips at Farm Hill, alluded to in a former Report, have been removed and the slopes adjusted, so that I do not anticipate any inconvenience from that source in future.

The three engines, which I stated in my last Report to have required re-tubing, have each undergone a thorough repair, the cost of which to the Company has been less than was originally anticipated.

The whole of the engines and working stock of the Company are at present in complete and working order.

In reference to the working expenses of the line, it may be proper to state, for the information of the proprietors, that our present consumption of coke is about 33lbs. per mile; but it is right to mention, that the aggregate consumption for the half-year amounts to about 39lbs. per mile. This increase has arisen from the bad quality of the coke with which we have, in some cases, been supplied; and I perfectly agree with the Directors in entertaining confident anticipations respecting the steps taken in the erection of ovens, for the manufacture of coke on the Company's premises.

The total cost of locomotive power upon this line is, at present, about 11d. per mile.

(Signed) JOHN GODWIN.

Total	14,907	79,203	154,673	248 783	8,579	4	0

N.B. It may be proper to mention, that in this Table, from Belfast to Dunmurry or Lisburn, and from Lisburn to Dunmurry or Belfast, is called one stage; from Lisburn to Moira another; from Moira to Lurgan a third; and from Lurgan to Portadown a fourth.

The CHAIRMAN then said, the Directors, in their Report, had alluded to a letter received from an influential body of proprietors, respecting the third-class carriages; and, to complete the Report, it would be necessary to read the letter in question. He accordingly read the letter, in which it was stated, that there had been a failure in the produce of the third-class trains; and it was stated, that the running of these trains had been prejudicial to the interests of the Company. The proprietors whose names were affixed to this letter, accordingly recommended that trial should be made of one standing carriage only, and that no more than a reasonable number of persons should be allowed to be conveyed by it. The Chairman then stated, that he did not wish to detain the meeting, at that time, by any remarks, but would hear any observations which might be made, by gentlemen present.

Mr. JAMES BRISTOW said, he had great pleasure in moving, that the Report which had been read by the Chairman be adopted, and that the proceedings of the meeting be circulated among the proprietors.

This motion having been seconded by Mr. EDWARD WALKINGTON, was put from the Chair and passed.

The CHAIRMAN would request the meeting to allow the new laws and regulations to be read. They had, they were aware, to put the seal of the Company on them before they would pass into a law. Therefore, being a matter of importance, he would be glad to have them read in the first instance.

Mr. W. J. C. ALLEN accordingly read the rules and regulations. He would observe, by way of preface, that some defects which had been found in the working of the bye-laws had led to the revision of them. The Board had been pleased to commit the matter principally to Mr. Hancock, himself, and their Engineer; and they had come to the resolution of recommending the prepared bye-laws for the adoption of the Board. The Board had adopted them, and had recommended them to the meeting for the adoption of the gentlemen present. The bye-laws meant those laws which affected others than servants or officers of the Company, viz., shareholders. The rules and regulations were for the government of those who are servants and officers of the Company. Mr. Allen then read the bye-laws, and also the rules and regulations. He also proposed a resolution to the effect that the existing bye-laws, orders, and rules of the Company, should continue in force only till the new regulations, which had been submitted, could legally come into operation, and that the Company approved of the new code.

Mr. JOHN HANCOCK seconded the resolution.

Mr. R. GRAY wished to ask a question. He wished to know if it would be necessary for the Directors to obtain tickets for travelling on the railway, like other passengers.

Mr. ALLEN thought that Directors travelling on their own business should not travel free; but he conceived if Directors were going on the business of the Company they would not require tickets.

A lengthened conversation ensued on this subject, some gentlemen contending that the Directors should be at liberty to travel free, at all times; whilst others were of opinion that they should always pay except when travelling on the business of the Company, it being left to themselves to say when they should or should not pay, according to such a regulation.

Mr. R. GRAY moved, and Mr. R. WORKMAN seconded, a resolution to the latter effect.

Mr. J. STEEN proposed an amendment to the effect that the Directors should travel free at all times.

This amendment was seconded by Mr. Charley.

After some discussion the amendment was rejected. The original resolution was then proposed, and a discussion followed. The sense of the meeting appeared to be in favour of the motion, but upon a suggestion it was withdrawn, it being thought better to leave the matter to the Directors, after such an expression of opinion from the shareholders, and it not being doubted how they would act, than to place such a resolution upon record.

Mr. BOYD proposed the next resolution, which was to the effect that a dividend of 9s. per share should be declared and made payable to the proprietors on the 1st of October next.

Mr. DUNVILLE seconded the resolution, which was unanimously passed.

Mr. D. LINDSAY moved the adoption of a resolution expressive of the meeting's approbation of the plan respecting third-class carriages, mentioned in the Directors' Report.

Mr. HARRISON seconded the motion.

Mr. R. GRAY said, with respect to the working of the third-class trains, he was one who thought it was not likely to be beneficial in its operation. He went on at considerable length to state his views on the subject, and opposed the motion proposed by Mr. Lindsay, because that resolution, as he conceived, if carried into operation, would have the effect of depriving poor people, who could not conveniently travel by one of the higher classes of carriages, of an opportunity of having articles for sale conveyed in the manner they would wish. He also argued that the mode of procedure which had been recommended by those who brought forward the motion, would in the end prove detrimental to the interests of the Company, inasmuch as poor persons would prefer travelling in cars, or on foot, rather than by the railway, if the proposed plan were adopted. He thought that unless they afforded persons poor in circumstances a facility for traffic, by allowing them an opportunity of departing from Belfast in the morning, and returning in the evening, they would not be granting them that measure of justice which they deserved to receive at their (the Company's) hands. After Mr. Gray had concluded,

Mr. BRISTOW could not help thinking, that these were questions of detail; and he would, therefore, move, as an amendment, that the question, in relation to third-class carriages, be left to the decision of the Directors.

This amendment, having been put from the chair, was carried, and the original motion, of course, fell to the ground.

After a few observations from Mr. Charley, Mr. Hancock, Mr. Boyd, and some other gentlemen, on the motion of Mr. Charley, seconded by Mr. Steen, a vote of thanks was passed to the Directors, and the sum of 413*l.* was directed to be placed at their disposal, as remuneration for their services, and those of the Auditors, during the past year.

It was moved by Mr. J. Steen, and seconded by Mr. Boyd,—"That the thanks of the shareholders are justly due to John Godwin, Esq., our Engineer and Manager, for the zealous and efficient manner in which he has discharged his duties."

The CHAIRMAN said, he had great pleasure in putting this resolution. Indeed, he felt that it was scarcely necessary to put it, formally, for he was sure they would pass it by acclamation. (Hear, hear.)

The motion was then put, and carried unanimously.

A discussion followed as to Sunday travelling.

A lengthened conversation took place in reference to Mr. Godwin's salary, as Engineer.

Mr. GREGG made some statements with regard to the amount which Mr. Godwin had been receiving from the Company as yearly salary (700*l.*). He thought that a sum considerably less would be sufficient remuneration for Mr. Godwin's services.—Many gentlemen present passed very handsome eulogiums on Mr. G., on account of the efficient manner in which he had discharged his duty; and Mr. Goddard, the Chairman, stated, that Mr. Godwin had been engaged by the Company for more than a year, at 700*l.* per annum; but he (Mr. Godwin) had come forward, and in a manner highly honourable, had expressed his willingness to accept of 500*l.* After some more observations from various gentlemen, the matter dropped.

It was then moved by Edward Walkington, Esq., seconded by David Lindsay, Esq., and resolved:—"That this meeting do now proceed to ballot for seven Directors, in the room of the gentlemen who go out of office in rotation, and that Robert Gray and W. J. C. Allen, Esqs., be appointed scrutineers, to assist the Secretary of the Company in taking the ballot."

The ballot having been taken, Alexander Hunter, John Hardy, W. J. Campbell Allen, Andrew Mulholland, Jonathan Richardson, John Thomson, and James Goddard, Esqs., were declared to be duly elected.

A vote of thanks was then passed to Mr. Goddard, the Chairman, that gentleman having been moved from the chair, and Mr. Bristow having been called thereto.—Abridged from the *Northern Whig*.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—SPECIAL MEETING.

On Friday, the 9th instant, a special general meeting of the shareholders in this line was held at noon at the new station, London-road, Manchester, for the purpose of receiving the Report of the Committee appointed at the late half-yearly meeting of the proprietors, on the subject of the proposed junction with the Leeds Railway, and of sanctioning or otherwise an application to Parliament to effect such junction. There was not a numerous meeting, about 50 gentlemen being present.

In the absence of Thomas Ashton, Esq., the Chairman of the Board of Directors,

T. Townend, Esq., moved that H. Newbury, Esq., the Deputy-Chairman, should take the chair. This was seconded and unanimously agreed to.

The Chairman suggested that they should wait awhile before proceeding to business, as several more proprietors were expected. Accordingly, half an hour was allowed to elapse from the time appointed for the commencement of the meeting, during which time several gentlemen came in. Several calls were then made on the Chairman to proceed to business.

Captain Cleather having read the circular convening the meeting,

The Chairman rose and said, the Directors have no statement to make to this meeting; but Mr. Barber, the Chairman of the Committee appointed at the last meeting, will have the kindness to introduce the matter to the meeting, and you will then take such course as you may deem proper.

Mr. R. Barbour—Mr. Chairman and gentlemen, having been deputed by the Committee appointed at the last general meeting, to report to you the result of our deliberations, before submitting to you the unanimous conclusion which we have come to in reference to the proposed junction between the Manchester and Birmingham Railway and the Manchester and Leeds and other railways at Hunt's Bank, I will briefly state that the Committee met on Saturday last, the day after the meeting, and were in deliberation four hours on this very important question; and, after the Directors had put us in possession of every information bearing upon the subject, and had given the most candid and explicit answers to all questions put to them, the Committee adjourned to Wednesday, in order to deliberate again, and to give to those members of the Committee who were then absent the opportunity of making themselves acquainted with all the circumstances of the case before coming to a final determination. The Committee met again on Wednesday, when the whole of the case was again examined into and fully discussed, when plans, with detailed explanations of the projected junction were likewise submitted to them by Mr. Buck, the Engineer of the Company, and after maturely considering the question in all its bearings, the result was that the Committee passed a unanimous resolution, which I shall now submit to you:—

On the motion of Mr. Burd, seconded by Mr. Hitchcock, and unanimously agreed to—"That after a full consideration of the existing circumstances connected with the Manchester traffic and the proposed junction of this railway with the Manchester and Leeds Railway—it is the decided opinion of this Committee that it is for the interest of this Company to form the proposed junction with the Manchester and Leeds extension line at Hunt's Bank; and the Committee strongly recommend that the proprietors should at the special general meeting to be held on Friday next, give their consent, with full power to the Directors to apply to Parliament at the earliest period for effecting the junction, and in such manner as shall appear to them most advisable."

On account of the various interests involved in the question, and as a public discussion might prove injurious to the interests of the Manchester and Birmingham Railway Company, the Committee have thought it best to present to this meeting, without note or comment, the resolution they have adopted, believing that the shareholders will not hesitate to put confidence in a Committee composed as they were of gentlemen who, previously to their being made acquainted with all the circumstances of the case, were strongly averse, if not openly opposed, to the making of a tunnel communication. It is but justice to the Directors to state, that they met the Committee in the most unreserved and candid manner; and, before they came to a conclusion, the Directors retired, so as to afford the Committee the opportunity of free discussion upon every point connected with this subject. (Hear, hear.) The present meeting, gentlemen, has been called at this early date, as the Directors were anxious to get the question of traffic settled as speedily as possible betwixt this Company and the other Companies interested in the projected arrangement. And I have no hesitation in stating, that if the shareholders at this meeting to-day sanction the propriety of the Directors applying to Parliament for the proposed junction at Hunt's Bank, great benefits will be immediately derived by this Company. I believe that is all that I am called upon to state. (Applause.)

Mr. D. Price—Mr. Chairman and gentlemen, Mr. Barbour having read to you the resolution of the Committee to whom you confided the interests of this railway with regard to the junction, which must serve as our Report, I have little more to do on this occasion than to propose a resolution. It may appear to you strange, that after having opposed the formation of the tunnel in the strong way which I did, I should now come forward to say, that in the position in which we now stand, we have no remedy but to go forward with it. (Hear, hear.) If we had been called together earlier, before we had lost the chance of making the southern junction, there is no doubt in my mind of the decided superiority of the advantages which might have been afforded us by that junction. But such is not the case, and now we are not to occupy ourselves with lamentations and regrets, but we are to consider the actual position in which we stand. We are, like men of business, to look our difficulties in the face, and having lost the southern junction, which is now gone from us—

Mr. Barbour—I would submit, Mr. Price, whether you are not out of order in opening the question of the southern junction.

Mr. Price—I am quite in order. I am not going to open any question. I say, that in the position in which we now stand, looking our difficulties fairly in the face, as a matter of business, we have no remedy, in order to preserve to ourselves the advantages proposed by the abandonment of the southern junction, than at once to give our consent to the Directors of this Company going to Parliament, and proceeding with the formation of that tunnel. (Applause.) Gentlemen, I do not wish to go minutely into the circumstances: I believe I have sufficiently stated all that offers on the subject. I believe on this occasion the less we say the better; and I hope the resolution that we shall come to this day will be unanimous, because it is very important that it should be so—that there should be no doubt whatever, no equivocation, nothing whatever upon which a cavil could be hung. (Hear, hear.) Gentlemen, I wish to repeat that sentence, and to impress upon your minds that this day there ought to be no halting between two opinions; that it behoves this meeting to come to an unanimous decision, and to afford no cavil to hang a peg upon. (Hear, hear.) Having been opposed to the tunnel in the first instance, having been so decidedly opposed to it as I was, and still being averse to it if another communication could be obtained, I hope that you will place sufficient confidence in me to be guided by what I say, without giving full explanations. Having said so much, I will proceed to propose the resolution, which is as follows:—"That the Directors be and are hereby empowered to take the necessary steps for applying to Parliament in the ensuing session, for effecting a junction with the Manchester and Leeds Extension Railway at or near Hunt's Bank, and in such manner as shall seem to them most advisable." (Applause.)

Mr. R. H. Wilson—Mr. Chairman and gentlemen, I am very unexpectedly called upon to second the resolution which has just been moved by my friend Mr. Price; and I certainly feel it incumbent upon me, in some measure, to follow his example. You, gentlemen, are aware that at the meeting which was held here last Friday, I took the liberty of making some observations, the tendency of which was to doubt the propriety of the course which the Directors had taken, in entering into any agreement or arrangement with the Directors of the Leeds Company, to form a junction between this station and that, without having first obtained the consent and authority of the shareholders, at a special meeting called for that purpose. That, gentlemen, was the head and front of my offending; and I think, from what took place, that the Directors were not very well pleased with my observations; however, I spoke my own private opinion; I had no personal feeling whatever against the Directors, but it did appear to me that they had committed an error in judgment. With these observations I shall let that matter pass. Now, gentlemen, I beg to say, that the Committee have given the most mature consideration to the statement and circumstances which were laid before them by the Directors, and I shall take the liberty of offering my individual opinion. Perhaps that opinion may not be worth much, when you recollect that I was told, at the last meeting, that I knew nothing whatever about the matters; but, such as that opinion is, I will take the liberty of offering it to you and it is, that under existing circumstances—and I be to repeat the words, under existing circumstances—is my decided opinion that it is not for the interest o the shareholders generally that the junction should b carried into effect. (Applause.) What my opinio might have been under different and other circum stances, I am not at present competent to say—(hear hear)—nor is it necessary that I should allude at al further to that subject; but I do take the liberty o stating, and of recommending to this meeting the ab solute necessity of being unanimous in their opinion that this meeting should give full power and authorit to the Directors to carry out the arrangement, at suc time and in such manner as they may think right. A the same time, I should not do that act of justice t the Directors to which I think them entitled, if I di not also bear testimony to the very candid manner i which the whole of the Directors came forward befor the Committee, and gave them the fullest informatio and assistance in their power, on those matters whic the Committee desired to be informed of. (Applause. It is only justice to them to state it. Gentlemen, I will not take up your time with further observation of my own, than by again recommending to you unan imity on the present occasion; because I am qui sure that we shall best consult our own interests b being unanimous, whatever may be your or my own private opinions. I have thought it right to give thi little explanation of my own opinions before seconding the resolution moved by Mr. Price.

After a few remarks from Mr. T. Greig, and Mr. Wilson, the Chairman put the resolution, which wa carried unanimously.

The Chairman—Before dissolving the meeting, I think I am called upon to make a few remarks in re ference to those which Mr. Price and Mr. Wilso have made on the subject of the southern junction. I should be extremely sorry, after what was agreed upon in Committee—that no discussion should be raised upon any point of difference—that we should come to the meeting, and simply ask the meeting to confirm the resolution passed by the Committee, after the most patient and arduous investigation which they gave to the matter—the result of their deliberation be ing what was stated and agreed to unanimously; after this, I should be extremely sorry that any allusion should be made to the southern junction; and I will not myself disturb the unanimity of the meeting by going into that question on the present occasion. But if there is any shareholder who thinks that the con duct of the Directors has not been what it ought to have been, that they have erred in judgment, or in in tention, I am quite ready on behalf of myself to say —and I believe I may say the same on behalf of every individual member of the Board—that we are quite ready, and willing, and even anxious, to go into the whole of that question whenever the shareholders shall call upon us to do so. (Applause.) We will endeavour to vindicate ourselves from first to last, and we will abide by the decision of the shareholders as to whether we have taken those measures, and adopted that line of conduct, which was the best calculated to promote the interests of this Company. ("Hear, hear," and applause.) And I shall be very happy, on this, or on any future occasion, to go most fully into that question; at the same time, as I said before, I will not now raise the question, nor do anything that might disturb the unanimity and good feeling which appear to have prevailed up to the present moment in this meeting. And I fully and distinctly avow that Mr. Price and Mr. Wilson have a right to exercise their judgment upon the question as to which is the best junction, and have a full right to call in question the judgment of the Directors in coming to the conclusion at which they have arrived, if that conclusion shall appear to them erroneous; the only thing I complain of is, that not only has our judgment been called in question, but by some gentlemen our motives have been called in question.

Mr. Wilson—Not by me.

The Chairman—Certainly not; I will admit that Mr. Wilson never did call our motives in question; and I will say that I never met gentlemen with greater pleasure than I met the whole of the gentlemen who were appointed on this Committee. (Applause.) They went into the subject in a most business-like manner; and I believe that the explanations and answers given them by the Directors were to every individual of the Committee perfectly satisfactory. (Applause.) With these few remarks, I beg to say that if any gentlemen should feel disposed to enter into the question of the southern junction on the present occasion, I shall be happy to remain here as long as the Company wish me.

After some further observations, thanks were voted to the Chairman.—*Manchester Courier.*

PARIS AND ROUEN RAILWAY.

Report of the "Conseil d'Administration" to the General Meeting.

Paris, August 30, 1842.

GENTLEMEN,—At the period of the general meeting last year we were, in a manner, but preparing for our labours.

The first year had been employed in arranging the final plans, and accomplishing the formalities prescribed by the law, in letting a portion of the works, and in entering into contract for the engines, rails, and chairs.

Our plans and propositions have afforded general satisfaction to the legitimate claims of the localities, and were subjected to very little alteration.

The purchase of the land, which one year ago was scarcely commenced, has been carried on with the greatest activity, and now draws to a close. For this purpose the line was divided into two sections—the one containing 19 communes, and the other 29 communes. The first section has all been purchased, except that part required for our goods' station at the Batignolles, of which a few parcels remain to be expropriated* in order to complete this station. We are, nevertheless, in possession of a sufficient portion of the land to be enabled to commence the works. In the second section all the land required for the railway and the intermediate stations, with one exception in the communes of Sotteville and Rouen, is already purchased. The contemplated construction of the Havre line required some alterations in our plans in these communes, or the land would also have been purchased by this time. The new plans have, however, passed the ordeal of the Committees of Inquest, and we shall now proceed, without loss of time, to obtain the land.

Notwithstanding that the property required for the railway is divided into 7,500 parcels, the value of the land and houses, together with the difficulties attendant on passing through towns and villages, such as Poissy, Mantes, and Vernon, the result has been satisfactory. The greatest portion of the purchases have been made by private contract. We have only had recourse to expropriation in a few cases, where the properties were of great value, and these were settled by the jury in the most equitable manner.

Great care has been taken in drawing up the different conveyances. As soon as the few remaining purchases are completed, an exact account of this portion of our outlay will be made out; in the interim, everything is so settled as to place the Company in perfect security.

In the last accounts which we had the honour to lay before you, the expenditure for the works amounted but to 200,000f. (8,000*l*.); on the 30th June last it reached the sum of 11.419,404f. 36c. (456,776*l*. 3s.); and at the present moment it is 14,338,460f. 41c. (573,538*l*. 8s.); this will show the activity which has prevailed in conducting the works. We now lay before you the Report of the Engineer-in-Chief, which will give you a more complete account of the progress of our enterprise:—

MR. LOCKE'S REPORT.

Paris, August 29, 1842.

Gentlemen,—The adjournment of the general meeting to the 30th instant has afforded me an opportunity of reporting to you the farther progress of the works on this railway, and I have now the honour to place before you the following general account:—

From the junction with the St. Germain Railway to the river at Bezons the earthwork and bridges are finished. The ballast is now being spread on the line, and rails and chairs are alone wanted to complete the permanent way.

The bridge across the Seine at Bezons has all its arches turned; and the planking of the top and the "garde corps" are all that is required to finish it.

The earthwork from hence to Maisons, with a very small exception, is also finished; and the bridge at Maisons is in an equally advanced state to that at Bezons.

In the forest of St. Germain, owing to the delay in obtaining possession of the land, the works are not so far advanced. The deepest cutting is now in full force night and day, the material from which is transported to the embankment towards Poissy.

All the bridges in this district are in progress.

At Poissy the bridge for the "Route Royale" is completed, and the public now pass under the railway; the embankment has already reached this place, and it is progressing rapidly from both ends.

With the exception of the embankment at "les Mureaux," all the earthwork between Poissy and Mantes may be finished in a month.

Nearly the whole of the distance has been formed for a considerable time, and the want of rails has alone prevented us from laying the permanent way.

At Mantes the embankment and bridge are steadily progressing; so also are all the lighter works between Mantes and Rosny.

The material for making the embankment at Rosny is brought from the tunnel at Rolleboise, a distance of about 2,000 metres, and where the permanent way is already laid.

The tunnel at Rolleboise has been for some time pierced throughout, and the casing with brickwork from several faces has been regularly proceeding. Nearly 2,000 metres (out of 2,625) are already finished; and the remaining distance, divided into several portions, is progressing by day and by night. Great difficulty has been experienced in making this tunnel; the rock in several places was found so very hard that not only was it necessary to use large quantities of gunpowder to remove it, but it was also necessary to secure the roof with a thick casing of brickwork. The rock in those parts is not stratified, but lies in large loose masses. It is a conglomerate of flint, embedded in very hard limestone.

The permanent rails are now being laid in those parts of the tunnel which are completed.

From the north end of this tunnel two lines of permanent way are laid to the embankment behind Bonnieres, the bridge for the "Route Royale" is completed, and the road is now used by the public.

From Bonnieres to Vernon, the line which passes by the side of the public road is already formed. The side walling for the towing path is much advanced, and little remains to be done before the ballast for the permanent way is laid on.

At Vernon, and from thence to le Goulet, and on to le Roule, a distance of about 16,000 metres, great activity prevails. Every cutting and embankment is in operation.

The two bridges for the Route Royale at Vernon, are nearly finished.

Several kilometres of the line between le Goulet and le Roule are already ballasted, and ready for the permanent rails.

The tunnel at le Roule may now be said to be finished; it is 1,700 metres long, and was commenced in April last year, making 16 months for the completion of this work.

The material has been found very favourable, and although the chalk is in some places very solid, we have thought it right to case with brickwork the entire length of the arch.

The permanent rails will now be laid through this tunnel, in order to facilitate the transport of the material from the Venables end, to form the embankment at le Roule, which is the principal work not yet done in this district.

The small tunnel at Venables (430 metres long) is steadily progressing.

From Venables to le Manoir, and from thence to Tourville, a distance of 25,000 metres, the greatest portion of the earthwork and bridges is finished, and the remainder is in active operation

The bridge at le Manoir has, with one exception, all its piers founded, and the masonry above water. A large quantity of stone and timber is on the ground, and the erection of the arches will proceed forthwith.

The division of the Route Royale at Pont de l'Arche and the bridge there are in an advanced state.

The tunnel at Tourville, with the exception of a few metres, is entirely completed, and the open cuttings at each end (the material from which is being used to form the embankment towards Oissel), are proceeding satisfactorily.

The bridge at Oissel, which crosses the two arms of the Seine, has all its piers founded and the masonry above water. One abutment only remains to be done. There is at present a want of stone at this bridge, and a portion of the timber for the arches is not yet on the ground, but I have given directions to have both these deficiencies supplied forthwith; and I rely on the continued exertions of Mr. Colue, the Contractor (who has hitherto shown great zeal in the execution of the work already done), to ensure the completion of the bridge in due time.

Between Oissel and Rouen the earthwork and the bridges are of a very light description, and are now in hand, and making very satisfactory progress.

The Directors are aware that the line, on entering Rouen, in consequence of the projected extension to Havre, has been changed, and the work there, in consequence, necessarily impeded. Fresh plans have, however, been prepared, and when possession of the land is obtained, the embankment towards the station will proceed by day and night.

Up to this period all the works on the line between Paris and Rouen have progressed with a rapidity which has fully equalled my expectations. It is true that had the rails and chairs been delivered more promptly, a very considerable portion of the permanent way might have been already laid. Considerable detentions have also arisen from our inability in several instances to obtain possession of the land, as well as from the late period at which some of the decisions of the administrative authorities were given, by which several months were lost before the works could be commenced. I do not wish to impute the slightest blame for these detentions. It may be that they are rendered necessary by the legal forms that are required to justify the construction of such extensive works; it is nevertheless true, that had it not been for these forms, the works at this time would have been more advanced than they are. The non-delivery of rails and chairs may have arisen from the increased demand during the last two years for these articles of manufacture, for I believe that great exertions have been made by the manufacturers to insure the delivery of the full quantity in due time, and the difficulties of the navigation which for want of water have arrested vessels in their progress, have increased that detention still further, and until the water rises, this difficulty will in all probability continue.

Notwithstanding all these delays, the contractors, Messrs. Mackenzie and Brassey, have by increased exertions and expense, endeavoured to made up for lost time, and they have been so far successful as to enable me to state (which I do with the most perfect confidence) that if the rails and chairs be even now delivered with sufficient rapidity, the railway will still be finished by March next year. I wish not, however, to be over sanguine, and I think it more prudent to fix the time for opening the line for the month of May.

The plans for all the intermediate stations on the line have been prepared. Those at Maisons and Vernon are already commenced, and they will all be completed within the present year. The station at Rouen, in consequence also of the extension of the line to Havre, has been retarded. The plan, however, is determined on, and so soon as the land is obtained we shall be in a position to proceed forthwith. It is important that no delay should arise in procuring this land.

The projected line to Havre has also rendered it desirable to alter the position of our workshops at Rouen which are not yet commenced. This circumstance, however, has not and will not influence either the supply or the reparation of the locomotive engines intended for the railway, for the contractors for these machines, Messrs. Allcard and Buddicorn, having found suitable premises in which to begin their manufacture, have made more progress than they could have done had they waited for the Company's shops.

The ground on which these workshops are to be erected, requires to be lowered, and the material is wanted to form the embankment towards the station, for which the land, as I have already stated, is not yet obtained. These buildings must therefore be delayed until the land is procured.

The manufacture of locomotive engines and carriages is proceeding very satisfactorily. Contracts with the parties above named for 40 engines, 200 waggons, and 120 coaches have been made.

The engines are in various states of progress. There are 8 (for which all the parts are made) now in the course of construction, which will be finished in two months.

At this period, 8 others will be ready to be put together, which will also require about two months to complete them. Since all the parts for all the engines are progressing simultaneously (and a great many of them are already prepared), I have no doubt that there will be a sufficient number of engines ready for the opening of the line at whatever period it may take place.

The first 12 coaches which were made as patterns are now nearly finished, and 12 others are in a state of forwardness. Extensive preparations for this branch of manufacture have already been made, by which greater progress will now be effected. I have already given directions to have sheds erected in which to stow each engine and carriage as soon as it is completed.

Contracts have also been entered into with Mr. Arnoux for 36 first class carriages.

It is only on 6 (which were ordered as patterns) that any progress has been made, and these are nearly finished.

Having now endeavoured to place before you, as nearly as I can, the exact position of the works, and the views I entertain regarding the probable time required for their completion, it remains only for me to add, that with the general execution of the works I have no reason to complain, nor should I allude to the reports which are sometimes circulated with regard to the insufficiency of some of our works, were it not for the purpose of stating, that though they may not be apparently quite so massive and so costly as are some of the public works of this country, yet that they are solid enough without superfluity—that they will be executed within the estimate originally made for them, and that when executed, I will hold myself pledged to guarantee their stability and maintenance for a lesser sum of money than any similar work has yet cost either here or in England.

I am, Gentlemen, your most obedient servant,

(Signed) JOSEPH LOCKE.

To this Report we beg leave to add that the advanced state of the works leaves us under no apprehension as to their early completion, nor have we any fear that the expenditure will exceed the capital. Our hopes and calculations on these two points have not been disappointed. The whole line will be finished two years earlier, at least, than the time allowed us by the Bill. We shall be thus enabled to diminish the charge for interest payable during the construction of the line, and anticipate the period when the dividends will be paid from the profits of the railway.

The result will fully justify the manner of contracting for the works which we selected. We have taken advantage of the experience acquired in England in these matters. Every doubt which existed as to success on the application of this mode of proceeding, so new to France, has been completely removed by the energetic means which our contractors have employed—difficulties have been overcome, and new methods introduced with perfect success.

Upon this subject we feel called upon to contradict in the most formal manner the incorrect

* By the word "expropriation" is meant the power to take the land required for the railway.

Digitized by Google

reports which have been circulated in respect to the want of harmony among the workmen of various nations employed on our works. We can safely affirm that among the 8,000 men now employed, nothing has ever occurred beyond slight disputes, which it is almost impossible to prevent among so vast a body of men. They have never been of such a nature as to compromise or even retard the execution of the works.

In respect to the nature and solidity of the works every precaution has been taken in order that they may stand the test of the most scrutinizing examination, they have been adjudged according to specifications drawn up after the most mature deliberation. An efficient staff of engineers has been placed on the different portions of the line, to watch over the execution of the works in their most minute details.

We have never had occasion, in any matter of importance, as far as regards the works, to differ with the contractors, they have at all times, with the utmost promptitude, complied with the orders of the Engineer-in-Chief.

The few accidents which have really occurred on the line have been greatly exaggerated, they were perhaps inevitable on such a difficult and extensive line of works requiring so much rapidity in their execution, but they were most promptly attended to, and always at the charge of the contractors.

If these works have been adjudged on terms not hitherto obtained here, be assured, gentlemen, that their solidity has not been sacrificed to a false economy; every means have been taken to secure their stability, and to afford at the same time perfect security in the working of the line. A railway is of itself a great monument. Its splendour is to be found in its utility.

During the period which has intervened since our last meeting we have completed our contracts for the supply of rails and chairs. The distance of the ironworks is very great, and the extraordinary dryness of the season, together with accidents on the canals, have hitherto retarded the deliveries, but we have taken every means to secure the strict execution of our contracts, and we have besides received the most positive assurances that the whole quantity will be delivered within the present year.

The construction of the engines, carriages, &c., for working the line has kept pace with the works; two months ago there was but one engine at work in the manufactory where our locomotives are in the course of construction, at this moment more than 500 men are actively employed, together with the most complete machinery ever yet in application here.

In fine, every part of our enterprise is in the most satisfactory position, for which we are greatly indebted to the powerful resources you have confided to our care.

The calls have been paid up with remarkable punctuality.

At the period of the last general meeting the receipts amounted to 12,602,086fr. 23c. (504,083*l.* 9s.), on the 30th June last they reached 28,320,991fr. 25c. (1,132,838*l.*), and at this present time they amount to 31,703,872fr. 35c. (1,268,154*l.* 18s.)

We have not been obliged to have recourse to legal proceedings to get in any of the calls, 94 shares only have been sold, and these sales have generally been caused by the death or absence of the party.

Your example will not fail to produce a beneficial influence in the execution of great public works. In France complete justice was rendered to you in the Chambers during the discussion of the law on railways.

Our monthly outlay has increased with the progress of our works, and in the last six months of the past year it has progressed from 1,200,000fr. (48,000*l.*) to 2,600,000fr. (94,000*l.*), and it now reaches 3,500,000fr. (140,000*l.*) each month.

The total amount of the expenditure is 27,428,591fr. 31c. (1,097,143*l.* 12s.) Although our resources are not yet exhausted, we nevertheless thought it expedient at the commencement of the ear to make application to the Minister for Public Works for the return of our caution money, and at the same time to pave the way by complying with the various forms required for claiming the loan of 14 millions from the State. At this moment even we are pressing the Ministers for return of the 3,600,000fr. (144,000*l.*) caution money, which must precede the loan of 14 millions (560,000*l.*). Return of 4-5th of the same has just been granted, and it is, perhaps, owing to a greater respect for the letter rather than the spirit of the law, that the whole is not returned, for it is impossible for the Government not to perceive that our money would be much better employed in carrying on the works than it is in the coffers of the State, that a security is only of real use in guaranteeing the formation of an association, but when a Company has already executed works to the amount of 28 millions (1,120,000*l.*), the guarantee of a few hundred thousand francs must be perfectly useless.

You may rest assured we do not lose sight of the period when the payment of the loan will commence, and we have too much reliance in the interest which the Government takes in our enterprise to have any fear or respect to useless delays.

As our works proceed, we are better able to appreciate the future resources of this undertaking, and we have every reason to believe that our estimates of revenue will prove to be as correct as are those of the cost of construction.

The Havre line is the necessary consequence of the Rouen line. It promises a vast addition to the number of passengers, and its construction will remove every doubt as to the extent of the transport of merchandise.

We have taken a prominent part with the Government and the Chambers in obtaining the assistance of the State for this line; and we may say, that to the example of the Rouen Company may be mainly ascribed the favourable terms of this Bill. The common interest which unites the two Companies will continue to be the best guarantee for their mutual co-operation.

In conclusion, permit us, gentlemen, to refer back to the origin of our undertaking. You will bear in mind that the law of concession dates from 15th July, 1840, some days after we met in general assembly to examine the modifications made in the law and in the statutes, but a graver subject then occupied and kept public attention in suspense. In the presence of great political embarrassment you did not hesitate to maintain the association—you had confidence in a better futurity.

You did not for a moment believe, that one of the best creations of a time of peace could possibly be suspended by the mere rumour of war. By your energy and resolution, you gave us the first example how to overcome all difficulties. This confidence was nobly responded to by your associates on the other side of the water. If we allude to the circumstance of the shareholders being of two nations, it is only for the purpose of assuring you that only one feeling has always animated them, although the object to be attained was a great and national work, the advantage of which would exclusively belong to France.

On all occasions, under the critical circumstances which threatened our commencement and in the progress to those better times which have now arrived, the English co-operation has never flagged, we have received all that we could hope for, the powerful assistance of its capital, and the benefit of its great experience.

Thus nothing has been able to shake the firm basis our association, upon it we have been permitted to found one of the most useful and beautiful monuments of human activity, and to consecrate the noble alliance of the industry of two great nations.

REDCAR RAILWAY.—We understand that several influential gentlemen have come forward to promote this undertaking; the admirers and visitors of Redcar may, therefore, congratulate themselves on having ere long a cheap and pleasant annual excursion to this delightful watering-place.—*Yorkshire Gazette.*

GREAT NORTH OF ENGLAND RAILWAY.

THE following appears in the last number of the *Gateshead Observer*, addressed to the Editor. We have alluded to it in our leading columns:—

Sir,—In your paper of the 3rd of September, last, I find a report of the last half-yearly general meeting of this Company, furnished you by the *Durham Chronicle.*

On reading the proceedings of that meeting, as reported in the latter paper, certain Directors have used language in addressing the proprietors, prejudicial to my professional reputation.

On a mutual friend recommending that neither they nor I should refer to the early proceedings of the Company, I was induced to acquiesce, while such silence was observed by the Directors. From that arrangement I now feel myself released by their observations at the meeting referred to.

I would, as briefly as possible, state such particulars only as refer to the points most noticed to the proprietors (and leave others and details to be noticed hereafter, if found necessary), in order to set myself right with the public, and saddle the right horse.

I hold written directions from the Board of Directors, the London Deputation, and the Company's Solicitor, that the Parliamentary estimate was not to exceed a given sum. On my stating that it was impossible to make and support such an esitmate before a Committee of either House of Parliament, I had instructions to exclude certain items in that for the county of Durham, and everything but the bare line of railway through the county of York.

This, the proprietors and the public will see, excluded expenditure now incurred in locomotive engines, coaches, trucks, horse and cattle carriages, coach and merchandise stations, coal depots, and workshops at various places on the railway, and will account for a larger portion of capital being required than was generally anticipated.

I do not for a moment wish to convey an idea that this will cover all excess of the estimate given to Parliament for the line from Hurworth to York (450,995*l.*); for most certainly there did arise, after the Act of Parliament was obtained, a great demand for labour and material, that in some instances exceeded by from 30 to 50 per cent. what was reasonably anticipated; which, together with a greater extent of such works, compensation, and other claims by land-proprietors and contractors, with other difficulties referred to at the general meeting, which would never enter the mind of any person, however conversant in railway business, will, I sincerely believe, cover the additional expenditure complained of.

The other point principally referred to is that of the number of locomotive engines. As Engineer, the extent of traffic did not form any part of my inquiries; consequently, when the Directors required to be informed of the number that would be wanted, I required to know—what data shall I take for my guide? The traffic, as proved before the Parliamentary Committee, was sent me as such guide; and on this document only I was left to form my judgment.

On the 7th of August, 1838, I stated my opinion thus:—"The only source of information I have calculated on, as to the present and probable amount and destination of the traffic on your railway, is that produced before Parliament."

The traffic tables referred to give as under:—

	For Parliamentary purposes.	Present actual Traffic.
300,000 passengers per annum	£94,132 ..	£36,000
Coach parcels	1,370 ..	1,510
Posting transferred to railway	1,040 ..	—
82,136 tons of merchandise	6,397 ..	9,014
200,000 tons of coals	40,000 ..	15,153
20,000 head of cattle	6,666 ..	—
28,000 head of sheep	1,166 ..	—
8,000 tons of fish	2,000 ..	—
Rents		1,502
Interest		1,888
Per annum	£153,271	£67,067

It was stated by one of the Directors, at the be-

Digitized by Google

fore-referred-to general meeting, that 15 engines were necessary, under all contingencies, for the present traffic. Now as the Parliamentary is about 228 per cent. of the present trade, the number of 33 engines, as stated by the same Director, was not too many for the whole expected business of the railway, which were to be provided on the opening of the railway. 28 were only ordered, with two ballast engines.

The Directors say, generally, that they were "greatly misled by the Engineer."

"They may have been unexpectedly taken by surprise with respect to charges to which they were laid open by their Engineer."

"I am sure the gentleman who calls out recklessness, must admit that it was not the recklessness of the Directors, but of the Engineer who advised them."

Then, after all this calumniation, they state—"We must by no means throw the blame entirely on the Engineer," as if they had some misgivings, or returning sense of shame, in thus branding a man's character without cause, to clear themselves of the odium of mismanagement.

I would, therefore, explicitly state, that no work was undertaken, or material procured, by the Engineer, until it had regularly passed the examination of the Board of Directors — received their sanction—apprised of its cost—and gave orders to proceed therewith without delay.

I have now referred to the principal points of remark at the general meeting having reference to me, and not there refuted. I am not one of those who court paper warfare. I would not have undertaken this, had I not been unjustly assailed by men who must have been grossly misinformed, or void of gentlemanly feeling. I can assure you, Sir, that I shall not again have recourse to the like mode, unless a continuance of the same line of conduct be followed, and then only so far as is necessary to remove any unjust stigma on my professional conduct.

I do most unhesitatingly state, that the attempt to deceive the proprietary has been on their part, and not that of the Engineer.

I am, Sir, your obedient servant,
THOMAS STOREY.

St. Helen Auckland, Sept. 6, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the Editor of the Railway Times.

SIR,—Your Editorial articles have frequently upheld the doctrine, that the public is not likely to benefit by the establishment of two rival lines of railway where one would suffice for the traffic, because all competition between Companies has a tendency to settle into a compromise, in which case the public has to pay interest, in the shape of higher fares, to support two establishments where one would suffice. You illustrate this by the case of the Grand Junction; and the case of the London Water Companies is an example of the same kind. You have been the constant advocate of low fares, and therefore it is clear that, in your advocacy of the interests of railway proprietors, you do not forget the interests of that party without which they could have no railway interest whatever, viz.—the public. But the position you assume as to competitive lines, leaves the public utterly unprotected against a large body of monopolists, who may choose to be unjust rather than take any trouble to conduct their business in the best manner—in other words, they would rather carry a small number of the public than a large number of the public, where the profits were alike in both cases, and the care and trouble greater in the latter. This is human nature. All monopolies tend to arbitrary injustice, and "*it is only by making the ruling few uneasy, that the oppressed many can hope for a particle of redress.*"

To say that the fares of all lines should be alike would be an injustice. There are some lines which will not support themselves, and yet are essential to the community generally. The persons who travel on such lines probably do it from necessity, and it is but fair to charge them a full price, short of what would be suicidal, *i.e.* drive them away. But there are other lines which large numbers would use, and make highly remunerative, if not driven away.

No one endowed with a fair share of common sense would grudge railway proprietors a fair per centage on their outlay, where that outlay has been conducted with ordinary prudence. The grossest blunder was committed by the Government in ever permitting the public roads to become private property; but the proprietors in showing enterprise and intelligence far in advance of the State, are fairly entitled to a handsome reward where prudence has guided their enterprise. Where imprudence has prevailed they are bound to pay the penalty of that imprudence, while they reap the reward of their enterprise.

In other words, *wasted* capital should be struck off the account as *loss*, and the per-centage calculated on the *real* outlay, apart from any computation of shares.

What would be the fair per-centage? More than that of the funds or of land, because the security is not quite so real—I mean land at its fair value, with the Corn Laws off. More than household property, as requiring more skill and judgment to conduct, and liable to deterioration to about the same extent; but less than a manufacturing business, as involving no risk when once established. The funds being 3½ per cent., 7 per cent. per annum would be ample for the railways.

But in consideration of this the public are entitled to have the best possible management, so that the cost of transit may be reduced to the minimum, and the largest possible number of passengers carried. On those lines which do not pay well, it is assumed that the cost is minimised, but this is a fallacy. In Manchester and other cotton mills, where thousands of individual capitalists work their own capitals, and "improvements grow upon the wiredrawing of profits," this is done, but railway capitals are worked by salaried servants, without even per-centages upon progress, and there never yet was an instance of a "day-working dockyarder" who did more work than would just pass muster. The Northern and Eastern line it appears is worth individual renting at 5 per cent. on the outlay, consequently it must produce more than that on the worst showing; yet Directorial Management cannot achieve the 5 per cent.

It seems to me a clear case that ultimately the whole of the lines must revert to the State for the purpose of the protection of the public. In reply to this, I shall be told that they are private property, and therefore sacred—at least such will be the argument of those who hold the paying lines. Those with the losing lines would probably make no objection to the State reimbursing their capital.

Let us examine into this. The State granted permission to make a railway, the object aimed at being, not the benefit of the railway makers, but of the public. So soon as the railway makers sacrifice the interest of the public to their own ease, the State is absolved, not from its legal bargain, but from the implied consideration—the monopoly. The State requires the lowest transit price consistent with the 7 per cent. How shall this be got at? Most clearly only by a process of competition. This strange anomaly exists—that while the Railway Company can call competitive manufacturers from the furthermost parts of the land to tender in opposition for every article of their own consumption, they themselves are free from all competition. And as it is a well-understood thing that it is not good policy to have a business apparently too thriving to incite opposition, they have the opportunity of portioning off profits in various ways before a public division is made.

The process of ascertaining the lowest price would be simple. Let the road be the propriety of the Company, and let the working of it be put up to public tender every three or four years, as is the case with the mails on the highways, the stock being valued. Any Company refusing to submit to this, would lie under the imputation of making large profits with little care, to the injury of the public, and such a line might fairly be laid open to the competition, not of another Company, but of a Government line.

The principle of a Government line, as to the working, should in all cases be a constant lowering of fares, either to the prime cost of working, or of devoting the surplus to the cost of maintaining inferior lines.

If, in the process of competition, the per-centage to the Company began to exceed a fair amount, they would be open to a competing line, unless they would agree to return the surplus to the contractors for the purpose of making a comparative reduction in the fares.

This would, in fact, be establishing a maximum profit, very distasteful to speculators, but very advantageous for those merely desiring investment. It would establish a public fund little liable to fluctuation.

There is no doubt this proposition will raise an outcry and imputations of spoliation. No matter if the proposition be true and sound. It is no proposal "to rase the seal from off the bond," but merely to apply to monopoly the wholesome test of competition. I will return to the subject with any fair upholder of the other side of the question.

I am, Sir, yours truly,
EXAMINER.

P.S.—I am the original "Examiner," and not your correspondent of that name who examines into the northern lines.

RAILWAYS—THEIR CLAIM UPON THE SUPPORT OF THE PUBLIC.

LETTER III.

To the Editor of the Railway Times.

SIR,—It is a commercial axiom that if the price of any commodity be reduced, the consumption will increase in a corresponding ratio. Two important advantages arise from such reductions—the commodity is placed within the reach of the masses, and employment is afforded to a greater number of persons. It will be seen that both these results have followed the introduction of railways.

3. *Reduced Fares.*—The average rate of fares charged by railway, as compared with the charges per coach, may be stated decimally as about .72 to 1., being a reduction of rather more than one-fourth. In addition to this, we must place the fees paid to coachmen and guards, which usually amounted to more than 10 per cent. The great impulse which this saving has given to travelling is proved, by the fact that nearly 9½ millions of persons travelled on the various railways from the 1st of January to the 1st of July, 1841. Thus it appears, that in the course of a year the number of persons travelling by this mode of conveyance alone, is more than equal to the whole population of Great Britain. To accommodate this number of persons it would require 5,040 coaches running daily, each coach carrying 10 passengers. From this it is evident that the reduction of fares has greatly increased the number of travellers, and enabled many persons to ride who were before precluded from doing so by the expense.

4. *Increased Employment.*—This augmentation of traffic is productive of another benefit, of equal magnitude and importance, viz., permanent employment for a greater number of persons. I am not in possession of any data from which to prove the actual number of persons engaged in various capacities on railways, but it must be much greater than under the coaching system, owing to the vast increase of passengers, and the superior and more complete nature of railway traffic arrangements; and it is here worthy of especial remark, that these persons are mostly superior in their habits and morals to those employed under the former system, inasmuch as their character is closely scrutinised previous to their engagement, and any flagrant delinquency is punished with immediate dismissal. This is a very

Digitized by Google

important feature in the changes which have been effected by the establishment of railways. Independently of the great number of persons permanently engaged on railways, as clerks, policemen, engineers, porters, pointsmen, &c., there are vast numbers *collaterally* employed in the formation of the lines, the erection of buildings, maintenance of way, building of carriages and locomotives, the manufacture of carriage ironwork, rails, chairs, sleepers, &c. The enormous sum of 50 millions of money has already been expended on 38 railways only. It is a difficult matter to form a correct estimate of the benefits which have arisen from the circulation of this great amount of capital; no one can reasonably deny that it has been of great assistance to the manufacturing and other interests.

5. *Safety.*—Notwithstanding the great outcry made from time to time against railways, in consequence of the accidents which have unfortunately occurred, it has been proved, beyond the possibility of a doubt, by Mr. Lang, in his Letter to the Earl of Ripon, that railway travelling is infinitely safer than any other means of transit which has hitherto been made available to the public. This statement will no doubt appear strange, and even absurd, to those persons who, having a vivid recollection of the accidents on the Great Western, Brighton, and other railways, have hastily jumped to the conclusion that locomotive travelling is of all modes the most dangerous. Nevertheless this assertion is strictly true. It appears, as I have previously stated, that in the six months ending July 1, 1841, there were nearly 9½ millions of passengers by railway. During this period 30 persons were killed on the several lines, 5 only of whom were passengers, the others being either trespassers, or persons connected with the lines. "If then [I quote from Mr. Lang's Letter] stage coaches were attended with as little personal injury to the public as railways, the following would be nearly the proportional number of accidents:—

"The number of passengers killed from causes beyond their own control.....	1 in 833 years.
The number killed from their own folly, negligence, or misconduct	1 in 1,250 years.
The number of persons run over in the public road	1 in 500 years.
The number of coachmen, guards, ostlers, and other servants of the coach.....	1 in 125 years.'

After this clear and decisive statement, I trust the coaching system will never again be defended on the ground of its greater safety.

6. *Civility and Attention* —Much has been said respecting the unparalleled insolence of railway officials. It has frequently been reprobated in the papers, both by zealous editors and indignant correspondents, and great has been the waste of words and paper thereon. I have had considerable experience in this matter—having travelled on many lines, and being myself connected with a railway—and I can safely assert that, generally speaking, railway servants, from the highest to the lowest grade, are invariably civil and attentive, both to the rich and the poor. They have ever, as far as I have seen, combined the *suaviter in modo* with the *fortiter in re*. The fact is, railway regulations are necessarily stringent, in order to prevent impositions being practised upon the Companies, and to preserve as far as possible the safety of the public. Many instances have come to my knowledge in which parties have felt themselves aggrieved, and made bitter complaints, because of the enforcement of rules, the express object of which was the preservation of their lives. This shows the absurdity of many of the complaints urged against railway officers. Doubtless there may be reasonable grounds of complaint in some few cases (and happily they are *but* few), but still it must be admitted that the *employés* of Railway Companies are much more civil and attentive than were those connected with the coaches. The insolence of coachmen and guards was proverbial. The annoying system of *feeing* was a continual and prolific source of dispute between them and their passengers, and I have myself been grossly insulted because I did not choose to give a fee equal to one-fourth of the fare I paid for my whole journey. The abolition of this fee system, and the plan of keeping a book at every station in which passengers may enter any complaint they may have to make, have been productive of the best results, and are a great and undeniable improvement upon coaching arrangements.

I think it will be admitted, after a careful perusal of the facts already advanced in these letters, that the railway has a great advantage over the coaching system in the following important respects:—

1. Speed.
2. Accommodation.
3. Reduced fares.
4. Increased employment.
5. Safety.
6. Civility and attention of officers.

These are amply sufficient to prove that railways are a benefit and not a *curse* to the country, and that, instead of being made the subject of reckless and indiscriminate opposition, they ought to receive the full support and confidence of the public. The combined influences of railways and steam navigation, with the advantages they present for the conveyance of manufactures and agricultural produce, will form the subject of another letter.

I am, Sir, your obedient servant,

E. D. C.

Stratford, July 27, 1842.

RAILWAY MANAGEMENT.

LETTER I.

To the Editor of the Railway Times.

Sir,—The discussions to which the alleged mismanagement of railways has given rise, have done much to promote the best interests of those national undertakings. But though these discussions have contributed to remove prejudices and misconceptions, and to elicit much valuable information and many useful suggestions, they have not always been marked by sound views, practical knowledge, or candid judgments. Railways being in reality monopolies, the proceedings of their managers have been regarded with natural jealousy by the public, and a disposition to quarrel with these proceedings has existed. In this state of public feeling, hasty judgments and unmerited condemnations were to be looked for. Accordingly, those behind the scenes well know that railway officials have been as often praised without discrimination as they have been censured without justice.

These gentlemen may be said to be still embarked in a voyage of discovery, without the landmarks of experience to guide them; and by experience alone can practical sciences or systems be perfected. Railway engineering and management have hitherto been but a series of experiments, costly enough Heaven knows! and not always planned with judgment, nor executed with vigour. How could it be otherwise? A heaven-born engineer is as rare as a heaven-born minister. Had such a *rara avis* alighted on earth just as railway proprietors needed the aid of his intuitive powers, it is not likely that his natural qualifications, however great, could have supplied the want of those lights which experience now sheds on the pathways of his arduous profession. I will not maintain, however, that engineers availed themselves in every case of the aids which science placed within their reach, especially of those derived from the investigations of geologists. It is clear that men who could fix on 10 per cent. on the estimated cost of construction as sufficient to meet all contingencies, could not have had before their eyes the fear of dislocated strata, hidden quicksands, and subterraneous accumulations of water. Why, cent. per cent. has been not unfrequently required to surmount the difficulties presented by these formidable agencies.

For railway managers the like apology, with the like qualification, may be pleaded. Great obscurity and numberless difficulties surrounded the first operations of these gentlemen, and being exposed at every point to collision with the public, their position was rendered doubly arduous. Environed with risks, they had to impose restrictions on the fraudulent and foolhardy without trenching too far on the liberty and convenience of the honest and cautious. To maintain long lines of way in a state of the nicest adjustment—to watch sedulously and keep in thorough repair a large number of machines, peculiarly complex and liable to derangement—to uphold in efficient working condition large stocks of carriages and waggons—to procure supplies of the numberless articles indispensable to railway operations—to invent new systems of accounts, and to apply the checks which the numerous hazards to which the interests of Railway Companies are exposed render so necessary; and all this had to be done with persons new to the duties, and who had not been trained to habits of discipline and subordination. No human foresight or sagacity was equal to the task of organizing beforehand a system of management which would now be thought even tolerably good for undertakings so novel, so complex, and so vast. Yet some railway managers are much to blame for having persevered in a vicious system long after its defects had been made manifest, and after other Companies had adopted improvements and modifications, the value of which had been shown by time.

Your present correspondent was for some time so placed as to obtain an insight into the systems at work on several important lines. Having since had leisure to digest the information so obtained, he places the result of his cogitations at your service, in case you should think them worthy of publication.

First in order for consideration stands Directoral Management. This portion of the subject divides itself into the questions of the number, the remuneration, the qualifications, and the duties of Directors. There being no obvious way of ascertaining the number of Directors which would best unite the essentials of efficiency and economy, the question should be decided by the wants and means of the various Railway Companies; perhaps no Board should have more than twelve, nor less than six members. The objections to a large number of Directors are not more cogent than to too small a number. If, in the former case, the expense is large, the responsibility too much divided, and the influence so powerful as to render opposition on the part of proprietors of no avail, so in the latter case there is the risk of individual predominance, without security as to fitness, and the still greater risk of Directors assuming executive functions without responsibility. Most Companies entailed upon themselves a needless expense by appointing too many Directors in the first instance. This has formed a stock grievance at half-yearly meetings, particularly at those of the Companies which have been the least successful. Accordingly, the number on most lines is now very properly in course of gradual reduction.

As regards remuneration, the Directors being largely interested in the railways they manage, and having besides much influence and patronage, should be content with the refunding of their actual expenses. Most Companies, however, appropriate a certain sum as salaries to Directors, which acts as a bait to adventurers.

The question of qualification is important; a very essential one is the having a large stake in the railway. This qualification is, however, too often the only one looked to. Practical knowledge, a cool judgment, a mind capable of weighing evidence, and a soul above jobs, are attributes which a Director, to be efficient, must possess.

The duties of Directors should be exclusively confined to legislation and control. Having, on the best evidence to be obtained, framed judicious regulations for the conduct of the various departments of their establishment, and appointed eligible servants, they should take care that these regulations be vigorously enforced, and that their servants do their duty; but there they should stop. What can be more detrimental to the interests of public Companies than a meddling busy-body of a Director, who fond of showing his power, gives orders which are often impracticable, and always injurious, by lessening the sense of responsibility on the part of servants. The indolent inefficient servant is glad

Digitized by Google

to shelter his incapacity under the cloak of a Director, and the zealous officer is rendered fretful and discontented. In either case the evil is the same. Let Directors therefore watch, reprimand, and if necessary, remove servants, but never interfere with them while discharging their duties.

In my next letter I shall treat of the number, classification, emoluments, and duties of officers and servants. VIATOR.

RAILWAYS AND THE INCOME TAX.

To the Editor of the Railway Times.

SIR,—I am obliged by your notice of my former letter, in which you clearly show the actual identity of the two modes — adopted by the Great Western and South-Western Companies respectively — of paying the Income Tax upon their dividends, the apparent difference consisting only in the *nominal* amount of the dividend, according as the tax is included in the dividend-warrant, or paid separately by the Company.

But you have incidentally started another question, viz., "whether a man whose dividend is under 150*l.* per annum, but together with the tax *paid by the Company* exceeds that sum, can recover the amount of the tax or not?"

I should be glad to see this point settled, and you would confer a great kindness on many of the poor shareholders by giving such information as may spare them much waste of time and trouble in fruitless applications to the Commissioners. Another question arises as to the amount recoverable when the tax is paid by the Company. You have supposed the case of a holder of 97 shares in the South-Western Company, and taking the dividend at 30s. per share *per annum* (not on the half-year as the case really is), the amount received from the Company would be 145*l.* 10s. But the tax paid by the Company is now clearly recoverable, and is 7d. in the pound, not only on the amount of the dividend, but on that amount together with the tax already paid by the Company, or 7d. for every 19s. 5d. (not 19s. 3d.) of his dividend.

Thus he would recover 4*l.* 7s. 5d. (instead of 4*l.* 4s. 10d., as your calculation has given it), making the whole income from the 97 shares 149*l.* 17s. 5d., while the holder of 100 shares would receive 150*l.* (not 145*l.* 13s. as you have stated) as the tax is supposed to have been already paid by the Company.

It is therefore very desirable that all Companies should append to each dividend-warrant a notice to the shareholder of the amount recoverable by him, in case his income be below 150*l.* per annum—especially as the dividends are often partly made up of a reserved fund, which is not *necessarily* liable to the Income Tax.

Suppose, for instance, a Company to have declared a dividend for the half-year ending on the 31st December last, and to have carried forward a reserved fund in aid of future dividends, which would be clearly exempt from tax—suppose a part of this fund applied to increase the dividend for the last half-year, it is evident that no tax can be recovered on this part of the dividend, as none has ever been paid; and as the last was a broken half-year, the tax commencing only on April 5, it will be extremely difficult for a shareholder, entitled to exemption, to calculate the exact amount which has been paid by the Company as his share of the tax for that half-year, and which he can consequently reclaim from the Commissioners. I will conclude with a case. A holds 100 shares, on which a dividend is paid of 150*l.* per annum (the tax being paid by the Company), out of which he has to pay to B 50*l.* per annum, interest on borrowed money. B having 100*l.* per annum in the funds, and A no other property. How much does A recover from the Commissioners, and how much (if any) may he retain from B, and how much (if any) can B recover?

[We recommend this letter to the consideration of our correspondents. In our opinion—

1. A recovers from the Commissioners .. £3 0 11½
2. A can retain from B..... 1 9 2
3. B can recover nothing.

—ED. R. T.]

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I have long been in the habit of reading your paper, and have been sometimes amused, and occasionally shocked with the effusions of your correspondents. But I have no recollection of having ever been so thoroughly astounded, as by perusing one or two communications in your last week's *Railway Times*, impugning the integrity of the Report of the Midland Counties' Railway meeting which you recently published. I was present during the whole of that meeting, and paid the closest attention to what transpired, and I have no hesitation in stating, that the Report in question is on the whole most accurate and faithful; and such, indeed, as could not fail to convey to an impartial mind a just and precise conception of the character and spirit of the entire proceedings. Nothing can be more insidious and reprehensible, as it appears to me, than the manner in which your correspondents have attempted to subvert the credibility of that report, and thereby to counteract the impression it is adapted to produce on the public, and more especially on the absent shareholders, as to the way in which their property is mismanaged, and their proxies misused. "R.," in particular, who dates at St. Helen's, writes so much in the spirit displayed by the officials at the public meeting, that I should be surprised to learn that he is not much more intimately allied to them than he should wish his readers to suspect. His significant sneering reference to the "small and disappointed shareholders," the "paltry 1,200*l.* a year to the Directors," their threatened "resignation," &c., indicates the identical spirit which was so deeply offensive to the assembled proprietary, and which the officials themselves are so obviously ashamed of now that the matter has come before the public, and they have had time for reflection. Doctor Johnson used to say, "Where there is shame there may in time be virtue," and if there be truth in this maxim of the celebrated moralist, we may hope to be saved from all future exhibitions of a spirit which no possible circumstances could justify, but which when manifested by a Board of Managers towards unfortunate and misled shareholders, whose confidence they have betrayed, and whose property they have sunk beyond all hope of redemption, is deserving the severest reprobation. The Directors seem to be but little aware of the wide-spread mischief and misery they have occasioned by the false hopes they have held out, and the false estimates, both of outlay and income, which from time to time they have published; and it is most assuredly a matter of deep regret, that no provision has been made by the legislature or otherwise, to visit with appropriate punishment, that systematic disregard of truth which has characterised their Reports and their estimates, and which is rendered sufficiently notorious by the results already ascertained, though the *final results* are not yet known. What can tend more decidedly to destroy all confidence in Boards of Directors, and to foster a feeling of scepticism and distrust which must prove fatal to all public credit, than such discrepancies between promise and performance! The very least thing which men in these circumstances could do, to atone for the injury inflicted on the Company, and for the insult offered to public virtue, would be to retire at once from an office which they ought not for a moment to have filled. And in the event of their hesitating to take the initiative, the shareholders should lose no time in reminding them of their duty in this matter, and thus set an example which others might laudably follow. Had this plan been adopted from the first in all detected cases of false estimates and violated pledges, there is no calculating the advantage, both in money and feeling, that would have resulted to the railway proprietary at large. Much of the mischief is now beyond the reach of remedy but prompt measures may yet do good.

I am, Sir, yours, &c.,

ALPHA.

Nottingham, September 6, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Such of your readers as have access to the first volume of your valuable periodical will find, on referring to No. 33, November 3, 1838, page 639, a synopsis of the revised estimate of traffic published by the Directors of the South-Eastern Railway at that time, showing the prospect of gross receipts, amounting to 382,119*l.* per annum, or about 7,300*l.* weekly. The original pamphlet being no longer generally obtainable, I have been induced to draw up, from the one in my possession, a short analysis of the traffic, with the view of ascertaining how far the present weekly earnings bear out the estimate; and as the result may prove interesting to many parties, I shall feel glad if you can conveniently make room for it in your columns:—

Estimated Receipts per week.

Places.	Coach Passengers.	Posting Passengers.	Horses and Carriages.	Parcels.	Total.
Sevenoaks Sundridge Westerham, &c. &c.	£140	nil.	nil.	£6	£146
Tunbridge Wells, Hastings, Rye, and Tenterden	1054	£142	£252	45	1493
Maidstone.....	260	nil.	nil.	20	280
Canterbury	727	nil.	nil.	84	811
Folkestone	129	nil.	nil.	5	144
Herne Bay	462				
Dover coaches.....	817				
Dover steam, including 1-10th part of Margate and Ramsgate passengers....	717	372	336	165	3269
Local traffic, main point, Ashford	400				
Grand Total of passengers, carriages, and parcels, per week					£6143

The merchandise is calculated at 1,138*l.* weekly, and cattle at 103*l.*, comprising, with the above stated traffic, about 7,300*l.* weekly. There is no item for mails and Government expresses, which on so important a line will probably amount to 200*l.* weekly. The traffic *expected* from the present opening to Headcorn amounts to about 1,900*l.* per week, or 700*l.* more than I am told will be realised the first week of opening to that station.

An inspection of the railway map will show how much the circuitous course of the line must affect the traffic as far as Tunbridge, a disadvantage which, however, will not be felt as regards the remaining portion. I am also disposed to think that both Tunbridge Wells and Hastings are stationary as watering-places, and that the usual process of doubling the coach traffic of 1838 could, in their respective cases, hardly be calculated upon, though Hastings, as a favourite and fashionable winter residence, may, from the steadiness of traffic, make amends. On the other hand, the Maidstone business is probably underrated, and the Dover most decidedly so, taking into consideration the notorious increase of continental travelling in the last five years. I have also no doubt that, when Dover is accessible in 3¼ hours from London, at a half the present charge of coaches, it will be second only to Brighton as an attractive watering-place. It may not have the dash and style of Brighton, or the romantic scenery of Hastings, but it possesses great accommodation for visitors, and as a first-rate packet station, is a cheerful and lively place. The noble castle and cliffs are also constant objects of interest.

To revert to the subject of existing traffic. I am convinced, from inquiry and observation, that a considerable sum, probably 100*l.* per day in addition to the present receipts, will yet be obtained from

Digitized by Google

the Tunbridge and Headcorn stations; but it will probably require a winter season to clear away the opposition of coaches and steam-boats. Those who have endured the discomforts and delays of a winter passage from Gravesend to London, or who have on the Sevenoaks road toiled over River Hill, or Meadows Court Hill, in the teeth of a snow storm, at the rate of five miles an hour, will not need much persuasion to ensconce themselves in a railway carriage at a similar or lower rate of charge.

The opening to Ashford will, I am informed, take place in November, being earlier than was promised, an event attributable, no doubt, to the late favourable weather. Though this will certainly create a considerable addition to the receipts, still the railway so entirely depends for success on its full opening to Dover, that partial and previous results are comparatively unimportant. There seems hardly a second opinion obtainable from disinterested parties that the short sea voyage will command nine-tenths of the continental passengers, in spite of every effort to direct the traffic by other routes. It admits also of little doubt that great numbers of the visiters who annually crowd the shores of Ramsgate, Margate, Herne Bay, Sandgate, &c., will, at moderate fares, gladly avail themselves of the railway.

The main object of these remarks is to convey crumbs of consolation to the shareholders, many of whom are resident in the north, ignorant of our localities and the peculiar features of the South-Eastern line. To such I would briefly say—hold fast your property under any possible sacrifice, and rest satisfied that the summer of 1844 will realise your most sanguine hopes.

I am, Sir, yours, &c.,

AN EAST-SUSSEX MAN.

Hastings, 9th September, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As a summary of some slight interest to the shareholders in the above-named railway, I beg to furnish for your columns, if you can spare a niche for insertion, an outline of *gross returns* from *traffic* since the opening:—

Nine months, from September 15, 1840, 17,912*l.* Dividend, 2½ per cent.
Six months, from June 13, 1841, 23,242*l.* Dividend 3½ per cent.
Six months, from December 13, 1841, 27,702*l.* Dividend, 4½ per cent.

Twelve weeks without *goods* on the *short* traffic, to September 4, 1842	£18,608	10	1
Thirteenth week, say	1,391	9	11
Three months	20,000	0	0
Three months, to December 11, 1842, estimated (with *goods traffic* on the line)	24,000	0	0
Total	£44,000	0	0

It requires no logic, I hope, to convince the proprietary that, if six months' gross traffic to June 30, 1842, yielded (27,702*l.*) a dividend at the rate of 4*l.* 9*s.* per cent. per annum, a subsequent six months' traffic to December 11, 1842, estimated on reasonable data, may return at the least 44,000*l.*, equivalent to 7½ per cent.! I leave the question to its own merits, and remain,

Sir, your obedient servant,

A SHAREHOLDER, AND LOVER OF *FACTS*.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The above railway has reduced its fares, with a view to increase its receipts, and to afford greater accommodation to the public. Greatly, however, to the surprise of its regular customers, the Directors have again altered the times of starting in the morning, and now there is no train up that will deliver persons in London earlier than 10 o'clock, excepting the one which brings the Norwich night coach, and arrives soon after six.

At the following places there are men in business who wish to arrive in town certainly not later than half-past 9, not one of whom can avail himself of this conveyance. The places are Waltham, Ponder's End, Edmonton, Tottenham, and Lea Bridge. Reckoning only ten at each place, and that is below the average number, they lose the opportunity of conveying 50 persons, and compel them to seek other conveyances.

I have reason to know that at the Lea Bridge station alone, the number has diminished since this alteration as to time, from 50 to 15 persons per day. The provoking part of it is, ever since the railway started they have had an early or business train, to arrive in town at 9 or half-past, until within the last few days; the time chosen for this regulation being just at the moment when they have reduced their fares.

The motive is inexplicable; one would almost imagine some of the Directors did not wish reduced fares to succeed, and adopted this as the readiest method to prove it.

I am, Sir, yours, &c.

AN INHABITANT OF WOODFORD.

September 13, 1842.

NORTH MIDLAND RAILWAY—ACCIDENTS, &c.

To the Editor of the Railway Times.

SIR,—You would greatly oblige a constant reader of your journal by inserting a notice of the two following most appalling accidents which occurred during last week on the above line, at the Derby station, under the following circumstances:—

At 6 o'clock on Tuesday morning, as the driver of the coal train was arranging a train of empty coal waggons, he called to a man named Brown to uncouple a waggon from the tender, who very imprudently leaped with his belly upon the buffer of the tender while the engine was still in motion; and having unhooked the chain, and in the act of getting off again, the wheel of the tender caught his foot, and split it completely in two as far as the instep. He was taken to the infirmary, and his leg was amputated above the ancle. Within a few yards of the same spot on Thursday afternoon, as an elderly man named Jones, who was employed to supply the engines with coke, was crossing one of the lines in the yard, with a coke-bag upon his shoulder, he was knocked down by one of the engines, which passed over him, and when taken up it was discovered that one of his legs was cut completely off, and the other broken—besides other injuries. He also was taken to the infirmary, where he lies in a very precarious state.

I am of opinion that the Company is much to blame in the latter case, as the person who was entrusted with the management is only a cleaner in the shed, and has never been accustomed to driving. He did not sound the whistle, or give any signal of the approach of the engine. There are a great number of branch lines about the station at Derby, and many men are daily employed in various departments in the yard, which is a very dangerous place, as pilot-engines, &c., are constantly flying about, and I consider that the Companies ought to have none but competent men for piloting. But, instead of that, I have seen numerous instances of men who have been brought up to agricultural pursuits, &c., who have obtained situations as engine-cleaners, and in a short time they have been sent out as firemen; and after firing for a few months, they consider themselves competent to take situations as drivers. They make application, and commence with the pilot-engine for a short time, and then get to running regular train-engines; in fact, they spring up like mushrooms, and assume as much consequence as though they had been drivers for a dozen years. I am of opinion, if Railway Companies would adopt the following plan, they would find it a very beneficial one: namely, not to employ any man as a driver unless he has served an apprenticeship to manufacturing of engines, and for each driver to do all the *casual* repairs his engine may require, thereby keeping him constantly employed; whereas the present drivers are not capable of doing any repairs, which causes a great deal more expense during repairs than would the above plan, and especially on lines where they are short of engines. I would likewise offer a premium for that man who runs his engine longest with the least repairs, which would be a stimulant for each man to keep his engine in good working order. I conceive that if the above plan were generally adopted, it would effect a great saving in the working expenses under this head, besides affording a guarantee for the public safety.

Yours, &c.

Derby, Sept. 6, 1842. A. F.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—The unfortunate dispute between these two Companies having assumed a different complexion since the late meeting of the Greenwich, I am induced to offer a few remarks on the consequences that must follow the unfriendly and hostile feeling shown to the Croydon Company. Before doing *this*, I will briefly state the case between the two Companies. The Greenwich require the Croydon Company to carry their passengers at the same fares which produced them a toll of 6,000*l.* per annum, and which now, with the increased toll, would reach 9,000*l.* I find the receipts of the Croydon Company when they were paying 6,000*l.* toll, amounted to 33,346*l.*

The expenses of working the line amount to	£26,233
For wear and tear	2,000
Which will make the amount	£28,233
Add toll to Greenwich	9,000
	£37,233
Amount of receipts from traffic on Croydon line	33,346
Loss to the Croydon Company	£3,887

So that the Greenwich Company require the Croydon to conduct their traffic at a loss of nearly 4,000*l.* per annum that they may pocket the 9,000*l.* toll. The Greenwich Directors, in the face of the above facts, having led their proprietors into a belief that the Croydon Company would pay this money, are naturally enough disappointed to find the toll has not reached half that amount.

I wish to say one word as to the oft-repeated assertion, that it was at the *instigation* of the Croydon Company that the Greenwich line was widened, and I am unwilling to reiterate the contradiction of this assertion; but I feel so important a fact should be kept prominently in view, as it must justify the Croydon Company taking the important step hereinafter stated. There are two facts that will set this matter at rest. First, that it was a Committee of the House of Commons (not the Croydon Company) that required some steps should be taken to avoid the supposed danger of four Companies using the Greenwich line. Secondly, the Croydon Company were not the consenting parties to its being made if the toll was to be raised to fourpence-halfpenny per passenger, being well aware they could never pay it. A formal protest to this effect was delivered to the Committee by their counsel, Mr. Austin. It is on record, that the Croydon Company offered to widen the line themselves, and guarantee the Greenwich Company 10,000*l.* per annum, which would now have enabled the Greenwich proprietors to have received a handsome dividend, and not as one of them stated at the meeting, so paltry a one "that he was ashamed to go home with it." I would ask, of what value are these facts. Do they not show that the same want of judgment and foresight still influence the councils of those who have the management of the Greenwich affairs, and which has so glaringly shown itself since the commencement of the undertaking, till it has gone on from bad to worse, and promises now to be on the verge of bankruptcy before long?—for I will tell the Greenwich proprietors, if their Directors will not, that the diminished receipts on their line is attributable to their popular and well-managed rival, the Blackwall Railway—and who can tell to what extent it will yet reach? The Greenwich

Digitized by Google

also are now about losing their best customer, the Croydon Company.

It is mismanagement of the Greenwich affairs that has placed that unfortunate Company in its present pitiable position. This now brings me to the main object of my letter, which is to impress upon the Croydon Board the importance of their immediately taking the necessary steps of suspending the traffic on their line as far as they are concerned; and I trust this will be done with as little delay as possible, seeing that all further negociation with the Greenwich Company is quite hopeless—the strong fact that the Croydon Company will lose less by suspending their traffic than carrying it with the present curtailed receipts, will be shown by the following figures:—

The expenses which the Croydon Company must under any circumstances pay, are maintenance of way, police, insurance, &c., which will not exceed 6,000*l.* per annum; to which must be added interest on borrowed capital, 8,000*l.*, together 14,000*l.*; to meet which the Company are now receiving from the Dover and Brighton Companies toll about 600*l.* per week, which, I think, may be fairly taken as an average for the next 12 months, which is at the rate of 31,000*l.* per annum, with about 2,000*l.* to be received from the Dover Company for the use of the New Cross station, will make 33,000*l.*; deducting from this 14,000*l.*, will leave 19,000*l.* applicable for a dividend to the Croydon proprietors of about 4 per cent. I trust the Croydon Board will be prepared to announce at the approaching half-yearly meeting their intention of adopting this plan, that they may have the formal sanction of the proprietors to so important a step.

I am, Sir, yours, &c.,

A CROYDON SHAREHOLDER.

August 1, 1842.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—At the half-yearly meeting of the Cheltenham and Great Western Railway, so long ago as May last, the Chairman told the shareholders, that as soon as their new Act of Parliament was obtained, a special general meeting would be *immediately called*, to put in force the powers of the Act without loss of time. A meeting is at last called for the 20th September, which is all but four months since the Royal Assent was given to the Bill, which contains immense powers to the shareholders, with a view of rescuing the concern from its present unfortunate position. The Act allows the shareholders to let or lease the railway, when completed, to the Great Western, or to the Bristol and Gloucester, *or even to sell it or lease it to any other Company;* and it gives a great extension of time in which to complete the undertaking, many years more than will be necessary, in my opinion. With such ample powers in their hands, what can have possessed the Directors to delay their meeting to so late a period of the year? It strikes me forcibly, that a more auspicious time than the present could hardly happen to favour the Directors in prosecuting, with vigour, the formation of the railway, under the auspices of the Great Western or the Bristol and Gloucester, both of which Companies are deeply interested in the finishing of the Cheltenham line, but more especially the latter, as when the Bristol line reaches Stonehouse on its way to Gloucester (a distance of 8 miles), they will have to pass over that portion of the Cheltenham road, by paying a toll or taking a lease of it, in the same way as the Birmingham and Gloucester line has taken up from the Cheltenham (from Gloucester to Cheltenham), just about a like distance, by way of lease—or rather, they have bought it for a period of years, with powers from the Cheltenham to redeem the road. That the line from Kemble, by the way of Stroud, to Gloucester will be made, with the assistance of the Great Western, no one can doubt who takes a calm view of the subject, as having gone "over shoes" by taking on lease that part which is open from Swindon to Kemble, they must go "over boots" by taking that part from Kemble to Stonehouse, and letting the Bristol and Gloucester either lease or purchase the remaining portion of the road to Gloucester.

It is quite ridiculous to suppose that a line of railway will, during the next 10 years, be made between Cirencester and Cheltenham, a distance of 16 miles. *The nature of the country and its thin population* are so well known, that no one can reasonably expect such an event taking place, and what after all would be gained in distance by this route, if it were made—8 or 10 miles at the most—hardly more than 20 minutes in time.

Now that money is so abundant all over the country (partly arising from the difficulty of employing it profitably in trade), and contractors of railways so numerous in the market, and *materials* of which railways are formed so much reduced in price, as compared to what they were a few years ago (viz., iron about one-half of what it was in 1836), a period more favourable for the prosecution of the Cheltenham and Great Western Railway, yet unfinished, could hardly possibly occur; and if the Directors do not quickly avail themselves of such a fortunate combination of circumstances as now presents itself to their notice, responsibility will attach to them of the most serious kind, in reference to the interests of their constituents.

I have no doubt that there are not a few *respectable* and *responsible* contractors that might be found who would undertake to complete the railway for *a fixed sum*, say 16,000*l.* a mile, full 10,000*l.* a mile less than what the part already made cost the proprietors, according to what was stated at the last meeting.

I am, Sir, yours, &c.

A LOOKER-ON.

September 5, 1842.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—I happen to be an unfortunate shareholder in the Manchester and Birmingham Railway, and being absent from home during the last week, I had not an opportunity of attending the meeting. On reading over the proceedings I am astonished at the extraordinary mode in which the Directors treat the proprietors. It appears there is to be another Committee of Proprietors to discuss the tunnel question with the Directors. It is only a few weeks since we had a similar Committee to discuss the agreement with the Grand Junction Railway Company. Surely this constant mode of having Committees is anything but creditable to the Directors. I have always been of opinion that it was the duty of Directors, having the entire management of a railway, to be prepared to submit their matters to the proprietors, properly matured, whenever it became necessary to carry any matter before them. But in our case they seem never to have made up their minds. There never was an instance of a railway where such vacillating policy was pursued. An Act of Parliament which cost 157,745*l.* was obtained, to join the Grand Junction at Stafford, in order to accomplish which the formation of the Congleton viaduct was actually commenced. Subsequently, without any reason being assigned to the proprietors, we abandon the line to Stafford, and make it to Crewe, thereby breaking faith with the Staffordshire gentlemen, who gave us in Parliament a very steady and strenuous support. We then made a bargain with the Grand Junction Railway Company, *which bargain has never been officially communicated to the shareholders to this time.* The reason generally stated was, that it was an excellent agreement, and the proprietors must place confidence in the Directors, and forbear asking them for the particulars. What was the result of this notable bargain? Why, that when the railway was ready to be opened throughout, it was one that could not be acted upon; the Grand Junction Railway Company had been too quick for us. That agreement, I see by the papers, is now to be superseded by another, with the same Company, by which it appears we are to pay to the Grand Junction Company 70 per cent. for working 24 miles. Now, it appears by the accounts, we have expended 1,754,843*l.* on the works, and that 127,000*l.* more is wanted, independent of the amount required for the tunnel, should that be determined upon.

It also appears that our highest week's revenue has not reached 2,400*l.* If the Grand Junction are to receive the 70 per cent., I am afraid we stand a very poor chance of a dividend. These matters require strictly looking into, and more explicit answers should be given by the Directors to the proprietors when questions are put, and not show such a disposition to secrecy. In other Companies every information that may be required is given by the Chairman—and why not in this?

I am, Sir, your obedient servant,

A SUFFERING AND ORIGINAL SHAREHOLDER.

Manchester, September 4, 1842.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—The following is the weekly receipt of the Edinburgh and Glasgow Railway, from the 30th June to 10th September:—

July 1 & 2.....	£513	12	5				
,, 9.....	1,890	5	2				
,, 16.....	2,214	18	6				
,, 23.....	2,464	6	10				
,, 30.....	2,178	19	5				
August 6.....	3,245	12	2				
,, 13.....	2,464	3	0				
,, 20.....	2,357	8	9				
,, 27.....	2,017	3	8				
Sept. 3.....	7,593	10	7				
,, 10.....	3,339	4	2				
	£30,278	19	8	or per week	£2943	16	3
Deducting the extra receipts for the cattle show week and the two last weeks.....	7,499	3	8				
Will leave the regular traffic	22,779	16	0	or per week	2,214	14	1
But add the actual receipt on 10 2-7th weeks of the extra traffic	2,966	14	0				
	£23,746	10	0	or per week	2,503	2	10
Provided the traffic for the remaining period of the current half-year, say, 15 5-7th weeks, remains at					2,214	14	1
There is a balance of extra traffic to be carried over this period of 4,532*l.* 9s. 8d., or per week					288	8	7
Total					£2,503	2	8

If, therefore, the Company have declared 5 per cent. on the weekly receipt of 1,800*l.* or the actual receipts of this day, 7 per cent. may be expected on 2,500*l.*

But the Edinburgh and Glasgow Company have done in four months what other Companies have been trying for years to accomplish, viz., the establishment of a system of economy in the working of the line; for, even including a large sum for the maintenance of the way, their working expenses are reduced to 33½ per cent., and may be still further reduced at the next declaration of dividend.

Some people seem to expect that in the winter months the traffic will fall off. Possibly in some cases it may, but what they may lose in one way they may gain in another; for the passengers and goods which are now conveyed by the canal will have recourse to the railway, when the canals are closed by frost, and therefore it is fair to calculate that the present traffic will be more than maintained.

The above is given with a view to protect the interests of the shareholders who, from misrepresentations, are tempted to throw away their shares at the present miserably low prices without the slightest cause for such reduction.

I am, Sir, yours, &c.,

SHAREHOLDER.

NOTES TO THE TRAFFIC TABLE,

(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester. The coaching receipts of the corresponding week of the previous year included nearly 900*l.* for special train of mechanics from Birmingham, and for the conveyance of troops.

14. The receipts include those derived from the Cheltenham and Exeter lines: the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 00*l.* 0s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 4,884*l.* 18s. 8d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 27*l.* 6s. 0d.; carriages, 64*l.* 12s. 0d.; dogs, 7*l.* 12s. 6d.; parcels, 203*l.* 8s. 5d.; cattle, 10*l.* 5s. 0d.; corn, 11*l.* 6s. 0d; heavy goods, 506*l.* 14s. 4d.; coal and lime, 113*l.* 17s. 3d. —Total, 945*l.* 1s. 6d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 2,983*l.* 18s. 7d.; carriages and horses, 255*l.* 14s. 1d.; parcels, 171*l.* 6s. 5d.; mails, 50*l.* 5s. 9d.; merchandise, 1,071*l.* 13s. 8d.; minerals, 304*l.* 6s. 10d.; cattle, 24*l.* 11s. 2d. — Total, 4,861*l.* 16s. 6d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Justice *was somewhat premature. He should have waited to see the result of our present number. Why does he not write under his real name?*

Bristol and Gloucester Railway.—*In our last week's share-list, the figures 42 and 43 were erroneously placed opposite the name of this railway, instead of the* Birmingham *and Gloucester.*

?.—*We thought we had given such answer as we could to every part of our correspondent's inquiries. His first letter is destroyed, but if he will take the trouble of writing again, we shall endeavour to clear up any obscurity that may exist.*

Eisenbahn.—*We would recommend that the shares in A be got rid of as speedily as possible. For investment, the lines numbered 3 and 4 by our correspondent, appear to us very desirable—especially 4.*

A Subscriber *(Waterford) is informed, that the receipts of the Birmingham Railway, as published in the* Railway Times *of 17th July, 1841, amounted to 17,434l. 15s. 7d. This return was for the week ending July 10.*

North Midland Railway.—*We feel much obliged to Mr. Frost for the further explanations given to us, with respect to shares, &c. If other Secretaries would follow the example thus set, error would speedily be detected and corrected.*

Mr. Bourne, of the Northern and Eastern, is entitled to similar commendation.

A Constant Subscriber.—*We would recommend further investment in No. 4, but not in any of the others. No. 2 will go much lower, at least 2l. or 3l. per share.*

Δ.—*The fall, we believe, will be only temporary. Our correspondent need not be in alarm.*

Croydon Railway —*In our report of the proceedings of the late meeting, we stated that the seal of the Company was not (as usual) affixed to the register of shareholders. We have since been informed that the seal was then affixed. All we can say is, that we did not see the act performed.*

Detector.—*The last letter, to which allusion is made, did not reach us. Will our correspondent write again?*

Scrutator's *letter is very much to the purpose, but if he will allow us to avail ourselves of a portion of its contents next week, we think we shall be able to make it* tell *better in another form.*

Eastern Counties' Railway.—A Constant Reader *on the affairs of this Company shall have attention next week.*

Q. *does not fall within the scope of our journal.*

Solomon *came to hand too late for this week. We had previously hinted at something similar with reference to other lines. His letter shall appear.*

Greenwich Railway.—*We really cannot oblige* A Very Modest Man *with any particulars relative to the intended (!) testimonial to Mr. Scrimgeour. We should imagine, however, that the worthy gentleman is considerably out of pocket by advertising. We should like vastly to see the subscription list. We cannot agree with our correspondent's postscript. Mr. Scrimgeour must of course be an excellent judge of his own merits, and therefore if he choose to get up a testimonial to himself, who shall gainsay it?*

Those of our correspondents whose communications are not acknowledged above, may consider that from some cause or other they are unsuitable. We have now got rid of our arrears in that department.

TRAFFIC OMITTED.

Edinburgh and Glasgow Railway.—*The following has been sent to us as a corrected copy of last week's return, the bustle attending her Majesty's visit having given rise to inaccuracy:— Receipts from passengers (No. 32,690) 6,749l. 11s. 4d.; horses and carriages, 82l. 19s. 6d.; parcels, &c., 50l. 0s 2d.; goods, cattle, &c., 291l. 8s. 2d.; total, 7,193l. 19s 2d.*

North Union Railway.—*Week ending September 2.—Receipt from passengers (No. 4,807) 939l. 19s. 4d.; goods, 136l. 14s. 6d.; coal, 80l. 9s.; total, 1,157l. 2s. 10d.*

Arbroath and Forfar Railway.—*Week ending September 3. —Receipt from passengers (No. 1,738) 69l. 18s. 5d.; goods, &c., 72l. 12s. 7d.; total, 142l. 11s.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500

Majority in favour of the RAILWAY TIMES .. **77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 17, 1842.

On a previous occasion we referred in very general terms to the parallel between the early history and fortunes of the South-Eastern (or Dover) and the South-Western (or Southampton) lines. We do not mean to carry the parallel to a fanciful extent, or to attempt to go into minute details, but it is certainly true that, in many of those cardinal points on which success or failure turns, there is a remarkable similarity. Both of these important works have undergone the most severe trials, but the Southampton line, as the elder brother, learnt the first lesson in the school of adversity.

The two lines are of nearly the same length, the Southampton (proper) being 77 miles, and the Dover (including the 12 miles common to the Brighton and itself) being 78 miles; and the Gosport branch of the former is analogous, not only in length, but in comparative importance, to the Canterbury branch proposed for the latter. Both possess, for their termini, seaports having considerable intercourse with the continent of Europe, and both pass through districts chiefly agricultural, neither touching any great manufacturing town, but each having within the range of its influence places of much public resort, and a large and wealthy, although a comparatively scattered, population. Both works were projected, and the Acts for them obtained, at periods when the fever of speculation ran high—both were at first under the control of military Engineers, having seats at the Board as Managing-Directors, or substantially in that capacity, which control was in course of time abolished in each—both also found it desirable to supersede the chief Engineers who originally laid out the lines, and to appoint others for the execution of the works. The South-Western line, as originally sanctioned by Parliament, involved very serious clay cuttings at St. George's Hill; the South-Eastern line had works of a similar character at Postling—both were encountered, in order to avoid interference with ornamental grounds, and in both instances these difficult works were by subsequent arrangements abolished. We will not pretend to follow the financial difficulties of the two Companies, but when we know that each *began* with a weak proprietary, and insufficient capital—that both were obliged to check their works for want of funds—that the original Bankers of each failed, and that public confidence, having entirely gone from each, was only restored on their obtaining powers to raise substantially double their original capital;

Digitized by Google

when we consider, moreover, that each had to encounter the storms of two great monetary panics, with money at 7 per cent., and war with France apparently inevitable, it may, we think, fairly be presumed that the pecuniary difficulties of each were equal—namely, such that it would be impossible for any commercial body to pass through greater and live.

Having thus touched on the dark history of the past, let us turn to the present, and the prospects of the future. There, too, we shall see a similar parallel—bright indeed, and cheerful, but still alike.

It was the fortune of these two undertakings to find, at the periods of their greatest depression, two men to preside over their respective councils of extraordinary capacity for such a labour—men very different in character and pursuits, but possessed alike of that untiring energy and perseverance, without which no great end can be accomplished. The two enterprises themselves were known, by those who had really the means of appreciating them, to contain the elements of brilliant success, and the fact that those men were giving the influence of their names, their intelligence, and their wealth to the undertakings, gave confidence to their colleagues and the public. The Directors also received material accession of strength in other members of the Boards. Tardily, but with great attention to economy, the lines were in part opened, the cost per mile being about the same. The first partial opening of each was in the month of May, that of the Southampton being to Woking, and that of the South-Eastern to Tunbridge. The distance from London to the latter place is greater than to the former, but the South-Eastern line receives comparatively nothing from short fares, they being taken by the Croydon and Brighton lines, whilst the Southampton has five stations within the first 15 miles. The circumstances were therefore sufficiently similar for a close comparison. The results of the first 14 weeks from the respective openings were as follows:—

1838—*South-Western.*		1842—*South-Eastern.*

It is to be observed that, from the first opening, the Southampton line had a direct communication by coaches through to Southampton, but the Dover line had no such advantage.

In September, 1838, the South-Western line was opened 15 miles further—to Winchfield. The receipts had by the 6th October risen to 1,321*l.* per week. On the 31st August, 1842, the South-Eastern line opened 15 miles further—to Headcorn, and we are much mistaken if the result will not in a few weeks prove the same.* The circumstances are rather against the South-Eastern in the comparison, inasmuch as the extension of the line has been accompanied by a material reduction in fares, for which it must probably take time to compensate, and Headcorn is badly situated for roads of approach.

After the opening to Winchfield, in 1838, the receipts of the South-Western remained comparatively steady, varying with the season from 1,321*l.* per week in October, to 930*l.* in December; and again in May, 1839, having got up to 1,893*l.* per week. But it was not until the opening to Basingstoke, in June, 1839, that the traffic began really to *tell*. From Winchfield to Basingstoke the distance is 8 miles only, but the average of the first 12 weeks after the opening of the line to Basingstoke shows a receipt of 3,385*l.* per week. Ashford, 10 miles beyond Headcorn, is the Basingstoke of the Dover line, and to that point it will, it is said, be open in November next.

The South-Western line was opened throughout in May, 1840, and then it was that the real strength and resources of the work began to be developed. The average receipt of the first 12 weeks after the total opening was 6,293*l.* per week, which advanced during that year to 7,000*l.* and 8,000*l.* per week, which sums we have seen it since exceed, with every prospect of further extension. The same proportionate results will, we entertain not the slightest doubt, be found on the opening of the entire line to Dover. Its merits and resources as the great continental outlet cannot be in any degree tested until it shall be complete throughout. The French line, from Paris to Rouen, is in an advanced state, and the extension to Havre is commenced, or about shortly to be so; whilst, on the other hand, the line from Paris to the Belgian frontier, with a branch to the coast, either at Calais or Boulogne, has been granted by the French Chambers, and the works on these lines will be immediately prosecuted.* But here the parallel fails, for whatever advantage the railway from Havre to Paris may bring to the South-Western line, it can never be of the same importance as the lines connecting Calais or Boulogne with Paris and Belgium will be to the Dover line. We may annihilate distance on land, but the passage by sea must remain the same; and this barrier, which whilst it was coach against coach, and diligence against diligence, always turned the scale in favour of Dover, will still do so when it shall be a question of railway against railway. The mails, the couriers, the bullion, the overland passengers and dispatches for India—everything for which *certainty* as well as speed is required will still take the shortest sea passage. All experience is in favour of this, and the fact that such traffic does take that course now, when there is a railway to Southampton and none to Dover, puts the matter beyond a doubt. Belgium and Germany must also necessarily take this route. It is scarcely possible to calculate the extent to which this traffic will go, when the great lines of communication now fast advancing in Prussia, Austria, and the central states of Germany, shall be connected with those of Belgium and France.

We think then, that having seen these two important lines struggling through and mastering similar difficulties, we may anticipate for the Dover, which yet remains to be proved, a result certainly not *less* successful than that which has attended the Southampton. That it may be more slow in its development we think very probable; because, opening as it does an entirely new tract of country, and passing away from the ordinary lines of communication, the formation of lateral roads, and the diversion of the traffic from existing channels, must be a work of time, but of the ultimate successful issue we cannot entertain a doubt.

We copy into another column a letter addressed to a provincial contemporary by Mr. Storey, Engineer-in-Chief of the Great North of England Railway. The object of Mr. Storey is to vindicate himself from the charges made by some of the Directors on the occasion of the recent meeting, to the effect that the Engineer was alone to blame for the excess of estimates, and that in fact the Directors had been misled by that gentleman's representations. Mr. Storey turns round upon the Directors, and thus writes:—

"I hold written directions from the Board of Directors, the London Deputation, and the Company's Solicitor, *that the Parliamentary estimate was not to exceed a given sum*.. On my stating that it was impossible to make and support such an estimate before a Committee of either House of Parliament, I had instructions to exclude certain items in that for the county of Durham, and everything but the bare line of railway through the county of York.

"This, the proprietors and the public will see, excluded expenditure now incurred in locomotive engines, coaches, trucks, horse and cattle carriages, coach and merchandise stations, coal depots, and workshops at various places on the railway, and will account for a larger portion of capital being required than was generally anticipated."

It grieves us exceedingly to have to place on record such words as these. Mr. Storey may think that he has sufficiently met the charge of having misled the Directors; but what says he to the graver accusation, which may now be preferred alike against him and them, of having deliberately and most shamefully misled Parliament and the public? We want words sufficiently strong to express our indignation and contempt for such trickery as Mr. Storey admits he was a party to. He was instructed, it seems, to keep the Parliamentary estimate within a certain sum, and against his own conscience he assented! We leave Mr. Storey to divide with the Directors who could counsel such a course of proceeding the merit of having carried it out! Had Mr. Storey been as careful of his "professional reputation" as in his letter to the local paper he would have us believe—nay, had he paid the smallest regard to his character as a man who would neither suppress the true nor suggest the false, he would have spurned such instructions as he says his Board of Directors furnished him withal, and would have submitted to the Parliamentary Committee (and we suppose he swore to their accuracy) only such estimates as he knew would be in accordance with the spirit of legislative arrangements. Mr. Storey, it would appear, threatens further disclosures. We hope he may have occasion to make them known; for although the public, we conceive, have enough before them to enable them to judge justly of Mr. Storey, and of those whom he would implicate in this disgraceful transaction, anything which can throw light upon the tactics of such parties must exert a salutary influence, not only as regards Parliament, but as affecting those who may lend credence to future *Storeys* in respect of engineering cost.

We fear that this case of the Great North of England Railway is by no means an isolated one. Prevarication and reservation appear hitherto to have characterised the proceedings of the profession in their contact with Parlia-

* Since this article was in type the first week's return of the traffic since the opening to Headcorn shows a receipt of 1,224*l.* The Dover line does not yet carry heavy goods. The present week's receipts will be found noticed elsewhere.

* The contract for the first division of the line (from Paris to Pontoise) is advertised for the 28th instant.

Digitized by Google

ment, and with those who were credulous enough to lend an ear to their hollow pretensions. They are now paying the penalty, in the utter distrust with which everything emanating from them is received. To inflame this well-founded dislike is not our object; we are anxious that the causes which have generated it should be removed. But removed these causes never will be till the plan (which we take some pride in saying we were the first to suggest) has been carried into effect of rendering an Engineer responsible in purse and person for the adequacy of his estimates. It gave us great pleasure to find that, in the Report which we dissected last week, Mr. LOCKE had expressed his adhesion to this salutary proposition. We know of other Engineers who purpose to found schemes for embryo railways on the same basis, and we have no doubt that the result will turn out to be satisfactory. We have heard indeed of a scheme (which in other respects likewise deserves success) where the legal expenses are in like manner to be distinctly set forth in a similar way, and not to be exceeded save at the risk and cost of the contractor. This is the right way of carrying out now-a-days a railway undertaking. Much better would it be for the shareholders, who subscribe a million or so of money, to agree to a liberal price for law and other contingencies, knowing that they will have nothing more to pay, than that they should be called upon, as in a recent notable instance, to disburse something like 60,000*l.* for legal costs, and of that sum 10,000*l.* in one half-year, after they had considered themselves wholly exempt from every charge of the kind. Were it our lot to be railway shareholders, we would much rather know the "outside" of the expenditure at once, than be led by degrees from original and revised estimates to a double, and sometimes to a treble, outlay. The Engineer-in-Chief of the Brighton Railway has the unenviable notoriety (if report speaks true) of counselling the keeping back the probable amount of constructive cost, lest interested shareholders should take the alarm; it will be for Mr. LOCKE, and others who desire to see the profession placed upon a proper footing, to offer such estimates only as they can conscientiously certify as final, and to guarantee their accuracy by incurring personal responsibilities to a corresponding extent. Experience has taught the public wisdom; if it has had less effect upon the profession, the fault rests with themselves, and so also will the punishment.

THE autumnal meetings just terminated have proved far from satisfactory in their results. With very few exceptions the dividends have been diminished, and in most of the cases where the previous per-centage is maintained, it has been effected by encroaching upon funds properly applicable to other purposes. Under such circumstances it need excite little surprise that, generally speaking, the shareholders have evinced their disappointment, by fault-finding and murmuring. We do not mean to say that in the majority of cases they have not had ample cause for this exhibition of feeling, but unquestionably in several instances they have expended their indignation very injudiciously — they have proved themselves penny-wise and pound foolish—squabbling about trifles, and leaving the grand sources of corruption, jobbing, patronage, and lavish expenditure, unapproached. As disappointment succeeds disappointment, and a small dividend is followed by no dividend at all, despair will lend the shareholders courage, and we shall in due time find them much more ready to condemn than they now show themselves forward to approve. The chances are, that once excited they will carry their censures too far; but as this contingency does not affect the present aspect of railway affairs, we need not now enter upon its consideration.

It is so far gratifying to find that attention seems at last to have been directed to the quarter from which railway proprietors are to look for an improvement of their prospects—namely, the curtailment of current expenditure. Little, compared with the amounts which might have been saved had prudence guided the operations of Directors and their officers, or vigilance characterised the proceedings of their constituents—little, we say, can *now* be effected by the most studious attention to economy; but, nevertheless, that *little* is worth the attempt. Past apathy is no justification of present inaction. The very fact that from lack of attention heretofore, a railway has been burdened, apparently for ever, with claims which render a satisfactory dividend a thing rather to be hoped for than realised, ought to serve as a stimulant in the prosecution of all rational means to remove the incubus, or modify its baleful operation. It is never too late to amend, and more particularly so in Railway Companies, where the causes which have produced effects so disastrous in the matter of first cost, must, if suffered to remain, generate similar results in current disbursements. With much pleasure, therefore, it is that we fancy we discover indications of closer investigation —more minute, more searching scrutiny—on the part of railway proprietors. For a time they may be baffled. The existing corporations, although but of brief existence, are strong in the very points where to be attacked successfully they must be assailed, and those who profit by present abuses (and their name is legion) will make a resolute resistance. The ultimate result, however, is not in any way doubtful. With a good cause, perseverance must eventually prevail.

Railway proprietors, becoming weary of the doubts and difficulties which, as matters now go, seem hopelessly to environ them, will be glad, at almost any sacrifice, to put an end to their perplexities—will escape from contingencies, however flattering, to certainties which, at an earlier stage of their experience, they would have spurned with contempt. Hence, the plan of letting their several lines on lease will gradually become popular. In some instances, the object of securing a fixed, unfluctuating income, can in no other way be attained. The leasing system is imperfect, however, in this respect, that it entails the necessity of keeping up an establishment distinct from that of the lessors. The Bristol and Exeter, the Cheltenham and Great Western, the Aylesbury, the Leeds and Selby, have (and it is proposed the Northern and Eastern shall have) their Secretaries, Directors, and Engineers, and various subordinate officers, all of whom must be paid out of the proceeds of the yearly rent. This is a very serious drawback, and the more so that in the case of lines which are fully completed, the services of these parties cannot be at all required.

An amalgamation of interests among neighbouring lines is the only mode by which economy can be carried to its legitimate extent. Three distinct establishments, for three separate and independent railways, which could easily be managed by any one of them with some slight addition to the existing staff, must of necessity absorb a very considerable proportion of the aggregate receipts of the lines so worked. Three Engineers, three Secretaries, three Superintendents, to do the work of one, and some 36 or 40 Directors to undertake and imperfectly to execute the duty which 5 or 6 would adequately perform—these are some of the beauties of the existing system, as compared with that which, sooner or later, will be brought into operation. Time will do much to open the eyes of the parties most deeply concerned, we mean the shareholders, and the opposition which the bare promulgation of such a scheme cannot fail to excite, will gradually subside.

We know of no railway conjunction where such an experiment could be tried with so much effect as on the Midland Counties', North Midland, and Birmingham and Derby lines. We say nothing at present of the removal of difficulties in the working of the several lines as affecting the public, although this is clearly a most material consideration; but apart from this, the advantages are too manifest to be overlooked. We shall return to this subject.

IN our number of Saturday last we alluded to the probable resuscitation of the West London Railway scheme, and expressed a hope that, having already expended so large an amount of money, the shareholders would avail themselves of this last chance of saving the wreck of their property. If we thought, however, that matters were to go on in the same unvaried round of mismanagement which has characterised the past proceedings of the Directors, we should most emphatically caution all parties interested against having anything more to do with the concern—against risking a single shilling in the vain attempt to retrieve bygone losses; for vain it assuredly would be, if the same bungling, and worse than bungling, were to be repeated. And this brings us to the object of our present notice, which is to recommend a far more extensive scheme of Board reform than was broached at last week's meeting.

It will have been seen that three very influential gentlemen were recommended to fill the vacancies existing in the Direction, and we should suppose that by this time they have been formally elected. But what are three among so many as ten or twelve individuals who have the modesty to charge the unfortunate owners of this dilapidated railway with a certain number of hundred pounds for doing —nothing? Had not the fact been distinctly stated, we should not have believed it possible that any body of Directors could have stooped to pocket the money of their constituents under such circumstances. Here is a half-finished railway rapidly becoming a complete wreck, and the Directors cannot, or will not, do anything to rescue it from its present condition, and yet not more regularly could they secure their "allowance," nor more unblushingly, if from the undertaking the proprietors were realising a handsome dividend! It is true they have not pocketted this allowance in hard cash, but they have been equally benefitted in having it "written off;" and, by the way, we should be glad to know how there came to be anything at all to be "written off." It is a long time since the shares of the Company were called up in full. Were any of these Directors in arrear on calls? If so, with what face could they pursue at law reluctant defaulters who had not the honour of a seat at the Board? Moreover, it would be

Digitized by Google

interesting to know by what rule and in what proportions the said allowance money was divided. They have constantly been complaining of the difficulty of forming a Board—and this is confirmed by the fact, that only two of them were in attendance at the very important meeting of last week—and under these circumstances, we cannot see how the money could have been (we will not say *earned*, for that would be ridiculous, but) colourably appropriated, unless those who *did* attend were paid at a very high rate indeed. There is clearly much to be elicited on this point, as well as on other points of internal regulation, and we doubt not the disclosures would be extremely edifying.

At present, however, the duty of the proprietors is less to call the Directors to account for what is past, than to guard against the recurrence of similar misconduct for the future, and they cannot do this more effectually than by still further modifying the constitution and character of the Board. In fact, neither the shareholders nor the public at large have any confidence whatever in the official ability or honesty of those who have brought the project to its present forlorn condition, and the sooner therefore they are got rid of the better. A few of them are decent enough, but collectively, a more inefficient body of men could not preside over the affairs of a Railway Company. They should, therefore, retire at once, and without exception, and let their places be filled by more energetic successors. Nothing short of this will give the project a fair chance of revival. The neucleus of a new Board being already obtained, there could, we should suppose, be little difficulty in finding a sufficient number of colleagues to carry forward the measures now in contemplation—men who would not clutch the emoluments of office until they had fairly and honourably earned them. Let the proprietors look to this at the adjourned meeting, if they desire to see the West London Railway something better than the "laughing-stock" of all beholders.

An extract which we give elsewhere from the "Minutes of Evidence taken before the Select Committee on Post-office Communication" (to whose Report we recently referred), shows that it is proposed to lay down the Electric Telegraph of Messrs. Cooke and Wheatstone, on the line now in contemplation from Chester to Holyhead, a single line of rails being deemed in that case sufficient. We wish we could see any symptoms of activity in carrying forward a scheme so valuable in a national point of view as the Great Holyhead Railway would unquestionably be. Some two years ago a great deal was said—although very little, we believe, was done—with reference to this project, which has since scarcely been before the public. We suspect that the amalgamation of the Chester and Crewe and Grand Junction Companies has contributed not a little to cool the enthusiasm of some of the earlier promoters of the great Holyhead line. The undertaking, however, is of far too much importance to be taken up or put aside at the caprice, or to suit the private purposes, of individuals however active or however influential, and we trust, therefore, that the attention of other parties will be drawn to the scheme, and that its success before Parliament will be as rapid as it is well deserved.

The very ingenious invention of Messrs. Cooke and Wheatstone is peculiarly applicable to a line like that from Holyhead to Chester. Mr. Bidder, from whose evidence our extract is taken, points out very clearly some of the advantages (in addition to an essential reduction in the cost of construction) which the adoption of the Telegraphic apparatus would ensure. That a line such as the Great Holyhead might, by means of the Telegraph, be worked efficiently and safely with a single track of rails, Mr. Bidder has no hesitation in asserting, and to any one who entertains the slightest doubt on this point we would recommend a perusal of Mr. Cooke's pamphlet, in which the merits of his and his coadjutor's invention are so ably set forth. Mr. Bidder is of opinion "that a single line of railway, with an Electrical Telegragh, is a more efficient line than a double line of railway without it"—an opinion which, so far as most railways are concerned, a careful consideration of the pamphlet already referred to will go far to confirm.

It has frequently struck us as being not a little surprising that the Electric Telegraph has not ere now been laid down upon every one of the great lines. The aids which it offers to the efficient and economical working of a railway where the traffic is large are so manifest, that we wonder a regard to their own comfort in the removal of a vast deal of the anxiety which must at present press so heavily upon them, does not induce Railway Managements at once to bring the Telegraph into general operation. It cannot surely be the expense which forms a bar to its introduction, when year after year we see thousands and tens of thousands of pounds expended upon schemes and projects which cannot boast of a tithe of its practical utility. And after all, even were the Telegraph a mere experiment, which it most assuredly is *not* (its merits having been long since practically put to the test)—even were its results much less important than on all hands they are admitted to be—where would be the harm in attempting to consult still further the safety of the public by the expenditure of a few hundred pounds per mile upon undertakings where ten times as many thousands per mile have already been laid out? We trust this invention will speedily secure that attention from Railway Boards to which, from its extreme practical value, it is so eminently entitled.

The following figures have been sent to us by a gentleman who has the best opportunity of becoming acquainted with the real facts of the case. They appear to show results different from those which might be deduced from previous communications on the same subject by another party equally competent to form an opinion. We leave the public to judge for themselves :—

Passenger traffic for 19 weeks on the Northern and Eastern Railway, comparing the receipts between London and Broxbourne of the year 1841, with low fares, being the first year of the opening of the road, with the same weeks in the second year, 1842, and higher fares. The summer of 1841 was singularly wet, that of 1842 peculiarly fine. The weeks compared are those ending the 4th April to that ending the 8th August, 1841; and those ending the 3rd April to that ending the 7th August, 1842. The receipts from passengers travelling north beyond Broxbourne in 1842, are excluded. In 1842 a greater number of trains were running than in 1841.

	1841.	1842.
London	£6,543 13 11	£5,442 12 3
Lea Bridge	476 9 1	296 9 1
Tottenham	522 4 2	316 7 11
Edmonton	488 8 0	212 14 8
Ponder's End	680 13 3	525 1 7
Waltham	1,757 16 10	1,633 5 10
Broxbourne	3,924 14 5	3,068 3 4
Total	£14,353 19 8	£11,494 14 9
Loss		2,859 4 11

Passengers in 1841	203,714
" 1842	115,534
	98,180

Had the fares continued the same, and the same numbers been carried in 1842 as in 1841, the loss of 2,859*l.* 4*s.* 11*d.* would divide as follows :—

Loss of toll to Eastern Counties'	£1,309 1 4
" Duty to Government	573 1 8
Net loss to Northern and Eastern	977 1 11
	£2,859 4 11

Besides this loss to the two Companies and the Government, 98,180 passengers were deprived of the benefit of railway travelling.

On August 9, 1841, the Northern and Eastern line was opened to Harlow, when all the north traffic that stopped at Broxbourne went on to Harlow, and Broxbourne ceased to be a terminus. Compare the four weeks from the 8th August to 5th September, 1841, with the four weeks from the 7th August to the 4th September, 1842, at the different stations as under. These receipts are the total gross receipts in both years—the line in 1841 being only open to Harlow; in 1842 open to Stortford, and trains in 1842 more frequent than in 1841.

	1841.	1842.
Stratford	£20 16 0	£20 9 0
Lea Bridge	140 5 9	76 9 7
Tottenham	118 5 3	77 0 11
Edmonton	124 2 1	46 16 9
Ponder's End	166 7 2	129 9 2
Waltham	421 5 0	359 2 4
Broxbourne	780 4 6	632 8 3
	£1,771 5 9	£1,332 14 11

Double these amounts, it being probable that the same persons returned as went to London and elsewhere	3,542 11 6	£2,665 9 10
Loss in the 4 weeks		877 1 8

On the 5th September, 1842, the fares were again reduced, and it now remains to be seen, if the traffic driven away can be recovered and increased.

The Blackwall Railway fares have now been raised 2d., in accordance with the feeling expressed at the late general meeting. The policy of the alteration time alone can test. The proprietors of the "Watermen" steamers have in contemplation a very strong opposition, by reducing *their* charges.

—*o*—

The following is the second week's return on the London and Dover Railway under the low fares. It will be seen that it marks a considerable increase over the first week, and as much as 100 per cent. over the last week of the high fares, the 25 per cent. reduction being allowed for :—

LOW FARES, SECOND WEEK.

	First-Class.	Second-Class.	Third-Class.	Total.	
Sept. 7....	221	488	141	850	£184 6
" 8....	289	356½	117½	763	173 10
" 9....	227	349	63½	649½	161 8 11
" 10....	271½	489	259	1,019½	207 15
" 11....	57	213	833½	1,103½	83 1
" 12....	269	656	277½	1,202½	243 13 11
" 13....	237½	467½	187½	892½	188 12 9
	1,582	3,019	1,879½	6,480½	1,242 11
Carriages, horses, parcels, and merchandise					102 15
					£1,345 6

It must be observed that the above does not correspond with the statement in our traffic table, the latter being computed to the 15th instant.

Of the above the following embarked and disembarked at New Cross (this for our Greenwich

Digitized by Google

friends), proving that one-sixth (last week it was one-eighth) of the whole number of passengers who have travelled on the Dover line have used the New Cross station:—

	1st.	2nd.	3rd.	Total.
Number of passengers booked to New Cross station from the 7th to the 13th September	124½	148	326½	599
Number of passengers booked at New Cross station from the 7th to the 13th September	88½	177½	217½	483½
Total				1,082½
Add the number from last week				818½
Total loss in two weeks by the prohibitive Greenwich toll to that Company				1,901

—o—

It is said that the Postmaster-General has decided on returning to the old method of paying the guards on mail coaches 10s. 6d. per week, and allowing them to take fees from passengers. The guards on railways are still to be paid salaries, without fees; but such salaries are to be on a reduced scale. The cause of the contemplated alteration in the mode of paying the mail-coach guards is the continued discovery that they receive fees. Six of them are now suspended for taking fees, but Lord Lowther has resolved not to dismiss them, because he declares it impossible to prevent persons who are paid only 70*l.* or 80*l.* a year from taking gratuities from passengers when voluntarily offered.

—o—

The total receipts in 1841, on the Belgian Railways, was 249,053*l.*; expenses 170,000*l.*; leaving net profit, 79,000*l.*, not quite 3 per cent. upon the capital employed.

RAILWAY OFFENCES AND OFFENDERS.

At the Surrey sessions, on Wednesday, William Neal was charged on several indictments with stealing certain stone blocks, the property of the London and Brighton Railway Company. The case has already been noticed in this journal. On the first indictment he was found not guilty, and the others were vitiated in consequence of the omission of the word "the" in the title of the Company. One would have thought that, with so many lawyers at their elbow as the Company can boast of, the parties who got up the case would have avoided a technical error like this. What an idea of English *justice* does the escape of an accused party on such a plea as this present!

Recently (as we learn from the *Yorkshireman*), before the magistrates at Bishop Auckland, Kenneth Baines, of New Sildon, slater, and Thomas Wheatley, of West Auckland, labourer, were summoned on the information of Mr. Manton, the Superintendent of the Company's police, on a charge of wilfully trespassing on the Stockton and Darlington Railway, and refusing to quit when ordered to do so. They were fined 10s. each, including costs.—George Howard, of West Auckland, waggon-driver, was also fined 8s., including costs, for absenting himself from his horses and waggon, whilst passing along the railway.

Edinburgh and Glasgow Railway—New Shares of £12 10s.—We understand that the Directors of this undertaking have agreed to suspend, for the present, that part of the fourth resolution passed at the special general meeting held on the 17th May last, which attaches forfeiture to the non-payment of the second and subsequent calls on the quarter shares, provided the first call (£3 per share) has been duly paid. Interest at the rate of 5 per cent. per annum will, of course, be charged from the date when the calls respectively fall due.—*Liverpool Standard.*

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

Sir,—Will you have the goodness just to refer to the traffic returns of the Grand Junction Company since the opening of the Manchester and Birmingham Railway? Notwithstanding that abstraction, they make their returns more than they were with the united traffic. I cannot comprehend this. The Liverpool traffic must have very much increased, while the London and Birmingham and other lines have fallen off very much. There is an error somehow or other.

The Grand Junction return, week ending July 23, taken from the *Railway Times*, was	£9,083	united traffic.	
Manchester and Birmingham	530	local traffic.	
Grand Junction, week ending September 3, exclusive of 70 per cent to be taken from the earnings of the Manchester and Birmingham, is	9,807		
Manchester and Birmingham returns	£2,279	0	0
Grand Junction	9,807	0	0
	£12,086	0	0
Deduct for local traffic carried on the Manchester and Birmingham line	500	0	0
Total	£11,586	0	0

If you could in any way explain this in your valuable paper, you would oblige,

A CONSTANT READER.

London, Sept. 15, 1842.

RAILWAY COMMUNICATING APPARATUS.

To the Editor of the Railway Times.

Sir,—May I beg the favour of being permitted, through the medium of your journal, to call the attention of some of your correspondents to the present want of communication between the last part of a railway train and the engine. It appears to me a subject of considerable importance, involving a serious evil, which might be remedied in a very simple and economical manner.

The system adopted upon some of our largest railways is that of placing a conductor in the carriage nearest the engine, and if there are trucks behind the last carriage, a guard is placed upon one of them. The conductor generally sits in his box, adjusting tickets or something of the kind, from station to station, and in the event of a truck or carriage getting off the rails, the guard is quite useless, because he has no means of attracting the attention of either engine-driver or conductor; consequently the passengers may be dragged for an indefinite distance without being able to make their danger known. I presume the reason it has not been noticed before, may be owing to the simplicity of the means requisite to effect the desired object; had it required something more complicated, the subject would have been favoured by the attention of scientific men.

I have merely alluded to the circumstances, without stating the means I would propose to adopt, hoping some one more skilled in such matters will give their attention to it.

I am, Sir, yours, &c.

A CONSTANT READER.

Hayes, Middlesex, Sept. 13, 1842.

[Our correspondent is in error in one thing; the subject has frequently been noticed.—Ed. R. T.]

BRISTOL AND EXETER RAILWAY.

The Reports of the Directors and Engineer prove that the season of difficulty and embarrassment is over—that every obstacle to complete success has been removed—and that the affairs of the Company have been placed in a healthy and prosperous condition. In less than three years, at the furthest, the railway will be finished to Exeter, and the inhabitants of this city will realise the vast and manifold advantages to which such an event must inevitably lead. Whether or not the period at present fixed for the completion of the work shall be anticipated by a year, is now the only question, and this question, it would appear, rests with the Directors of the Great Western Company to decide. For the present, it is true, they have declined to accede to the terms proposed, but they cannot be insensible to the advantages which must accrue, both to themselves and the public, from the opening of the line to Exeter at the very earliest possible moment; and having the fullest confidence in their liberality and public spirit, we do not despair of seeing the negociation speedily resumed, and brought to a successful issue. We must not quit this subject without adverting for a moment to the financial position of the Bristol and Exeter Company. In this we think there is much matter for congratulation. The proprietors at the present moment are receiving, out of their revenue, a very fair dividend upon the capital which they have invested, with the assurance of those most competent to form an opinion that that dividend cannot be diminished, though there is every probability of its being increased. The Directors have already in their hands a sufficient sum to guarantee the vigorous and uninterrupted prosecution of the works, and, with the concurrence of the general meeting, they are about to take such steps as will render any further calls unnecessary, at least for a considerable time. To a great number of proprietors this will afford a very seasonable relief, and the suggestion adds another to the many proofs which the Directors have given, of their considerate regard for the interests of their constituents, and of their undiminished attention to those duties which they have hitherto so faithfully and so usefully discharged.—*Western Luminary.*

Quick Travelling.—A gentleman left Havre in the steam-packet *Lord Melville* at half-past 5 o'clock on Monday morning last, and arrived at the Railway station, London Bridge, *via* Shoreham Harbour, at half-past 5 the same afternoon. He remained three hours in London, and left at half-past 8 by railway for Liverpool, where he arrived at half-past 6 on Tuesday morning, thus making the journey from Havre to Liverpool, *via* Brighton and London, in the almost incredibly short time of *twenty-five hours*—an instance of the quickest travelling probably ever known. This could not have been accomplished but for the facilities afforded by the officers of Customs, for whom an apartment has been fitted up for the examination of passengers' luggage at Kingston, on the wharf itself, so that no delay whatever occurs. It is, we believe, the only case of the kind in England; and we have therefore the greater pleasure in doing justice to the considerate conduct of the authorities. The works of the Paris and Rouen Railway are now in rapid progress; and it is confidently expected that the entire line will be opened throughout on the 1st of May next. We learn also that great pains are taking to improve the harbour of Dieppe, a large number of men being constantly employed upon it. When all these undertakings are completed, and when some further improvements are made—as no doubt will be the case—in Shoreham Harbour, the Brighton route most inevitably become the most frequented, as it is infinitely the shortest means of communication with France. A map has just been issued by the General Steam Navigation Company, which shows beyond dispute the immense superiority of this route over all others in point of distance. A line drawn from London to Paris through Brighton and Havre is a straight line, and that by Brighton and Dieppe nearly so, while all others are very greatly longer and more circuitous. There is no resistance to be offered to ocular demonstration of this sort.—*Brighton Gazette.*

GREAT WESTERN RAILWAY—RESERVE FUND.

To the Editor of the Railway Times.

SIR,—I see, by an advertisement in your paper, that the Great Western Railway Company have given notice of Mr. Heyworth's intention "to submit to the next half-yearly meeting a resolution for the consideration of the proprietors, that the principle of a depreciation fund should not exist in the affairs of this Company." In your short but pithy remarks upon the Great Western meeting in the *Railway Times* of the 20th of August, I find the following sentence:—"It will be seen that a good deal of discussion took place with reference to a 'depreciation fund,' but ultimately the plan sanctioned at a previous meeting was triumphant. We can readily conceive how anxious some parties are to divide as much as they can now, leaving futurity to shift for itself, and then to withdraw quietly from the concern." From a previous sentence I was led to hope that you would have taken up the subject of a depreciation fund, but as that has not been the case, may I beg the favour of offering a few observations on that important, that vital subject. I confess, Sir, that I was very much surprised on reading the account of the Great Western meeting, at the motion brought forward by Mr. Hovenden, proposing to declare a dividend of 7 per cent. when the account clearly showed that even 6 per cent. could not be fairly declared as the result of the last half-yearly receipts; and which motion was concurred in, although not exactly supported, by Mr. Heyworth, who said, "he concurred in everything that had fallen from Mr. Hovenden, *not that he wanted the ½ per cent.*"

Now, what is the real state of the question? Here we have a railway not yet completed, be it remembered, of 118 miles in length, laid down upon the novel principle of Kyanised timbers, with numerous bridges and stupendous tunnels cut through solid rocks of various formations, whose security no Engineer can possibly guarantee, to say nothing of the cuttings and prodigious embankments which are to be met with on this line—what security, I ask, is there if you reserve no fund for contingencies—that instead of a 6 per cent. dividend, we may not be some day called upon to relinquish our dividend for a time altogether, to meet the consequences of some casualty on the works of this lengthy railway? Already has Government thought it necessary to institute an inquiry by General Pasley respecting the safety of the Box tunnel, which I am happy to find has been satisfactory. But it is well known that there are other tunnels between Bristol and Bath, which have been cut through rocks of a more dangerous character than the oolite of the Box tunnel. It is not generally known, but at the time of the excavation of one of the tunnels, between Bath and Bristol, such was the fearful nature and inclination of the strata, that one of the contractors said he dreaded to return whenever he left the works, lest he should hear on his return that the rocks had slid down and destroyed the people who were constructing it. And it is upon such works as these that it is proposed to dispense with a reserve fund; they may appear to be secure, but who can ensure it. Besides, the mere falling of one of the bridges—the Maidenhead one for instance—would, I apprehend, nearly swallow up a reserve of the present amount of four or five years' standing. But what shall we say should the Kyanising plan prove a failure, and the whole line require to be relaid in the course of the next ten years—and just grounds there are for mistrusting that process? I confess, seeing the many casualties to which such a line as the Great Western is exposed, I should, as a permanent holder, have been better satisfied had the Directors proposed a *bona fide reserve and depreciation fund* of 30,000*l.* per annum, even though at an expense of a ½ per cent. per annum in the amount of the dividend. That would be the best way to give stability to the property, and prevent those fluctuations in the price of the shares which, to say the least of it, are calculated to create anxiety in the minds of those whose capital is embarked in the undertaking. I hope, therefore, that most of the proprietors will agree with me in opinion, and oppose Mr. Heyworth's motion—the grounds that I have before stated not being the only ones on which I should resist it. Everybody, at all acquainted with concerns in which large mechanical powers are employed, well knows that it is customary, before dividing the profits, to write off annually 10 or 15 per cent. as a depreciation fund; and this, even if in excess, is no wrong, because the whole have the benefit of it, and should they at any time feel disposed to sell their interest in the concern, a railway for instance, will they not gain an increase in price for their shares, in consequence of the better security they have to offer in a concern thus guaranteed by a reserve and depreciation fund?

I will venture to suggest a mode of increasing the dividend, which I believe to be preferable to attacking the reserve fund. Let Mr. Heyworth and his friends carefully investigate the rates now charged in the merchandise, but more particularly in the parcels, department, which I believe to be capable of much increase—not by any reduction of the rates, they being too low already, but by making the public pay for the work really done. Can any system be more absurd than this: A party at Bridgewater (and of course it is the same along the whole line) received a chest of tea of a certain weight, for which he paid a certain sum; a few days after he received two chests, double the weight, for which he only paid the same amount as for the one chest. Imagine what a loss to the concern this is calculated to inflict. It holds out the temptation to tradesmen to unite in, I will not say defrauding, but what is vulgarly called "doing the Company." I wish to cast no censure upon our Directors, but, from many circumstances similar to the foregoing, I have long been of opinion that the rates in the merchandise and carrying departments require a careful and skilful revision, by parties *practically* acquainted with the *carrying* (not *coaching*) trade.

I am, Sir, your obedient servant,

W. R.

Paris, September 10, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—About a year ago I addressed you on the then condition and prospects of the Great Western Railway. The letter, as might have been expected, created a great sensation amongst the sanguine and the whole host of officials, as well as amongst those whose wish was father to their thought. The railway journals teemed with communications impugning the truth of the statements, or denying the inferences which were clearly to be deduced. Imputations upon the motives of the writer, doubts as to the soundness of his information, or the integrity of his purpose, were rife, and although he was said to be well known, no one ever rebutted his statement or refuted his arguments. It was one continued stream of abuse. I was well aware of the consequences of running counter to the stream when at its greatest height, and nothing less than a conviction of stemming the current of error would ever have induced me to state the result of my inquiries and examinations. And what were the disclosures which provoked so much abuse?

I stated, *as facts within my own knowledge*,—first, that the cost of the line, then about 5½ millions, might be set down at more than 7 millions; second, that the expenses of working the line to Bristol would be somewhat more than 2,000*l.* per mile per annum; and lastly, that the average receipts to Bristol might be stated with great approach to accuracy at from 10,000*l.* to 10,500*l.* per week.

Now, first, of the first. The capital, at that time about 5½ millions, is now 6,435,671*l.*; and much more than 200,000*l.* is owing. The works in progress are not likely to be completed for so little as 100,000*l.*, and as yet there is no station in London. These three items involve an expense little short of 500,000*l.*; and Mr. Brunel himself would smile if I presumed to limit *him* to a quarter of a million *for contingencies*.

This will be denied, as my first statement was denied, but it is not the less *true*.

Secondly, as to the expenses of working. By the statement before me I find the expenses of the past half-year are 127,778*l.*, to which if we add 10,000*l.* for depreciation not made good, and 13,000*l.* for the seven new engines which were, I take it, to replace others worn out, and which should therefore have been placed to capital account, we shall have a sum total for expenses of 150,778*l.*, or 301,556*l.* for the year; which, reckoning the Great Western 118 miles, at 2,000*l.* per mile, and the branches, upon which the expenses cannot be more than two-thirds, at 1,333*l.*, will produce the amount.

Lastly, it was stated that the receipts would not exceed 10,500*l.* a week upon the Great Western. By adopting the same process of multiplying 10,500*l.* by the number of weeks, this also proves correct.

I further stated, that the receipts would not exceed 10,500*l.* on the Great Western line to Bristol, if the receipts were kept separate; and that the gross receipts on the Great Western and its extensions would not exceed 12,350*l.* Now the fact is, that the Great Western has not earned 10,500*l.*; and that, despite the remarkably fine spring and summer, the whole line has not produced 12,450*l.* per week.

Having now vindicated the accuracy of my calculation *in every particular*, I will venture to give to the Directors and shareholders a few words of well-meant advice to be neglected now, and to be regretted hereafter. I urge them to revise their present arrangements, and to place their establishment in better working order. I tell them, *advisedly*, that if fairly administered (by fairly I mean upon an intelligible and well-defined system, not admitting of reference to the capital in every emergency) their line does not pay now 4 per cent., and that it will hereafter pay much less, the future receipts, which are weekly *decreasing*, being encumbered with *increased* expenses, in rent, tollage, extra working, and additional interest upon capital, to an amount very much exceeding 30,000*l.* per annum. It is therefore absolutely necessary that a system of very rigid economy should be introduced into every part of the works, not omitting the office of the Engineer-in-Chief (*all exceptions are invidious*), and that a reduction should be effected to meet the decrease in the receipts, and the *increase* in the expenses. If this is not done, I then advise the proprietors to insist upon the capital account being closed, and that only such payments be made as may be specially voted at the half-yearly meeting, as otherwise they can have no security against extravagance.

I wish distinctly to guard myself from stating anything to the prejudice of the professional or personal character of Mr. Brunel, when I state most distinctly that I consider he extends his influence too far in authorising, and if not initiating, yet in sanctioning, the expenditure of money which, but for the *amour propre* of Mr. Brunel, might be saved.

Though the vast outlay incurred and in progress may be approved by his friends, who point to the Great Western as HIS monument, which he has erected to his own memory, yet the shareholders who are not sentimental may be excused if they seek to lessen the cost of some few of the adjuncts at least, though it may now be too late to murmur at the lavish expenditure on the *monument* itself. I warn the Directors and the shareholders—it is their business, not mine. I warn them because evil days are coming, because I am well aware of sources of expense which impend, and which will come upon them unawares, unless they put their house in order.

I tell them that in their last dividend of 6 per cent. there is more than 2 per cent. made up from capital in the shape of new engines (which clearly belong to traffic, and should have been charged to working expenses) from balance remaining from last half-year, and from money in hand belonging to the Bristol and Exeter. If, therefore, with a

Digitized by Google

dividend of less than 4 per cent. on the last half-year, and with an increase already in the future expenses exceeding 30,000*l.* per annum, there is a considerable and regular decrease in the receipts, no resource presents itself, but a great diminution in the expenses under every head and in every department. To this complexion it must come *at last*, and if the Directors are wise to this complexion, it will come *at once*.

I am, Sir, your obedient servant,

IGNOTUS.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—About a year since some letters bearing the signatures of "S. P." and "Ignotus" appeared in your journal, impugning the conduct of the Great Western Railway Company, which excited much and angry correspondence.

Having looked in vain for further letters from those writers, I think it very important that the true state of the case, with respect to this concern, should be made known.

The writers above alluded to stated, with an accuracy little short of prophecy, that the receipts upon 170 miles would realise from 12,300*l.* to 12,600*l.* per week for the whole of the first year, and that it was quite impossible, if the accounts were fairly stated, that a receipt of 12,465*l.* per week, or 75*l.* per mile per week (*the actual receipts*) could pay a dividend of 5 per cent., seeing that the Great Western worked 3,704 miles where the Birmingham worked 2,656 miles per day, that the Great Western had to pay 55,000*l.* in rent, and were burthened with the maintenance of way, and expense of working, over 56 miles more than the Birmingham, whilst the Birmingham receipts exceeded 16,000*l.* per week, or 144*l.* per mile per week. This view of the subject had great weight with the more even-minded of the shareholders, and has, I admit, led me to scrutinize the Report just put forward very narrowly, and the result of that scrutiny I shall now submit to your consideration.

First, I was struck with the artful construction of the Report, which, whilst it brought out in full prominence the slight increase in the goods traffic for the six months just ended, as compared with the *previous* half-year, and the increase so-called on the present half-year, as compared with the corresponding period of 1841, in which latter period it was stated that the line was *extended* 18 miles (a mode of speech which, but that it appears in the Report of a body composed of respectable men, a plain person, like myself, would have said partook both of the *suppressio veri et suggestio falsi*), the fact being, that in the former period there existed a gap of 18 miles, states that the dividend was the same as the last year. This is a delusion.

The present dividend includes 7,500*l.* belonging to the Bristol and Exeter, and more than 10,500*l.* balance from the last account, so that here alone is 18,000*l.* divided, it is true, but not earned. Next there is a sum of 7,223*l.* only set down for repairs and expenses of locomotives, and yet in another part of the Report of this meeting, Mr. Brunel admits that there were seven new locomotives, I conclude with tenders attached, the cost of which would be somewhere about 13,000*l.* Now, as the plant was stated to be ample at Christmas, it is quite evident that the cost of these new locomotives should have been placed to revenue, unless it is intended to go on for ever taking from capital, and thus giving a false appearance to this undertaking.

If, therefore, 30,000*l.* be deducted from the money appropriated to dividends, as being inapplicable—as not having been earned—the dividend for the present half-year would have been at the rate of 4 per cent. per annum, beyond which, as is shown by the statement of the Directors, they were not justified in going. The cause of this is not far to seek. The Directors, over and above any personal interest which they may have as shareholders, are a temporary and elective body, desirous of passing their time as pleasantly as they can during the short term of their existence as Railway Directors, and care little, so that they can keep affairs quiet in their time. The shareholders, however, have an interest in being informed as to the exact condition of their affairs, and, if they are wise, will yet move for a Committee of Examination, or, what will serve the purpose just as well, insist, at once, upon the contracts being settled, all debts paid, and the capital placed under the control of a Committee, apart from the Directors. In this case, no money would be paid, unless sanctioned by the proprietors at their general or special meetings, and all the accounts for monies, so expended, would be placed with the Committee for examination and audit, such payments to be the subject of a separate Report from the Committee to whom the charge of capital is entrusted.

By this means, railways will become safe investments, and worthy of confidence, and the proprietors well be preserved from those disclosures which now affright the railway world from its propriety.

Again, the proportion of borrowed capital, as compared with the legitimate or share-capital, fills me with alarm for the future, for whilst

The permanent or share capital amounts to only		£3,015,013
The amount borrowed on debentures is	£2,098,109	
And on loan notes, or promises to pay	£1,374,300	
		£3,472,409
Total		£6,487,422

making a proportion of 115*l.* of debt, to 100*l.* of capital, whilst in other important lines the proportion is 33*l.* of debt to 100*l.* of capital. This is a state of things that cannot be suffered to continue, without exposing the Company to great danger, and, ultimately, to great loss.

The conduct of Mr. Hovenden, supported as he was by Mr. Heyworth, was, under the circumstances, most extraordinary; and as they are both men of the world, they irresistibly reminded me of the doings in the city of London Corporation, where, when a job of more than ordinary size was to be perpetrated, it was usual to put forward an ardent member to propose that some enormous grant should be voted. This gave an opportunity to some moderate and safe man to state, that though he agreed with his worthy friend in his views, and the necessity of a vote, yet, under present circumstances, it would be prudent to limit the vote to a smaller sum. By this means the money was obtained which, if proposed at first, would have been scouted. Still the assertion of Mr. Hovenden, that the Great Western was at the maximum of its expenditure and the minimum of its receipts, was too rich even for the proprietors themselves, who must be well aware that with present receipts they will never again *divide* 6 per cent., nor, at their present scale of expenditure, *earn* 4 per cent.

I am, Sir, your obedient servant,

R. A.

Amount of Capital as per last half-yearly account.

	Miles.	Cost.	Annual Receipts.
Birmingham	112	£5,867,504	828,730
Great Western	118½	6,435,671	
Branches	50½		
Tollage, £55,000	169		
Representing a capital of	1,100,000	7,535,671	628,223

The facts may be shortly stated thus. The capital of the Great Western exceeds that of the Birmingham by 1,666,167*l.* The Great Western travels 1,048 miles, or about 48 per cent. more daily, than the Birmingham, and earns 180,000*l.* less per annum.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The very able manner in which you have on various occasions exposed the abuses of "*Railway Management*," leads me to hope you will give this letter space in your columns, to bring to the notice of my fellow shareholders a few remarks on the very unsatisfactory Report of the Great Western Railway Company at their last general meeting. If we pay our servants well, we are assuredly entitled to be well served by them, and every satisfactory explanation (instead of every possible mystification) ought to be afforded us. In the detail of charges referred to in the revenue account I will compare several items with the charges of the London and Birmingham Company—thus we have in round numbers:—

	Great Western	London and Birmingham.
	£	£
*Waggon, carriage, and engine repairs	19,800	9,000
*Coke	19,800	14,200
Clothing	1,165	600
Wages of police, guards, conductors and porters	18,125	11,100
Advertising	510	125
Stationery, account and ticket books	1,770	615
The amount of general charges, (Abstract No. 3,) and general office for Direction, &c.	18,920	7,200

The enormous difference in the charges on the two railways calls for some explanation; but there is another subject which claims the serious attention of the shareholders, namely, that we have actually 20,000*l.* of our annual traffic taken as part payment of locomotive engines and carriages, which ought to have been charged to *capital account*, instead of keeping this sum set aside for a depreciation fund to accumulate for 10 years, for the repair and keeping up of an efficient stock of engines, &c. Certain it is that our railway may nominally thus cost only 7,000,000*l.* at the end of 10 years instead of 7,200,000*l.*, but will the present proprietors be benefitted by thus giving up 20,000*l.* per annum for the sole object of reducing the *total cost of the railway*—for I contend that the mode the Directors have adopted of placing the 20,000*l.* against the cost of the plant of our railway, does not amount to anything more? Our locomotive engines, carriages, &c., actually cost up to this period 551,570*l.* 3s. 7d., against 286,000*l.* which the London and Birmingham cost, and we must bear in mind that the whole cost of our engines, &c., has not yet been paid. With the above enormous sum staring Mr. Brunel in the face, and further payments still to be added, it is only natural that the Directors and Engineer should endeavour to make their half-yearly Reports as favourable as possible, but I do trust that their present attempt to place a portion of our legitimate traffic against the cost of new engines, carriages, &c., before our railway accounts are finally settled (or that we know the cost of it) will be resisted, and most effectually. If it is requisite to set aside 50,000*l.* annually for the purpose of repairing and keeping up our stock, let it be done, but I trust the great body of the proprietary will resist the appropriation of any portion of their traffic to reduce the amount which ought legitimately to be added to the capital account.

I remain, Sir, yours, &c.,

A SHAREHOLDER IN THE GREAT WESTERN.

London, September 1, 1842

TESTIMONIAL TO I. K. BRUNEL, ESQ.

To the Editor of the Railway Times.

SIR,—I was in hopes ere this to have seen published in your valuable paper the names and amount subscribed towards the *Service of Plate* intended to be presented to I. K. Brunel, Esq., Civil Engineer, Great Western, Bristol and Exeter, and other railways, the publicity of which, in my opinion, would greatly augment the amount, and I for one should be most happy to see the present subscription doubled.

Amount subscribed to the 1st September, as furnished by the Provisional Committee to the subscribers £1,820 10

I am, Sir, yours, &c.

A CONSTANT READER.

London, Sept. 13, 1842.

* The Report at a special general meeting held 9th January, 1839, if referred to, will show what degree of faith is to be attached to similar Reports of the Great Western Direction.

Digitized by Google

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—If, as your correspondent "A Constant Reader" asserts, the general meeting was packed with the friends of the Directors, their votes and general behaviour prove they were very shy of showing their friendship. The Chairman appeared to me to reply to the questions put by the shareholders in his usual candid and business-like manner. We have no grounds for supposing that the Directors or their friends speculate in shares. The general meetings are held at the same time, and the weekly returns are made as regularly as most other Companies. Any one in possession of the *Railway Times* can defend his property from the evil effects of share-jobbing, with a moderate degree of understanding. His calculations on our present prospects are but too correct. Take the capital at 1,025,000*l.*,

Revenue		£52,000
Working expenses	£26,000	
Interest on £225,000	11,250	
Government duty	2,500	
Rates and Taxes	2,250	
Rent of wharf	2,000	
		44,000
Balance		£8,000

which would give about 3s. 4d. per share, without allowing anything for depreciation of stock. But we have no reason to despond, when we consider that 2 foreign, 3 Gravesend, and the Woolwich steamers, are the only ones that are running from the Brunswick wharf at the same fares as from London Bridge.

I am, Sir, your obedient servant, F.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—The unprecedented fine summer which we have had has doubtless been of extraordinary benefit to the line in question, but which has been materially augmented by the very great competition and facilities of the steam-boats—a description of traffic which this railway must mainly depend upon for support, and which the shareholders ought to go hand-in-hand with the Directors in promoting, and further, in co-operating with those steam-boat proprietors who are willing to connect themselves entirely with the railway.

The shareholders (not getting a dividend), in a state of excitement, and in the despair of the moment, strain at gnats and swallow camels. They do not set about the right way of improving their condition. They complain (most justly) of the outrageous law expenses—charges which have been incurred, and which must be liquidated. Let them, instead of looking back upon old grievances, call a special meeting to consider whether there is no possibility of working the line quite as efficiently as at present, at a much less cost. I will only name two items, viz., for the half-year—Direction, 600*l.*; and another department (but with a very long name attached to it), check-clerks, superintendent, storekeeper, pier-master, and goods manager, 428*l.* 14s. I should say, as regards this last item (provided the Directors have no particular interest to serve), they could get a most efficient pier-master at 150*l.* per annum; a clever superintendent and storekeeper at 250*l.*; and a very respectable and trustworthy check-taker at 100*l.* As regards a Managing-Director, 600*l.* per annum would be a most handsome recompense. In these two items a saving might be effected of 957*l.* 8s. per annum, equal to 38,296 passengers at 6d., or 57,444 passengers at 4d. But, instead of the shareholders attempting to discover where the shoe really pinches, they agree with the Directors to raise the fares, thereby putting a check upon the progressive increase they are at present maintaining (an increase which, however great it may attain, will in nowise augment the working expenses—*vide* Report). And what is the lame argument brought forward in favour of such increase? One, I should say, that could be used in opposition to it. An honourable shareholder gets up and states, that a friend of his (no doubt considering the saving of 2d. of much importance) always travels in the cheapest class carriage: but he adds, that his friend considered the facilities were so great that he would still travel by it though the fare were 1s. Though he may be willing to give a shilling for the facilities, few will be found of the same opinion, as passengers can get from London Bridge to Gravesend for that sum. I need not add more as to the impolicy of raising the fares, as your able remarks in last week's *Railway Times* have given the Directors and shareholders a hint, both as regards fares and steamboats, which I trust they will profit by.

I am, Sir, your obedient servant,

OBSERVER.

London, September 7, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I am not disposed to find fault with the severe strictures with which, from time to time, you have assailed the Directors of the Brighton Railway. Their past management (particularly as respects a want of proper system in keeping the accounts, and the imperfect control which they appear to have exercised over the engineering department of the line) lays them open to the charge of incompetency or neglect. As far as I can judge, they have been bad accountants, and have neglected properly to supervise and control the discretion of their engineer. So far they deserve your censures, which, though they have undoubtedly lowered the market price of the shares, have produced an excellent result in awakening the vigilance of the proprietary, and the caution of the Directors.

I have lately passed over the line several times, with a view to observe its condition, and make myself acquainted, as far as may be, with the details of its *present* management, and can safely say, that the general condition of the works is good, that the necessary buildings and stations for working the line are tolerably complete, and that the management of the traffic will bear a favourable comparison with that of any line in the kingdom for regularity, caution, and comfort to the passengers. At present the Directors appear to be doing their duty, and I augur well for the future prospects of the concern. Under this impression I have resolved not to sell my shares, being confident, that if properly conducted, the railway is, even now, in a condition to pay 5 per cent.

I come to this conclusion on the following grounds.

1. The line must be worked at a small comparative expense, as it has only 40 miles to keep in repair, has tolerably favourable gradients, lands its coal direct at its own wharf, and manufactures its own coke.

2. The traffic is good at present, and is capable of considerable development; it is almost entirely a passenger traffic, and can be conducted at high fares.

Now let us see how matters stand in figures.

I shall take the average traffic at 4,100*l.* per week (for the last eight weeks it has averaged about 4,350*l.* a week) with Brighton by no means full, and four coaches running each way daily.

We have therefore weekly traffic	£4,100
Deduct tolls to Croydon and Greenwich Companies 1-10th	410
Clear weekly traffic	£3,690
Average expenses (say)	1,300
Average weekly profit	£2,390

or, 124,280*l.* a year.

I shall take the expenditure in round numbers, as my object is merely an approximation, to have been

36,000 50*l.* shares	£1,800,000
Money borrowed at 5 per cent.	900,000
Total	£2,700,000

leaving the money received from the South-Eastern Company entirely out of the question. We have therefore to deduct 45,000*l.* for interest, which leaves 79,280*l.* to pay the dividends on 36,000 shares, or about 2*l.* 4s. per share. Whoever will take the trouble to compare this by no means improbable result, with that of the same calculation applied to the Edinburgh and Glasgow, Manchester and Leeds, or Great Western lines, will be probably surprised at the prices which their respective shares bear in the market, and will learn to estimate, at its proper value, *a Directory in whose management the proprietors and the public place confidence.*

I am, Sir, your obedient servant,

J. S.

— College, Cambridge, Sept. 3, 1842.

CYLINDRICAL WHEELS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—With your permission I will make a few remarks on the subject of Mr. Rankine's comparison between conical and cylindrical wheels.

The accuracy of this comparison must depend very much on the state of the rails. Rubbing friction at the peripheries of railway wheels is of two kinds—that on the tread, or bearing portion; and that on the flange, or guiding portion.

If the rails present a true horizontal surface, with a right line, cylindrical wheels may run on them without inducing rubbing friction on the tread; provided,

1. That the axles be truly parallel and rectangular with the line of progress.

2. That, supposing the wheels to be keyed fast on the axles, they be of exactly the same diameter.

Variation from these conditions, as, for example, curvilinear rails with parallel axles, and wheels of equal diameters, will induce rubbing friction on the tread. One rail being higher than the other will induce rubbing friction on the flange, unless at that exact velocity which balances the centrifugal force to the unequal height. But the power requisite to generate the centrifugal force which avoids the rubbing friction on the flange, will be equivalent to that which the rubbing friction would absorb. It is in reality running the carriage on a smooth road up hill, to avoid the rough road of a level.

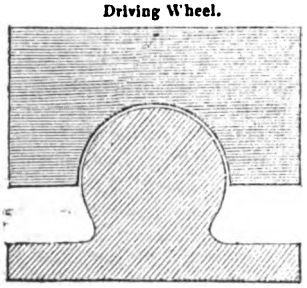
The cause of the rubbing friction in any case must be, that different diameters of the periphery are travelling at different rates of speed over one specific length of surface, or *vice versa*; therefore while one portion rolls the other portions rub. By equalising the diameter, *i. e.* by making cylindrical wheels to run on a straight line, the friction is avoided as regards the tread, or bearing portion, but not as regards the flange, or guiding portion. With wheels conical in the tread constant friction will occur, unless the form of the rails is such that they only bear at a point, and not across the whole breadth of the rail. In such case the conical wheels will run without friction, but they will be liable to oscillate laterally, unless those portions of the rails on which they bear be exactly level and parallel to each other.

The question first to be settled is, what is the practical condition of rails generally as to form and position?

The form of the engine driving-wheels determines this. If the driving wheels be cylindrical on their peripheries, the bearing surfaces of the rails will be level, *i. e.* the same plane with them. If the driving-wheels be conical, the rails will have a corresponding form. And whatever form be given to the rails at the outset, the tread of the engine-wheels will, sooner or later, wear or press them to a fit.

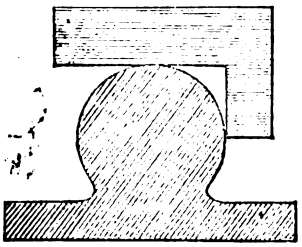
There is one obvious advantage in conical driving-wheels—by their greater friction they induce more adhesion for the purpose of draught. Moreover, they relieve much of the pressure against the flanges by the constant tendency of the gravity to keep the wheels bearing on their smallest diameters.

The desirable thing, therefore, would be to have conical driving-wheels and cylindrical training-wheels. To accomplish this object it would be essential to have very powerful rails, and about two-thirds more weight on the driving-wheels than on the training. By this means the position of the rails adapted to the driving-wheels would not be disturbed by the training-wheels.



But it would be essential that the rails should be

Digitized by Google



very straight, otherwise the training wheels—bearing only on their outer diameters upon the higher, or outer edges of the rails—would be subject to constant vertical oscillation, from a series of inequalities.

The perfection of the principle would be a cylindrical rail with the top slightly flattened. The

Driving Wheel.

Training Wheel.

tread of the driving-wheel being turned to a groove fitting the top and sides of the rail would ensure a constant friction of much greater amount than is at present attained, and consequently the adhesion would be greater, and better adapted for ascending acclivities. Moreover, the thrust of the wheel being equal on both sides of the rail would be equivalent to a vertical pressure, and tend constantly to preserve the gauge. The flat portion of the rail would be exactly adapted to cylindrical training-wheels, and their only friction would be in the occasional rub of their flanges against the rails. This plan would be found advantageous in the construction of railway feeders where steep slopes prohibit the use of ordinary engines, and the traffic will not afford a large preliminary outlay.

I remain, Sir, yours, obediently,
WILLIAM B. ADAMS.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—I should like to ask the Secretary, or more directly, in this case, the Chairman, why, in making a new contract with the coach proprietors for running coaches between Bristol and the railway terminus here, and under which the Company have consented to an advance of 20 per cent. on the fares, a clause should be forced upon the coach proprietors, prohibiting them from running the coaches to or from the Great Western station at Bristol. Is jealousy of that line to be carried to such an extent by a Director in the London and Birmingham, as to discountenance traffic coming off it, legitimately available for this? I would ask, can the interests of this undertaking afford such caprice? If not, such management is unsuitable and incompetent. I remain, yours, respectfully,
A SHAREHOLDER.

Gloucester, Sept. 6, 1842.

Northern and Eastern Railway.—The Northern and Eastern Railway Company have made a very material reduction in their fares to Lea-bridge, Tottenham, Ponder's End, and Waltham. They have also established an omnibus to carry passengers to and from the railway trains in High-street, Shoreditch, to the Mansion House, at the novel rate of 2d. per passenger. From that place the public can, of course, find conveyances to every part of London, and the object of the Company would appear to be to give cheap travelling a fair trial.—*Morning Post.*

HALL'S PANEL SIGNALS USED ON THE EASTERN COUNTIES' RAILWAY.

Fig. 1. Fig. 3. Fig. 3. Fig. 2.

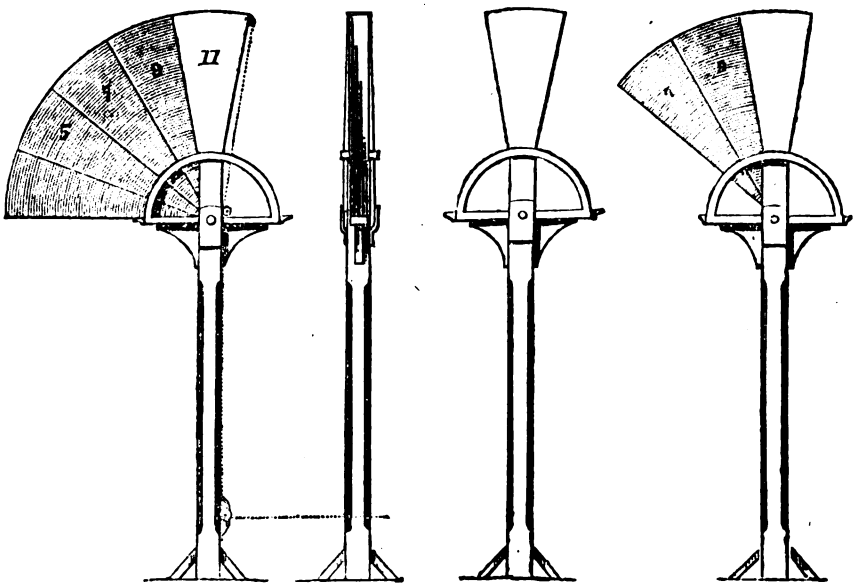


Figure 1.

The signal to be placed in this position immediately upon a train or engine passing the signal post, and to remain so until five minutes after the train or engine has left the adjoining station, or the signal post if there be no contiguous station.

When a train is stopping at an *intermediate station* to take up or set down passengers, and the train happens to be on the opposite line of rails to that on which the station is placed, then all the panels of the signal (or of both signals if there happen to be two) must be extended as shown in this figure, and of course no other engine must then pass. But if the stopping train happens to be on the line of rails next adjoining the station, then the (No. 9) *yellow* and the (No. 7) *green* panels only are to be exhibited (as shown at fig. 2), and another engine or train may then pass along the other line of rails, provided the speed be reduced to 15 miles per hour.

Every engine with or without a train attached is to stop at the green post, 100 yards distant from the signal, *when the leaves of the signal are exhibited in the position* fig. 1, *and on no account whatever is an engine to pass the signal when any portion of the 4th panel is visible.*

Figure 2.

After a train or engine has passed the signal or adjoining station 7½ minutes, the signal must be exhibited as shown at fig. 2, with the (No. 7) green panel at the bottom.

Whilst any portion of the 2nd or green panel is visible (the two lower or *red* panels being previously withdrawn from view), no engine or train may pass the signal on the same line of rails, unless the speed at which it travels be reduced to 15 *miles* per hour; which limit is not to be exceeded until after passing a post painted with green and white stripes placed at the distance of one mile from the signal. The time of passing this post is, therefore, under these circumstances, to be 4 minutes.

But in foggy weather the speed is to be reduced to 10 *miles per hour until after this post be passed, and in this case it will therefore occupy* 6 *minutes to reach this post. Any deviation from these limits must be immediately reported by the conductors or guards of the train.*

Figure 3.

The signal at the expiration of 12½ minutes from the passing of a train will have all the leaves withdrawn from view, and shows the line to be clear; *subject only to the general rules and regulations which every engine-driver, fireman, guard, and conductor must have with him when on duty.*

Note.

The signal-man is to attach the lamp to the signal at night and during foggy weather.

Atmospheric Railway to Dalkey.—We understand that the contract and agreement with Messrs. Samuda, Brothers, were sealed this day (Friday) by the Dublin and Kingstown Railway Company. Mr. Dargan is to have the execution of the earthwork, masonry, &c. The Company themselves will provide and lay the rails, and supply the necessary carriages. Mr. Dargan's part of the work is expected to be completed within three months; and Messrs. Samuda expect to have the 100-horse power engine at work about that time. The laying of the pipes will then commence, from Dalkey towards Kingstown, and each will be proved by the air-pump as the work proceeds. It is expected that everything will be ready for the conveyance of passengers between Kingstown and Dalkey by the 1st of May, and that, upon the opening of the summer season, the public will have the gratification of witnessing at full work, within a few miles of the Irish metropolis, the first regular line of railway ever constructed upon the atmospheric principle.—*Dublin Mercantile Advertiser.*

Great Western Railway.—A correspondent complains of the regulations observed by the Great Western Railway Company at their station here (Reading), and states that on Wednesday last two ladies and a child, who wished to go to London by the two o'clock train, were accompanied by two respectable females, the daughters of one of the ladies, who were prevented by the officer on duty from going on the platform to see them off safe—that the elder lady was put into a carriage in which there was no room to sit down, and notwithstanding the remonstrance of several persons present, the train started with her standing, and, after proceeding a short distance, stopped and allowed her to get into a less crowded vehicle. We have given the above insertion, because we believe that by calling the attention of the Directors to the subject the evil complained of may be remedied, and feeling as we do that the best interests of the Company are promoted by affording every necessary comfort and convenience to the public.—*Berks Chronicle.*

THE ELECTRIC TELEGRAPH.

THE following is an extract from the "Evidence taken before the Select Committee on Post-office Communication," at the sitting of the Committee on the 6th of June last. The witness under examination is Mr. GEORGE BIDDER, C. E. :—

3670. Mr. Owen Stanley—What description of railway would you propose?—I would propose a single line of railway, with an electrical telegraph; and I do so because the traffic on that line would be exceeding simple; it would be confined to two trains each way each day, the morning and evening mail. The local traffic is so small as not to require an intermediate train; at all events, a single intermediate train between Chester and Conway would satisfy all the demands of the local traffic; and therefore a single line of railway, by the assistance of the electrical telegraph, would, in my opinion, amply accommodate and provide for the limited number of trains which the traffic would require; indeed my opinion is, that a single line of railway, with an electrical telegraph, is a more efficient line than a double line of railway without it. * * *

3698. Mr. Grogan—Will you state what are the peculiar advantages of the electrical telegraph?—They are various; but I will allude to one or two which strike me at this moment, viz., in the event of an accident happening to the train on its way to join the railway at Crewe; for instance, supposing a train to be due at Crewe at 10 o'clock at night, and that the train should be interrupted in its course 40 miles from that place, and the engine disabled, the trains from Manchester and Liverpool would arrive there in due course at the above hour, and would there wait, according to the regulations, a quarter of an hour for the other train, when they would proceed on their journey in entire ignorance of what had happened to the latter. At a quarter past 10, in all probability, a pilot-engine would set out to investigate the cause of the delay, but as it would be unknown whether this delay was occasioned by the breaking down of the engine, or by the train getting off the rails and getting on the other line, it would be necessary to travel, especially in winter and dark nights, with great caution, and certainly at a speed not exceeding 20 miles an hour, so that the pilot-engine would not arrive at the site of the accident until a quarter past 12 o'clock, and would then necessarily be upon the wrong line of rails, namely, the down instead of the up line, and it would have to go to a crossing to get to the other line of railway, so that with the time occupied with these evolutions, it would not be attached to the train before half-past 12 o'clock, and would not then arrive at Crewe till 2 o'clock in the morning, thus occasioning a loss of time equal to four hours; and this, be it observed, is with a double line of railway. On the other hand, let us suppose there is a single line of railway only, with an electrical telegraph, and a train broke down at the same place at 12 o'clock; in less than 10 minutes from this time information of the stoppage would be conveyed along the whole line to Crewe, and the pilot-engine would immediately set off to render assistance, but previously to its starting, information also of its movements would be communicated throughout the whole line, and thus every preparation would be made to enable it to proceed uninterruptedly, and thus it would be enabled to travel at a high speed, so that it would reach the disabled train at half-past 9 or a quarter to 10 at the latest; it would then take the train in tow, and arrive at Crewe at about half-past 11 o'clock, instead of at 2 o'clock, as in the other case; besides which the detention of a quarter of an hour would be saved to the trains from Manchester and Liverpool, as when they arrived at Crewe they would be made acquainted with what had happened to the train, and their stopping there being unnecessary, they would be enabled through their journey to London to give information as to the time the other train might be expected, and thus also pave the way for expediting it throughout the whole journey.

3699. Would it have peculiar advantages with respect to a packet station?—Unquestionably, because by means of the telegraph the parties stationed at the look-out at the port would judge a long time before the vessel arrived, as to whether there would be any delay in starting the train; they would judge not only of the delay, but of its extent, and thus they would send information of the same throughout the whole line, and enable, as before stated, preparation to be made for expediting any train that might be detained by adverse winds opposing the passage of the steamer, without interrupting any other communication of the traffic. * *

3702. Mr. Stanley—Then you would propose only a single line of railway?—Yes; but having only two trains each way daily, and as only two of those can meet, I propose, when it should be found by experience the best time of starting of the trains, and the point at which they usually meet, that at that place a double line of railway should be established, and the line would be worked as follows, viz.: as soon as the trains start from the opposite extremities of the line, information would be sent throughout the whole line in each direction, to say that the trains had started, so that at every station along the line parties would be prepared to expect them; and again, as each train passed each station, information of that event would also be transmitted throughout the line, so that for every instant of the progress of the trains, exact information of their position would be known to the parties interested, so that at last, when they came to the portion of railway where they would necessarily meet the train which arrived at one end of that first, say station, it would pass on, and information would be sent to station B. immediately, so that the train coming in the opposite direction would there be detained until the other train had passed, so that the possibility of the trains meeting would be altogether precluded.

3703. Is the electrical telegraph liable to get out of order?—Certainly not; and I would give as an instance, the electrical telegraph on the London and Blackwall Railway, on which it has been used for nearly two years uninterruptedly, and where the trains are running in each direction every quarter of an hour throughout the day, and where the result of a failure of the telegraph would be attended with the most fearful and fatal collision; because, between London and Blackwall there are 5 or 6 stations; and as this railway is worked by means of ropes the carriages at those stations are all attached to the rope at once while at rest, so that when the engines commence pulling the rope the whole of them are set in motion simultaneously, and thus if by chance any one of these carriages should not have been attached to the rope, or should become suddenly detached, the succeeding carriage in dark foggy nights must necessarily run into the one which has thus been detained, and thus occasion the collision alluded to. Now, in order to avoid this the telegraph in operation on this railway conveys the information to the engines at the opposite extremities of the line, giving information that everything is ready for their starting, or the contrary, as the case may be, and not only so, but as it occasionally happens, the carriages by some cause or other become detached from the rope in the progress of their journey from one end of the line to the other, in which case the conductor of the carriage gives notice in the nearest station by holding out his flag, when the telegraph is employed, and the whole rope, with the carriages attached to it, are immediately stopped, and all accidents thus prevented. Now this operation has been going on every quarter of an hour every day for nearly two years without any interruption, and the complexity and difficulty of applying this kind of railway to the simple nature of the traffic between Manchester and Holyhead admits of no comparison with that above stated.

What vehicle is most characteristic of the present age? The *steam car-age.*—*New York Aurora.*

THE MILITARY AND THE RAILWAYS.—A detachment of the 32nd regiment, from Winchester, under the command of Colonel Markham, left the Euston station of the London and Birmingham Railway at 6 o'clock this morning, to join the main body now stationed at Leeds. They carry with them a large quantity of baggage. On reaching Rugby they will branch off by the North Midland Railway to Leeds. A detachment of the 12th was conveyed down the line yesterday afternoon to Weedon, where they go to relieve another regiment which has been there on duty since the commencement of the riots. Other divisions have passed down the line in the course of the week on their way towards the north, to relieve some battalions of the Guards, who are coming up to London.

EASTERN COUNTIES' RAILWAY.—This line progresses with surprising rapidity towards completion. The situation fixed upon for the station-house here is directly over the two arches crossing the road in Duke-street, as most convenient for carriages taking up and setting down passengers, as well as for pedestrians. A brick foundation is now being raised, upon which a very neat and appropriate building, as a station-house, formed entirely of timber, is to be placed, and which is already prepared, and will be conveyed here in detached parts on or before Monday next; a few hours will be sufficient to fix it. The probability of Mr. Braithwaite, the Engineer, performing his promise of travelling upon the line from London to Colchester on the 1st of October, is still entertained. It may be that all parts will not by that time be brought into conjunction, in the shape in which they are intended to remain for a permanency; such a circumstance might present some difficulty, but for the enterprising spirit of Mr. Braithwaite, who, on a former occasion, upon the same line, surmounted a similar obstacle, by laying the rails upon wooden piles where the embankments were incomplete. Much, however, depends upon the weather, which just now is most unfavourable.—*Chelmsford Chronicle.*

COLLISION ON THE NORTH UNION RAILWAY.—A collision which might have been attended by fatal consequences took place on the North Union Railway, at the Wallgate, in Wigan, recently, between twelve and one o'clock. A bank engine is regularly stationed at Wigan, and this was proceeding from the Wigan station towards Preston, when a powerful engine with about 14 of Messrs. Pearson's coal waggons laden, came up at a good speed from towards Chapel-lane. The men on the "bank engine" had not sufficient time to move out of the way before the coal engine came up in consequence of the shunts leading on to the main line being wrong at the time. The engine was therefore stationary, and, as the distance between the Wallgate station and Chapel-lane is very short, the engine attending the coal train engine was unable to stop the train entirely, though every means were used both by those employed on the engine and the "breaksmen" on the waggons, to lessen the speed of the train. Both the men attending the "bank engine," and those with the coal train, perceiving that a collision could not be avoided, sprang on the ground, and by this prudent act escaped the consequences which the shock of the engines would occasion. The bank engine was thrown off the line and a little injured, but the powerful coal engine sustained no damage. The rails were thrown out of place, and a quantity of the coal fell from the waggons when the concussion took place, but very fortunately no person was injured. The damage occasioned altogether is trifling; and it is right to add, that no blame whatever can be attached to any one, the accident arising solely from the short distance between the two stations, and the circumstance of the attendants of the bank engine being unaware of the near approach of the coal train at the time they were attempting to move from the branch to the main line.—*Liverpool Standard.*

WEST LONDON RAILWAY. — RESOLUTIONS passed at the Half-yearly General Meeting held on Friday, September 9, 1842.

1. It was moved by Mr. Godwin; seconded by Mr. Wilkinson, and unanimously resolved—

"That the further sum of £32,000 be raised in 3,200 shares of £20 each by this Company, under the provisions of the amended Act, and that this meeting do create and direct the same to be issued at the price of £10 per share; such shares to form the first class mentioned in the Report of the Directors."

2. It was moved by Mr. Whittaker; seconded by Lord Kensington, and unanimously resolved—

"That the further sum of £15,200 be raised by this Company in shares of £20 each, also under the provisions of the amended Act; such shares to form the second class of shares mentioned in the said Report; and that this meeting do create the said shares, and direct the same to be issued to the simple contract creditors of the Company at the price of £20 per share."

3. It was moved by Mr. Craufurd, seconded by Mr. Millbank, and unanimously resolved—

"That the calls upon the shares of the first class which have been created at this meeting, be made by the Directors payable at the periods mentioned in the said Report."

4. It was moved by Mr. Garland, seconded by Mr. Godwin, and unanimously resolved—

"That the Secretary be directed to proceed to Manchester, accompanied by an influential proprietor, to lay before the proprietors in that place the proceedings of this meeting, and endeavour to prevail upon them to subscribe for the new shares."

5. It was moved by Lord Kensington, seconded by Mr. Whittaker, and unanimously resolved—

"That this meeting do adjourn to Thursday, the 29th of September instant, at this office, at Two o'Clock precisely."

(Signed) ROBERT GUNTER.

FALMOUTH HARBOUR. — TO ENGINEERS, CONTRACTORS, and OTHERS.—The Falmouth Harbour Committee are desirous of receiving TENDERS for Deepening part of the Inner Harbour of Falmouth, and for removing therefrom either 30,000, 60,000, or 90,000 tons, as may hereafter be decided upon.

Persons Tendering must deliver separate estimates for the several quantities, and state separately the price per yard or ton for which they will raise and discharge the soil, and for which they will remove and deposit it. The work to be accomplished will require sufficient power to remove the soil from a depth of water not greater than 25 nor less than 8 feet.

All communications to be made to the Falmouth Harbour Committee, or to W. J. Genn, Esq., Secretary thereto, at whose office plans and specifications of the work required to be done may be seen, and every information obtained, and where Tenders will be received until the 13th day of October next.

There is no rock within the space proposed to be excavated. The material to be dredged is well adapted, and is in demand for manuring purposes.

Specimens of the soil already raised will be sent to any parties if desired.

Dated 13th September, 1842.

TO CONTRACTORS. — THE LLANELLY RAILWAY AND DOCK COMPANY are ready to receive Tenders for the following works and engagements:—

For the keeping in repair and working order their Locomotive Engines and Tenders, and for the haulage of Coal and Culm, &c., over the line.

For the keeping and maintaining in repair the Permanent Way and Branches of the Railway.

The conditions of the above Contracts may be seen on and after the 26th instant, at the Company's Office, 59, Old Broad-street, London, or at the Dock Office, Llanelly, Carmarthenshire, where further information may be obtained.

Tenders may be sent in for the works and engagements separately, or for the whole, and must be delivered sealed up, and headed, Tender for ———, at the Office in London, on or before the 13th October next.

The Company do not pledge themselves to accept the lowest Tender.

By order of the Committee of Management.

JOHN BIGG, Secretary.

DRY-ROT AND DECAY — MARGARY'S PATENT.—The cheapest and most simple preparation for the preservation of Timber, Canvass, &c., from Decay, the material being only 4d. per pound.

This Patent is used by her Majesty's Board of Ordnance; by Brunel, Locke, and other celebrated Engineers; and by Noblemen and Gentlemen on their estates. It has been extensively used for Railroads in England, and is now on the Bristol and Exeter and Manchester and Sheffield lines. In France, on the Paris and Havre line. It repels the attack of insects, as neither the White Ants, nor the *Teredo Navalis*, so destructive in the Liverpool Docks, will touch any substance so prepared.

Licences granted, and Specimens of all sorts of wood may be seen, at the Patentee's office, Quality-court, Chancery-lane, where every information will be given on the subject.

Rick Cloths, Cement Bags, &c., may be had of the sole Agent, Mr. Lee, 97, Leadenhall-street.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—CONTRACTS FOR WORKS.—EXTENSION OF TIME.—The Directors of this Company having been applied to by several Contractors for an Extension of Time, to enable them to copy the Plans, Specifications, &c., of the Dinting Vale Viaduct, No. 6, and the Longdendale Contracts, Nos. 7 and 8, have agreed to Postpone the Letting of the above-named works until the 28th instant, at the Company's Office, 15, Piccadilly, Manchester, where Tenders are to be delivered not later than Twelve o'Clock at noon on that day.

By order,

JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY — CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the following Works:—

Contract No. 6, or Dinting Vale Viaduct Contract.—To commence at the termination of the Gamesley Contract, in a field No 226 on the plan, in the parish of Glossop, and to terminate in the field No 209 on the plan, in the said parish; the length of the viaduct being 484 yards or thereabouts.

Contracts Nos. 7 and 8, or Longdendale Contracts.—To commence at the termination of the Dinting Vale Viaduct Contract, and to terminate in a field No. 2 on the plan, in the parish of Glossop, near to the entrance of the Summit Tunnel; the length being 6 miles and 73 chains, or thereabouts.

These Contracts to comprise the whole of the works necessary for the completion of the lengths of the railway herein mentioned, including the ballasting and laying of the permanent road, except the rails and chairs, which will be found by the Company. The contract is also to include the maintenance of the works for twelve months after their entire completion.

Plans, sections, specifications, and draft forms of contract may be seen on application to the Secretary, at the Railway Office, 15, Piccadilly, Manchester.

Sealed tenders, addressed to the Secretary, and endorsed "Tenders for Works," to be sent in on or before Twelve o'Clock at noon on Wednesday, the 28th September inst, after which day no Tender will be received.

Printed forms of Tender may be obtained at the office, and no others will be attended to. The Directors will not consider themselves bound to accept the lowest offer.

By order of the Board,

JOHN PLATFORD, Secretary.

Manchester, 15, Piccadilly, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—Forfeited Shares.—By a Resolution passed at a Special General Meeting of the Shareholders, held at Sheffield on the 12th day of January last, Interest at the rate of 5 per cent. per annum will be paid on all Shares on which the full amount of calls has been paid, until such time as the Railway shall have been opened six months throughout.

The Directors are now prepared to receive Tenders for any portion of the 1,419 Shares which were forfeited at the last half-yearly general meeting, on the 31st August last, as having the full amount of calls (£82 10s. per share) paid up; the persons now purchasing will, therefore, be entitled to interest on that amount from the date of purchase.

These shares now offer to capitalists grand advantages as an investment—the Treasury having granted their first loan of £50,000. The line will be further opened to Glossop early in November next.

All the shafts of the Summit Tunnel are now down, and 1,601 yards of the double line of driftway have been driven within the last six months—making 3,129 yards now driven: and before the 1st March next, it is now ascertained, they will be opened throughout, and the undertaking placed in the position to which its advantages so strongly entitle it.

Any further information may be obtained on application to the Secretary, at the Company's office, 15, Piccadilly, Manchester; or at the Chambers of Joseph Locke, Esq., Engineer to the Company, Adam-street, Adelphi, London.

Sealed Tenders for the purchase of Shares to be addressed to the Secretary on or before the 27th day of September instant, endorsed "Tender for Shares."

By Order,

JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, September 14, 1842.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY. — TENDERS FOR LOANS.—The Directors are prepared to grant Mortgages, under the powers of their Act of Parliament, for Loans of Money, in sums of not less than £200 each, and for periods of three, five, or seven years, at the option of the lender. Interest at the rate of 5 per cent. per annum will be paid half-yearly, for which interest warrants will be given for the period agreed on, payable at the Company's bankers in London, Manchester, or Sheffield.

Further information may be obtained at the Company's Offices in Manchester or Sheffield; at the Office of T. J. Parker, Esq., Sheffield; Messrs. Bagshaw and Stephenson, Manchester; or Messrs. Johnson, Son, and Weatherall, Temple, London.

By Order,

JOHN PLATFORD, Secretary.

Manchester, April 27, 1842.

LONDON AND DOVER (SOUTH-EASTERN) RAILWAY. NOTICE—Scrip-Holders are reminded that the Third Instalment of £5 per Share on the new Shares created in pursuance of the resolutions passed at a special meeting of the Proprietors of this Company held on the 28th of April last, will Fall Due on Wednesday, the 21st instant, and that unless the same be paid on that day, or with interest within 14 days afterwards, to any of the undermentioned Bankers, forfeiture of every share which shall after such latter period be in default will ensue:—

London—Messrs. Glyn and Co., 67, Lombard-street.
Liverpool—Messrs. Moss and Co.; Messrs. Barned and Co.
Manchester—Messrs. Jones, Loyd, and Co.
Leeds—Messrs. Beckett and Co.
York—The Union Banking Company.
Dover—Messrs. Latham and Co.; the National Provincial Bank of England.
Ashford—Messrs. Jemmett and Co.
Cranbrook—Messrs. Wilmshurst and Co.
Tunbridge and Tunbridge Wells—Messrs. Beeching & Son.
The Country Branches of the London and County Banking Company.

By order, JOHN WHITEHEAD, Secretary.

10, Coleman-street, September, 8, 1842.

LONDON AND DOVER RAILWAY.— EXTENSION TO HEADCORN. — Dover in 6¼ hours, Maidstone in 3¼ hours.

Trains leave the London Station at

1	2	3	4	5	6
a. m.	a. m.	a. m.	p. m.	p. m.	p. m.
30 past 7	30 past 9	30 past 10	30 past 1	4	¼ past 6

Coaches run to Dover in connection with the trains numbered 3 and 4, to Maidstone 1, 3, 4, and 6. The journey to Dover, through Ashford, Hythe, Sandgate, and Folkestone, will be completed in 6¼ hours (at reduced fares), and to Maidstone in 3¼ hours at fares, exclusive of the Railway charge, of 1s. outside, and 2s. inside. Places and parcels for Dover must be booked at the Golden Cross, Charing Cross; Spread Eagle, Gracechurch-street; or at any of Messrs. Horne and Chaplin's booking-offices. Parcels may also be booked at the London and New Cross stations.

Post horses can be obtained at Headcorn, or any of the Company's stations, by notice being given the previous day of the hour they will be required.

Trains leave the Headcorn Station for London at

1		3	4	5	6
a. m.	a. m.	a. m.	p. m.	p. m.	p. m.
5 past 7	20 bef. 9	5 bef. 11	25 past 2	25 past 4	10past6

Coaches will leave Dover to meet the trains numbered 4 and 6, and Maidstone to meet the trains numbered 1, 2, 4 and 6.

Time-tables, with full particulars of the Trains, altered Times, and reduced Fares, may be had on application at the various Stations on the line; at the London Bridge Station; at the booking offices; and at the Company's office.

The Fares to and from London and New Cross to the following places, will be as follows:—

	From London.		From New Cross.		
	First-Class.	Second-Class.	First-Class.	Second-Class.	Third Class.
	s. d.	s. d.	s. d.	s. d.	s. d.
Headcorn	10 0	7 0	8 6	6 0	3 8
Staplehurst	9 0	6 0	7 6	5 0	3 4
Marden	8 0	5 6	6 6	4 6	2 9
Maidstone road..	7 6	5 0	6 0	4 0	2 6
Tunbridge.....	7 6	5 0	6 0	4 0	2 6
Penshurst.....	6 6	4 6	5 6	3 8	2 0
Edenbridge	5 6	4 0	4 8	3 4	1 10
Godstone	5 4	3 8	4 6	3 0	1 8
Reigate	4 8	3 4	4 0	2 6	1 6
Croydon	2 3	1 9	1 6	1 2	1 0

Post-horses are in readiness at the New Cross Station on the arrival of every train to convey carriages to and from all parts of London, at 10s. 6d. each, including the driver; also at the London Bridge Station.

Omnibuses meet every train at New Cross for Charing Cross, Gracechurch-street, &c.

By order, JONN WHITEHEAD, Secretary.

London, 10, Coleman-street, September 8, 1842.

THE THAMES TUNNEL IS OPEN TO VISITORS DAILY (Sunday excepted) from Nine in the morning until dark, and lighted with gas.

The entrance is now only on the Middlesex side of the river, close to the Tunnel Pier, Wapping (the Shaft at Rotherhithe being closed to finish the new Staircase).—Admittance, 1s. each.

By order of the Board of Directors,

J. CHARLIER, Clerk of the Company.

Company's Office, 2, Walbrook Buildings, City, August, 1842.

N.B.—Steam Boats to the Tunnel Pier at Wapping, from Hungerford, Adelphi, Temple Bar, Blackfriars Bridge, Old Shades and Old Swan Piers, and London Bridge. Books with Plates descriptive of the Works are sold at the Tunnel, price One Shilling.

Digitized by Google

MANCHESTER AND LEEDS RAILWAY—TO ENGINEERS, MILLWRIGTS, &c.—The Directors of the Manchester and Leeds Railway will MEET at their Offices, Hunt's Bank, Manchester, on Monday, the 3rd day of October next, to receive Tenders for the supply of One Pair of High-pressure Steam-Engines, constructed on the marine principle; Cylinders, 33 inches diameter and 5-feet stroke, with three boilers, capable of working at a pressure of 50lb. per square inch; also the Rope Geering required for working the Extension Line to Hunt's Bank, consisting of rope wheels, pullies, balance frame and weight, with shafting, pedestals, wall-boxes, &c., fixed complete.

The specification and drawings, showing the details of the rope geering and general arrangement of the engines, will be ready for inspection at the Engineer's office (Mr. Gooch's), Palatine Buildings, Hunt's Bank, Manchester, on and after Monday, the 19th day of September next. The Tenders must be delivered at the Secretary's office, on Monday, the 3rd day of October, 1842, not later than ten o'clock in the forenoon; and parties tendering will be required to be in attendance at three o'clock in the afternoon of the same day.

Manchester, August 31, 1842.

THE COUNTRY TRADE SUPPLIED ON TERMS HIGHLY ADVANTAGEOUS.

TO RAILWAY AND OTHER PUBLIC COMPANIES, MERCHANTS, MANUFACTURERS, &c.—PRINTING OFFICES.—LOVE AND BARTON, Wholesale and Retail Stationers, 10, Market-street, Manchester, beg to inform their friends and the public that they have made considerable alterations in, and additions to, their already extensive workshops and printing offices, as well as to their types, presses, and machinery. In consequence of this increased accommodation, L. & B. are prepared to execute orders for Printing and Stationery with more than ordinary despatch; whilst their beautiful variety of Types, whether for Book-work, or for Fancy Borders, or Labels, enable them to get up their work in a style almost unknown out of London. The typography of several recent works issued from L. & B.'s press, has received the unsought-for encomiums of the public press. And, with reference to

FANCY BORDERS, &c.,

L. & B. beg to direct attention to a quarto pamphlet of specimens they have just published, which may be had at their establishment. The very great experience L. & B. have daily in Printing and Ruling the most intricate patterns for many of the great Railway Companies and Water Carrying Companies, in various parts of the kingdom, enables them to execute with precision, expedition, and economy, that peculiar description of printing necessary for such establishments. L. & B. can refer to the several Companies by whom they are employed for testimonials as to the efficiency of their manufactory of Account Books and of their Printing Office.

Railway Forms of all sorts.
Canal Forms of all sorts.
Printed Literary Books.
Merchants' Headed Books.
Placards and Hand bills, in black or coloured inks.
Fancy Labels and Borders.
Invoices, Cards, &c. &c., all executed in the very first-rate style.

Connected with their Printing Office, Love and Barton beg to allude more particularly to their

ACCOUNT BOOK MANUFACTORY.

L. & B. are the inventors of the "Unique Binding" for Ledgers, &c., which binding is so complete and excellent, that books bound on its principle cannot become disjointed, but will bear the roughest usage, and maintain their durability, whilst they open easily, and lie flat in the back. L. & B. beg to refer to a pamphlet they have published, explaining the unique method of binding. Few concerns in the country manufacture account books to a greater extent than L. and B.; consequently, few can offer the advantages in price and quality they can.

WRITING PAPERS.

Love and Barton necessarily purchase these on wholesale terms; and, buying under peculiar advantages, they are desirous to give to their connection the full benefit of them.

In every variety of their business, L. & B. study to observe the utmost punctuality, and to give every possible personal attention; and while they gratefully acknowledge the very extensive support with which they have been favoured, they trust to show themselves worthy of further confidence by persevering in the course they have hitherto adopted.

Small Stationers and Printers in country towns can be supplied by L. & B. with numerous articles cheaper than by ordering from London. Lists of Stationery suitable for their use may be had on application to L. & B.

10, Market-street, Manchester, September, 1842.

NEWCASTLE AND DARLINGTON JUNCTION RAILWAY.—The First General Meeting of the Shareholders of the Newcastle and Darlington Junction Railway Company will be held on Tuesday, the 4th day of October, next, at Twelve o'Clock, at Noon, in the Directors' Room, at the Railway Station, in York.

GEORGE HUDSON,
Chairman of the Board of Directors.

DOVER AND LONDON (SOUTH-EASTERN) RAILWAY.—The following Coaches are in connection with the above Railway, and depart from the

Golden Cross, Charing Cross,
83, Regent Circus, Piccadilly,
George and Blue Boar, Holborn, and
Cross Keys, Wood-street, Cheapside,

For	Trains.
Hastings and St. Leonard's, at	10 30, 1 30 and 4
Hawkhurst and Rye..... at	1 30
Cranbrook and Tenterden .. at	1 30 and 4
Dover and Folkestone..... at	10 30 and 1 30
Sandgate and Hythe..... at	10 30 and 1 30
Maidstone..... at	7 30, 10 30, 1 30 and 6 15
Ashford ..... at	10 30, 1 30 and 4

And to Tunbridge Wells at 7¼, 9¼, 10¼, 1¼, 4 and 6¼.

Omnibuses to and from every Train.

Parcels received at the above Offices, and duly forwarded for the above places, and all parts on this line of Railway.

B. W. & H. HORNE, Proprietors and Agents.

GUARANTEE SOCIETY.—Established by Act of Parliament.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this society; to relieve relatives and friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its Patrons the principal Bankers, Merchants, and Public Institutions in the Metropolis and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals:—

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. F. Shuttleworth, Esq
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.
G. Palmer, Esq.	

Standing Counsel—R. Ryder Dean, Esq.

Solicitors—Messrs. W. and S. Cotton, 76, Basinghall-street.

This Society presents to the public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the *integrity* of another.

2. Individuals who are already surety for the *fidelity* of others, may immediately protect themselves from loss by insuring with the Society.

3. The expense and painful obligation of obtaining approved sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4. All risks attending *irresponsible* sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, Confidential and Responsible Situations, where, for a moderate Premium, Surety for Integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, 28, Poultry, London.

By Order,
THOMAS DODGSON, Secretary.

MANCHESTER and BIRMINGHAM RAILWAY.—Friday, 9th September, 1842.—At an ADJOURNED MEETING of the Proprietors held this day, at the Company's Offices, London-road, Manchester,

HENRY NEWBERY, Esq., Deputy-Chairman of the Board of Directors, in the Chair.

Robert Barbour, Esq., as Chairman of the Committee appointed on the 2nd instant, "to confer with the Directors relative to the proposed junction with the Manchester and Leeds Railway, and the arrangements connected therewith," read the following Resolution, which had been unanimously passed by that Committee on the 7th instant:—

"That, after a full consideration of all the existing circumstances connected with the Manchester traffic, and the proposed junction of this railway with the Manchester and Leeds Railway, it is the decided opinion of this Committee that it is for the interests of this Company to form the proposed junction with the Manchester and Leeds Extension line at Hunt's Bank. And the Committee strongly recommend that the Proprietors should, at the Special Meeting on Friday next, give their consent, with full power to the Directors to apply to Parliament at the earliest period for effecting the junction, and in such manner as shall appear to them most advisable."

Whereupon it was moved by David Price, Esq.; seconded by R. H. Wilson, Esq., and resolved unanimously:—

That the Directors be, and they are hereby, empowered to take the necessary steps for applying to Parliament in the ensuing session, for effecting a junction with the Manchester and Leeds Extension Railway, at or near Hunt's Bank, and in such manner as shall seem to them most advisable.

HENRY NEWBERY.

The business of the meeting being terminated, Robert Barbour, Esq., was called to the chair;

When it was moved by John Brooke, Esq., (of Huddersfield); seconded by Thomas Townend, Esq., and resolved—

That the best thanks of the meeting be given to Henry Newbery, Esq., for his very courteous and satisfactory conduct in the chair.

ROBERT BARBOUR.

LONDON AND GREENWICH RAILWAY OFFICE, 37, Canterbury square, 13th September, 1843.—The TRANSFER BOOKS, of the Second and Third Share Capitals, will be SHUT from Monday, the 19th, to Friday, the 30th of September. The half-year's interest on the Preference Shares (less Income Tax) will be paid at the Company's offices, on and after the 30th instant, from 10 till 4 o'Clock (Tuesday and Saturday's excepted).

By order of the Board,
J. Y. AKERMAN, Secretary.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

II.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Corrected to August. Price 1s., in cloth.

III.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

IV.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand with a Map of London. Price 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

THE TENTH THOUSAND.

Just published, *in a Sealed Envelope*, price 3s., and sent free, on receipt of a Post office Order, for 3s. 6d.,

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

TENTH EDITION—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, 51, Bull-street, Birmingham; T. Sowler, No. 4, St. Ann's-square, Manchester; G. Philip, South Castle-street, Liverpool; Fannin and Co., 41, Grafton street, Dublin; Drummond, 114, High street, Edinburgh; and sold in a *sealed envelope*, by all Booksellers.

OPINIONS OF THE PRESS.

"This work, *a tenth edition of* which is now presented to the public, *ten thousand copies having been exhausted since its first appearance*, has been very much improved and enlarged by the addition of a more extended and clear detail of general principles, as also by the insertion of several new highly interesting cases. We feel no hesitation in saying that there is no member of society by whom the book will not be found useful, whether such person hold the relation of a *parent*, a *preceptor*, or a *clergyman*."—*Sun* evening paper.

"This is a work that we fear there exists too much need for to cause us to hesitate to recommend it for general perusal. Every branch of those frightful maladies, whether the result of immoral habits or secret vices, is here succinctly treated, and divested of all medical technicality, plain and easy directions are given for the best mode to be pursued in all cases, however complicated or apparently hopeless. To the married, as well as the unmarried, this little work alike affords consolation and cure in peculiar cases, and we are doing a service to society in recommending it to general notice."—*Essex and Herts Mercury*.

"Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable."—*Magnet*.

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. The communication must be accompanied by the usual consultation fee of £1, and in all cases the most inviolable secrecy may be relied on.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride, Fleet-street, Middlesex.—Saturday, September 17, 1842

The Railway Times.

" Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 247. Vol. V.—No. 39.] SATURDAY, SEPTEMBER 24, 1842. [Price 6d.

BRISTOL AND GLOUCESTER RAILWAY COMPANY.—Notice is hereby given, That in pursuance of the provisions of the Acts of Parliament, the Half-yearly General Meeting of the Shareholders in this undertaking (including Shareholders in the Line from Bristol to Coalpit Heath, as well as Shareholders in the Extension Line), will be held at the White Lion Inn, situated in Broad-street, in the City of Bristol, on Thursday, the 29th day of September instant, at One o'Clock in the afternoon.

By order of the Committee of Management,
GEORGE JONES, Chairman.
ROBERT FLETCHER, Secretary.

Bristol, 5th September, 1842.

The Chair will be taken at One o'Clock precisely.

The Transfer Books will be Closed on Saturday, the 24th day of September instant, and not re-opened until after the said General Meeting on the 29th of the said month.

BRISTOL AND GLOUCESTER RAILWAY.—The Directors of this undertaking will receive Proposals for LOANS of Money on Debentures, to be issued under the Provisions of the Acts of Parliament, in the month of October next, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest, at the rate of £5 per cent. per annum, payable half-yearly, at the Banks of Messrs. Miles, Harford, and Co., Corn-street, Bristol; and Messrs. Barnetts, Hoare, and Co., Lombard-street, London

For monies immediately advanced the security of Loan Notes, under the Seal of the Company, will be given, which may be exchanged for Debentures in the said month of October.

Tenders expressing the Sums and terms of years to be addressed to the undersigned, at the Company's Office, Exchange Buildings, Bristol.

By order of the Committee of Management,
ROBERT FLETCHER, Secretary.

Office, Exchange Buildings, Bristol, May 30, 1842.

BRISTOL AND GLOUCESTER RAILWAY.—EXTENSION LINE.—CALL of £10. per Cent., being £5 per Share.—The Committee of Management of this undertaking having resolved, at a Meeting held in Bristol this day, to call, under the provisions of the Acts of Parliament relative to the said undertaking, for an Instalment of £5 per Share, Notice is hereby given, That the Subscribers to the said undertaking, and Proprietors of Shares therein, are required to pay, on or before the 24th day of September instant, to any one of the undermentioned Bankers, the sum of £5 on each of their respective Shares, viz.,—

London—Messrs. Barnett, Hoare, and Co.
Bristol—Messrs. Miles, Hartord, and Co.; Messrs. Baillie, Ames, and Co.; Messrs. Stuckey's Banking Company; The West of England and South Wales District Bank.
Gloucester—The Gloucestershire Banking Company.
Manchester—Messrs. Jones, Loyd, and Co.

By order of the Committee of Management.
GEORGE JONES, Chairman,
ROBERT FLETCHER, Secretary.

Interest at the rate of £5 per cent. per annum will be charged to all parties who remain in arrear for this Call after the above-named 24th day of September.

5th September, 1842,
Office, Exchange-buildings, Bristol.

MR. SAMUEL HALL'S PATENT SMOKE-CONSUMING APPARATUS.—The following papers may be had gratuitously, on application by letter to Messrs. H. and W. Good, No. 60, Moorgate-street; or of Mr. Hall, No. 18, King's Arms Yard, London,

Refutation of Mr. Josiah Kearsley's Incorrect Report to the Directors of the Midland Counties' Railway respecting the above Apparatus.

Remarks on Mr. John Fox Bell's Defence (if Defence it may be called) of Mr. Josiah Kearsley's misstatements, as advertised by Mr. Bell in the *Railway Times*, the *Railway Magazine*, and the *Mining Journal*, of the 3rd instant. Also,

An Exposé of the pretended claims and overweening vanity of Mr. Charles Wye (*alias* Counsellor) Williams, as displayed in his paper published on the 3rd instant in the *Mechanics' Magazine* and the *Mining Journal*.

In Royal Octavo, 3s. 6d., cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London, Simpkin, Marshall, and Co.; Liverpool, Wareing Webb, Castle street; Manchester, Simms and Dirham; Birmingham, Wrightson and Webb; Leeds, Slocombe and Simms.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

CRANES, ROPE BLOCKS, AND SCREW JACKS, manufactured by ELLIS AND NOTON, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs, and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description, on the most improved principle.

Drawings of the above may be seen, and particulars obtained, at the works in Manchester, and at the office of C. F. Cheffins, 9, Southampton Buildings, Holborn, London.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.—LOANS.—The Committee of Management are prepared to receive Tenders for the Loan of a limited amount of Money, in sums of not less than £1,000 each, to be secured by the Bonds of the Company, bearing Interest at 4 per cent. per annum, payable half-yearly. Period of the Loans to be either for 3, 5, or 7 Years; the term preferred to be mentioned in the Tenders, which must be addressed to the undersigned. By order,

JOHN HAWKSHAW, Clerk of the Company.

Canal and Railway Office, Salford, Sept. 22, 1842.

RUSSIAN STEEL IRON—C C N D.—The undersigned having been appointed sole Agents for the Messrs. de Demidoff, in England, the above mark of Iron can only be obtained through them, at

18, HIGH-STREET, HULL, and
29, AUSTIN FRIARS, LONDON.

At Liverpool, they have appointed Messrs. Carns and Telo; and at Bristol, Messrs. P. Maze and Son, their Agents.

The undersigned particularly request all buyers of the C C N D to make their purchases through them, or through their Agents, which will effectually put a stop to a fraud which is extensively practised by unprincipled parties selling a loose, roaky, inferior Iron, with a counterfeit mark of the C C N D, by which Manufacturers have been grossly imposed upon, and the old, favourite, genuine mark, unjustly discredited.

ANTHONY AND GRAHAM.

29, Austin Friars, 7th September, 1842.

TO BE SOLD BY AUCTION, BY MR. DIXON, at his Repository, Barbican, on Friday, September 30, 1842, at One o'Clock, 20 valuable, fine-shaped, known good, seasoned CART HORSES, with the Thill and Chain Harness, being the genuine and entire Stock of Mr. R. Johnston, of the Horse-Shoe Wharf, Upper Thames-street, that have been employed in the coal trade, positively for sale without reserve, in consequence of his having entered into an engagement for the work to be done by contract.

A very handsome short legged Four wheel Chaise or Brougham Horse, which for strength and beauty is really not to be equalled in London.

Seven young, fresh, powerful, active Cart Horses, the property of Sir J. W. Lubbock, sold in consequence of his having disposed of his arable land.

Colours—Blacks, Bays, Browns, Chesnuts, and Greys.

☞ The above Stocks of splendid seasoned Cart Horses are worthy the attention of Brewers, Distillers, Carmen, Contractors, Corn and Coal Merchants, Wharfingers, Warehousemen, and Tradesmen, as they are from constant and hard work, and for absolute sale.

On view, and catalogues had, two days before the sale.

FORTY HORSES, FIVE GREAT WESTERN RAILWAY OMNIBUSES, PORTER'S CART, HARNESS, &c., removed from the Blossoms Inn, Lawrence-lane. Mr. DIXON begs to announce that he is instructed by the Assignees of Mrs. Gilbert, of the Blossoms Inn, Lawrence-lane, to Sell by AUCTION, at the City Repository, Barbican, (removed for convenience of sale) on Tuesday, September 27, 1842, commencing at Twelve o'Clock precisely, the genuine and entire remaining portion of the Stock, comprising 40 well-known, good, seasoned, Horses, Five excellent Railway Omnibuses, that have been working to and from the Great Western Railway office, Bank, and the Station at Paddington, 10 Sets of capital Pair-horse Harness, a Porter's Covered Cart, light Dennett, &c. &c.

☞ The above excellent seasoned Stock is worthy the attention of Omnibus, Stage Coach, and Post Masters, Public Companies, and others—being well-known in their work—are positively without exchange or addition, and will be sold, as usual under such circumstances, without reserve, or warranty of any kind.

On view the day prior, and morning of Sale, when Catalogues may be had of A. B. Belcher, Esq., 2, King's Arms Yard, Official Assignee; of Mr. M'Leod, 16, Billiter-street; at the Blossoms Inn, Lawrence-lane; and of the Auctioneer, at his Repository, Barbican.

PROPOSED PLYMOUTH AND EXETER RAILWAY.

ON Tuesday, September 13, a meeting of the shareholders in this undertaking was held at the Guildhall, Plymouth, when T. GILL, Esq., M.P., was unanimously called on to preside.

On taking the chair Mr. GILL observed, that he had received a letter from Mr. Rundle, M.P. for Tavistock, and had intimation from the Earl of Devon, and other shareholders, that it was impossible for them to attend, but that they were all favourable to the object of the meeting. The present meeting had been called in consequence of the determination come to at the last meeting of the Directors, held a few days ago, for the purpose of showing to the shareholders the good effects of the expenditure of the money that had been already subscribed, and to hear the Report of Mr. Macneil, on the eligibility of the three different lines that had been already surveyed. It was only within the last month that this Report has been placed in the hands of the Directors, and it was the object of this meeting to show in what manner the money already subscribed had been expended.

The CHAIRMAN then called on Mr. Whiteford to read the Report, from which the following abstract has been prepared :—

ABSTRACT OF THE REPORT.

Mr. Macneil's Report commences by referring to his instructions from the Directors, viz. "to inspect the country between Plymouth and Exeter, and examine the various plans which have been proposed by different Engineers, for a formation of a railway between those towns, and report generally which of these lines he might consider the best and most likely to afford the greatest accommodation to the public, while it should yield the best remuneration to the party about to embark their capital in the undertaking."

Mr. Macneil then proceeds to describe his examination of the various lines which had been surveyed, by Messrs. Brunel, Moorsom, and Rendel, also new modifications suggested by Mr. Rendel during the inquiry. He (Mr. M.) describes the general contour of Devonshire, in reference to the difficulty of forming a decided opinion as to the best course of a line of railway, from the mass of engineering documents thus placed in his hands. He was further aided in the inquiry by a schedule of the traffic taken on the various lines by one of the Directors, Mr. Cole, which in all the calculations, Mr. M. has doubled only, although he seems to consider this is far beneath the actual increase of traffic afforded by the formation of a railway, the average increase by English Railways, being six times the original amount of traffic. In examining the projected line to Falmouth and Plymouth, from Exeter, by Captain Moorsom, and observing the heavy gradients and small amount of traffic on this as a trunk line into Cornwall, as compared with a line to Plymouth, through the South Hams, it was deemed advisable "to ascertain the practicability of extending the line from Plymouth to Falmouth. The connection of these important and flourishing sea-ports, by means of railway, being a desideratum which the public convenience in other parts of the empire has already made manifest; and being therefore an essential point of view, when considering the advantages which either line will ultimately afford to the public." A section of a line, *viâ* Landulph and St. Germains, and also by Torpoint and St. Germains (population 2842), Liskeard (population 4287), Ashford Bridge, the Fowey river, Lostwithel (population 1186), Par Harbour, St. Austel (population 10,320) Grampound (population 607), Tregoney (population 995), to Truro (population 15,000), and Falmouth (population 7,520) were placed in his hands.

Mr. Macneil then proceeds to give a detail of each of the proposed Plymouth and Exeter lines, and gives in a tabulated form the lengths, gradients, and probable estimated expense of maintenance and motive power, with the annual traffic and revenue, that may be anticipated on each line respectively. The various data, viz.

1st. The expense of construction.
2nd. The expense of motive power.
3rd. The expense of maintenance.
4th. Of the coaching departments.
5th. The expense of the establishment—being all taken on given uniform data, which he describes very minutely.
6th. The cost of land, and damages.
7th. The cost of obtaining an Act of Parliament, being placed at such sums for the various lines as his inquiries and judgment dictated. The result of the very voluminous portion of Mr. M.'s Report, in which he gives in detail every element of calculation of the five lines hereafter described is given in a table showing the comparative capital required; annual expenses; amount of revenue; balance to pay interest, per-centage, and length of each line. The Report is accompanied by sections of the gradients, and a general plan of all the lines involved in the inquiry.

Mr. Brunel's line commences at the canal basin, at Exeter (population 40,338), and follows the Exe valley to Starcross (population 2,313) near Kenton, whence it passes through Dawlish (population 3,132), and along the sea coast to Teignmouth (population 4,459), skirting the Teign river to its crossing at Hackney Cellars, passing Newton (population 3,912), at one mile and a half distance, near Kingskerswell (population 843) Dainton, Little Hempston, half a mile north of Totnes (population 4,990), through Hanger Slate Quarry by Rattery Mill, Marley, Brent, (population 1,237), Wrangotor, Ivy Bridge, whence a course considerably north of the turnpike road to Hamerdon and Colebrooke, thence by the valley of the Plym, by Plympton, (population 8,665), to Crabtree, whence it diverges from the general line of turnpike road, through Lipson, under Mutley Plain to Union-street, Plymouth (population 80,000.)

Mr. Rendel's line over Dartmoor leaves Exeter near St. Thomas's church, passes up the Ide valley to Perridge, whence to Culver-house and Dunsford, and following the valley of the Teign, begins to ascend Dartmoor sharply at Chagford (population 1,836) to New-house, whence by Post Bridge and Prince Hall, to Nun's Cross, here leaving the Moor, it falls by Leather Tor and Donsland Barn to the level of Roborough Down, thence taking nearly a straight course by Jump and Knacbersknowle to Plymouth (population 80,000.) The Tavistock branch diverges from this line near Roborough Rock, and passes above Horrabridge, and near Grenoven to Tavistock (population 6,272.)

Captain Moorsom's line leaves Exeter for two miles and a half by the Bristol and Exeter Railway, whence diverging up the valley of Creedy near Crediton (population 5,947), by the Yeo river near South Tawton and Zeal, to Oakhampton (population 2,199) whence near the general line of turnpike-road by Sourton to Lidford, where the line to Falmouth diverges. The Plymouth line proceeds by Wheal Friendship mines to Tavistock (population 6,272), and joins the line above described as forming part of Dartmoor line from Tavistock to Plymouth.

Mr. Rendel's south line leaves Exeter to near Culverhouse by the general course of the Dartmoor line. Leaving that it enters the Teign valley, and passes thereby to Newton by Chudleigh Bridge and Kingsteinton (population 1,498), passing through Newton (population 3,912), it follows the Lemon river to beneath Denbury Hill, whence by Broadhempston and Dartington to within two miles of Totnes (population 4,990), thence it passes up a favourable valley to a junction with the general course of Mr. Brunel's line, at Rattery Mill, following this line as before decribed to Bittaford Bridge, but reducing the works by increased gradients it proceeds to Ivy Bridge, Lea Mill Bridge, and Plympton (population 3,665), near the general line of turnpike-road, and again joins the couse of Mr. Brunel's line near Farmpool Quarry, it proceeds to Plymouth with less works and increased gradients.

Having thus gone through the various lines in detail, and ascertained the different items of expenditure and probable revenue of each, it will be desirable to bring the whole under one view in the following statement, by which a comparison may be more easily made :—

MR BRUNEL'S LINE.

Locomotive—Capital required, 1,633,327*l.*; annual expenses, 103,803*l.*; amount of revenue, 222,615*l.*; balance to pay interest, 118,812*l.*; per cent., 7–3; miles 48¾.

Stationary Power—Capital required, 1,693 299*l.*; annual expenses, 90,002*l.*; amount of revenue, 222,615*l.*; balance to pay interest, 132,613*l.*; per cent., 7–8.

MR. RENDEL'S DARTMOOR LINE.

Water Power—Capital required, 1,108,342*l.*; annual expenses, 70,782*l.*; amount of revenue, 130,075*l.*; balance to pay interest, 59,293*l.*; per cent. 5–3; miles. 42¾.

Steam Power—Capital required, 1,159,318*l.*; annual expenses, 84,641*l.*; amount of revenue, 130,075*l.*; balance to pay interest, 45,434*l.*; per cent., 4–0.

CAPTAIN MOORSOM'S LINE,

Capital required, 1,239,022*l.*; annual expenses, 85,404*l.*; amount of revenue, 123,383*l.*; balance to pay interest, 37,979*l.*; per cent., 3–0; miles, 54¾.

MR. RENDEL'S SOUTH LINE.

Capital required, 1,269,144*l.*; annual expenses, 110,385*l.*; amount of revenue, 215,762*l.*; balance to pay interest, 105,376*l.*; per cent. 8–3; miles, 47½.

COMBINED LINE.

Capit l required, 1,469.391*l.*; annual expenses, 102.462*l.*; amount of revenue, 222,615*l.*; balance to pay interest, 119.152*l.*; per cent., 8–1; miles, 49.

From this statement it will be perceived that Mr. Rendel's South line will return the greatest rate of interest, and that the capital required for its construction is less than will be required for either Mr. Brunel's line, or the line composed partly of his and partly of Mr. Rendel's, the difference being nearly 400,000*l.* in the former case, and 200,000*l.* in the latter.

The annual expense, however, of working his line exceeds that of working Mr. Brunel's line by locomotive and stationary power nearly 20,000*l.* a year, and the combined line 8,000*l.*, but this difference in a great measure arises from passing the Perridge summit at so high a level, in order to obtain a short tunnel. By making that tunnel a mile long instead of 950 yards as at present, at least 100 feet of elevation would be saved, and the gradients leading to and from it would be so far reduced as to diminish the cost of working very materially. In laying out the line for final execution, many improvements and modifications would undoubtedly be made, so as to improve the curves, lessen the expense of construction, and do away with any objections that may be made by landed proprietors.

Though the Dartmoor line has much to recommend it, and would give railway accommodation to Tavistock by means of a short branch, 4¾ miles, as shown in the plan which accompanies this Report, yet Mr. Macneil without hesitation gives it as his opinion that the line of railway already pointed out through the South Hams would be more generally useful, and more profitable to the shareholders.

With respect to Captain Moorsom's line, it is evident from the preceding tables of calculations that it cannot compete with the other lines from Exeter to Plymouth, considered merely as a line to connect those towns without reference to an ulterior object of forming a communication between Exeter and Falmouth, the consideration of which was not embraced in the instructions received from the Provisional Committee. It should therefore be considered as a railway to Falmouth, forming a communication with Plymouth, by a branch from Lidford, and as such must be compared with the route through Plymouth by the Dartmoor or southern lines already described, in conjunction with their extension from Plymouth to Falmouth, as surveyed by Mr. Rendel. The line of Captain Moorsom, which is described in the plan and sections accompanying Mr. Macneil's Report follows the valley of Lyd river, crossing the Tamar to Launceston (population 4586), whence across the moors near the Brown Willey, and by the Helland river to Bodmin (population 4,643), whence following the general line of the new turnpike road to St. Austel (population 10,320), it passes towards St. Stephens by Tregelin summit, where it passes close to the proposed extension of the Exeter and Plymouth railway, *viâ* Torpoint. Capt. M.'s line passes near Landock, Tresillian bridge, to near Truro (population 15,000), whence it passes near Penryn (population 3,337) to Falmouth. Mr. Rendel's has been before described, and is shown more particularly by the plan and sections. By this it appears, that the direct line surveyed by Captain Moorsom, from Exeter to Falmouth, is 108 miles, with a branch to Plymouth of about 21 miles, which would together involve the formation of about 129 miles of railway, and make the distance from Exeter to Plymouth 54¼ miles, and from Plymouth to Falmouth 56¼ miles: whereas, by the line through the South Hams, the distance from Exeter to Plymouth would be only 49½ miles, and from Plymouth to Falmouth, or rather to the pool of St. Just, 56¼ miles—making the total distance about 106 miles; by this route, therefore, there would be a saving in distance between Exeter and Plymouth of about 5 miles, between Plymouth and Falmouth of 39 miles, and on the whole distance between Exeter and Falmouth a saving of 3 miles, whilst the saving in railway construction, as compared with the line by Lidford, would be about 26 miles.

The CHAIRMAN here said he should be glad to hear any gentleman's remarks. It was not his business to talk, but previous to any discussion, he would take the liberty of making one or two observations. When he was in London he had an interview with the Chairman of the Committee of the Great Western Railway, who was exceedingly desirous of knowing what they were doing, because he had had an application from Captain Moorsom respecting a line from Falmouth to Exeter, to whom he had held out no hopes of assistance. He (Mr. Gill) then stated that they had employed Mr. Macneil, a man of undisputed abilities, to report upon the eligibility of the three different lines of road that had been hitherto surveyed, and Mr. Russell then observed that if they would give him a full report of Mr. Macneil's opinion as to the best line of road that should be adopted, and show that it would be a profitable undertaking, he would answer for the Directors of the Great Western Railway that they would render every assistance in their power, and that they would be ready to enter into arrangements for leasing any part of the road, as soon as it was finished, at the rate they had agreed with the Bristol and Exeter line, which was at the rate of 6 per cent. upon the outlay. Now he (Mr. Gill) considered it almost impossible to raise two millions and a half of money in this district; but if it could be shown that 6 per cent. could be obtained by advancing money in this concern, instead of getting only 2½ per cent. (the present common rate of interest), they might expect that a feeling would be raised among the people of Devonport, Plymouth, and in the county of Devon, that would encourage them to proceed, and they would not be doing justice to themselves if they did not embrace this opportunity. It had been said by many that it would be idle to advance money upon a speculation that could never be realised, and, in consequence, an extraordinary degree of apathy had prevailed amongst them. If the money required was to remain entirely with themselves, it was not to be wondered at, but when they knew that the Great Western Railway Company were willing to assist them, not from motives of generosity, but for an evident advantage to themselves, this apathy should, and he trusted would, be done away with. It was not to be expected that those gentlemen who had already expended their money in the preliminary expenses necessary for bringing forward this great undertaking, could continue to make these sacrifices, unless they were supported and encouraged by the feeling of the public at large, and if every respectable tradesman would come forward and subscribe for one or more shares, so as to prove to the House of Commons that there was a general desire in these towns, and in the county, to carry out this great and advantageous undertaking, he was convinced there would be no difficulty in obtaining the money, either by loan or otherwise, and no obstacle would then present itself but which might be easily overcome.

The Rev. J. HATCHARD said, he took the liberty of asking whether the gentlemen in the South Hams district had been applied to, as to their willingness in co-operating with them in carrying the line through their neighbourhood?

The CHAIRMAN said, he was very glad this question had been asked, because when he was in London, Mr. Rundle and himself had, in conjunction with

Digitized by Google

Mr. Macneil, called a meeting of the noblemen and gentlemen connected with that district, to the number of 20, when 8 or 10 attended, and all who were present were anxious to hear more upon the subject, and were desirous to co-operate with them in the measure, provided the southern line of road should be adopted.

The Rev. J. HATCHARD asked, whether they should be justified in doing their duty in pursuing this measure without knowing what sum had been already subscribed?

Mr. GILL replied, that more than 50,000*l.* had been already subscribed, which sum was more than was necessary in accordance with the Act to enter into preliminary proceedings.

Mr. WHITEFORD observed that, what took place in 1840, was no rule of guidance for the present time.

The Rev. J. HATCHARD asked, how far the calculation as to the receipts and expenditure, and the amount of traffic, had been made from actual observation, and how the average increase of traffic on railways to the former amount was six times greater, and in many instances twelve, as stated in the Report.

Mr. WHITEFORD stated, that the amount of traffic had been made from actual observation, but that three times was considered in Parliament, as the fair average amount.

The CHAIRMAN remarked, that at no time could a railway be commenced under such favourable circumstances as the present; the price of iron was never known to be so low as it now was.

Mr. D. DERRY said that he had had some connection with railways, and he knew that iron was 35 per cent. lower now than it was formerly.

Mr. WHITEFORD would take that opportunity of observing, that in regard to the water power that had been proposed by Mr. Rendel, it had been acknowledged by the first-rate engineers, that it was decidedly preferable to steam. In order to remove the difficulty of raising a sufficient sum for carrying out their project in this immediate locality, it could be effected by raising money upon the guarantee of the Great Western Railway, or by getting a loan of Exchequer Bills, as had been done by other similar Companies If the measure should be brought forward by efficient persons, or even by a few great capitalists, it would be considered as a job, and there would be great obstacles in procuring a Bill; it was therefore desirable to procure a strong numerical force, no matter as to the amount of shares, but a number of shareholders, in order to prove that there was a popular feeling in favour of the measure.

Mr. THOMAS STEVENS moved, that the Report which had been read should be adopted; and remarked, that the apathy which had arisen, and which was much to be regretted, was occasioned by the limited number of the Provisional Committee that had been appointed.

Mr. S. DERRY seconded the motion. He was confident it only required the shareholders to come forward to carry out the measure. He was astonished at the apathy of the people of these towns towards a measure of such undoubted value, for he was convinced that there was no railway in the kingdom which presented such great advantages. It would be the terminus to the best port in the land. From the new pier which was now constructing, and the many facilities which would thereby be produced for bathing, and the speed with which strangers could be conveyed by the railway, he was sure that it would become the first watering-place in her Majesty's dominions. He was persuaded that it would become the principal port for Bristol, as there would be less loss of time than going round the coast. If the measure were not carried out, Plymouth would be shut out from all the world; they would lose all the advantages which nature and art had given them, and they would be placed a century behind all the rest of the kingdom. All that they required was a back country, and that the railway would afford. If the shareholders did not receive 1 per cent. for the money they advanced, the town would be benefitted to such an immeasurable extent that they would be amply repaid; but even as a money speculation, he was persuaded that it would be profitable, though he did not give much credit to the calculation of estimates, as he had known so many of them to be fallacious.

The motion was carried unanimously.

Mr. HATCHARD proposed that the cordial thanks of the shareholders be given to the Directors, especially for the clear, lucid, and satisfactory Report that had been read, which was so simple in its details, and so intelligent in its language, that any school-boy could understand it as far as he went. If the public could know all the particulars, they would be fully sensible of the benefits derived from the Directors' exertions; and in order to second them as they ought, every respectable tradesman should take one or more shares. If the project were not carried out they would, in this nook of the island, be behind all the rest of the country; their trade and commerce would be annihilated, and, comparatively speaking, grass would grow in their streets; the lovely scenes of their neighbourhood would be neglected, and they would lose the advantage of visitors coming amongst them, which was an object not to be overlooked, for then probably they would become settlers. The towns certainly wanted more wealth, and they also wanted more men of energy and enterprise—such men as yourself, Sir (addressing himself to the Chairman). He spoke this feelingly, as he ardently wished for the temporal as well as the spiritual welfare of his fellow-townsmen.

Mr. S. DERRY seconded the motion, which was carried unanimously.

Dr. COOKWORTHY proposed that a public meeting should be called as soon as possible.

Mr. PRANCE seconded the motion. He thought the apathy of the public would be in a great measure removed—when they were convinced of the practicability of the road over Dartmoor, and the light that had been thrown upon this fact, particularly in regard to the water power. He would beg leave to ask what sum was absolutely necessary to be raised, before they could go to Parliament for a Bill?

Mr. WHITEFORD said that according to the late Act, respecting railways, three-fourths of the necessary capital must subscribed for in shares, 10 per cent. upon which must be paid up; but this might be obtained by loan without throwing any discredit upon the respectability of the Company. It had been done in several instances, as it was scarcely possible to form a Company that would pay up 10 per cent. upon the shares subscribed, merely upon a project that may not be carried into execution. Government had seen the evil of this clause in the Act, and there was every reason to suppose that it would be repealed in the next session.

Mr. D. DERRY said that there had never been any definite plan acted upon, for he well knew that the Great Western Railway Company were, in the beginning, labouring under greater difficulties than their own Directors were now. All the great railways had their Acts passed before they had paid up more than a very small sum, even at the time it was termed the mad progress of railway speculation. It was not the largeness of the sum paid up—but the greatest number of shareholders that was most attented to.

Mr. LINDON begged to make one observation, which was, that as they went on, the further they would reduce the expenses, by taking advantage of the experience of others who had gone before them.

The CHAIRMAN said that before he put the question relative to a public meeting, he would beg leave to state, that the Committee had a wish to publish the Report that had been read, or an abstract, as might be thought expedient, and the only objection to such a course was, the Directors having expended all the funds that had been raised. The power was now at an end.

Mr. HATCHARD said, that being the case, he would move, that the Provisional Committee be empowered to act as a Committee, to condense and print an abstract of the Report, and to convene a public meeting, at as early a period as they may deem expedient.

After some discussion, Dr. Cookworthy withdrew his motion, and that of Mr. Hatchard's was carried unanimously.

A unanimous vote of thanks to the Chairman was proposed and carried, who briefly returned his thanks, and the meeting dispersed.—*Plymouth Journal.*

MINERAL RAILWAY TO MUIRKIRK.—A meeting of those favourable to this undertaking was held at Ayr, on Tuesday week, in the Hall of the Ayr Arms Inn; Sir James Boswell, Bart., in the chair. The Report of the survey by Mr. Robson, the engineer, which has been printed and circulated, points out two lines; both pursuing the same route from Ayr to Henryston; from thence the one diverges in a northerly, the other in a southerly direction, and again unites at Carbella. It was unanimously agreed that the north line should be adopted, with power to make such deviations as shall embrace the mineral fields in that quarter, and to make a branch to Old Cumnock. A Committee having been named to obtain subscriptions, the meeting separated.—*Glasgow Constitutional.*

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—GENERAL MEETING.*

THE twelfth half-yearly meeting of this Company was held at the Subscription Rooms, Stroud, on Tuesday; C. F. SAGE, Esq., the Chairman of the Board of Directors, in the chair. The attendance was numerous and influential.

The requisition calling the meeting having been read by Mr. Merrick, the Secretary,

The CHAIRMAN said, at the meeting in May the Directors stated it to be their intention to call a special meeting so soon as the new Bill received the Royal Assent, but upon considering the subject they felt that they should best consult the interests of the proprietors by not calling them together until they had a definite proposal to submit for their approval. The course which the Directors took when the Bill became law is already known; it was not adopted without mature deliberation, and the proprietors will be of opinion, I have no doubt, that it was the most judicious. The Directors have kept steadily in view the completion of the line, feeling convinced that if it can be accomplished by an equitable arrangement with other parties, it will be the means of raising this undertaking to a higher pitch of prosperity than could be effected by any other proceeding which the Act would authorise. With this view the Directors opened a negotiation with the Great Western Company, which is still pending, and it will be their duty to bring it to a conclusion as soon as possible; but while evincing every disposition to meet the wishes of that Company on all reasonable points, they will not lose sight of your interest, nor will they consent to any scheme which can, in their opinion, place the existing property of your Company in jeopardy. (Applause.) Should the negociation terminate favourably, the Directors will call a special meeting and lay the treaty in detail before the proprietors, and the subject can then be fully and unreservedly discussed, and it will remain with the proprietors either to ratify it, or to reject it. I may here remark, that whatever may be the pretended or real opinion of the Great Western Company as to the value of this concern, we know that it is greater than they can possibly estimate at this time, and it will be apparent to every person who is acquainted with this locality, that the completion of the line must be a matter of deep and grave moment to that Company. This is not merely a branch of local importance, but, as was stated on a former occasion, it is the portion of a trunk of two great national railways—the one connecting the whole of the north of England with the west and south-west; the other connecting the metropolis and the south of England with Gloucestershire, Herefordshire, Monmouthshire, and the greater part of South Wales. Between these extensive districts and the metropolis there exists a very large amount of traffic, a great proportion of which is, and will continue to be diverted into other channels, so long as our line remains in its present incomplete state, but when the road is finished it will flow again into its legitimate course. Any defalcation in this traffic will fall peculiarly heavy on the Great Western Company, inasmuch as the whole of it would pass over 77 miles, or nearly two-thirds of the entire distance of their line, whereas only a portion of the same traffic could pass over 39 miles of ours, when the line is completed. Traffic is, of course, more or less valuable to a railway according to the distance over which it has to be conveyed, and if you look at the relative mileage of the two lines, and keep in mind, that if our line had not been open to Cirencester, the Great Western Company would have lost nine-tenths of the traffic which it at present carries to their line, you will be able to form some idea of the value of this undertaking to that Company, whether in its present state, or when completed. I have two objects in view in stating these few facts—first to show you that the Directors fully understand the real position of the Company, which is a guarantee, if such were wanting, that they will not sacrifice your property; and secondly, that it is manifest that the all-powerful motive of self-interest will sooner or later urge the Great Western Company to make an equitable arrangement with this Company, and more than this, I presume, none of us wish or expect. I purposely abstain from offering an opinion as to the probable position of the Company in the event of the existing negociation terminating unsuccessfully. Such a result appears so unlikely that I do not consider it necessary to advert to it further. Any opinion upon such a point must be speculative, and

* We are indebted to the courtesy of the Editor for an early copy of the *Gloucestershire Chronicle* of to-day, from which this report

Digitized by Google

could only lead to discussion without any good result. I have much pleasure in announcing to you that the loans on debentures are coming in more freely, and the Directors hope to be able to meet the engagements of the Company without, at present, making a further call. (Applause.) I will not trouble you with any further observations, but proceed to read the Report.

The Report, which appears in our advertising colums, was then read by Mr. Sage.

A desultory conversation took place with regard to one of the items in the account, relating to the balance which appeared due from the Gloucester and Birmingham Company, when the Chairman explained that the accounts between the Companies were not yet settled. On the suggestion of a shareholder, the Chairman read that part of the last Report of the Great Western Company, which related to the negociation that had been in progress between the Directors of the two Companies, with reference to the completion of the line. The Chairman stated, that since this Report of the Great Western Company, no meeting had taken place betwixt the Directors of these Companies, and that should any gentleman wish for additional information upon any point, he should be happy to furnish it.

Mr. J. VARDEN, of Worcester, said, that before proceeding to any general discussion, it would be well to understand exactly the present position of the Company. He wished to know what the amount of the liabilities of the Company was for works, loans, &c.

The CHAIRMAN said, that as the financial statement was made up to the 24th June, he would wish to confine himself to that period; that the liabilities of the Company up to that day, and not expressed in the financial statement, might be taken at about 35,000*l.*; to which the liabilities, enumerated in the statement appended to the Report before the meeting, being added, would make the total amount about 129,000*l.*

Mr. VARDEN then requested to be informed what was the amount of arrears due upon good calls; this, the Chairman stated, he considered to be upwards of 20,000*l.* on the 24th of June. A converration, in which Mr. Varden and several other gentlemen joined, then ensued, with reference to the amount of further calls that would be required to discharge every liability of the Company, including the loans on debentures and otherwise. The Chairman declined pledging himself to the accuracy of any calculations that could now be formed on this subject, but stated that, at a former meeting of the proprietors, the sum of 20*l.* per share had been named as requisite, and he (the Chairman) believed that that would be more than sufficient.

Mr. VARDEN—It is of great importance that we should have a complete financial statement.

The CHAIRMAN—I do not know how such a statement could be accurately made up. At the present time there is the disputed accounts with the Gloucester and Birmingham Company; there is also a quantity of land which we do not require, and which we must dispose of, but it is impossible to say how much it will bring. There are also a number of other things involved in the same uncertainty.

A SHAREHOLDER—If I understood you right, you expressed a hope that you would be able to meet existing liabilities unprovided for without making another call.

The CHAIRMAN—We are in great hopes that we shall be able to do so. We have made arrangements with that view with our treasurer, and loans are offering more freely.

In answer to a question, the Chairman said that the contracts for works were all at an end.

Mr. VARDEN—In the Report of to-day I notice a statement about certain negociations with the Great Western Company, but you (the Directors) do not mention anything about the Bristol and Gloucester Company. May I ask if any negociation has been opened with that Company?

The CHAIRMAN—The Bristol and Gloucester Company are in a different position from the Great Western. Their interests are provided for by the Act.

Mr. VARDEN—Do the negociations include the line from Stonehouse to Gloucester?

The CHAIRMAN—The negociations include the tire interest of our Company. They who succeed to it step into our shoes, and will stand in the same position with any other Company that we should do. I beg to repeat again what I stated, with all sincerity, in my opening address, that the Directors will not consent to any arrangement that may be supposed to place the interests of the existing proprietors in jeopardy.

Mr. AVERY, of Gloucester—I beg to make a few remarks, because I think it is proper that the present position of the Company should be ascertained. It is perfectly clear to me that we are *virtually* in the situation of having expended the whole of the 100*l.* per share. It is entirely gone; and we are now met here to deliberate on the subject of future expenditure to the same amount, probably, as that which now appears in the account, namely, 537,000*l.* As for the negociation going on with the Great Western Company, I have not the slightest doubt of our interests being looked after and taken care of, but I say it is impossible that any arrangement can be carried into effect calculated to be of benefit to us, under the Report of the Great Western Company which has just been read. (Applause.) It is clear to me that the Report explicitly shows, that however desirable it is that the construction of the line from Cirencester to Cheltenham should be completed—it is clear, I say, that all that the Great Western Company want, is to have that line completed, and then they will be willing to take it upon lease. Now, I ask, looking at the past, whether there is any power on earth which will enable you to say that a certain expenditure will enable you to complete the uncompleted portion of the line. That it can be estimated with any degree of accuracy, I assert to be impossible. We have, indeed, the intimation that contractors are willing to enter into engagements to complete the whole of the line without any probability of excess of expenditure, but can you, with your experience of the past, place reliance upon such engagements. (Applause.) Is not the whole falsified from beginning to end as regards such anticipations. (Applause.) We have embarked our capital to complete the line to a certain point, and I believe it is not more than half completed. The whole of your subscribed capital is gone; and will you now commence negociations having for their object the incurring of equal expense, without any probability of adequate advantage, on the sole ground of the Great Western Company undertaking to pay the interest on the borrowed money? Nothing could induce me to concur in a negociation having such for its object. It is clear that the estimate cannot be ascertained with that degree of accuracy which is indispensably necessary to enable the sum to be fixed which the Great Western Company are to pay. But, suppose we go on and enter into terms with the contractors who are to carry out the arrangement, and suppose that the parties fail to fulfil their engagement when the undertaking is only half completed. The consequence would be, that the proprietors would be called together, and they would be told—"Here, gentlemen, we are so far advanced, and no further—shall we now stop, after having spent 200,000*l.* or 300,000*l.*, or shall we go on, by swamping the old proprietors, and trust to Providence for the result?" I say nothing can justify the entering upon such an undertaking; and it certainly afforded me great pleasure, when I read, in the Report presented this day, that you (the Directors) had entered upon the negociation with the view of selling the present completed line, and also our power to complete what remains. I thought the last time I had the opportunity of meeting the shareholders, and I believe it was the general opinion, that that was the sole object sought to be obtained. I understood that the object of going to Parliament was to invest the Company with power to sell the line to any Company that might desire it, and that a negociation was accordingly entered upon with the Great Western Company, having a sale for its object, and that it would not be deviated from to such an extent as to lead to a suggestion for completing the line—the Great Western Company taking care not to involve themselves in one atom of responsibility. That such is their intention clearly appears from their Report; and is it not desirable that at this meeting some decisive course should be adopted? Let the meeting decide whether it is prepared to embark upon the proposal of completing the line, or whether it will adhere to the question of sale only. It is clear that if we adopt the first course, and be unable to go through with it, the interest of the present proprietors must be entirely destroyed—everything will be swept away. If a sale cannot be effected on suitable terms, let us consider whether it will not be better to remain, as has been suggested, in *statu quo*, and secure the income arising from what is completed. There is no possible reason to induce us to enter upon any proposal involving a further expenditure of money. It is only with reference to the pending negociation that I trouble the meeting with these remarks. I know that the interests of the proprietary will be amply cared for by the Directors; but this is now the twelfth half-yearly meeting we have had, and each succeeding Report has vied with its predecessor in expressing congratulations at the prospect of the Company. I know that for several meetings, in proportion as calls were made, the shares went down in value, and now, when in receipt of an income of 17,000*l.* a year, the shares are quoted at from 20*l.* to 30*l.* I do hope that the meeting, for the reasons I have stated, will express their opinion as to the terms upon which the negociation shall be pursued.

Mr. R. VARDEN said, that he could, from considerable experience, corroborate the remarks of Mr. Avery, as to the impossibility of obtaining an accurate estimate of the expense of completing such a line as that in question. To enter upon the undertaking, under such circumstances, would be to trust to a broken reed. It is true, that for the present the negociation with the Great Western Company appears to have failed; but that may have arisen from a hope entertained by that Company, that the proposal as to the completing the line would be gone into by the Cheltenham and Great Western Company. When they discover that this hope is fallacious, they may be induced to come into terms. But although this should not be the case, the partners of this Company enjoy a revenue which yields more than 2½ per cent., and the retaining of it is better than to enter upon the enterprise of completing the line. Mr. Varden concluded by asking what was the estimated number of good shares.

The CHAIRMAN replied, that at the last meeting the number of good shares was from 5,600 to 6,000, and nothing had occurred since to alter the estimate. He said, in referring to the remarks of Mr. Avery and Mr. Varden, that although he agreed with them on many points, still he was of opinion that it would be premature to enter upon a discussion of the object at which these gentlemen had aimed. It should be borne in mind, that the Directors were as much interested as the proprietors could be in bringing the negociation to a satisfactory conclusion. All the considerations which had been urged in support of the views advocated, would necessarily enter into the calculations of the Directors; and, as had already been stated through him, their organ, they would consent to no arrangement calculated to place the property of their constituents in danger. Their sole and only object was, to advance the prosperity of the Company, and to render it as profitable as possible to the shareholders. Should the proprietors fetter them by any resolution confining them to a particular course, they would commit one of the most suicidal acts which can be conceived. He would appeal to any man of business—to Mr. Avery himself, as a man of business—whether he would consent to have his hands tied up, or his efforts confined, when he was endeavouring to carry through any similar negociation. [Mr. AVERY—Not as a general rule; but there may be exceptions.] Whether general or particular he (the Chairman) did not consider that any such limitation would be advantageous. It was possible that by a vote of the present meeting, the Directors might be so hampered as to nullify all their efforts. As matters stood, the proprietors were perfectly secure. The Directors had merely power to negociate, they could not bind the Company without their own consent. As he had already stated, should the negociation terminate favourably, it would be the duty of the Directors to submit the treaty for the decision of the proprietors. He (the Chairman) was there in a similar position to that in which the Chairman of the Great Western Board was at their meeting, were he to enter at length into explanations relative to the pending negociation, it might be made a handle of against themselves. And for the same reason they could not expect that the Chairman of the Great Western Company would have made statements and admissions at their meeting which might have furnished this Company with arguments against them in the treaty that was then going on. He (the Chairman) wished the meeting to look at the position of both Companies. He and his brother Directors had told them that nothing definite had taken place, and that as soon as any distinct arrangement was proposed, the shareholders would be called together for the purpose of approving or rejecting it.

In reply to a question from Moxham, the Chairman stated that no expense was being incurred for works on any part of the line beyond a small quantity of ballasting.

A SHAREHOLDER inquired whether it was likely that any declaration on the part of the proprietors would tend to strengthen the hands of the Directors?

The CHAIRMAN—If such could possibly be the result, I would say so at once; but I do not think that any declaration of opinion would be of advantage. I have had no communication since the meeting of the Great Western Company with any individual connected with that Company on the subject of the treaty; nor had I any intimation of the mode in which they intended to allude to such treaty in their Report; nor any knowledge of the Report itself until I saw it in print.

Digitized by Google

Some shareholders having again suggested the propriety of limiting the Directors to a particular line in their negociations with the Great Western Company,

Mr. ROBERTS—I have been endeavouring to ascertain what the real point at issue is, and if I am right it is this—whether the Directors shall now be called upon to a substantive statement of what is now going on with the Great Western Company, or whether you will allow them to postpone that development till a future time. Now, I think we are to regard the Directors as men in whom confidence can be placed, but it does not follow that that confidence shall be unlimited, and the question which now occurs is, to what does the postponement amount? If the negociation involved expense, and if we were bound to continue it or confirm whatever was resolved upon, I should take a different view from that which I now entertain, and would support the opinion of the previous speakers in favour of a distinct and definite line of action being laid down. From the statement made by the Chairman, I understand that nothing definite will be gone into by the Directors without the sanction of a special general meeting. Looking at the words of the Report they are certainly vague and difficult to be understood, but I am prepared to suppose that there is a reason for it, and am of opinion that the interests of the Company will be best consulted by not insisting upon a substantive statement relative to the negociation now going on, or at least till that negociation is further advanced. Now I find from this paper that the Great Western Company take up the same ground as we do. Mr. Roberts here read an extract, and proceeded to say,—the question is whether we shall allow them to go on, seeing that no expense is involved in the meantime. We have a right to suppose that the Directors state nothing in their Report but what they believe to be true, so far as an opinion can be formed; and we have a right also to suppose that their reason for not giving us more minute information arises from their desire to promote the interests of the Company. For my own part I will oppose going into a resolution tying up their hands from adopting a course which they believe to be right. They ask that their efforts may be untrammelled, and I think it would be unwise in the proprietors to pass any resolution calculated to obstruct them.

Mr. R. VARDEN said, his remarks had been misunderstood. He did not intend to suggest any resolution. He had merely expressed an opinion that it might tend to the advancement of the negociation, if the Great Western Company were made acquainted with the feelings of the shareholders. He did not wish by any means to tie up the hands of the Directors, but he was anxious that it should not go abroad that all the shareholders were in favour of the views indicated in the Report as to the completion of the line.

The CHAIRMAN said that the Directors were at all times anxious to ascertain the opinions of the share holders, and that such views as were expressed met invariably with their best attention. They never contemplated involving the shareholders in any scheme leading to indefinite expenditure.

A question having been asked as to the probable amount of the next dividend,

The CHAIRMAN stated that the Directors expected to divide the same amount as before. He then moved, in the words of the resolution, the adoption of the Report.

Mr. FERRABEE said that he had much pleasure in seconding the resolution. He was convinced that the full benefit of their undertaking would never be realised till the line was completed. He did not say by whose means the completion was to be effected, but till the line was completed the proprietors would not derive the full benefit. For his own part he could state that the interest he held in the Company was considerable to him, but he had confidence in the Directors, as he knew that they were more largely interested in the undertaking than he was, and what would contribute to their interest he was sure would contribute to his.

Mr. AVERY said that in consenting to the resolution he was not to be understood as approving the Report, in so far as related to any negociation being gone into involving the completion of the line by the present Company, and that should he at any subsequent meeting deem it necessary to remark upon it, he must not be considered as fettered by allowing the motion to pass without a formal dissent.

The CHAIRMAN said that neither Mr. Avery nor any other shareholder was fettered in the least by the adoption of the resolution.

The motion was agreed to unanimously.

A vote of thanks to the Chairman and Directors was then moved and carried by acclamation.

The CHAIRMAN having returned thanks for himself and colleagues in the Direction for the cordial manner in which the motion had been carried, the meeting separated.

MANCHESTER AND BIRMINGHAM RAILWAY—THE LATE MEETING.

THE accounts submitted to the late general meeting were not forwarded to us at the time. We have since received a copy, and for the purpose of future reference now publish them:—

Statement of Account, from February 1st to July 31st, 1842.

RECEIPTS.		DISBURSEMENTS.	
Balance brought forward from last Report	£74,793 15 10	Advertising and printing	£276 6 7
Cash receipts on calls	13,466 0 0	Engineering and surveying	2,715 12 9
„ Loans on mortgage	131,125 12 0	Land and compensation, including conveyancing	25,287 10 8
„ Building materials, bricks, rents, registration fees, &c.	356 17 10	Works and permanent way materials	145,493 6 9
Balance	3,283 1 5	Office expenses	379 17 3
		Travelling expenses and agencies	671 12 3
		General law charges	507 10 0

THE POST-OFFICE AND THE [ROTHERHAM] RAILWAY.

To the Editor of the Railway Times.

SIR,—A paragraph having appeared in the *Sheffield Independent* of the 3rd instant, headed as above, which is calculated to throw upon the Sheffield and Rotherham Railway Company the odium of the recent change in the Post-office arrangements at Sheffield, by which the time for posting letters is so materially and unnecessarily abridged, and whereby also the remittances of our merchants and bankers are exposed to much extra risk, I conceive it to be my duty to the Railway Company with which I am officially connected to set the public mind right in this respect, and to point to the quarter to which the remonstrance of our merchants and manufacturers ought to be directed.

This cannot be better done than by giving a short history of the Company's connection with the Post-office department; but before doing so I may be allowed to say, that I differ in opinion from some of the sentiments expressed in the paragraph above alluded to. In the first place I cannot conform to the doctrine that because the Company's trains must run to and from Masbro' night and morning with passengers they should carry the mail bags for nothing, and dedicate a compartment in a carriage for that purpose, on the ground of its not involving any additional expense to the Company. It might with equal propriety be contended that because a train *must* go at a stated hour that therefore the *late* passengers might be allowed to occupy gratis the few vacant seats because the train must go at all events, whether empty or full, and no more cost be incurred. Nor, in the next place, do I conceive that the merchants, bankers, and manufacturers of Sheffield will much concern themselves as to whether the Post-office authorities can effect a trifling pecuniary saving by getting their letters conveyed between Sheffield and Masbro' by a mail cart instead of by the railway; but the grave considerations for them and the rest of the public are, which method of conveyance affords the most time for completing and posting their daily correspondence? Are the risks of stoppage and robbery of the bags greater or less by railway or by mail cart on the highway, and at times of the evening and morning which for more than half the year will be in the dark? To both these questions the answer is undeniably in favour of the railway; but besides the extra risk, is the inconvenience arising from the closing of the Post-office nearly half an hour before its wonted time in order to admit of the bags being conveyed in the aforesaid mail cart to be atoned for to our merchants and manufacturers by the Postmaster-General's saving of a few shillings per day over the cost by railway? But now to return to the history of the connection between the Post-office authorities and the Railway Company, and its abruption.

You are of course aware that an Act was passed granting powers to the Postmaster-General to convey the mails by railway at prices to be fixed by arbitration, and the trains to start at such times as the Post-office should please to require. On the 23rd July, 1840, the Postmaster-General (Lord Lichfield) gave formal written notice to the Sheffield and Rotherham Railway Company, "that he required the mails and post letter bags to be conveyed by the Company on their railway at the times specified in the time-table annexed, either by the ordinary trains or by special trains, as need might be, and at their own cost to provide sufficient carriages and engines to his satisfaction, and for the performance of such service to give security by bond."

The Company accordingly commenced the services, entered into the required bond, with a penalty of 1,000*l.*, the cost of which they were required to pay to the Post-office authorities.

In February, 1841, the Postmaster-General served the Company with a second notice, requiring certain alterations to be made in the starting of the mail trains. These were complied with.

In 1841, several letters passed betwixt the parties in reference to the amount of compensation which should be allowed for the services rendered.

The Company asked 25*s.* per day for the two trains performing four trips per day.

The Post-office authorities required the amount to be fixed by arbitrators in the way specified by the Act of Parliament. They appointed as their referee Lieut. Harness, of the Royal Engineers; the Railway Company appointed, on their part, Mr. William Bradley. By the Act, the two arbitrators had power to appoint an umpire in case they should not agree. The arbitrators met, and on the 19th January, 1842, after two days investigation, during which the Company's books and data were all laid open to Lieut. Harness, the two arbitrators came to a decision (without calling in the aid of an umpire), whereby they "awarded 23*s.* per day as the amount which the Railway Company were justly entitled to," being only 2*s.* per day less than the Railway Company had asked in the first instance; a proof that the Company sought no very exorbitant remuneration for their services.

Ever since the 23rd of August, 1840, the Company conveyed the mails as required by the Post-office authorities, no official intimation was ever given by them that the services were imperfectly or inefficiently executed, or that the awarded remuneration was considered too high, or that they could procure the performance of the services at a cheaper rate by other means; but on the 26th May, 1842, I received a notice from the new Postmaster-General (Lord Lowther), stating that the services required of the Company by the previous Post-office notices, "would from and after the 29th August, 1842, cease to be required, and he declared that after such day the said services should cease and determine." Thus abruptly ended the connection, without any fault or reason *assigned*, and without the Company being required to go to a second arbitration of price under that Act of Parliament, or invited to send in any lower tender.

It seems, however, that the Postmaster-General chooses to alter the mode of conveying the bags, and the Company have no control whatever, although they are disposed by every means in their power to render accommodation to the public at any price which Lieut. Harness, or any other reasonable Government Engineer, shall pronounce to be equitable. It is, therefore, for the Post-office to satisfy the public on the subject, and to assign reasons for a change which must subject the public to much danger and needless inconvenience.

I am, Sir, your obedient servant,
THOMAS PEARSON,
Secretary to the Sheffield and Rotherham Railway Company.

Sheffield Station, Sept. 16, 1842.

RAILWAY MANAGEMENT.

LETTER II.

To the Editor of the Railway Times.

SIR,—It was promised to resume the subject of these letters with the number, qualifications, emoluments, and classification of railway officers and servants.

The multiplicity of operations to be attended to on railways, their intricacy, and the skill and experience required for the performance of many of them, involves a great division of labour, and the employment of a large number of persons. It is important that the number should always be fully equal to the duties to be done. Many of these duties are extremely irksome, requiring continuous attention, and untiring watchfulness. If, therefore, by overtaxing the moral or physical energies of the persons to whom they are confided, the zeal or vigilance of these persons should be relaxed, very great evils may ensue, and the acknowledged safety of railway travelling be seriously compromised. What the actual number should be, must be regulated by the wants of the respective Companies. No general rule is applicable. The division of labour necessary on long and prosperous lines would be absurd if applied to short lines, or to lines with a limited traffic. Isolated and tributary lines may be managed with fewer hands comparatively than trunk railways. In short, as has been said, the exigencies of each Company must decide the question of number. There are risks, however, which will be guarded against by a vigilant proprietary. The division of the establishment of successful Companies into departments, and the subdivision of those departments, may exceed what is necessary to efficient management, though well fitted to give extension to patronage. On the other hand, the Companies with whom economy is a vital question will be disposed to paltry savings, and to attempt to conduct their operations with fewer persons than is consistent with their own security, or the public safety.

On a review of the systems of management with which the writer is acquainted, it seems to him desirable that there should be on every railway establishment a supreme executive officer, having control over all the departments, and assisting at the deliberations of the Court of Directors as its Secretary. In most systems a distinction is made between in-door and out-door duties, and an independent head appointed to each division. This arrangement, through involving the employment of two highly-paid officers where one might serve, is wholly unnecessary, and has in another way a very bad effect. The impossibility of defining the line which separates the two classes of duties, leads to collision between officers of equal rank, mutually jealous of their authority; and causes disputes and heart-burnings, where all should be unanimity and co-operation.

Subordinate to this chief officer there should be at the head of each department a man of energy and character, possessing the necessary skill, whether professional, mechanical, or clerical, and having under him a full force of working men with as few as possible of the white-gloved gentlemen who strut about in holiday clothes, and are much more effective as instruments of confusion and delay than of order and dispatch.

Railway establishments are, from their nature, divided into the following departments:—the engineering, the locomotive, the construction of carriages and waggons, the police, the stores, the accountants, the coaching traffic, and the merchandise and live-stock traffic departments. It is only on lines of the first magnitude, and possessing the largest traffic, that an independent head for each of these departments will be required. On lines limited in extent, two or more of the departments may be safely confided to the management of one person. But this and other modifications required to adopt the general system of management now recommended, to the wants of each railway, must be regulated by circumstances so diversified that no more can be now done than to allude to them. On investigation, it would perhaps be found that the number of working men employed by Railway Companies is not greater than is needed, but that there is commonly an excess of high-paid functionaries exclusively engaged in the duties of supervision. This is the more remarkable, because the facilities afforded by railways for exercising a vigilant supervision with a few persons are very great.

In the foregoing enumeration of departments, the audit department, which exists in a state of greater or less efficiency in most railway establishments, is not included, because from its peculiar nature it requires to be separately treated.

The next subject for consideration is the qualifications of officers and servants. We have seen the claims of civil engineers to be placed at the head of railway establishments warmly advocated. From this opinion many will, with good cause, dissent. Professional men are seldom good men of business. Accustomed to look at things in the gross, they do not appreciate the importance of details. They are apt to be dogmatical, to wrap themselves up in the mysteries and etiquette of their profession, and to look with something like contempt on the opinions

Digitized by Google

of plain men, who cannot interlard their discourse with technical terms, or digest the tough morsel of a problem in algebra. I do not, however, dispute the value of professional knowledge when found in union with other and more essential endowments. A railway manager should be a man of prompt and energetic character, of a capacious mind, able to take enlarged views without overlooking minutiæ, not above receiving useful suggestions, however humble the quarter from which they come, and if not practically proficient in all the operations he has to conduct, at least sufficiently so to guide and apply the knowledge of others to the best advantage, and withal fitted to acquire an ascendancy over those whom he is appointed to control. How many such men are now at the head of railways in this kingdom I leave those who have an opportunity of knowing to say.

The qualifications of subordinate officers must of course have reference to the departments to which they are attached. The head of locomotive departments should join to the practical skill of a tradesman, a knowledge of the scientific principles on which the steam-engine is constructed, that he may be competent to judge, not only of the sufficiency of the work executed by those under him, but to decide on the merits of new inventions, on proposed alterations, or to suggest improvements himself.

A class of servants connected with this department excited at one time much attention. The public were horrorstruck, and expressed much indignation at discovering that engine-drivers could neither read nor write. It is proper that all men should be taught the arts of reading and writing, but to regard the possession of them as indispensable to qualify a man for driving an engine were absurd. The duties of an engine-driver are purely mechanical, and are to be learned solely by practice. His knowledge of the machine whose mighty power he has to guide should be complete. He should be able to see at a glance that all its parts are in a state of perfect adjustment, or if derangement takes place, to detect at once its position or extent. But above all, he should be a man of calm courage; for it may so happen that the well-being of hundreds may depend on his retaining his presence of mind, and that too in the face of danger more appalling than can well be conceived.

The duties of a Resident Engineer are seldom such as to demand professional acquirements of the highest order. He is usually engaged in maintaining the permanent way in good repair, and on watching the state of the tunnels, bridges, and other works. It is desirable that he should have some skill as an architect, as he may be called on to plan buildings and superintend their erection. To dilate on the qualifications of the large class of servants who require neither professional nor mechanical skill would be needless. Men of experience are at present rare; the object should therefore be to nominate men that *can* learn, and to place in all situations of importance, but more especially at road stations, persons of education, good address, and respectable character, who will treat the public with attention and civility.

Next in order stand emoluments. Railway Companies expend very large sums on salaries and wages, but with few exceptions their servants are not more than adequately paid. It may be questioned if a maximum salary of 800*l.* per annum would not command the services of persons every way qualified to fill the highest offices on railways, and no railway establishment should have more than one functionary of this order. The descending scale of salaries will of course be graduated with reference to the responsibilities and duties of the offices to be filled. As a measure of economy, the employment of lads to perform the minor duties is a step which may be taken with advantage. The practice pursued by some Companies of making the emolument depend in part on the good conduct of the individual is worthy of imitation. This is done by distributing periodically a certain sum in the form of gratuities to those most distinguished for merit and skill.

Whatever scale of salaries Railway Companies fix upon they will find men willing to serve them on their own terms. It is more judicious, however, to secure the services of efficient men by holding out the inducement of adequate remuneration, than by pitching the salaries too low, to risk the evils likely to result from the employment of incompetent persons. The only recommendation of the latter course is its economy, but it may be doubted if this recommendation is not more apparent than real. Where the servants are generally incompetent the number must be increased, and after all the duties will not be so well performed.

A good classification of servants is an object of very difficult attainment in any establishment. It is easy to arrange them in grades or classes, according to the importance of their offices or the amount of their salaries, but the difficulty is to insure the promotion of the deserving without opening a door to the advancement of the incompetent, to prevent merit from being borne down by the pressure of interest. The proper course would be to subject the candidate to an examination, and the parties appointed to test the comparative fitness should be a Committee of Directors; for the officer is placed in an invidious position who has to decide whether he shall admit or promote an unqualified person, or render himself obnoxious to a Director by throwing discredit on his nomination. A perfectly impartial system of promotion is not to be expected, but even an approach to it would have the very best effects.

The next subject shall be the precaution necessary to the safety of the public.

I am, Sir, yours, &c.,

VIATOR.

THE LONDON BRIDGE RAILWAYS.

To the Editor of the Railway Times.

SIR,—It is obvious to the most casual observer that, unless there be a considerable increase in revenue, or reduction of expenditure, railways will disappoint the hopes of their original projectors. An increase of revenue, of perhaps 10 per cent. on the present receipts, may very reasonably be expected so soon as trade revives, and diminished expense of living leaves a larger surplus for locomotion. This must be left to time; but much good, I am of opinion, may be effected in the meantime by a more judicious and more economical administration of these concerns.

It is the object of an old subscriber to give a few hints on this subject, in regard to several of the lines, and I begin with the South-Eastern group —the Greenwich, Croydon, Brighton, and Dover. It is now a well-established fact, that the longer and more independent a line of railway is, it is susceptible of being worked both more economically and efficiently. Divide, for instance, the Birmingham into 30 lines, each of the length of the Greenwich, with their accompanying "subordinates of idleness" and inefficiency, and its present handsome dividend would be destroyed by bad arrangement and increased expenses. Did it never occur to the wise men of the east, who preside over the destinies of so many suffering shareholders, how much the management of this group might be simplified and improved, and the expenditure reduced, by giving to their several lines the efficiency as well as the resemblance of a hand and fingers, instead of their present disjointed *tentacula*. It required, one would suppose, no "Bell's Bridgewater Treatise" to say, how conducive to the strength of the whole would be a more intimate union of their several links. By uniting the four lines into one, we could thus dispense with three regiments of functionaries and their salaries, and get their services much better performed by selecting a few from the best of the four. The trains could be better timed, and at less risk of accident, and the fares so judiciously equalised as to raise the largest amount of profit to the Company. The influence of the united Company would be so much increased as to enable them to compete with any existing opposition. All these advantages would so strengthen the credit of the Company as to enable them to borrow money on more moderate terms, and this on upwards of 2,000,000*l.* would be no trifle to the shareholders. From these reforms, in short, each holder of 100*l.* capital would derive from the united Company a much larger dividend than he can ever expect to receive from any of them separately. The seasons of the various termini being somewhat different, the weekly receipts would probably vary less on this than on any other line of railway, and would thus prevent those sudden and serious fluctuations in the price of its stock that is so beneficial to the jobber, and disgusting to the investor. This latter object would also be promoted by balancing their books on 31st August and 28th February, so as to equalise the revenue of the year.

Now, the most important and practical question remains—how are all these great advantages to be secured? Before answering this, I may as well mention, that I have no longer any interest in these Companies, and can therefore speak most impartially on the subject. I would venture, therefore, to suggest, that it would be for the special advantage of each and all that every shareholder of the different Companies should get a pound in the new Company for every pound he may have paid to the Company with which he is at present connected, without any reference to the present price of its shares. To those who estimate the value of an investment by its selling price, the holder of Croydon Railway shares may object to allow the holder of Greenwich old shares to participate in this arrangement, the shares of the latter being about 60 per cent. discount, and those of the former only 30. But let the Croydon Company take heed that the Greenwich keeps the key of a most valuable terminus; and those who heard and saw the manner in which the last application for a new terminus to the Croydon was absolutely scouted in Parliament, must be thoroughly convinced that no new terminus will ever be granted to the Croydon. Judging also from the last year's experience, it would appear the Greenwich Company has the power, so long as the *present* system continues, that if *it* shall make nothing of the traffic, neither shall the Croydon. Now, as half an egg is at all times to be preferred to an empty shell, this arrangement, in my opinion, would benefit the Croydon, and, *a fortiori*, the Brighton and South-Eastern, whose shares are at a greater discount, and prospects equally gloomy, unless they exemplify the maxim that union is strength by adopting the principle of this arrangement. The details can be arranged after the principle is agreed upon.

I am, Sir, yours, &c.

SOLOMON.

Edinburgh, Sept. 14, 1842.

THE LONDON BRIDGE RAILWAYS.

To the Editor of the Railway Times.

SIR,—Having diligently perused the Reports of the Brighton, Croydon, and Greenwich Railway Companies, and as there appears to me to be some discrepancies in the said Reports, I beg to ask from you, or some of your numerous readers, an explanation on the following points.

The Greenwich Company in their Report have put down the Croydon toll received by them up to June 30, 1842, as 1,691*l.* 11s. 6d., whereas the Croydon Company in their last Report make the toll paid to the Greenwich Company up to July 31, as high as 2,362*l.* 18s. 6½d., the July toll being, according to the Croydon Chairman's speech, only 355*l.* If therefore the July toll, 355*l.*, be subtracted from the gross amount, 2,362*l.* 18s. 6½d., there remains 2,007*l.* 18s. 6½d. as toll paid to the Greenwich Company to the end of June, which amount differs from the sum 1,691*l.* 11s. 6d. put down in the Greenwich Report as Croydon toll by no less than 316*l.* 7s. 0½d.

Fully expecting that the Croydon Company would have realised 7,000*l.* as Brighton toll, and being deceived in those expectations which I had grounded on the previous Reports of the Brighton and Greenwich Companies, I beg to subjoin those calculations for the benefit of the Croydon share-

Digitized by Google

holders, and I may add, that I do not in the least impute want of accuracy to any of the Companies, but as my calculations have proved to be erroneous, I wish these inaccuracies to be pointed out.

Toll, according to Brighton Report, paid to Greenwich and Croydon Companies to 6th June		£6,228	9 2
Deduct toll, according to Greenwich Report, received from Brighton Company to 30th June.....	£1,556 18 11		
Deduct 325*l.* as toll for 24 last days in June	325 0 0		
		1,221	18 11
		£4,996	10 3
Add for Croydon part of Bighton toll for 24 last days of June		880	0 0
Add Croydon toll from Brighton Company for July		1,600	0 0
Total		£7,476	10 3

After deducting from the above 600*l.* for Croydon proportion of Brighton toll for January, there remains by my calculation 6,876*l.* to the Croydon Company as Brighton toll, being more by 408*l.* than was actually received.

I am, Sir, yours, &c.,

A SUBSCRIBER.

September 5, 1842.

RAILWAY "MONOPOLY" AND THE PUBLIC.

To the "Original Examiner."

SIR,—No epithet more highly descriptive than the above could have been selected. Most truly original is the free-and-easy style in which you dispose of questions which, to ordinary comprehensions, have some show of difficulty. You would persuade us that you are untying the Gordian knot, while you are in fact cutting it with an air of easy self-complacency, which forcibly reminds one of the gravity of an ape cracking a nut and transferring its contents to his mouth.

There are now somewhere between 60 and 70 millions of money invested in railways. This vast amount of private property you really seem to think of less importance than the four-and-six-pence you draw from your pocket whenever you have a mind to take a mouthful of fresh air, and be whirled along in an arm-chair, with the swiftness of an arrow, and the ease of a balloon. Where is your gratitude, Sir? I am not acquainted with your private affairs, but, for anything I know, you might never have been able to escape, even for an hour, from the close and smoky atmosphere of a great city, but for the economical conveyances provided by the spirit and enterprise of the men whose property you would cut and carve without either law or equity. Assuming that you are a man of property, and that you wish to turn the acre of ground you hold in the vicinity of a country village to the best account; you dig a well, surmounting the pump with your effigy by way of ornament, and charge your neighbours what you consider a reasonable sum for the use of the well. In a little time the villagers come to you and say, "You charge too much for the use of your well; we think you expended more than was necessary, and are nowise disposed to pay the expense of placing your stupid face on the top of the pump." "Well, gentlemen," you reply, "if you think so, dig a well for yourselves." "No," say they, "we have not the means to do that, but we shall pay you what we think your well should have cost, and take it into our own hands; and if you offer any resistance, we will break your head with the handle of your own pump." How would you like this very original reading of the law of property? Yet this is precisely the way in which you would treat railway proprietors!

Have you ever seen a pompous man, with port erect and leaden eye, giving utterance to stilted nonsense with an air of the most profound wisdom. If you have, the display must have struck you as supremely ridiculous. Believe me it is possible to cut quite as ridiculous a figure on paper, if one will undertake to decide questions dogmatically which he either does not or cannot comprehend. Get you home to your house, Sir; sit you down in your arm-chair, place your elbow on the table, bringing your fore-finger in contact with the tip of your nose, and remain in that position until you prove your premises that Government would have constructed the railways for less than they have cost, that it would manage them more economically and better than they are now conducted, and that the rights of railway property are not as complete and unalienable as those of any other property whatever.

I am, Sir, yours, &c.,

AN EXAMINER, BUT NOT THE "ORIGINAL."

THE LATE RAILWAY MEETINGS AND DIVIDENDS.

To the Editor of the Railway Times.

SIR,—The railway meetings for the half-year may now be said to be concluded, certainly not to the satisfaction of the proprietors, for out of a selection of a dozen lines, I find that four have reduced their dividend, two have paid none at all, two have maintained the same rate, while only two have increased the dividend, and two have paid dividends for the first time. Taking these together, it cannot be called a satisfactory result; but classifying them, it is even less so, because the decrease in dividend is through the increase of expenditure, for in most cases the traffic has materially increased.

Let us glance at the *first* four; they are the Hull and Selby, the Eastern Counties', the Manchester and Leeds, and the North Midland.

Of the first-named railway, great things were once expected, the original prospectus having held out hopes of 9½ per cent. dividend; and although this was never expected since the opening, yet 5 per cent. was looked for, and, judging from the traffic, ought to have been paid. For the six months ending February, 1841, the receipts amounted to 14,154*l.*; they divided 10s. per share, although in the Report it was stated, "that a great reduction was to take place in the maintenance of way." Yet in 1842, when the six months' receipts were 22,000*l.*, they only divide the same, and want 67,000*l.* more to build stations, &c. &c. What extra traffic will be required now to pay the 10s.?

Of the *second*, the Eastern Counties', there the traffic certainly led shareholders to expect something better than 4s. per share. It is true that when opened to Colchester, an immense increase of traffic will be obtained, but they want 20,000*l.* more, the interest of which will *take* away "all the profit of the mine," and still have it in their power to call up 2*l.* per share on the original shares.

Of the *third* line, the Manchester and Leeds, the shares were at 10 premium, they are now at 1 and 3, ex. div., (38s. 6d.); and although people may rail against "market value," yet, is it not better to have a good *saleable* security at a fair profit, than a bad one? You need not job (that seems the obnoxious word); but are you not more satisfied, more comfortable in mind? Oh, yes. It is all very patriotic to rail at "stock doings" and "jobbing accounts," but any man of prudence is pleased to see his investments at that price which will give him a profit. The Manchester and Leeds paid 2*l.* 2s. per share for the previous six months, now 38s. 6d.; the decline is not so very great, but railways should advance, not recede; promises should be fulfilled, hopes realised, and not one sixpence retreat in dividends should take place.

The North Midland have dropped 1 per cent. from their dividend, with quarrels between Directors and shareholders, yet the traffic is decent, and were not the expenses on the original outlay so enormous, all might be well; as it is, "lower and lower must it sink," until a *proper* Committee of Inquiry is organised and in active operation; and this I should recommend to all the above four mentioned railways. Let the shareholders see to this, and success may follow.

Of the two who have paid no dividend, the Blackwall can hardly ever answer. Short lines are unprofitable; *that* has been proved. And when Solicitors' bills are so enormous, and expenses so magnified, there are sad prospects as to a future dividend. Poor, very poor, expectations can be held out to shareholders unless they change the system entirely, re-arrange the various departments, and weed the establishment of its drawback, which, by the way, should include a few uncivil porters, who cannot do any good to their employers.

The Croydon Railway, the other *un-paying* line, has good expectations, although Croydon is not a place of much importance, and if the toll question could be amicably settled between the Croydon and Greenwich Companies, 5 per cent. (which I assume to be a fair rate of interest) might be obtained; but the Grange-road branch will prove too expensive to benefit the main line, unless well supported by the other "joint Companies," viz., the Brighton and South-Eastern. Who is right or wrong in this question is not to the purpose. The Croydon cannot pay what the Greenwich want; therefore the Croydon build a branch, and the Greenwich lose all. These facts speak for themselves, and answer my question, "which should yield?" Yet during this difficulty the Croydon shareholders get no dividend, and the Greenwich shareholders a reduced one.

Of the two who have maintained their previous dividend, the South-Western and the York and North Midland, the latter is by far the best, not only in dividend, but in prospect. They maintained 10 per cent., taking 5,000*l.* from the reserve fund, which is very well, when it must be considered that the riots in the manufacturing districts materially affected the Yorkshire lines, and where trade has also been very dull throughout this year; whereas the South-Western traffic is different, and all parties expected a rather higher rate, particularly after the fine summer; besides, it is doubtful whether the 6 per cent. can be kept up, and if it can, without any reserve or *balance* of the smallest kind.

Of the two which have increased their dividends, the London and Birmingham and Northern and Eastern, the former is the best-managed line in England, and to that management may be attributed a large portion of the traffic. All the original hopes have been realised; for if the expenditure was considerably more than was expected, the revenue has increased in the like proportion; and although the present dividend is in the highest degree satisfactory, it may still probably improve.

The Northern and Eastern have increased their dividend 5s. per share, and with certain hopes of a better one next time, provided a lease is not granted to Mr. Parker, a measure which, were I a proprietor, I should strenuously oppose. The shareholders would not get more than 5 per cent., whereas I think there is every prospect of a much better return, besides the probable destruction of their stock, which it would require a large amount to replace. The prospects of this line are good, and a fair return given at the present price of the shares.

Of the two lines who have paid their first dividend, one, the Edinburgh and Glasgow, deserves especial notice. Open only four months, one month of which they carried no goods, they declared 5 per cent., the expenses being but 33 per cent. with every prospect of a reduction. Since then the average increase of traffic is 500*l.* weekly, a large sum, and evidently a further increase may be expected, for the opposition of the Agnewites is fast fading away, and despite of all its squabblings and jealousies, this railway will be the "London and Birmingham of the North." This I prophesy, and this all shareholders may confidently look to. For myself, 49 was the price at which I bought, and 55 should not tempt me to sell.

The London and Brighton is so well known to the railway public that I need scarcely mention it. The Directory are still the same, and not much can be expected from them, although the lash of the press has reduced them to a little reason. Were good management and economical principle adopted, 5 or 6 per cent. might be looked forward to; as it is, nought can be said until February next, when the time of estimating expenditure and receipts will have arrived. Lately the traffic has

Digitized by Google

fallen off some 200*l.* or 300*l.* per week, but still the time may come when a dividend, and that a good one, will be paid.

The above summary does not seem very favourable to railway shareholders, but it is but lately that the press has been roused to action, that holders have begun to fancy Directors are sometimes mercenary, and in that little time much has been done, more will be done. Therefore I should advise shareholders never to despair, but to remember that Birmingham shares were once at 5 discount, and that they are now at 92 premium.

I am, Sir, your obedient servant,

DIOGENES.

Baltic Coffee-house, Sept. 20, 1842.

THE DIMINUTION IN RAILWAY RECEIPTS.

To the Editor of the Railway Times.

SIR,—The last half-yearly meetings of the several railways that have been more than a year in operation having so universally shown a smaller receipt from passengers than the corresponding period of last year, and the diminution having continued up to the present time in the weekly returns, the fears of many railway shareholders have been excited, from an impression that the reduction was likely to be still greater, and neither yourself, nor any of your numerous correspondents, appear to have assigned any cause for this state of things, although a most palpable one there certainly is, in the fact of a general election, and a *double* session of Parliament. If you will be good enough to refer your readers to the relative dates of 1841 and 1842, the whole difference in the weekly receipts may be easily accounted for. The general election giving a general impetus to travelling, and the calling together and prorogation of Parliament, with its members, agents, lawyers, witnesses, &c., contingent thereon, will account for any difference that may exist in the traffic. The writer of this knows one railway that carried 37,000 passengers in part of June, July, and August, during the elections, that were paid for by the two contending parties, and chiefly at the nomination.

I am, Sir, yours, &c.

A SHAREHOLDER IN MANY RAILWAYS.

Manchester, September 20, 1842.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Amongst the many instances of abuse and mismanagement in the Midland Counties' Railway there are few so flagrant as that of permitting the Deputy-Chairman to hold his situation at the Board notwithstanding his having, for some time, been engaged in supplying coke to the Company. I am aware that the practice is excused on the ground that the Company's Solicitor gives it as his opinion that a Director is by no means disqualified, by engaging in a contract under the Company, but may still retain his seat at the Board, provided he is immediately re-elected. I will, however, endeavour to show that this monstrous doctrine cannot be supported by any power conferred by the Act of Incorporation. The clause which is intended to apply to these cases is the 142d, and is as follows: "Provided nevertheless, and be it further enacted, that no officer of the said Company receiving a salary, nor any person concerned or interested in any contract with the said Company, shall be capable of being chosen a Director of the said Company, nor shall any Director be capable of accepting any other office or place of trust or profit under the said Company, or of being concerned or interested in any contract with the said Company during the time he shall be a Director of the said Company; and if any Director of the said Company shall at any time whilst such Director, accept or continue to hold any other office, or place of trust or profit under the said Company, or shall at any time cease to be a proprietor of ten shares at the least in the said undertaking, or if any Director, or any Secretary, clerk, Treasurer, or other officer or servant of the said Company, shall, either directly or indirectly, be concerned in any contract with the said Company, or in any contract for any lands required by, or article to be used or consumed by, the said Company, or shall participate in any manner in any work to be done for, or goods to be sold to, the said Company, and every such Director, clerk, Secretary, Treasurer, or other officer or servant, shall thereupon be immediately, and is hereby discharged from the Direction, office, service, or employ of, in, or under the said Company, and rendered incapable of being thereafter employed by them, unless re-appointed, and such re-appointment be confirmed at some general or special general meeting of the said Company." I admit that the clause is as ambiguous as a lawyer need desire, but before proceeding to argue upon it, I would just ask if it were not intended to prevent interested parties from having any control in the management of the undertaking, what was it intended for? Divested of this meaning, it has clearly none at all, and might just as well have been omitted in the Act as inserted. I contend, however, that the meaning of the clause is obviously this—that any Director, accepting any office, or being concerned directly or indirectly, in any contract under the Company, or ceasing to hold less than 10 shares in the undertaking, is thereby disqualified, and that he remains so disqualified during the continuance of such engagement or contract, or until he is repossessed of the proper number of shares, *and ever afterwards*," unless re-appointed." Now if this were not the meaning, the Act would be absurd, inconsistent, and contradictory, inasmuch as the 137th clause provides that no proprietor holding less than 10 shares shall be eligible for a Director, which is again confirmed by the 142nd clause. But by the construction which the Company's Solicitor puts on this part of the Act, a Director might reduce the number of his shares until he held less than 10, *or even none at all*, and still continue to hold his seat at the Board, provided he were immediately re-elected. Again the clause in question is intended to apply to, and discharge any Treasurer, Secretary, clerk, or other officer or servant of the Company, from his office or employment, on his becoming interested in any contract, or concerned in the supply of any article used by the Company—a very salutary provision certainly, but of no kind of use, because the Company's Solicitor says that by being immediately re-appointed, he may keep both his place and his contract. Hence, by this very convenient doctrine, it appears that Directors may, or may not have any shares, that they may enter into any contract with the Company, that the Engineer may contract for the execution of the works of the railway, that the Secretary may supply stationery, or the store-keeper stores of all kinds—in short, that every possible abuse may be perpetrated under the authority of a section of the Act of Parliament evidently intended to prevent that which the Company's Solicitor contends that it sanctions.

I am, Sir, your most obedient servant,

DETECTOR.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As you gave a place in your columns last week to several lengthy statements, all tending to depreciate a great mass of railway property, I trust you will be equally ready to circulate a plain answer to those statements, by which they will be shown to be false and unfounded,

I shall direct my answer more particularly to the letter of "Ignotus," as he professes to bring forward specific facts—the other letters being little else than loose and vague declamation.

"Ignotus" arranges his columns of attack under three several banners—the cost of the line, the expense of working it, and the receipts; and he boasts, with inconceivable assurance, that his prognostications, under each of these heads, have been fulfilled. I now proceed to show, that in every case they have been falsified.

First. The cost of the line. "Ignotus" here tells us truly, that 6,435,671*l.* has been expended; but he omits to state, that 300,000*l.* of this forms no part of the permanent capital of the Company, but will be paid off by the sale of extra land, premises, and plant. In proof of this I refer to the express terms of the resolution under which the money was borrowed, which was passed at the meeting in February, 1841. We have, then, on the one side, the unsupported assertion of an "unknown" individual, that the railway will cost more than 7,000,000*l.*; on the other side, we have the deliberate assertion of Mr. Brunel, that it will not cost more than 6,300,000*l.*—an assertion which the experience of a year employed in winding up those accounts which remained unsettled has enabled him, in two several Reports, to repeat with increased confidence. I know of no instance where an Engineer has had the hardihood thus to repeat and abide by an insufficient estimate.

We now come to the expense of working the line. "Ignotus" assumes here, that the seven new engines, bought in the last six months, were to replace worn-out old ones. If he had attended the last spring meeting he would have learnt that this was not the case, but that they were wanted to complete the stock. His calculation, being founded on this error, at once fails; and perhaps, without any imputation of excessive credulity, we may trust those through whose hands the most minute accounts have passed, who tell us that the expense of working the line has been, during the last half-year, 751*l.* per mile. I may observe, that the first six months of the year, as including the worst weather, are always the most expensive.

And now for the receipts. These being a plain matter of fact, "Ignotus" here gives up all hope of mystification by false argument, and boldly betakes himself to downright fiction. He asserts, that the receipts on the line to Bristol have averaged less than 10,500*l.* per week for the first year of the opening of the line. A reference to the Reports (whose authority, in this instance at least, cannot be impugned) will show that the weekly average of receipts on the main line has been 10,940*l.* 3s. 4d.

"Ignotus" goes on to speak of decreasing receipts, insinuating that this is peculiar to the Great Western. It is true, that for the last four weeks there has been a slight decrease as compared with last year, notwithstanding the opening to Taunton. But go through the long list of weekly railway traffic and you will not find, I believe, a single instance in which the lamentable depression of trade has not produced a similar result. To compare in this case, as is usual, the Great Western with its great rival the London and Birmingham: during the last fortnight the Great Western receipts are less by 1,338*l.* 2s. than for the corresponding period of last year; but during the last fortnight the receipts of the London and Birmingham have declined no less than 4,948*l.* 14s. It would be useless to extend the comparison to other railways, where the result would be nearly the same.

I remain, Sir, your obedient servant,

A SUBSCRIBER.

Newbury, September 21, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having read with some care the various letters in the *Railway Times* of last week, and those previously, I am induced, as a shareholder, to take up my last Report and wade through it with every possible accuracy, to correct or refute some of the glaring mistakes, and apparent injustice, that such letters may make on those perhaps little informed on the subject; and underneath I take the figures as given in the Report of June 30, 1842, and regret my being obliged to come to a conclusion not altogether satisfactory, or such as could for a moment justify the Directors to declare a dividend at the rate of 6 per cent. per annum, unless it were taken out of the capital of the Company. The Report shows our having spent 6,435,671*l.*—

Digitized by Google

Which at 5 per cent. for the half-year would be	£160,891	15	0
Exeter rent	17,737	0	0
Cirencester	8,500	0	0
	£187,128	15	0
	173,093	0	0
Deficiency, to pay 5 per cent. on the half-year, of	£14,135	15	0

Gross amount of traffic for the half-year ending 30th June, 1842	£310,871	0	0
Working expenses	127,778	0	0
	183,093	0	0
Surplus fund	10,000	0	0
	£178,093	0	0

Now, Sir, figures are stubborn facts, and I pledge myself to the accuracy of these as per Report, but in setting these forward I am bound also to show how so large a loss is necessarily incurred by the Great Western Company, for in another part of the Report it states the cost to be 75*l.* per mile for the half-year on the whole line for every expense; and then if you throw the cost of rent and maintenance of way on those wretched concerns, the Bristol and Exeter, and Cheltenham and Great Western Companies, how stands the account? Why thus:—50 miles of Cheltenham and Great Western and Bristol and Exeter at 75*l.* per mile, 37,550*l.*; Exeter rent, 17,737*l.*; Cirencester, 8,500*l.*; making total cost to the Great Western of 63,787*l.*, and the joint receipts of both Companies to have been only 36,993*l.* for the same period, thus leaving a dead loss to the Great Western Company of 26,794*l.*—for what? For having been guilty of the intense folly of being connected with either of these lines. Now, however good or bad either the Bristol and Exeter or Cheltenham and Great Western might be, I would strongly urge on the proprietors of the Great Western Company to immediately rid themselves (at any cost whatever) of both concerns, for as sure as the continuation of increased rent on further openings of the Exeter, or any other connection whatever with the Cheltenham, so will the loss be proportionably greater to the Great Western Company, and ultimately what would have been productive and profitable to the Great Western proprietors alone, will, by having these two unwieldy speculations attached to it, reduce the Great Western dividend to 3 per cent., and create to a large and influential proprietary a heavy loss and disappointment. Hoping that no addition will be made to the Cheltenham and Great Western Company to entail further loss to the Great Western Company, I am, Sir, for the present,

SEMPER VIGILANS.

Bristol, September 20, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In the well-merited strictures on the proceedings of the Directors and officials of the Great Western Railway Company, so ably penned by several of your correspondents in your paper of Saturday last, they seem to have overlooked a matter of some importance in the balance-sheet, presented to the proprietary at the last half-yearly meeting. How comes it that the charges for interest of borrowed money, in that account, is less than in the preceding half-year, by upwards of 1,400*l.*, when in point of fact, it must necessarily have been increased by upwards of 8,000*l.*? Had that item been truly stated, it would have been upwards of 82,000*l.* instead of 72,000*l.* If you will refer back to the accounts made up to the 30th June, 1841, you will find that the amount expended over and above the sum raised by calls, on whole, half, and fifth shares, viz., 3,025,000*l.*, on which the dividends are paid, was 2,852,120*l.* 7*s.* 8*d.*, and by reference to the following accounts made up to the 31st December, 1841, you will find the charge for interest on borrowed money to be 73,881*l.* 18*s.* 5*d.* The same accounts also show that the expenditure up to that date, over and above the said amount raised by calls on shares, was increased to 3,257,478*l.* 2*s.* 4*d.*

How comes it, then, that in the present accounts, made up to the 30th of June, the interest charged is only 72,438*l.* 1*s.* 7*d.*, whereas six months' interest, at 5 per cent. on the sum charged as expended (say they had left themselves without one shilling of a balance on hand), would be 81,436*l.*, omitting fractions?

If the matter cannot be entered into by the shareholders at the special meeting about to be called, I hope some of the influential proprietors will call a special meeting to investigate the monetary concerns of the Company, as it is evident they are in anything but a healthy state.

The statements also which are made, both as regards the amount of capital requisite for locomotive stock, and also for the working expenses of the same, by means of that most convenient item, depreciation fund, are anything but satisfactory. It is the same thing, taking interest into account, whether 20,000*l.* be annually abstracted from the pockets of the proprietary for 10 years, or at the end of that time the Directors seek for a further increase of 250,000*l.* capital. Had the 20,000*l.* subtracted from the cost of locomotive engines, carriages, &c., charged under the head of capital account in the present half-year's account, made its appearance in its proper place, the working expenses would have been nearer 48 per cent. than 51. Close the capital account, and then let every expense come under the proper head of working expenses, by which means the Engineer would be compelled to admit that his hobbies are not ridden at so light a cost as he would fain make it appear.

The present position of the Company is calculated to create anything but pleasant feelings in the minds of those parties who, like myself, have embarked their money in this concern, with a view to permanent investment. What with the Chancery suits and other matters, it behoves the proprietary to be at once up and stirring.

I am, Sir, yours, &c.

QUID.

London, Sept. 20, 1842.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Leaving to abler heads and pens than mine a regular answer to the notable trio of assailants of the Great Western Railway who last week launched their darts against it from such opposite quarters, and for such various reasons, I beg to send you a few figures, with a view to show my brother-shareholders that there is no reason to despair on account of the receipts being somewhat less just now than they were last year.

About this time last year I find that the receipts for four weeks, of the Birmingham and Great Western Railways, were—

London and Birmingham	£73,170
Great Western	58,358
Difference	£14,812
Showing an average weekly difference of	£3,703

The last four weeks show the following result:—

London and Birmingham	£65,495
Great Western	56,705
Difference	£8,790

Being an average weekly difference of 2,197*l.* 10*s.*

Thus we see that while the Birmingham has fallen off 7,675*l.*, or 1,919*l.* per week, the Great Western has only suffered to the extent of 1,653*l.*, or 413*l.* per week. It is true that the Taunton and Bridgewater line has been added to the Great Western since last year, but this can scarcely be yielding more than 500*l.* a week, and will still leave the Great Western at least 1,000*l.* a week better off on a comparison with its northern rival.

Before concluding I would just remark, that the present difference between the receipts of the two lines is at the rate of 114,000*l.* per annum, not 180,000*l.*, as one of your correspondents states—and where he can find that there is a difference in the capital of 1,600,000*l.* I am at a loss to conceive. I rather think that he will find it, when the accounts are closed, something less than a third of that sum.

I remain, Sir, yours, &c.,

G. W.

Bristol, September 19, 1842.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—When the Directors of the Brighton Company resolved to charge the same price for a day-ticket from Croydon to Brighton and back, as for a ticket of the same kind from London to Brighton and back, although every such London passenger was carried 20 miles further, and cost the Company 2*s.* 9*d.* in toll more than a similar passenger from Croydon, it was generally thought that this was the most splendid specimen of drivelling to which even the intellects of a Board of Directors, aided and abetted by a Secretary, could ever be expected to attain.

The Directors of the South-Eastern, however, fired by a noble spirit of emulation, have, it appears, resolved that even this illustrious effort of genius shall not remain unsurpassed. They have, in the new scale of fares, determined that a passenger from Croydon to Tunbridge shall, if he travel in a first-class carriage, pay 1*s.* 6*d.*, and if he travel in a second-class carriage pay 1*s.* *more* than a passenger from New Cross to Tunbridge in the same carriage would have to pay; although the Croydon passenger travels seven miles less, and costs them nothing in toll to the Croydon Company. Well may the South-Eastern Directors say that they are on friendly terms with the Croydon Company, when they thus disinterestedly offer a premium of 1*s.* 6*d.* to every passenger who will do them the favour of riding seven miles further in their carriages, and thus enable them to have the pleasure of paying 9*d.* toll to the Croydon. It has, indeed, been suggested that this ingenious device owes its origin to the fact of there being considerable opposition, both by land and water, in the carrying passengers from London into Kent, while no such opposition exists from Croydon; but it is to be hoped that no such secret hankering after monopoly actuates a Company which is such a strong advocate for low fares and tolls, but that it proceeds from an ardent desire to convince the Brighton Directors that, in absurdity at least, there is "in the lowest depth a lower deep," and that if they wish to keep the lead in that particular line of business, they must again meet in solemn conclave, and issue one of those wonderful "resolutions of the Board of Directors" which have long ago compelled "the wise men of Gotham" to hide their diminished heads.

BETA.

[If our correspondent had applied at the Company's office, he would have found that the ground of this complaint had been removed, the fare having been assimilated to that from New Cross.—Ed. R. T.]

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—It being very generally believed that intelligent parties hold opposite opinions respecting this line, a few remarks may perhaps reconcile the apparent anomaly.

I incline to think it quite a misunderstanding that any difference of opinion exists on the subject. All I ever conversed with about it, and I have with many, think ultimate success inevitable, *i. e.* when the contemplated railways from Calais to Brussels and to Paris are made; but on the other hand, many consider that a great many years will elapse ere these lines can be completed, and consequently hopes may from time to time be so long deferred as in the interval to disappoint impatient shareholders, and so prevent the market value of the shares being either high or steady; in short, it is a line rather for capitalists than others.

The par of the shares, although nominally 50*l.*, is in truth about 33*l.*, and the present market price

Digitized by Google

of 22*l.* equal to about 33*l.* 3*s.* discount only. There can be little doubt that from the difficulty in procuring loans, a further creation of shares will be resorted to, sooner or later.

It ought to be borne in mind that the distance from London is somewhat circuitous, nearly 90 miles, and that hence the charges, although pitched on the low-fare principle, must still, in order to pay expenses, be greatly above that of the steam-boats.

Ultimately the line must surely pay, but not for many years I think; whilst therefore it may suit capitalists well, I think it only fair to warn others.

I am, Sir, yours, &c.

PHILOS.

SOUTH-EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—You have written so much and so well on the policy of low fares, and I have found you at all times so accessible to correspondents, that I make no apology for troubling you with a few lines on the scale of fares just fixed on this line. There is a medium in all things, and I cannot but think that the Directors have gone beyond it, and made too great a reduction—as the first-class fares are really lower than the old *outside* coach fares. I am quite puzzled to understand the meaning of the difference between the fares from London Bridge and those from New Cross.

The first-class fare from New Cross to Tunbridge and Headcorn, and the intermediate stations, is 1*s.* 6*d.* less than the fare from London Bridge. From London the difference begins to lessen, and the fare from New Cross to Croydon is only 9*d.* less than the London Bridge fare. Now, as the same toll is payable to the Greenwich Company, be the passenger a short or a long one, I cannot understand upon what principle this difference in the fares is founded, or how it can possibly benefit the Dover Company.

It surely must be more advantageous to them to get 10*s.* from London Bridge than 8*s.* 6*d.* from Croydon, and yet every inducement is given to passengers to start from Croydon. I take it for granted there is some good reason for making this distinction which I am unable to discover, and if you will take the trouble to enlighten me on the subject, and point out in what the advantage consists of taking passengers from New Cross in preference to London Bridge at such fares, I shall be much obliged to you. It seems to me like cutting off one's nose to be revenged on one's face; and the only parties who appear to me to gain by the scale are the long passengers, and the only ones to lose, the Greenwich and the Dover Companies.

I am, Sir, yours, &c.

AN OLD SUBSCRIBER, AND A DOVER SHAREHOLDER.

Derby, Sept. 19, 1842.

LONDON AND CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—As I believe yours to be the only independent journal devoted to railway business, I beg to direct your attention to the extraordinary charges for the removal of the slips of earth on the Croydon Railway, such further excavation as may be required to prevent further accidents of the kind, and the removal of the felt from under a portion of the rails. The estimate for the works appears to be upwards of 60,000*l.*, which sum is to be raised by creating additional shares. I think a more extravagant charge it is impossible to imagine, and I challenge the Engineer to prove that the shareholders will have one-tenth part of the value in labour or materials. If similar works were required on a turnpike road, they would have been much better performed for all useful purposes for less than 5,000*l.* The shareholders may, however, calculate for themselves, the earthwork being at the most about 3*d.* per cubic yard for filling the waggons, and the cost of removal to the spoil-bank about the same.

I am, Sir, yours, &c.

ANTI-HUMBUG.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It is with extreme regret I read in your paper a letter evidently written to uphold the Directors of the Brighton Railway, in opposition to every fact you have stated, proving the want of rigid investigation, and general condemnation of the Management and works. The works are, in many respects, the worst that can be imagined, and it is only the dryness of the weather which has protected the Directors and Engineer from general exposure of the fact.

No railway mismanagement can be more justly held up as a warning to Directors and Engineers of other railways; and if you wish to preserve your credit for consistency, you will not fail to protect the shareholders and the public, when so clear a case is before you.

I am, Sir, yours, &c.

A SHAREHOLDER.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I agree with "J. S." of Cambridge that the prospects of this line are very good, provided we had a Directory which had the confidence of the proprietary or the public, but I would ask "J. S." how is it possible that either the one or the other can have confidence, after the most shameful waste of property, and the gross incapacity of the Directors, as shown by their accounts. It is notorious that the Committee who were appointed in January last, do not hesitate publicly to say, that they could make nothing of the accounts, Let any one ask the shareholders in Manchester and Liverpool their opinion of this line, and the reply is invariably, "If we had a *good, honest* Directory it would do." I myself was recommending an influential capitalist to come in, when his reply was, "change your Directory, and then—" Mr. L. Heyworth's conduct at the last meeting is looked upon with a good deal of suspicion. They do say he is waiting to get into the Directory, and that he has a promise to that effect.

I am very much pleased with your remarks upon Railway Management, in the number for September 13, which is now before me, and I hope my brother shareholders will attentively peruse it. You recommend the Midland, North Midland, and Birmingham and Derby to unite for the purpose of working, and thus do away with 30 or 40 Directors, three or four Secretaries, three or four Engineers, &c. This very plan ought to be adopted on the lines terminating at London Bridge, viz., the Brighton, South-Eastern, Croydon, and Greenwich. Can there be any doubt as to its practicability? And if Directors were earnestly desirous of benefiting their shareholders, they would themselves put it forward; instead of which the Brighton Directors almost squabble about the division of the 2,100*l.*, which they have the impudence to take for involving us in such a beautiful manner—more by-the-bye than any line in existence allows for Direction. Or why not, as you suggest, lease the line? I have heard it said that there are parties who would lease the Brighton, but that it is discouraged by our excellent Chairman, for some reason best known to himself.

I am, Sir, yours, &c.

D.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—More than a fortnight has elapsed since the general meeting of the Sheffield and Manchester Railway Company, at which a very extraordinary charge of trafficking in shares was made against the Directors, and I certainly expected that there would have been a public explanation before this time.

Aware that unity of action is of the utmost importance in concerns of this nature, I am second to none in giving the greatest confidence to the Executive. However, there is such a thing as misplaced confidence; and many circumstances have transpired, since the formation of this Company, that have made me strongly suspect the trustworthiness of its Executive, but there has been nothing so flagrantly wrong as the conduct charged upon them at the late meeting.

Being very unwilling to rake up things from the past, or to provoke any acrimony, I shall not at present enter into these circumstances; but if the Directors do not shortly make a clean breast of it with respect to this particular charge, I purpose to give an *exposé* of what have appeared to me, and to many shareholders of my acquaintance, to be the wrongful doings of the Directors.

In reference to the charge, Mr. Ellison, the Chairman of the meeting, said that it did not apply to the Directors as a body, and therefore he could not answer it. He, however, did all he could do to get the truth out, by distinctly repudiating the charge as applied to himself. Messrs. Turner, Chapman, and Thornely followed his example, leaving 12 others who remain tainted. Their names need not now be given. My opinion is at variance with Mr. Ellison's on the point of the charge not applying to the Directors as a body, for I would not form part and parcel of a Board of which some members had acted wrongfully, unless the facts were made public.

As the very extraordinary number of 1,419 shares were declared forfeited at the late meeting, in order to get at the truth a shareholder moved that the names of the defaulters be inserted in the resolution declaratory of forfeiture; but the Directors declined this, on the ground that no other Company did it.

This reason was not a valid one, because it had previously been done, and it had shown, that while some poor fellows had been pushed to the verge of ruin, others had been excused who it was well known could have paid, and who are now the obsequious servants of the Directors on all occasions. We are in the same boat, and should sink or swim together.

But I find I am trenching on ground which I had not intended to occupy at present. Wishing to see the Directors in an honourable position,

I remain, Sir, yours, faithfully,

ISAAC IRONSIDE.

Sheffield, September 16, 1842.

THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—As I always find the most correct information and sound opinions in your valuable paper, I beg to request your opinion on the following subjects. It is now pretty widely reported that the Manchester and Birmingham, and the Manchester and Sheffield Railways are about to join their interests, and form one line. Probably this may do the Sheffield line good, but I cannot see what good can arise to the Manchester and Birmingham Company. A much better plan appears to me to be this: As the Grand Junction is the grand north line, and as they have bought the Chester and Crewe line, they should also buy the Chester and Birkenhead, Manchester and Birmingham, and Manchester and Sheffield lines. Then they would have a communication from the western to the eastern seas.

They might have the bulk of the Liverpool and Leeds traffic, the Manchester and Leeds and Hull traffic, the Sheffield and Derby traffic, the Manchester and London, Birmingham, and Chester traffic; in fact, they would have the command of the north traffic.

I am, Sir, yours, &c.

PUBLICOLA.

September, 20, 1842.

THE RAIL AND THE TURF.—A horse belonging to Lord Eglinton, run at Doncaster on Monday week, was transferred to Leicester by the North Midland and Midland Counties' Railways, and won a race at the races of that town on Wednesday, and was afterwards transported back to Doncaster, to run a third time there on Thursday.

NOTES TO THE TRAFFIC TABLE,
(on the opposite page.)

3. Main line, 53 miles; Tewkesbury branch, 2. — Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone. The Company are now before Parliament for power to raise the capital to 500,000*l.*

8. Receipts include the Northern and Eastern toll, &c.

12. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester and Chester and Crewe lines, as also the toll from the Manchester and Birmingham Company. The divisor employed to ascertain the daily receipts per mile is 121 (85+15+21.) The Company do not now carry goods to Manchester.

14. The receipts include those derived from the Cheltenham and Exeter lines; the former opened for 18 miles, and the latter for 45. The divisor employed to ascertain the daily receipts per mile is therefore 181½ (118½+18+45.) The *rent* of the branch lines is together about 1,163*l.* per week. There is likewise a *toll* payable to the Exeter Company of a farthing per passenger and per ton of goods per mile travelled.

15. The dividends have been hitherto (up to 31st December, 1841) appropriated to completing the line and works.

17. The 00*l.* 0s. 0d. from goods, &c. is for toll only.

18. Ten per cent. is the maximum dividend allowed by the Company's Act.

19. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. The dividend is *nominally* at the rate of 10*l.* per cent., but to the original shareholders it is equal to upwards of 11*l.* per cent., as the dividend on the original shares is paid upon 100*l.*, although only 90*l.* has been called for. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

20. At the last meeting no dividend was declared, the disposable balance from the previous six months' working being only 1,472*l.* 10s. 9d.

21. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The traffic of the six months produced 63,326*l.*, and there was a balance from the previous half-year of 12,479*l.* Out of these two amounts combined, the dividend (after making certain deductions) was paid.

22. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

23. Capital of 993,300*l* includes new capital for widening the line, &c. The dividend of 7s. 6d. per cent. does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table includes the receipts from the footpath, but is exclusive of the Brighton, Croydon, and Dover toll.

24. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount. The Gosport branch is included in the length stated.

25. Including Toll, &c., from Sheffield Company, and after deducting omnibus charges, &c., and subject to payments to the Grand Junction Company.

26. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

27. The 5,120*l.* 16s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.

28. The receipts for goods, &c., include, horses, 36*l.* 16s. 0d.; carriages, 50*l.* 9s. 0d.; dogs, 4*l.* 10s. 0d.; parcels, 207*l.* 11s. 11½d.; cattle, 25*l.* 11s. 0d.; corn, 16*l.* 18s. 1d; heavy goods, 505*l.* 6s. 0d.; coal and lime, 205*l.* 4s. 11d. —Total, 1,112*l.* 6s. 11½d.

31. The amount of stock *created* is 3,000,000*l.*, on which dividends are payable; and the sum of 850,000*l.* is borrowed money at interest. The 3,000,000*l.*, however, is nominal, inasmuch as the shares were some of them issued at a discount, which reduced the actual amount to 2,589,500*l.*, viz.:—15,000 shares at 100*l.* = 1,500,000*l.*; 15,000 of 50*l.*, issued at 40*l.* = 600,000*l.*; 22,500 of 33*l.* 6s. 8d., issued at 21*l.* 13s. 4d. = 489,500*l.*; total 2,589,500*l.* The details of the receipts are as follows—Passengers, 3,727*l.* 12s. 8d.; carriages and horses, 280*l.* 4s. 3d.; parcels, 190*l.* 10s. 4d.; mails, 50*l.* 5s. 9d.; merchandise, 1,123*l.* 9s. 9d.; minerals, 317*l.* 0s. 1d.; cattle, 15*l.* 16s. 8d. — Total, 5,704*l.* 19s. 1d.; including North Midland proportion of Manchester and Leeds traffic, and amount received for Sheffield and Rotherham Company.

32. The receipts are after deduction of Liverpool and Manchester toll.

33. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 134*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 32½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

34. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

35. The returns are inclusive of Manchester and Birmingham toll.

37. The length stated includes branches.

39. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A New Subscriber.—*We should invest in Nos.* 1 *and* 3, *but we earnestly recommend our* New Subscriber, *and all others who contemplate buying or selling shares, to read the* Railway Times *and judge for themselves. We are very unwilling to give advice in such matters.*

A Constant Reader since 1838.—*We would recommend investment in B and C, but with the caution which we have given another correspondent. We would not have anything to do with D; the shares will unquestionably go lower. With respect to the other questions of our correspondent, the new shares of the South-Eastern Company have no priority. The money paid to the Brighton Company will, we have no doubt, be required before the Brighton line is entirely completed; the Brighton Directors say* no. *Neither Company pay any toll to the other, each passing over the portion of the other free.*

M. *(Aylesbury street).—Nos.* 1 *and* 8. *The latter, we have no doubt, will* ultimately *prove most productive. Nos.* 3 *and* 5 *will come lower*—much *lower. Do not, if you can manage otherwise, sell No.* 9 *at present.*

Investor *(Darlington).—No.* 3.

A Constant Reader *(Wallingford) has our best thanks.*

A Constant Reader *(Glasgow) is thanked. We had previously seen the paragraph, but our correspondent should have taken the precaution of forwarding the paper. We cannot be expected to see* all *the provincial journals.*

Birmingham and Gloucester Railway.—A Shareholder *is referred to a paragraph in another column. We cannot, under the circumstances, give any attention to his second letter. We have reason to believe that he is not* bona fide *"A Shareholder."*

A Well-Wisher.—*We have nothing whatever to fear from the quarter referred to; but, nevertheless, we feel grateful for* Well-Wisher's *attention and good opinion.*

A Subscriber.—*We believe that the payment of the* 30 *per cent. is included.*

A Subscriber *(St. Leonard's post mark).—Yes.*

Parasitus *might, we think, have found better employment than criticising the* style *of our Derby correspondent of last week. Will he venture to grapple with the* subject?

A. *(Lewes).—If* 5 *per cent. be no inducement, we do not see that benefit would arise from further investment. We think there is "a chance" of the shares rising* 5*l.* or 6*l. within the time specified. We do not think, however, that* 5 *per cent.* certain *ought to be refused.*

An Ex-Shareholder *should argue the question on its merits. It is absurd to say, that because other lines which at one time were "favourites" have since declined in public estimation,* therefore *the line to which he refers should fall into equal discredit. Let him give any reasonable data for the conclusion at which he arrives, and we shall make his caution public.*

Theta.—*The returns were respectively,* 17,502*l.* 3s. 3d.—17,272*l.* 6s. 10d.—17,342*l.* 17s. 2d.—17,762*l.* 15s. 7*d*.—17,788*l.* 8s 8d.—*and* 18,784*l.* 2s.

Patience.—*The letter of* Shareholder *was* not *copied from another paper. If* Patience *wished to reply to it, he should have addressed us in the first instance.*

An Inquirer.—*We have written to the gentleman named, but as yet have had no answer.*

Midland Counties' Railway—A Proprietor.—*Enough has been said on the subject.*

North Midland Railway.—*A correspondent wishes us to call the attention of the Directors of the North Midland Railway to the delay in forwarding the dividend warrants in accordance with the resolutions passed at the last meeting of the shareholders. "You will* [*he says*], *doubtless, be surprised to hear that although the meeting of the Company was held on the* 20*th ult., and the dividend declared payable on the* 15*th instant, I have not up to the present date received my dividend warrant; and I may observe, that this negligence occurred in respect to the payment of the* previous dividend."

TRAFFIC OMITTED.

Brandling Junction Railway.—*Week ending September* 10. —*Receipts from passengers (No.* 10,953), 397*l.* 2*s.* 10*d.*; *goods and coals,* 409*l.* 12*s.* 4*d.*; *total,* 806*l.* 15*s.* 2*d.*

Eastern Counties' Railway.—*Week ending September* 11.—*Receipts from passengers (No.* 17,316), 1,068*l.* 12*s.* 10*d.*

THE RAILWAY JOURNALS.

The Stamp Returns for April, May, and June, just published by Order of the House of Commons, enable us to complete the Returns for the year ending the 30th of June last. The results, as affecting the railway journals, are as follows:—

RAILWAY TIMES	**146,374**
Railway Magazine	68,500
Majority in favour of the RAILWAY TIMES	**77,874**

from which are to be deducted 10,874 Supplement stamps used for double numbers, still leaving the ordinary circulation of the *Railway Times* just about double that of its contemporary.—*September* 17, 1842.

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 24, 1842.

If we had been asked twelve or eighteen months ago to name a Railway Direction that seemed to possess the most unbounded confidence of the proprietors, we should have answered unhesitatingly, the Northern and Eastern; if it be now asked to name a Direction who have about the smallest amount of confidence placed in them, we fear the answer must (after the exhibition at the late special meeting) be, with as little hesitation, the Northern and Eastern.

Formerly their every recommendation was implicitly, perhaps too implicitly, taken; never was a doubt ever hinted. Now they meet their constituents on the most important question probably ever submitted to them, afraid openly to give their own opinion, but evidently in secret opposed to the proposition—which, however, is all but unanimously adopted by the meeting, and a joint Committee, *with a majority of shareholders on it*, as was very significantly insisted on by those present, appointed to carry it out. Whence so great a change? Let us take a retrospect.

During the short period of three years, we find no fewer than three different Chairmen in power, on no principle of rotation, but by arbitrary changes—and they have had a like number of Deputies, on no principle of succession. There have, moreover, during that time been three successive Engineers, and three different Secretaries; and in the two years since the line was partially opened, there have been (to keep up the *trios*) three different managing officers, and Heaven knows how many various modes of Directoral superintendence. One day there has been a Managing Committee of two Directors suddenly sent to the right-about to make way for a Managing Director, sole and salaried, but unfortunately ignorant equally of railways and business, although connected by marriage with the large mercantile house of William Crawshay & Co.; and at last, to cover his incompetence, one of the old disbanded Committee—the veteran battalion—again called out for active service with the rank of Deputy-Chairman, and the duty of *aide-de-camp* to the aforesaid Managing Director—an experienced Abercromby (to take an illustration from history, and, as we have unconsciously fallen into the military vein), to the rescue of an incapable Duke of York!

With such incessant changing of men and measures—here to-day, gone to morrow—with the vacillation and uncertainty of management necessarily attendant thereon—measures affecting the public convenience, the interests of

Digitized by Google

the trader and the profits of the shareholder, hastily taken up, to be as hastily laid aside when they have answered their clap-trap purpose, and almost as soon as there has been time enough to complete the squander of money on the first ill-judged view—with a trade imperfectly developed after two years from the first opening and the carriage of goods not even begun, nor, it would seem, the slightest preparatory arrangement made for it—with a revenue falling off at the very best season of the year, when that on every other line is at its height—with a share-market prostrated by the operation of those who, after their noisy and ostentatious protestations (to say nothing of written and honourable engagements), ought to have had their right hands cut off rather than have tampered with the property of others committed to their sacred trust—with hopes raised by the exaggerations of one Chairman (as if there were a *bull* in the market) only to be thrown to the dust by the equally suspicious despondency of another (as if the bear had now taken the stall of the bull), and to crown all, with as yet no *bona fide* dividend—can it be a matter of surprise to any one that "a change has come o'er the spirit of the dream" between the Directors and their constituents?

Let no good-natured easy shareholder fondly imagine, that there must be some mistake in our assertion as to the non-existence of a dividend, seeing there have been *three* declared, and he has actually received the money! Vain delusion! Let him analyse the accounts for himself, and look not merely at the glossy conclusion of the Directors. See there, according to their own showing, a balance of only 13,522*l.* on last half-year, without any provision for the rent due to the Eastern Counties', amounting to the not very trifling sum of 3,500*l.*, which, deducted, leaves 10,022*l.* applicable to the purposes of a dividend; *but a dividend on what?* Why, according to every principle of common sense common honour and common honesty, on the cost of the portion of the line in operation during the half-year; that is, on the whole line, with the exception of two miles, or in money, say on 800,000*l.* out of 875,000*l.*, which it may now fairly be assumed will be the minimum capital required. But of this 800,000*l.* no less an amount than 368,240*l.* is borrowed money, having a preferable claim for its interest on any moneys paid on shares. That interest for the half-year at 5 per cent. is 9,206*l.*, and taken from 10,022*l.* as above, will leave the *huge* sum of 816*l.* to be divided among 9,000 and odd shares, or at the rate of about twenty-*pence*, instead of *shillings* per share, without a *stiver* being set aside for depreciation, or a *sous* left at the bankers' as a balance!

Such is the result of the last half-year. It would only be a wearisome reiteration to go back upon those preceding. Let us rather look at the prospects for the future, just glancing in passing at the fact that half of the 800*l.* out of which we have ventured, perhaps incautiously, to propose a dividend of *twenty or one-and-twenty pence* per share, is to be most considerately appropriated by the Directors to their own remuneration—a step in itself quite proper, if taken at the proper time, were it only to save the proprietors from being, with very bad taste, if not offensively, reminded of "gratuitous services," (as they have been most faithfully at every meeting that has been held up to the last, either by the Report of the Directors or the speech of the Chairman, or both) and to make the Directors amenable alike for their conduct and appointments, even if transactions that savour of jobbing in shares, or otherwise, have to be inquired into, or appointments having the appearance of family arrangements have to be called in question.

According to the accounts only 100*l.* was paid during the last half-year for Directoral Management; but *if* report speaks truly, this also has now been put on a better footing. The Managing Director is in future to have a *sufficient* salary—we have heard it variously stated at from 300*l.* to 600*l.* Probably it is intended to advance by increments until it reaches the latter amount, and in that case probably the "Deputy" may be discarded again when his services can be spared with safety to the more precious charge. In the meantime, however, what with these gentlemen and their staff, the shareholders will very likely have to "whistle" for any balance at all on the current half-year, more especially when it is considered that 75,000*l.* more of capital (subject of course to interest) has now come into play by the opening of the line throughout to Bishop's Stortford.

Behold the prospects of the Company at the moment when a proposal is made to take the railway on lease for a period of years, guaranteeing to the shareholders 5 per cent. on their outlay, with a moiety of any profit accruing over that amount! We do not intend now to go into any examination of the arguments that may be brought *pro* or *con* the offer. It may be a good thing or it may be otherwise, but assuredly, unless something better can be said against it than anything that fell from the Directors at the late meeting, their case is a hopeless one. What are the objections stated by these gentlemen? "That there may be difficulties in the arrangements of the details." No doubt of it, and it is their duty to remove instead of magnifying or multiplying them, if the object in itself be desirable. "An officered establishment, with Directors at its head, must still be kept up, at a cost [say they] of probably a thousand a year." For what purpose, pray? Why, to watch over the *appointments* of the lessees (as if the latter would be insane enough to allow of any interference in that respect), and to restrict salaries (as if those who are under such heavy guarantees would be lavish in them), and to take heed that the Company shall not be saddled with a lot of surplus stock—a most unnecessary but kind consideration *on their part*, as the parties tendering will obviously for their own interest be careful not to furnish the line with stock of any kind more than sufficient for the trade, unless it be ingeniously imagined that profit is to be made by buying at prime cost to sell at a valuation which must of necessity be much below it.

No, no! These are not the reasons actually at work; place, pelf, and patronage, office and authority are at stake, as was very plainly told the Directors by an honourable proprietor. Had it been otherwise, such paltry cavilling objections would not have been put forward. The question would have been grappled with *on its merits*, and a bold decided opinion given upon it, instead of the *yea-nay* resolution offered to the meeting. It would have been stated openly whether there was a prospect of the line under the present system yielding anything approaching 5 per cent. clear, with good grounds for expecting anything beyond, to which indeed all their *prudential considerations* have been directed. From this most obvious part of their duty the Directors shrunk, and thus virtually abdicating their functions, left the shareholders to take their own independent course—which they did accordingly. It is to be hoped for the sake of their dividends that they may be able to strike out some course to get together a trifle for that purpose, if not by leasing, by some improved system of management; but they may rely upon it that this is to be attained only by the steady, cool, and concentrated exertions of good business men.

In the *Railway Times* of the 27th ultimo, we remarked on the improved state of the Eastern Counties' Railway Company's finances, and observed, that the whole railway had from circumstances been formed actually with the capital of the proprietors, without borrowed money, and that therefore the security the Company could give to lenders for any money now to be borrowed was equal, if not preferable, to any existing security—the London and Birmingham Railway Company's bonds or loan notes not excepted.

This observation has produced the following note:—

"*To the Editor of the Railway Times.*

"Sir,—In a recent number of the *Railway Times* you state, in a leading article, that the security which the Eastern Counties' Railway Company can give to lenders for any money now to be borrowed must be equal, if not preferable, to any existing security, the London and Birmingham Railway Company's bonds or loan notes not excepted.

"The market value of the whole shares of the Eastern Counties' Railway is about 550,000*l.*, and by their first Act the Company have a power to mortgage the rates and tolls to the extent of 533,000*l.*, and for which they are now advertising for tenders. Whether they have power under any subsequent Act to borrow a further sum on mortgage of the rates and tolls, I do not know, but when a fluctuating property like railways is mortgaged to nearly the full amount (as will be the case if they borrow 533,000*l.*), of what the public consider at this time the entire concern to be worth, it does seem to me so extraordinary to assert that such a security is equal to any existing security, or that the Eastern Counties' Railway bonds are equal to those of the London and Birmingham, that I do hope in your next number, for the benefit of myself and other plain men, you will be kind enough to state your reasons for that opinion more fully than are set forth in the *Railway Times* of the 27th August.

"I am, Sir, your most obedient servant,

"A Constant Reader.

"P.S. Perhaps you may be able to state whether the Company have power to borrow any further sums on mortgage of the rates and tolls under any subsequent Act of Parliament."

Our correspondent's letter we are happy to receive, and in reply to give the desired explanation in justification of our remarks.

The Company by their original Act of Incorporation were entitled to issue 64,000 shares of 25*l.* each, and to raise thereby 1,600,000*l.*, and were empowered to borrow 533,000*l.* by debentures.

The first amended Act, which passed in 1838, did not give any additional powers of raising money, but by the last amended Act passed in 1841, the Company had power to raise by shares 300,000*l.* more, and upon bonds 100,000*l.*

Of the 64,000 shares, 56,000 have been issued, leaving 8,000 unissued shares, and the sum of 300,000*l.* last mentioned has been raised by shares taken by the proprietors.

All this money so raised is of course capital. But the Company have besides obtained 466,000*l.* upon the issue of 56,000 convertible

Digitized by Google

debentures of 8*l.* 6s. 8d. each; and also borrowed the 100,000*l.* as authorised by the last Act of Parliament.

This latter sum of 100,000*l.* is in truth, and practically, the sole charge or encumberance on the railway, costing 2,500,000*l.*, and if we make good this assertion, our correspondent will probably admit that a better security with any Railway Company does not exist than this sum of 100,000*l.*; and he will go further, and agree with us, that if the Company, as other Companies have done, should issue their loan notes to the extent of 200,000*l.* in anticipation of the sale of unissued shares, and surplus property in their hands of that value, to prevent the sacrifice of a forced present sale, such loan notes will likewise form an indisputable security to the public.

The proposition is easy of proof, on this simple ground, that the debentures issued for the 466,000*l.* are, though in fact debts, still incipient shares, and must inevitably become shares. Each being for 8*l.* 6s. 8d., is convertible into a 25*l.* share of the capital stock, and because of this convertibility, the market price of the 8*l.* 6s. 8d. is at present about 10*l.* 12s. 6d., and so sure as there exists this premium of more than 2*l.* per each debenture, so sure is it also, that each debenture will speedily become a share and sink into the capital stock, and be no longer a debt against the Company.

If our correspondent could by any agreeable means fall into a long and placid sleep, and revel in pleasant dreams, or visit Elysium and return at Christmas, it is probable that he would then find the Company without a single debenture for the 466,000*l.* remaining outstanding. He would also have the gratification of reading our back numbers for three months, and satisfying us of the truth of his assurance, that he is our "Constant Reader."

A MEETING was held last week at Plymouth with reference to a proposed railway from that town to the city of Exeter. The proceedings will be found reported in another page.

We are not sufficiently acquainted with the locality to determine whether the superiority claimed for Mr. RENDEL'S scheme be deserved or not. Should good grounds exist for disputing the preference thus awarded, we daresay the promoters of the other routes will not remain silent. Mere engineering merit, upon which line soever it may preponderate, will however be insufficient to settle the question as between the several projects. An inferior line, well backed by local subscribers, and not opposed by the landholders through whose property it is to pass, would stand a much better chance of securing Parliamentary sanction, and the support of capitalists at a distance, than an intrinsically better route, from which the parties more directly to be benefitted stand aloof, or which is likely to meet with the hostility of the owners of the soil. If the people of Plymouth, then, desire to see Mr. RENDEL'S plans carried out, they must at once set down their names as shareholders. They have the strongest possible incentives to be up and doing without delay, if they wish to escape the fate which, unless they secure a railway, will most assuredly overtake them, namely, of being (as was remarked at the meeting) "shut out from all the world." To pass resolutions in favour of railway communication generally, or in commendation of a particular scheme, will be useless, nay, worse than useless, unless the parties put their hands into their pockets and evince their sincerity by subscribing liberally for the stock. Obvious as is the truth of this observation, it is too frequently overlooked in practice. Much more is necessary now than the bare promulgation of a railway project to get a subscription list filled. Railways *have* been made not only without the assistance, but in spite of the strenuous opposition, of local interests, but it were vain to hope for such a consummation in a case like that of a Cornish or Devon line, where the attractions held out to speculators at a distance must, of necessity, be but small. Fortunately, a more correct judgment of the benefits resulting from the modern system of locomotion has been formed by those on whom the extension of that system mainly depends—we mean the local population—and if love do not lead them to patronise railway undertakings, fear will drive them—the fear of seeing their several neighbourhoods sink into decay from want of the means of easy, economical, and expeditious intercourse which more enterprising districts have already secured.

Some stress was laid at the Plymouth meeting on the aid to be expected from the Great Western Company. The promoters of the scheme must not trust too much to *that*. We suspect the proprietors of the Great Western Railway have quite enough upon their hands already, and at any rate the Plymouth Railway must have something beyond an existence on paper, before the Great Western Company can be expected to step forward with an offer to lease the road. There must, of course, be some mistake in the statements on this point attributed by the Chairman of the meeting to Mr. RUSSELL, the Chairman of the Great Western Board. Mr. RUSSELL is too judicious to commit himself, or the Board over which he presides (even if his constituents had no voice in the matter), to the support of one particular project out of several, any one of which would equally benefit the main line, and none of which may be carried into effect; and he is too much a man of business to talk of a specific rent for a concern which is so entirely in the clouds as the "Plymouth and Exeter Railway."

THE Directors of the West London Railway were censured the other day by the *Times* because they had not, it was alleged, formed a Board in order to induct into office the three gentlemen so honourably nominated to seats in the Direction at the last meeting. The Directors have enough to answer for, but in this instance we believe they were blameless, the fact being, that up to that time not one of the three had qualified, and that one of them has declined to serve, and another is in Ireland. The third (Mr. WILKINSON,) has since qualified, and was formally elected at a meeting held yesterday.

One feature in the proceedings of yesterday's Board meeting is of good omen. We understand that a resolution was agreed to, relinquishing all claim to official remuneration from the commencement of the present year, and further, that the Directors' allowance be discontinued until the line shall be fairly in operation.

The adjourned meeting of proprietors takes place on Thursday next, when we trust there will be a full attendance. The time for action has arrived. "Now or never" must be the watchword. The vacancies still existing at the Board should at once be filled up by active men of business, who will bring and keep the undertaking prominently before the public. We have heard it said that parties are willing o complete the line upon most favourable terms. If the proprietors let this chance of saving the wreck of their property pass unimproved, they may rely upon it that another will never present itself. We would especially exhort the Manchester proprietors to exhibit their usual spirit, and fairly set the new plan afloat. Mr. THOMPSON, the very zealous and intelligent Secretary of the Company, proceeds, we are told, to Manchester to-day, accompanied by an influential shareholder, and we trust he will bring back favourable tidings.

As respects the scheme itself, we have only to express once more our earnest hope that after so large an expenditure it will not be suffered to miscarry. We are quite satisfied that it will of itself remunerate new comers, even should neither of the great Companies be disposed to rent or purchase it, which when brought fairly into operation one or other of them is almost certain to do.

IT has frequently fallen to our lot to record cases of extortion, and more frequently instances of vexation and annoyance, by landowners against Railway Companies; it is therefore with peculiar satisfaction that we notice an act of a very different character on the part of Sir EDWARD CHOLMELEY DERING, of Surrenden Dering, Kent. The Dover Railway Company found, on the opening of their line to Headcorn, that a material difficulty would arise in enabling the Dover and Ashford coaches to communicate with the station, in consequence of the narrowness and bad state of a parish road connecting the turnpike-roads. The difficulty could only be met either by sending the traffic a considerable distance round, or by passing through Surrenden Park. Sir EDWARD, on a representation of the matter, most liberally granted permission for the coaches to pass through his avenue and park. It was a concession of no ordinary character, as the road passes for upwards of a mile through the beautifully ornamented grounds, and close to the ancient family mansion. This public spirit is beyond all praise, and the name of Sir EDWARD DERING will long be held in honourable remembrance for the noble example which he has set.

WE learn from a local journal that the Committee of seven proprietors, appointed at the late meeting of the North Midland Railway Company to investigate the affairs of that undertaking, have commenced their sittings at Derby. It is to be hoped that the inquiry will be prosecuted in such a way, and carried to such an extent, as to be productive of practical benefit to the shareholders. It will signally fail of this effect, if conducted as examinations of this kind usually are—that is to say, in a spirit of partisanship, and with a view to criminate or clear particular individuals. All reference to the past, except in so far as it may serve as an example or a warning for the future, should be studiously avoided. No good can arise from raking up old grievances, a remedy for which has, however recently, been provided.

The main inquiry of the Committee will, we presume, have reference to the best means of attracting further traffic to the line. Local knowledge is indispensable to a proper judgment on this vital matter, and we trust the Committee will use every effort to collect information respecting it. Without casting any imputation on the Directors or their officers, we would recommend great caution as to statements upon this point emanating from the Executive. Of course these gentlemen are of opinion that all that could have been done *has*

Digitized by Google

been done, else do they stand self-convicted of negligence or inefficiency. We have reason to believe that all has *not* been done, and that an inquiry into such details as the rates of charge, the measure of accommodation offered at stations, the times of starting trains, and the encouragement extended to *feeders* of the railway, will show that very much more might readily be effected. Every proprietor residing near the line, or conversant with its business, who thinks his own experience likely to be of use, will of course take care to place himself in communication with the Committee.

Whatever may be the conclusions at which the Committee arrive, we trust they will speak out boldly and unreservedly—that they will not merely tell the truth, but the *whole* truth. Any reservation, out of delicacy to individuals, cannot fail to do mischief, and so far from answering its purpose, will only pave the way for future Committees. It is much better that the worst should be known at once, than that doubt and distrust, leading to constant bickerings between the Directors and their constituents, should hang over the concern. If the revenue of the railway can *not* be improved, it is but right that the proprietors should know it. The constant alternations of hope and fear, of despondency and exultation, are as much opposed to the well-being of a Railway Company as to the happiness of an individual; and if the Committee can, after full inquiry, set the doubts of the proprietary at rest, they will be performing an acceptable service, even should the fears which many entertain of an unfavourable result, be confirmed.

In our last number we felt it our duty to offer a few remarks upon a letter bearing the signature of Mr. Thomas Storey, Engineer to the Great North of England Company, with reference to the original estimates and actual expenditure of that concern. Mr. Storey has sent us the following letter, and as he appears to think that it furnishes a sufficient answer to our observations, we give it an equally prominent place in our columns:—

"*To the Editor of the Railway Times*

"Sir,—In the leading article of your paper of the 17th instant, you have used strong observations having reference to a letter of mine, published in the *Gateshead Observer* on the 10th of this month.

"Before doing so, you ought, in justice to the accused, have been better informed of the requirements of Parliamentary Committees in 1835-6, and with the powers obtained for the Company and the public in the Acts of 1836-7, for making the Great North of England Railway.

"The Acts of Parliament referred to are in detail on those subjects familiar to me, and I can state truly, that coupling such with the estimates given, there was no "deliberate or shamefully misleading of Parliament" by the Engineer. Numerous are the Railway Companies in the north of England, who by their Acts of Parliament, did not take powers to become carriers or erect establishments for that purpose; such powers being deemed wise and expedient by the legislature to be vested only in the public, lords of manors, and owners of property through which the railway passed, there could be no reason for my courting explanations on this subject with the proprietary, such being the province of the Directors before engaging in the outlay.

"However much I admire your zeal in defending, or otherwise drawing the veil and exhibiting, railway speculations in their proper colours and shapes, together with individuals connected therewith, I do think you have, in this instance, outstripped your judgment, had it been better informed.

"I am, Sir, your obedient servant, and constant reader, "Thomas Storey.

"St. Helen, Auckland, Sept. 20, 1842."

We think we might safely leave this letter to speak in confirmation of our strictures rather than otherwise, without entering into any lengthened vindication of our previous remarks. One word, however, upon the line of defence which Mr. Storey has chosen to adopt.

"There could be no reason [says Mr. Storey] for my courting explanations on this subject with the proprietary, such being the province of the Directors before engaging in the outlay." When it is remembered that "this subject" had reference to the exclusion from the estimates of everything connected with the *plant* of the then intended railway, even to *stations*, we cannot agree with Mr. Storey that he had "no reason" to clear himself from all participation in the suppression of so important a fact. We think that, as an honourable and honest man, he ought to have spurned every proposal to lend the sanction of his name to anything *likely* to mislead the public, and his now throwing the blame on the Directors will not exculpate himself.

Mr. Storey intimates that it was then customary to exclude from Parliamentary estimates the cost of the carrying establishment. It might be so (although we hold that the promoters of every such Bill, who did not fairly and broadly state this to the public, were guilty of obtaining money under false pretences), but it is clear from Mr. Storey's previous letter, that *he* at least did not consider the Great North of England Railway estimates to bear this interpretation. He says:—

"I hold written directions from the Board of Directors, the London Deputation, and the Company's Solicitor, *that the Parliamentary estimate was not to exceed a given sum.* On my stating that it was IMPOSSIBLE TO MAKE AND SUPPORT SUCH AN ESTIMATE before a Committee of either House of Parliament, I had instructions to exclude certain items in that for the county of Durham, and everything but the bare line of railway through the county of York."

Was the cost of "plant" included in the original prospectus of the Great North of England Company, that Mr. Storey should at first have found it *impossible* to bring the estimate within a certain sum, although afterwards, by excluding such cost, he was enabled "to make and *support* such an estimate?" If so, were the alteration and exclusion ever notified to the public until certain of the Directors thought fit to attack Mr. Storey, and that gentleman deemed it advisable to retaliate?

Our charge against the Directors in the first instance, and against Mr. Storey in the second, was plain and simple enough, namely, of having, in order to obtain an Act, brought before Parliament and the public estimates which they, the Directors and Engineer, knew, but which Parliament and the public did *not* know, would be insufficient. Nothing which Mr. Storey has now advanced affects that charge in the smallest degree.

Mr. Storey would insinuate, in his present letter, that nothing but the cost of the carrying establishment was excluded. Will he state that in as many words? If so, we trust he will at the same time show how it happens that the original estimate has in other respects been so greatly exceeded. Our impression is, that when Mr. Storey says he had "instructions to exclude certain items," other items than the cost of plant were for the nonce kept out of sight.

It would seem as if Mr. Storey were one of those who most admire our "zeal in drawing the veil, and exhibiting railway speculations in their proper colours and shapes, together with the individuals connected therewith," when such strictures gall not themselves. We take it as the highest possible compliment that every party "accused" (to adopt a phrase of Mr. Storey's), should deem us in all but one instance justified in our censures. We fear there is still much to unveil in reference to the getting up and carrying out of railway speculations, and with all deference to Mr. Storey, probably the Great North of England Railway does not form an exception. It is, we hope, scarcely necessary to assure Mr. Storey that we entertain not the smallest wish to do him an injury, either professionally or personally. We merely fixed upon the statements made under his own hand as a specimen of a (once) prevalent practice. He has now got so far committed, that if he feels any regard for the "professional reputation" to which he refers in his first letter, he cannot let the matter rest where it is. He threatens further exposure of the Directors; let him carry his threat into execution. He says he holds "*written* directions from the Board of Directors, the London Deputation, and the Company's Solicitor, that the Parliamentary estimate was not to exceed a given sum;" let him produce these instructions if he has any desire to maintain the character to which he lays claim. In our columns he shall have full room and fair play. We would gladly deal leniently with a minor offender, could we thus bring exposure if not punishment upon the more guilty.

A letter, which we publish in another column, from Mr. Pearson, Secretary to the Sheffield and Rotherham Railway Company, exposes some strange proceedings on the part of the Post-office authorities in connection with the transmission of the mails by that line. Really it would seem as if Government officials took particular pains to bring odium upon themselves and the public service. The Post-office was, during many a year, notorious for the slovenly, capricious, and inconsistent conduct of its functionaries; we had hoped that under the new arrangements a more becoming order of things had been established. The most provoking part of the business is, that the blunders of the men at head-quarters are by the public attributed to the Managers of Railways, whereas, in truth, they themselves appear to be almost helplessly at the mercy of Lord Lowther and his subordinates. We hope this particular instance of seeming caprice will, at the earliest possible moment, be brought under the notice of Parliament by some one of those honourable members who have distinguished themselves by their attempts to reform abuses in this important department of the national service.

The *Times*, through its correspondents, has within the last few days been taking several Railway Companies—the Eastern Counties', South-Eastern, Blackwall, and others—to task for acts of commission and omission connected with the working of their respective lines. We are bound to say that, in every instance, complaint appears to have been made not without cause; and the shareholders in these lines are much indebted to the *Times* for making public every case of mismanagement that is properly established. It is thus only that *they*, and not unfrequently thus only that the Directors, are made acquainted with the existence of abuses which cannot fail most materially to affect the prosperity of these important under-

Digitized by Google

takings. We are no advocates for suppression or concealment. Railway Companies require to be kept "up to the mark;" and it is only by means of the public press that corporations, in most respects irresponsible, can be restricted wtihin due bounds. The very fact that in general the arrangements of Railway Companies are most admirable, renders it desirable that any instance of a contrary character should be exposed, in order that it may be at once corrected.

It will be seen from the notice of the meeting of the Cheltenham and Great Western Railway Company, published in another page, that the negociations relative to the further extension of that line are still pending. It is a pity, we think, that *something* is not done in one way or other to set the matter at rest. There never was a more favourable period than the present for the further prosecution of the works, and if the line *is* to be carried forward, no time ought to be lost.

The *Worcester Chronicle* of Tuesday says:—"In the course of last night a cow was run over on the Birmingham and Gloucester Railway, about two miles from Spetchley. The poor animal was cut to pieces, and some luggage trucks were thrown off the line, but beyond that and the necessary delay, no other inconvenience occurred." We suppose this is another result of defective fencing. It is to us a matter of extreme surprise that very frequent and very serious accidents do not arise from this cause.

A similar accident occurred a few days since to a mail train on the North Union Railway. Two cows were killed.

—o—

It will be seen from our traffic returns that the raising of the fares on the Blackwall Railway has, during the last week, led to a falling off in the receipts of nearly 200*l.*, as compared with the corresponding week of last year, and this too although the present season is far more favourable to pleasure trips than was the last.

—o—

We learn, from the *Worcester Journal*, that the respectable citizens are taking measures to disavow their connection with the late factious attempt to annoy the Directors of the Birmingham and Gloucester Railway. The following declaration has, we understand, been extensively signed:—

"We, the undersigned, bankers, merchants, traders, and others, inhabitant householders and rate-payers of the city of Worcester and neighbourhood, regarding favourably the recent proposition made by the Birmingham and Gloucester Railway Company, to construct a branch line from a point in the city to its main line near to the station at Spetchley, and which favourable regard is founded on the following amongst other reasons:—

"*First*—Because such proposition offers the most advantageous arrangements that the city can hope for under existing circumstances;

"*Secondly*—That while it would go a great way to relieve the city and the surrounding district from their present unfortunate condition as regards railway travelling, it would also, viewing it in conjunction with the improvement of the navigation of the river Severn, tend greatly to enhance and diffuse the commercial, agricultural, and trading advantages to be anticipated from that important undertaking;

"*Thirdly*—That the formation of such branch line will present no obstacle to the including of Worcester in any more extended line of railway that may hereafter be projected in this direction, or indeed in any other:

"We therefore express the hope that the Company will apply for a Bill in the next session of Parliament, exclusively to carry into effect such branch line, promising in the event of their doing so, and it appearing that the Bill contains such clauses as will ensure to the city the formation and working of the branch at the earliest practicable period, our best influence by petition or otherwise, in support of such application, and to obtain for it the sanction of the legislature."

RAILWAY OFFENCES AND OFFENDERS.

James Cooper, switchman on the Edinburgh and Glasgow Railway, through whose negligence the accident occurred, which terminated in the death of Mr. McLeod, bookseller, was on Monday last charged at the Glasgow Court of Justiciary with culpable homicide. He pleaded guilty, and was sentenced to ten months' imprisonment.

LONDON AND DOVER RAILWAY.

Traffic Receipts for the Week ending September 20, 1842—the Third Week of the Low Fares.

	First-Class.	Second-Class.	Third-Class.	Total.			
Sept. 14....	253½	530	206	1,000½	£208	2	4
„ 15....	224	460½	194½	879	188	19	11
„ 16....	217	430½	225	872½	182	7	10

Horses, carriages, parcels, &c.					138	10	9
					£1,520	18	10

The above exhibits a considerable increase over the preceding week. The following shows also a corresponding increase in the numbers embarked and disembarked at New Cross during the same period:—

Week—14th to 20th September, inclusive.

	1st.	2nd.	3rd.	Total.
Number of passengers booked *at* New Cross station from the 14th to the 20th September	63½	207½	327	598
Number of passengers booked *to* New Cross station from the 14th to the 20th September	106	178	513½	797½
Total				1,397½
Add total to the 13th, from last week's *Railway Times*.....				1,901
Total loss in three weeks to the Greenwich Company by their prohibitive toll				3,298½

RAILWAYS IN GERMANY.

[From a Correspondent.]

Since the 17th May last—the date of the opening of the *Hamburgh* and *Bergedorf* Railway—99,560 passengers have been conveyed on that line of 10 miles distance, yielding a gross receipt of nearly 4,000*l.* The traffic has been much greater than could have been expected after the calamitous fire which destroyed a great part of the city of Hamburgh, and thus considerably checked the inclination of the public for recreations and excursions, by which the Hamburgh and Bergedorf Railway would otherwise have been considerably benefitted in the course of the late fine summer months. The shares of this line are now at 20 discount. The chances for seeing it soon continued towards *Magdeburg* and *Berlin* are at present not very bright. As regards the latter line, the Provisional Committee at Berlin is in its views quite at variance with the opinion entertained by the Provisional Committee at Hamburgh, which latter advocates a line *via* Lauenburgh, Boitzenburgh, and Lenzen, along the river Elbe, where the country is so level that the steepest gradient on the whole distance will not reach even 1 in 1,000, whilst the wise Berliners have taken the strange notion into their heads that a line 8 miles longer, with gradients of 1 in 300, and even 1 in 268, would be preferable, because its course would be further inland through the dominions of the Grand Duke of Mecklenburgh Schwerin. It can never be expected that the Hambro' capitalists would furnish their means for the construction of a *bad* line, in the face of the fact that a *good* line *can be secured;* and the Duke of Mecklenburgh would do better to accept a line on the boundary of his dominions, running in the valley of the river Elbe, than allow no line at all, unless he should prefer to realise his impracticable views either at his own risk and expense, or jointly with the Berlin Committee which shares them—a supposition which has, however, no chance of being made effective.

It is also to be feared that the continuation of the Hamburgh and Bergedorf Railway through the kingdom of Hanover, *via* Luneburgh and Uelzen, to *Magdeburgh*, will be frustrated by the intention of the Hanoverian Government to construct a railway from Hanover to *Harburgh*, a rising port situated opposite Hamburgh. But such has been the *intention* for the last seven years. It is evident that both the Hanoverian and the Mecklenburgh Governments will consult the true interest of their respective subjects, by striving to accomplish what practice has many years since proved unattainable, and not persisting in an obstinate rejection of those suggestions admitted on all hands as really good.

Although the Royal Assent has some months since been given to the *Kiel* and *Altona* Railway Company, the Directors have, to the present moment, not deemed it expedient to advertise the contract for earthworks. Rumours are in circulation that they are not very sure about the forthcoming of the first call of 20 per cent. due in October, the shareholders discovering more and more that there is no chance for a traffic on that line sufficiently large to pay mere expenses.

Manchester and Leeds Railway.—A proof of the extraordinary reduction of friction on a railway as compared with that of the common road, may be arrived at by the fact, that a four-horse coach, running between London and Birmingham, left, by the wear of horse-shoes and wheel-tyres, 11¼ lbs. of iron on the road each journey of 118 miles; while at the present time a first-class carriage, weighing 3½ tons, with a brake, is now running on the Manchester and Leeds Railway per 25,000 miles with Banks's tyres, having lost in weight by this distance not more than 7¼ lbs., and, from every appearance, this carriage is likely to run a distance of three or four times the circumference of the earth without the least repair to the wheels. The wheels were old ones, repaired on Banks's plan, when put under the carriage, the cost of repair not being more than half the price of a set of wheels for a stage-coach.

—o—

Slamannan Railway.—About 4,000 passengers were conveyed up and down this railway from the districts of Airdrie, Coatbridge, Wishaw, and Holytown, on Tuesday week, to see the Queen and suite pass through Linlithgow. They were conveyed eastwards in several trains, but in going back one train took upwards of 1,500 people at once. Between carriages, waggons, &c., the train consisted of 110 vehicles filled with passengers, propelled by five engines, four in front and one behind, and the whole extended to the enormous length of a third of a mile.—*Scotsman.*

Digitized by Google

BIRMINGHAM AND GLOUCESTER RAILWAY.

In our last number appeared a letter signed "A Shareholder," which imputed to the Directors of this Company that, in a "new contract with the coach proprietors for running coaches between Bristol" and the terminus at Gloucester, they had *forced a clause* upon the coach proprietors, "prohibiting them from running the coaches to or from the Great Western station at Bristol." We have since learnt, from a quarter upon which every reliance may be placed, that this imputation is wholly groundless—that there is at present no contract existing for the service referred to, although the Directors are in treaty with a respectable coach proprietor; while, so far from seeking to *force* such a clause as that mentioned by "A Shareholder," one of the stipulations actually proposed by the Directors, *but objected to by the coach proprietor*, is to provide for the vehicles running to and from the Great Western station! We regret that we should have given currency to last week's misstatement. "A Shareholder" had sent us his name, and we could not suppose that on a matter of fact like this he would attempt to mislead the public. We shall take especial care that he do not mislead them again through the columns of the *Railway Times*.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—It appears to me that your correspondent who signs himself "A Suffering and Original Shareholder," has been misinformed as to the agreement entered into by the Directors of the Manchester and Birmingham and Grand Junction Railways. He says, that "it also appears that our highest week's revenue has not reached 2,400*l*. If the Grand Junction are to receive 70 per cent., I am afraid we stand a very poor chance of a dividend." Now, either the writer of this is himself under a misapprehension as to the terms of the agreement, or he has so expressed himself as to convey an erroneous impression to others. If he himself is misinformed, he will be glad to learn that the payment of 70 per cent. is not on the gross amount of 2,400*l*., but only on such part of it as goes over the Grand Junction Railway, leaving of course the full amount of the traffic between Manchester and Crewe to the Manchester and Birmingham Company. It should also be borne in mind that the 30 per cent. is net profit on a line of 54 miles, which they have had no expense in the formation of, also that by the present arrangement they have only one terminus station to build and to maintain. I am a considerable shareholder myself in this line, and though (as your correspondent doubtless is) I am annoyed at the present low price of the stock in the market, I believe that price to be caused by extraneous circumstances, and that we shall before long find to our satisfaction that we shall have a fair dividend, and much improved value for the stock.

I am, Sir, yours, &c.

ANOTHER SUFFERING (BUT NOT DESPONDING) SHAREHOLDER.

Manchester, Sept. 22, 1842.

A letter from Vienna, September 5, says:—"As soon as the contracts for the railway works in the north and south were taken, workmen were at once set on. Not less than 6,000 men are employed near Olmutz, and the number will be increased to 10,000 towards the end of autumn. On the Trieste line, the works are also urged forward, and 30,000 men will be employed on both lines in the spring."

ITALIAN RAILWAYS.—It is contemplated by the Pontifical Government to authorise the establishment of a railway from Naples to the frontier of the Romish States, near Terracine.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Fully agreeing with you in condemnation of the Board clinging to office in all their *uselessness*, there is one fact I would notice as truly *monstrous*. A Director, *in default for calls, and consequently having no voice, continues at the Board, and takes his allowance!!!* * * * *

A few words to the proprietors as to the new shares.

Every *old* creditor has a right to two new shares for every three he now holds. The original capital was 150,000*l*., and we surely looked for 5 per cent. dividend—

That is.....	£7,500
Now we require to pay interest on new shares, and all our debts	4,700
Remainder	2,800

3,200 are the number of new shares, being two-thirds of the old, consequently 4,800 is the original number; add 760 of the second-class (the creditors), and the total is 8,760; among whom 2,800*l*. is to be divided, which is fully 5*s*. per share, or nearly 1½ per cent. *on all the shares*. Observe the result—

30 original shares cost.....	£600
20 new do.	200
Dividend	800
10 per cent. on 200	20
1½ do. 800	12
	32

which is 4 per cent. on the embarked capital.

If you let these advantages go to the public so much the worse for yourselves. But I know the Stock Exchange is *thirsting* for them, and have no doubt, by whomsoever done, the money will be raised.

I may be told the assumption of dividend is incorrect, as we do not complete the *original* line. True, but see the 100,000 people who *now* go up the river in boats, and will, certainly many of them, use our line to enjoy a fresh breeze and a cup of tea on the Scrubs.

In the conviction that we shall go along the line by Christmas, I subscribe myself,

Yours, obediently,

ONE OPPOSED TO THE LEGAL AND DIRECTORIAL MANAGEMENT.

[Our correspondent will see that we have struck out a passage from his letter. The charge therein made against individuals is so grave, that we could not bring it forward on an unsupported assertion, although we know our present correspondent to be a gentleman of unquestionable integrity.—ED. R. T.]

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In the *Railway Times* of 6th August you were so kind as to insert a statement for me of receipts for the half-years ending June 30, 1841 and 1842, showing the receipts in both periods on traffic direct to and from London and all the stations, (not from one intermediate station to another) to Broxbourne inclusive, in which statement there appeared a gain of 466*l*. 9*s*. 2*d*. in 1842 over that of 1841, the increased fares having been in operation during the latter period.

In your paper of the 17th instant you insert another statement, with some remarks from yourself, on the conflicting conclusions to be drawn from the two.

The object of each is to show the effect produced by the raising of fares; the periods given are different, one is for 26 weeks, the other for 19 weeks, and both are true, with the following explanation:—

In the periods taken in 1841, Broxbourne was the terminus; but in 1842, no passenger is included that went beyond Broxbourne; in 1841, we had two daily coaches plying to places beyond Harlow, and these, with private conveyances, may be supposed to have brought 24 passengers per day, which number must also return, viz. 48 passengers per day, at 2*s*. 6*d*. each; for the space of 19 weeks this would be 798*l*., which would reduce the sum stated to be lost, viz. 977*l*. 1*s*. 11*d*. to 179*l*. 1*s*. 11*d*. in the period selected.

I fearlessly assert that nothing was lost to the revenue of the Company, taking the whole period of its operation, and an important point has been gained, which was an ingredient in the motive for raising the fares, viz. to effect a commutation of toll with the Eastern Counties'.

I am, respecfully, Sir, your obedient servant,

JOHN ROSKELL.

Office, High-street, Shoreditch, Sept. 22, 1842.

GRAND JUNCTION RAILWAY.—It is an object of regret to us to speak in terms of disparagement of any public Company, especially when the acts of that Company display, in many instances, a regard for public convenience. There are, however, two circumstances intimately connected with the interests of our immediate district, and we think rather interesting to the Grand Junction Railway too, to which, failing to call attention, we should but ill discharge our duty as public journalists. Many of our readers have learnt to their cost, that the former not moderate charges of conveyance to Birmingham and Stafford, but particularly to Birmingham, have now been raised to an exorbitant amount. It costs one about 10*s*. to go to Birmingham and return by a mail train. The stations being so distant from the central parts of the towns, one may "coach it" for half the sum, with very little loss of time. Between Wolverhampton and Stafford there is but one conveyance daily, save the railway, and that at an inconvenient hour. The railway, thus, is in that direction almost a monopoly; and we are free to say, that we feel conscious it is not the object of the Directors of the line to render that monopoly subservient to their own ends, without some regard for public convenience. But this is not the only evil: between two o'clock p.m. and half-past eight, there is actually a lapse of six hours without any mode of conveyance by trains from Stafford to Wolverhampton—the county town, and the central mart for manufactures in the county. This, really, is a gross public nuisance; and we have reason to believe that a representation of the fact to the Directors will remedy the inconvenience. The public feel strongly on the matter.—*Staffordshire Examiner*, September 17.

THE BIRMINGHAM RAILWAY CHURCH.—A church, the first of the kind in connection with railways, is to be erected on a site of ground near the London and Birmingham Railway, for the religious instruction of the servants connected with the Company, and the neighbouring population round their central station at Wolverton. The proposition was first made at a general meeting of the shareholders in 1840, when it was resolved to establish a Church of England chapel at Wolverton, so soon as the sum of 4,000*l*. required to erect it should be raised. Within 300*l*. of that amount has already been subscribed, including 1,000*l*. from the Railway Company, with an annual endowment for the minister; 2,000*l*. from the Radcliffe Trustees, and sundry other sums. A temporary reading-room, capable of holding 200 persons, licensed by his Grace the Bishop of London, has been opened until such time as the church shall be erected, which it is expected will take place early in the spring. It is to be built in a plain, substantial style, and to contain 600 sittings. There is to be a burial ground, with a house for the residence of the Rev. George Weight, the minister, who has been appointed to officiate as chaplain. Mr. Glyn, the Chairman of the railway, has presented the trustees with a handsome communion service of plate.—*Daily papers.*

STAGE-COACH DUTIES.—By an Act of the last session of Parliament, which is to come into force on Monday week, the 3rd of October, the stage-coach duty, per mile, is reduced one-half—viz., from 3d. to 1½d.

THE NEW "RAILWAYS' REGULATION ACT."

THE following is Mr. Gladstone's Act, printed from the authorized copy. We publish it for the convenience of future reference:—

1. *3d & 4th Vict. c. 97.*] Whereas by an Act passed in the 3d and 4th years of the reign of her present Majesty, intituled "An Act for regulating Railways," provision was made for the supervision of railways; and whereas it is expedient for the safety of the public to make further provision for that purpose; be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that this Act shall come into operation on the passing thereof.

2. *Recited Act and this Act to be construed together.* And be it enacted, that the provisions of the said recited Act and of this Act shall be construed together as one Act, except so far as the provisions of the said recited Act are hereby repealed, or shall be inconsistent with the provisions of this Act.

3. *Notice before opening Railway repealed.*] And whereas by the said recited Act it is enacted, that after two months from the passing of the said recited Act no railway, or portion of any railway, shall be opened for the public conveyance of passengers or goods, until one calendar month after notice in writing of the intention of opening the same shall have been given, by the Company to whom such railway shall belong, to the Lords of the Committee of her Majesty's Privy Council appointed for Trade and Foreign Plantations: and whereas by the said recited Act it is also enacted, that if any railway or portion of any railway shall be opened without due notice as aforesaid, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of 20*l.* for every day during which the same shall continue open, until the expiration of one calendar month after the Company shall have given the like notice as is hereinbefore required before the opening of the railway, and any such penalty may be recovered in any of her Majesty's Courts of Record; be it enacted, that the said recited provisions of the said Act shall be, and they are hereby repealed.

4. *Notice of intended opening of Railway.*] And be it enacted, that no railway or portion of any railway shall be opened for the public conveyance of passengers until one calendar month after notice in writing of the intention of opening the same shall have been given, by the Company to whom such railway shall belong, to the Lords of the Committee of her Majesty's Privy Council appointed for Trade and Foreign Plantations, and until ten days after notice in writing shall have been given by the said Company to the Lords of the said Committee of the time when the said railway or portion of railway will be, in their opinion, sufficiently completed for the safe conveyance of passengers, and ready for inspection.

5. *If Railway opened without Notice, Company to forfeit 20l.*] And be it enacted, that if any railway or portion of any railway shall be opened without such notice as aforesaid, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of 20*l.* for every day during which the same shall continue open until the said notices shall have been duly given and shall have expired; and every such penalty may be recovered in any of her Majesty's Courts of Record, or in the Court of Session, or in any of the Sheriffs' Courts in Scotland.

6. *Board of Trade empowered to postpone the opening.*] And be it enacted, That if the officer or officers appointed by the Lords of the said Committee to inspect any such railway or portion of railway shall, after inspection thereof, report in writing to the Lords of the said Committee that, in his or their opinion, the opening of the same would be attended with danger to the public using the same, by reason of the incompleteness of the works or permanent way, or the insufficiency of the establishment for working such railway, together with the grounds of such opinion, it shall be lawful for the Lords of the said Committee, and so from time to time, as often as such officers shall after further inspection thereof so report, to order and direct the Company to whom such railway shall belong to postpone such opening for any period not exceeding one calendar month at any one time, until it shall appear to the Lords of the said Committee that such opening may take place without danger to the public; and if any such railway, or any portion thereof, shall be opened contrary to any such order and direction of the Lords of the said Committee, the Company to whom such railway shall belong shall forfeit to her Majesty the sum of 20*l.* for every day during which the same shall continue open contrary to such order and direction; and any such penalty may be recovered in any of her Majesty's Courts of Record, or in the Court of Session, or in any of the Sheriffs' Courts in Scotland; provided always, that no such order as aforesaid shall be binding upon any Railway Company unless therewith shall be delivered to the said Company a copy of the Report of the officer or officers on which such order shall be founded.

7. *Notice of Accidents to be given to the Board of Trade.*] And be it enacted, that every Railway Company shall within 48 hours after the occurrence upon the railway belonging to such Company of any accident attended with serious personal injury to the public using the same, give notice thereof to the Lords of the said Committee; and if any Company shall wilfully omit to give such notice every such Company shall forfeit to her Majesty the sum of 5*l.* for every day during which the omission to give the same shall continue; and every such penalty may be recovered in any of her Majesty's Courts of Record, or in the Court of Session or in any of the Sheriffs' Courts in Scotland.

8. *Board of Trade empowered to direct Returns.*] And be it enacted, that the Lords of the said Committee may order and direct any Railway Company to make up and deliver to them returns of serious accidents occurring in the course of the public traffic upon the railway belonging to such Company, whether attended with personal injury or not, in such form and manner as the Lords of the said Committee shall deem necessary and require for their information with a view to the public safety; and if any such returns shall not be so delivered within 14 days after the same shall have been required, every such Company shall forfeit to her Majesty the sum of 5*l.* for every day during which the said Company shall neglect to deliver the same; and every such penalty may be recovered in any of her Majesty's Courts of Record, or in the Courts of Session or in any of the Sheriffs Courts in Scotland: provided always, that all such returns shall be privileged communications, and shall not be evidence in any court whatsoever.

9. *Gates at level Crossings to be kept closed across the Road.—2 & 3 Vic. c. 45.*] And whereas by an Act passed in the 2nd and 3rd years of her present Majesty, and intituled "An Act to amend an Act of the 5th and 6th years of his late Majesty King William IV. relating to highways," it was enacted, that whenever a railway crosses or shall hereafter cross any turnpike-road, or any other highway or statute labour road for carts or carriages in Great Britain, the proprietors or Directors of the said railway shall make and maintain good and sufficient gates across each end of such turnpike or other road at each end of the said crossings, and shall employ good and proper persons to open and shut such gates, so that the persons, carts, or carriages passing along such turnpike or other road shall not be exposed to any danger or damage by the passing of any carriages or engines along the said railway. And whereas by the Acts relating to certain railways it is provided that such gates shall be kept constantly closed across the railway, except during the time when carriages or engines passing along the railway shall have to cross such turnpike or other road. And whereas experience has shown that it is more conducive to safety that such gates should be kept closed across the turnpike or other road instead of across the railway; be it therefore enacted, that, notwithstanding anything to the contrary contained in any Act of Parliament heretofore passed, such gates shall be kept constantly closed across each end of such turnpike or other roads, in lieu of across the railway, except during the time when horses, cattle, carts, or carriages passing along such turnpike or other road shall have to cross such railway; and such gates shall be of such dimensions and so constructed as, when closed across the ends of such turnpike or other roads, to fence in the railway, and prevent cattle or horses passing along the road from entering upon the railway while the gates are closed: provided always, that it shall be lawful for the Lords of the said Committee, in any case in which they are satisfied that it will be more conducive for the public safety that the gates at any level crossing over any such turnpike or other road should be kept closed across the railway, to order and direct that such gates shall be kept so closed, instead of across the road; and such order of the Lords of the said Committee shall be a sufficient authority for the Directors or proprietors of any Railway Company to whom such order is addressed for keeping such gates closed, in the manner directed by the Lords of the said Committee.

10. *Railway Companies to erect and maintain Fences.*] And whereas it is expedient that further provision be made for the safety of the public in respect of the fences of railways; be it enacted, that all Railway Companies shall be under the same liability of obligation to erect, and to maintain and repair, good and sufficient fences throughout the whole of their respective lines, as they would have been if every part of such fences had been originally ordered to be made under an order of justices by virtue of the provisions to that effect in the Acts of Parliament relating to such railways respectively.

11. *Disputes between connecting Railways to be decided by the Board of Trade.*] And be it enacted, that where two or more Railway Companies, whose railways have a common terminus of a portion of the same line of rails in common, or which form separate portions of one continued line of railway communication, shall not be able to agree upon arrangements for conducting at such common terminus, or at the point of junction between them, their joint traffic with safety to the public, it shall be lawful for the Lords of the said Committee, upon the application of either of the parties, to decide the questions in dispute between them, so far as the same relate to the safety of the public, and to order and determine whether the whole or what proportion of the expenses attending on such arrangements shall be borne by either of the parties respectively; and if any Railway Company shall refuse or wilfully neglect to obey any such order made upon or against such Company by the Lords of the said Committee pursuant to this provision, such Company shall forfeit to her Majesty the sum of 20*l.* per day for every day during which such refusal or neglect shall continue; and every such penalty may be recovered in any of her Majesty's Courts of Record, or in the Court of Session, or in any of the Sheriffs' Courts in Scotland.

12. *Powers of making Branch Communication with Railways, and of entering upon them with Locomotive Engines, to be regulated by the Board of Trade.*] And whereas powers of laying down branch lines opening into the ledges or flanches of main lines of railway, and of entering upon and passing along such main lines with carriages and waggons drawn by locomotive engines, or by other mechanical or animal power, and also powers to form roads or railways across existing railways on a level, have been given by various Acts relative to railways to the owners or occupiers of lands adjoining the railway, and to other persons with their consent: and whereas experience has shown that the exercise of such powers without limitation would in many cases be attended with danger to the public using such railway; be it therefore enacted, that if, in the case of any railway on which passengers are conveyed by steam or other mechanical power, it shall appear to the Lords of the said Committee that such power as aforesaid cannot be so exercised without seriously endangering the public safety, and that an arrangement may be made with a due regard to existing rights of property, it shall be lawful for the Lords of the said Committee to order and direct that such powers shall only be exercised subject to such conditions as the Lords of the said Committee shall direct; provided always, that no railway shall be considered a passenger railway if two-thirds or more of the gross annual revenue of such railway shall be derived from the carriage thereon of coals, iron-stone, or other metals or minerals.

13. *Alteration of dangerous Level Crossings.*] And whereas in many cases railways have been made to cross turnpike roads, highways, and private roads and tramways on the level, and the Companies to whom such railways belong would in some cases be willing, at their own expense, to carry such roads and tramways over or under such railways by means of a bridge or archway, for the greater safety of the public, but have no authority so to do: and whereas it would promote the public safety if Railway Companies were enabled, under the sanction and authority of the Lords of the said Committee, to substitute bridges or archways for such level crossings as aforesaid; be it therefore enacted, that in all cases where any Railway Company shall be willing, at their own expense, to carry any turnpike road, highway, or private road or tramway over or under their railway, by means of a bridge or arch in lieu of crossing the same on the level, it shall be lawful for the Lords of the said Committee, on the application of the said Company, and after hearing the several parties interested, if it shall appear to the Lords of the said Committee that such level crossings endanger the public safety, and that the proposal of the Company does not involve any violation of existing rights or interests without adequate compensation, to give the said Company full power and authority for removing the danger at their own expense, either by building a bridge, or by such other arrangement as the nature of the case shall require,

Digitized by Google

subject to such conditions as the Lords of the said Committee shall direct.

14. *Power for Railway Companies to enter upon adjoining Lands to repair Accidents.*] And whereas it is essential to the public safety, and also for the proper maintenance of railways in a state of efficiency for the public service, that Railway Companies should have the power, in case of accidents or slips happening or being apprehended to their cuttings and embankments or other works, to enter upon the lands adjoining their respective railways, for the purpose of repairing or renewing the same, and to do such works as may be necessary for the purpose; be it therefore enacted, that it shall be lawful for the Lords of the said Committee to empower any Railway Company, in case of any accident or slip happening or being apprehended to any cutting, embankment, or other work belonging to them, to enter upon any lands adjoining their railway for the purpose of repairing or preventing such accident, and to do such works as may be necessary for the purpose; provided always, that in case of necessity it shall be lawful for any Railway Company to enter upon such lands and do such works as aforesaid, without having obtained the previous sanction of the Lords of the said Committee; but in every such case such Railway Company shall, within 48 hours after such entry, make a Report to the Lords of the said Committee, specifying the nature of such accident or apprehended accident, and of the works necessary to be done, and such powers shall cease and determine if the Lords of the said Committee shall, after considering the said Report, certify that their exercise is not necessary for the public safety; provided also, that such works shall be as little injurious to the said adjoining lands as the nature of the accident or apprehended accident will admit of, and shall be executed with all possible despatch; and full compensation shall be made to the owners and occupiers of such lands for the loss or injury or inconvenience sustained by them respectively by reason of such works; the amount of which compensation, in case of any dispute about the same, shall be settled in the same manner as cases of disputed compensation are directed to be settled by the Acts relating to the railway on which such works may become necessary; provided always, that no land shall be taken permanently by any Railway Company for such works, without a certificate from the Lords of the said Committee, as hereinafter described.

15. *Compulsory Powers of taking Land for the purposes of Railways extended, where thought necessary for Safety by the Board of Trade.*] And whereas by various Acts relating to railways compulsory powers are given to Railway Companies of purchasing and taking lands for the construction of such railways, and it is provided that such compulsory powers shall not be exercised after the expiration of certain limited periods from the passing of the said Acts: and whereas it is sometimes found necessary for the public safety that additional land should be taken after the expiration of such periods for the purpose of giving increased width to the embankments and inclination to the slopes of railways, or for making approaches to bridges or archways, or for doing such works for the repair or prevention of accidents as are hereinbefore described; be it therefore enacted, that, in every case in which the Lords of the said Committee shall certify that the public safety requires additional land to be taken by any Railway Company for such purposes as aforesaid, the compulsory powers of purchasing and taking land contained in the Act or Acts of such Railway Company, together with all the clauses and provisions relative thereto, shall, as regards such portion or portions of land as are mentioned in the certificate of the Lords of the said Committee, revive and be in full force for such further period as shall be mentioned in such certificate: provided always, that any Railway Company applying to the Lords of the said Committee for any such certificate shall give 14 days notice in writing, in the manner prescribed by the Act or Acts of such Company for serving notices on landowners, of their intention to make such application to all the parties interested in such lands, or such of them as shall be known to the Company, and shall state in such notice the particulars of the lands required; and if any of such parties interested shall apply within the said period of 14 days to the Lords of the said Committee, such party shall be heard by them before any such certificate is given: provided also, that where any such application shall have been made by any Railway Company to the Lords of the said Committee, upon which application any such certificate shall have been refused, the Directors of such Railway Company shall, if required by the Lords of the said Committee, repay to the party resisting such application any expenses which he or they may have incurred in resisting such application.
